FOREWORD TO THE 1971 REISSUE

Responding to widespread demand from librarians and other researchers, The H. W. Wilson Company has brought back into print the six early volumes of Current Biography Yearbook, 1940-45. Although their style and format depart considerably from present editorial policy, the volumes constitute a rich source of information on persons of the World War II period. They provide contemporary viewpoints on major world figures and furnish valuable leads to further research into the lives of a host of authors, organization heads, war correspondents, and women military leaders. And their reference value is enhanced by photographs that are difficult or impossible to come by elsewhere. The Company is pleased to make these volumes once again available to serve the research and reference needs of the scholarly community.

CHARLES MORITZ

Preface

"Biography is by nature the most universally profitable, universally pleasant of all things: especially biography of distinguished individuals."—*Carlyle*

In the main the staff of CURRENT BIOGRAPHY is inclined to agree with the estimable Carlyle. Yet when a staff member assembles six biographical sketches of the same person from six newspapers, magazines and books, and finds that each differs radically from the others in dates and statements of facts, we begin to wonder. Then follows a period in which we try to arrive at the approximate truth. In many cases we have asked biographees to correct any errors and give us additional information. However, in no sense are these *official* biographies.

This volume is a cumulation of all the material in the monthly numbers of CURRENT BIOGRAPHY issued in 1940 (these can now be discarded). Additional sketches have been incorporated in this annual in place of a December monthly number. All names marked [Dec] in the complete index (Who's News and Why) at the end of the volume have not appeared in any previous issue. Each sketch and its accompanying list of references have been brought as far up to date as time and the printer's "deadline" have allowed. In writing of people who are making history today, each issue of a daily newspaper brings changes, so we have tried to incorporate into these sketches as much late material as possible.

The staff of CURRENT BIOGRAPHY includes the managing editor, E. Mary Trow, and the editorial assistants, Barbara Falkoff, Frances Jennings and Lillian Price, who, together with Ruth Lechlitner and Flora Kaiser, part-time writers, are responsible for most of the sketches in this annual volume. Herbert B. Grimsditch, London journalist who has written for other Wilson publications, also sent us sketches of many English statesmen, written between hasty trips to improvised shelters in bomb-torn London.

Efforts were made to obtain a photograph to accompany each biography, but this proved impossible to accomplish. We take this opportunity to thank all—individuals, organizations, publications—for their cooperation in furnishing photographs and information in response to our requests.

MAXINE BLOCK
Editor

Explanations

Authorities for forms of names are the Library of Congress and the Wilson Company bibliographical indexes. Exception is made to the authorized form when the shortened form of a name is better known: e.g., Monty Woolley instead of Edgar Montillion Woolley. If the full name is not given in the heading it will be found in the sketch itself.

After the name, pronunciation is given if the name is difficult, and then the date of birth as fully as possible. The date of death is given for those who have died. The occupation of the subject and the reasons for his news-worthiness follow. Next comes the sketch itself, followed by a list of references for further study. These include magazine and newspaper references (in one alphabet) and books. If the person is not living, references are made to obituaries in newspapers and magazines. Only books of an autobiographical or biographical nature are listed, including such well-known reference works as *Who's Who*, *Who's Who in America*, etc. The absence of a date following the title of an annual publication means that the volume used is the latest published.

The magazine articles listed under *References* are in abbreviated form (see list "Periodicals and Newspapers Consulted" for complete title). The form of entry is as follows: Ladies' H J 56:78-9 S '39 por. This means that an article supplementing our sketch will be found in Ladies' Home Journal, volume 56, pages 78-9, in the September 1939 number. The abbreviation *por* means that the article is accompanied by a portrait. In the case of newspapers, the name of the paper is followed by paging and date.

ABBOTT, GEORGE June 25, 1889- Playwright; theatrical producer

Address: b. 630 Fifth Ave, New York City

George Abbott, one of half a dozen of Broadway's best known producers, has achieved a reputation for "pulling rabbits out of shabby theatrical hats and turning them into ermine." His talents as a director, and frequently as co-author, have put over many a show which was no dramatic masterpiece.

As George Jean Nathan, the drama critic, said of Abbott: "His is the theatre of snappy curtain lines, wisecracking dialogue, mention of favorite brands of champagne, periodic, humorous excursions to the lavatory, sentimental relief in the shape of tender young lovers, and various analogous condiments, all staged as if the author had used a pepper shaker in lieu of an inkwell." But, according to Nathan, Abbott's ambition is to be a directorial Hamlet, "to produce more important plays than the trivial comedies and farces with which he has achieved big box office success." Abbott has few rivals in the field of rough and tumble popular entertainment, of fast-moving, side-splitting farce. Yet every time he has tried to establish himself as a producer of more exalted status he has had a flop on his hands.

"If Abbott," Nathan writes, "can't be the directorial Hamlet of his dreams, he may at least content himself in being a pretty satisfactory couple of other fellows from Ephesus and Syracuse." Nathan's allusion is to one of Abbott's hits, *The Boys from Syracuse*, a modern adaptation of Shakespeare's *Comedy of Errors*, with the songs and lyrics by Richard Rodgers (see sketch this issue) and Lorenz Hart. Rodgers and Hart had thought Shakespeare's classical plot of the twin brothers and their mistaken identities good enough for them, but Shakespeare wasn't good enough for George Abbott, who wrote the book for the musical comedy, *The Boys from Syracuse*. Abbott pitched out Shakespeare's dialogue because he liked his own better.

While some critics said that even Abbott's dialogue, Rodgers' and Hart's music instead of Shakespeare's poetry, and good comic actors failed to lighten the tedium of the tale or keep it from dragging, the play was a hit. It was not one of the outstanding Abbott successes, however, such as *Room Service*, *Boy Meets Girl*, *Three Men on a Horse* or *Brother Rat*.

GEORGE ABBOTT

As a producer, Abbott has not hesitated to use unknown material, and, as a matter of fact, has had his greatest successes on what Broadway characterizes as "hot lunches." *Room Service* was a "washed up" play property when authors John Murray and Allen Boretz brought it to Abbott. Sam Harris, the well-known producer, had tried the play out in Philadelphia with Metro-Goldwyn-Mayer money, and it was a \$23,000 flop. When the Harris option lapsed, Abbott looked at the script and suggested a few changes. It went on to wild acclaim on Broadway, and later Abbott sold it to RKO Radio for \$255,000.

He undertook to produce *Brother Rat*, after it had been turned down by 31 managements, because it was a play about youngsters written by youngsters (John Monks Jr., and Fred F. Finklehoffe, Virginia Military Institute '32). The Abbott "touch" turned it into a Broadway hit and a \$150,000 film property. Abbott's own *Three Men on a Horse* made an estimated profit of \$650,000.

He has had flops, too. *Angel Island* and *Brown Sugar*, both playwriting efforts of Bernie (Mrs. Howard) Angus, flopped on Broadway in 1937. Of five productions Abbott had on Broadway during the 1939 to 1940 season, three were flops, closing soon

ABBOTT, GEORGE—*Continued*

after they opened. *Goodbye in the Night* opened in March 1940 and quickly closed.

After *Too Many Girls* made a hit on Broadway, Abbott went to Hollywood to produce and direct it for RKO. It was his first experience with the movies in which he declared himself happy about the whole thing, and he came back to New York eager to get started on his first Broadway productions of the fall of 1940 season: *The White-Haired Boy* and *Pal Joey*.

It is true that producer Abbott has occasionally undertaken plays by established authors—for instance Bella and Samuel Spewack's *Boy Meets Girl*, which became a smash-hit. But he prefers to pick them out of a grab bag, or to help write them himself.

Abbott has co-authored many plays—*Broadway* (with Philip Dunning); *Coquette* (with Anna Preston Bridgers); *Three Men on a Horse* (with J. C. Holm); *Four Walls* (with Dana Burnet); *Love 'Em and Leave 'Em* (with J. V. A. Weaver); *The Fall Guy* (with James Gleason) and others.

As for rules, superstitions or fetishes about the theatre, Abbott says he has none. Too many shows that have followed all the rules and superstitions have flopped, he says. He writes by the oral method—that is, he talks to secretaries informally. Then he writes it all out in longhand, and leaves it to the secretaries to make what sense they can out of it. There is usually enough sense to make a play. And as a collaborator on sick manuscripts, Abbott performs miracles.

He started in the theatre as an actor in 1913. He was born in Forestville, New York, June 25, 1889, son of George Burwell and May (McLaury) Abbott, attended Kearney Military Academy and Hamburg High School, and received his B. A. from the University of Rochester in 1911. He was a student at Harvard the following year, and the succeeding year an actor.

From 1919 on he wrote and directed plays and films. He was director for Paramount Pictures from 1927 to 1930. In 1933 he became a partner of Abbott-Dunning, Incorporated, producers, and when the partnership was dissolved continued producing for himself.

Abbott is an arch apostle of what he calls "pace" in performance, but pace is not necessarily speed, he says. "Tempo," he asserts, "is variety." Actually many of his productions which seem to move at break-neck speed move slowly a large part of the time. The effect, according to Abbott, is achieved by contrast of character, of movement, of tone of voice, and not in making actors speak and move in double quick time.

Abbott married Ednah Levis of Rochester, New York in 1914. Mrs. Abbott died in 1930. He has one daughter, Judith Ann.

ADAMIC, LOUIS (ă'dām-ik) Mar 23, 1899- Author; director of the Common Council for American Unity

Address: R. F. D. 1, Milford, New Jersey

Louis Adamic is the man who heads the Common Council for American Unity, organized "to explore the complex racial cultural situation" created by 38,000,000 non-Anglo-Saxons and non-Protestants having joined the older racial stocks in the United States. Through the Council's quarterly, *Common Ground*, which was given a grant from the Carnegie Corporation and whose first issue was published in the summer of 1940 under Mr. Adamic's editorship, the Council will attempt to offer an "amalgam of belief and unity" which can successfully hold together the varied temperaments, religions and individualities of all Americans, new and old.

Something like the Council has been Mr. Adamic's dream for a long time. He is himself a new American, born in the little village of Blato, Austria (now Yugoslavia) in the Slovene province of Carniola on March 23, 1899. The son of Anton and Ana (Adamic) Adamic, he was brought up in a family of seven brothers and sisters, attended the Gymnasium of Ljubljana from 1910 to 1913. He didn't like it, didn't like the career his parents expected him to follow, thought much about America, but might never have come here if he hadn't read a book called *Do Not Go to America* and hadn't been thrown out of school at the age of 14. The ceremonious unveiling of a statue of Franz Joseph had revealed a monarch crowned with a very unbecoming spitoon—Louis' contribution. Once out of school, he kept right on going until he reached the United States.

"Studious, idealistic, vaguely aspiring to be a writer," the youthful immigrant dug ditches, loaded freight, welded metals, wove textiles, swept floors, waited on tables, looked around in America's West—and learned English as fast as he could. He hadn't exactly expected to become a millionaire. Finally, when he knew enough English, he entered the University of California, read all the books he could lay his hands on. He was naturalized in 1918, entered

the United States Army during the World War, and after the War went right on discovering America—particularly from the point of view of its workers, its unskilled laborers, its immigrants. Someone once described him as “a tall young man with a look of eager curiosity.”

Although Adamic had published numerous magazine articles, his first book wasn't published until 1931. It showed that he didn't like quite all he saw. Called *Dynamite*, it was a record of violence in the United States' labor movement from the Molly Maguires to the dynamiting of the Los Angeles *Times*' building. The year his book was published Adamic married Stella Sanders of New York. *Laughing in the Jungle* (the “jungle” was the United States, and the title might have been paraphrased “whistling in the dark”) followed in 1932. That year Adamic also won a Guggenheim Fellowship by submitting the outline of a novel which he proposed to write during a visit to his native Carniola. What he actually wrote after his visit didn't turn out to be a novel, but it was a best seller. *Native's Return* (1934) was the first-person story of a young man who returns to his own country and finds that he cannot become a peasant again; it was Adamic's own story. Two sequels, *Grandsons* (1935) and *Cradle of Life* (1936), were also successful; his first novel, *The House in Antigua* (1937), was not so well received.

My America, published in 1938, received much critical acclaim. It has been described as “An Immigrant Author's Sixth Book in Search of a Character.” A “mixture of memoir, social philosophy, anecdote and transient magazine article,” its section headings reveal something of its contents: America in Action; New York; After the Native's Return; Ellis Island and Plymouth Rock; The Depression; The Workers; Random Portraits and Snapshots; The Long Road. Mr. Adamic has never subscribed to any particular political philosophy, but this, like his most casual writings, displays a rare personal honesty, a “complete integrity and a kind of cool passion for justice and democracy,” and an almost mystical belief in “the American Process,” which, in spite of countless failures and setbacks, he believes has been for 200 years working for “more and more social, economic and political liberty and equality.”

After receiving a grant-in-aid from the Rockefeller Foundation in 1937, Louis Adamic worked for the Rockefeller and Carnegie Foundations in collecting the experiences of foreign-born and second-generation groups in America and trying to classify the attitudes toward them of native Americans of older stocks. *America and the Refugees*, a pamphlet, was published in 1939. Many of Adamic's magazine articles have dealt with the same problems—the feeling

LOUIS ADAMIC

of inferiority of millions of new Americans and its causes; the tragic situation faced by refugees from Fascist Europe who have entered the United States illegally. Adamic has also written sympathetically and from firsthand experience of the CIO, of sitdown strikes, of migratory workers in California, of labor in general, but perhaps it is the problems of the immigrant which he best understands and which most arouse his desire to help. The Council which he now heads might be said to have been conceived back in 1934, when he urged some sort of an organization which could give these millions a pride in their own cultural heritage and create a sympathetic understanding for them on the part of older Americans.

Mr. Adamic's newest book, *From Many Lands* (1940), has an identical purpose in mind. A collection of “illuminating and significant portrait-histories,” packed with facts, it gives true records of the lives of certain immigrants—Meleski, Starkku, Steinberger, Evanich—each of whom came to America with a definite contribution to make to his adopted country and who had the good fortune to have it accepted. Said the New York *Times* reviewer: “In the heroic sweep of his material, the poetic thrust of the author's noble simplicity, the everyday heroisms and dauntless triumphs over disaster which are the stuff of which these lives are lived, Louis Adamic has given us such a saga as might be sung by heroes of old.”

Adamic is a member of the Authors' League of America, the American Civil Liberties Union, the American Political

ADDIS ABABA, PIETRO BADOGLIO, DUCA D' (äd'is ä'bä-bä bädöl'yo) Sept 28, 1871- Ex-supreme chief of the general staff of the Italian Army

Address: Rome, via XX Settembre 8, Italy

Bulletin: Badoglio resigned on December 6.

In 1922, when Mussolini marched on Rome, it was Pietro Badoglio who begged for a battalion of Royal Carabinieri to "sweep away these Black Shirt upstarts." Had the King assented, he could have crushed the Fascist march. Four years after Mussolini seized power, legend says that the same man hustled up troops just in time to pre-

PIETRO BADOGLIO, DUCA D' ADDIS ABABA

vent an attempt on the Dictator's part to seize the throne of Victor Emmanuel. Staunch monarchist, "friend and favorite of the Italian aristocrats," said to rank high in the freemasons, Pietro Badoglio is still too useful a man to be retired to the obscurity that his Duce might find politically desirable for him. Whatever his personal views are today on the subject of Mussolini and the War, in his military rôle he has already won more victories for Italian Fascism than most Fascists, has been rewarded in the past with the titles of Marquis of Sabotino and Duke of Addis Ababa and in 1940 is supreme chief of the general staff of the belligerent Italian Army.

Badoglio comes from the province of Piedmont, whose people are "distinguished by unswerving perseverance." He was born of humble, peasant parents (Mario and Antoinette Badoglio) in Grazzano Montferrato in 1871. He attended a military school at Turin, in 1890 became a sub-lieutenant of artillery and later entered the War College and the Royal Army Corps. He has served in every Italian war since, his first experience being lieutenant of artillery in the East African campaign of 1895 to 1896, when the Abyssinian Emperor whipped Italy in Eritrea. At that time he helped save Adigrat, and was one of the survivors of Adowa. In the Libyan campaign of 1911 to 1912 he was credited with planning the victory of Zanzur which wrested Libya from Turkey. He was promoted to the rank of major.

The First World War found him, in 1915, a lieutenant colonel with the second army corps fighting the Austrians, and in 1916 he became colonel and chief of staff of the sixth army corps. Other promotions followed and the capture of Mount Sabotino from the Austrians which led to the victory at Gorizia

earned him a generalship. Badoglio had just taken over the command of the second army when the Austrian surprise attack brought about the defeat of Caporetto. He helped General Armando Diaz and the Allied rescue staff reorganize the Italian defense forces, strengthened morale, himself prepared the defensive on the Piave, and the "final push" which he had planned at Vittorio Veneto in October 1918 resulted in complete victory over the Austrians.

That he can be firm is shown by his behavior as leader of the Italian Armistice Commission which negotiated with Austria in November of that year. At one point in the negotiations an Austrian officer began to protest at the terms. "*Basta!*" exclaimed Badoglio. "Under the circumstances we have nothing more to say!" He turned to his adjutant. "Please make a telephone call and see that the order for cessation of hostilities is withdrawn." The telephone call never had to be made.

Hailed as a national hero after the War, Badoglio was made chief of the general staff of the army, and later Senator for life. In 1921 he was visiting both Romania and the United States as envoy extraordinary. In 1922 came the march of the Black Shirts on Rome. The year 1924 found him Ambassador to Brazil; in 1925 he again served as chief of the general staff; in 1926 he acquired the title *Maresciallo d'Italia* (field-marshal); in 1928 he became Governor General of Libya; and finally in 1929 he was knighted as the *Marchese del Sabotino*. He governed Libya until 1933.

In the beginning Badoglio was supposed to have opposed the Abyssinian War, but when the elderly De Bono was leading the Italians to disaster in Ethiopia, he was, nevertheless, sent to replace De Bono in November 1935 as high commissioner for East Africa—thus making the Ethiopian conquest an affair of the regular army and shoving the responsibility for its success on to Badoglio's shoulders. He was equal to the task. In 1936, victorious, he was created Viceroy of Abyssinia and then relieved at his own request and made Duke of Addis Ababa. He is said to have "master-minded" Franco's victory in Spain, though he himself refused to campaign, saying proudly: "I have never been a chief of mercenaries." The lessons in mechanical warfare learned in Spain are undoubtedly proving useful to Badoglio in World War II, however.

Taciturn and modest, Badoglio's "square head and jaw and flattened nose often betray a pugnacious aspect. His deep-set eyes seldom smile. Yet . . . his manner is dashing, kindly, courtly. . . Despite his years, his back is straight as a ramrod, and few military shoulders are as natively adorned." He is far from being the traditional Latin hothead. Seldom engaging in any large-scale operation until he has himself inspected things thoroughly and made careful

plans, skeptical of reports he can't verify with his own eyes, he is as economical with lives as he is with material, and his men like him and have confidence in him. He used to have friendly arguments with General Gamelin (see sketch this issue) over the war of position versus the war of motion, but that was before September 1939. Not quite all his accomplishments are military. He seldom fails to win at *Boccia* (a kind of bowls played by Italian peasants), he is the author of a book, *War in Abyssinia* (1937) and he never overbids at bridge.

ADDITON, HENRIETTA SILVIS May 14, 1887- Social worker

Address: Westfield State Farm, Bedford Hills, New York

On March 18, 1940 Miss Henrietta Additon assumed her duties as superintendent of Westfield State Farm, New York's only prison for women. She is the first woman superintendent of the prison section at Bedford Hills; the reformatory (just across the highway) which opened in 1901 has had only one woman superintendent, the late Dr. Katharine Bement Davis who later became Commissioner of Correction for New York City. The prison and the reformatory were united in 1933.

Miss Additon, succeeding the late Carl J. Kane, is responsible for the welfare of almost 600 delinquent women and girls in the farm's two branches. She must supervise the operation of the prison farms, the cannery, the laundry, a herd of cows and droves of pigs. She said she had never had any experience in cow and pig management, but expects to find out about it soon.

Henrietta Additon's ancestors came from Maine, but she was born in Utica, Illinois. Before many years her family moved to Flowery Branch, Georgia, where her father, Orville I. Additon, (Lucy [Benner] Additon was her mother) had a furniture business. She began her career as a schoolteacher there after she was graduated from Piedmont College in Demorest. Within a year she became an instructor in history in that Georgia college and in 1911 received an M. A. degree from the University of Pennsylvania in social studies.

Then Miss Additon became an agent for the Philadelphia Society for Organizing Charities and the following year probation

ADDITON, HENRIETTA—*Continued*

officer for the city's municipal courts. In three years she was put in charge of probation work in Philadelphia. During the World War she was director of the women's and girls' section of the War Department's Commission on Training Camp Activities.

After the War she was successively executive assistant to the United States Interdepartmental Social Hygiene Board; executive secretary and organizer of the Philadelphia Big Sister Association; in charge of the Girls' Service at the Sesqui-centennial Exposition in 1926; consultant on protective measures of the American Social Hygiene Association.

In 1930 Miss Additon went to New York City to head the Crime Prevention Bureau, and when Edward P. Mulrooney became Police Commissioner he appointed her a deputy so that she might better carry on the bureau's work. As sixth deputy police commissioner she was put in charge of a newly organized Crime Commission Bureau. She resigned in September 1934 as a result of a disagreement with Mayor La Guardia (see sketch this issue), charging that the Mayor misunderstood and hindered the work of her bureau. Later the misunderstanding was patched up. The next year she was made a member of the State Crime Commission and was appointed to the State Commission of Correction in 1938.

Miss Additon became the director of the New York World's Fair Welfare Department in 1937 and in 1938 her duties were extended to include the supervision of housing. She and her assistants took care of 11,418 individuals during the first Fair season. They gave medical care to many

who needed it; helped foreigners who couldn't speak English; supplied information on suitable living quarters; returned lost and runaway children, of whom there were more than 7,000, to their parents.

From her wealth of practical experience in crime prevention and juvenile delinquency Miss Additon has written articles for magazines and published two books: *City Planning for Girls* (1928), a study of the social machinery for case work with girls in Philadelphia, and *A Study of Brooklyn Girls* (1931). She has lectured extensively to social workers and to club groups on crime prevention, probation, penology and social work and has taught social economy at the Pennsylvania School of Social Service, Bryn Mawr, the New York School of Social Work and Hunter College.

Shouldering her new duties in her early 50's, Miss Additon is described as "a large woman with graying hair and brown eyes." She has a calm, competent, charming manner accompanied by a contagious smile. She had told herself that she would never accept a position in an institution, but the challenge of Westfield Farm and the possibilities of exerting an influence upon its inmates made her personal preferences give way to her sense of duty. As a social worker, "but with a sense of humor," she hopes to be able to help solve the problems, not of 600 inmates of the prison and reformatory, but of 600 individuals—"each with a separate background, and to help each individual herself so that upon release she can cope with the world."

ADLER, MORTIMER JEROME Dec 28,
 1902- Educator; author

Address: b. University of Chicago, Chicago,
 Illinois; h. 20 E Cedar St, Chicago, Illinois

Attention in the educational field first came to Mortimer J. Adler in 1930 when President Hutchins of the University of Chicago brought him there to be his right hand man in instituting a "return to the classics" theory of education. Then only 28 years old, Adler soon became known through his publications as one of the most brilliant thinkers in the United States. His *Art and Prejudice* (1937) not only received the approbation of scholars, but came to wider public notice because of its section on motion pictures as an art and the question of their regulation by moral and political authorities. *How to Read a Book* (March 1940) is Dr. Adler's first book for the man in the street; one of the soundest in the "self-help" category, it led the best-seller lists.

Most people can't read, Dr. Adler says, and that's what's wrong with democracy. After he had received his Ph. D. and began teaching, he discovered that he himself didn't know how to read, and set about remedying the matter. Reading for amusement is ruled out in his discussion; by reading he means learning, or reading for understanding. In his first section of *How to Read a Book* he says a book worth reading must be read three times: for analysis, for interpretation and for evaluation. In the second section of the book Dr. Adler lays down rules for reading (as necessary, he says, as for tennis or car-driving) such as spotting clue-words and sentences, pivotal paragraphs and central ideas. His third section is concerned with the connection between reading and freedom. The whole process is called active (as opposed to passive) reading, entailing "the most intense mental activity."

Reading in this way, Dr. Adler says he can read at best 10 books a year. In an appendix he lists books by 131 great authors of all time, from Euclid to Thomas Mann.

The style of *How to Read a Book* is clear and simple, informal and concrete enough for the average level of "reader" intelligence. The book has been highly praised by reviewers, one of whom claims it has taught him, for the first time, how to read. It has also been praised, but questioned in part, by educators.

Mortimer J. Adler was born in New York City December 28, 1902, son of Ignatz and Clarissa (Manheim) Adler. In high school he was editor of the De Witt Clinton High School paper; but he never was graduated because the principal objected to his trying to run the school as well as the paper. He left high school and became personal copy boy to a newspaper editor. Soon he was writing short editorials and taking extension courses at Columbia University in the evening. When he was fifteen he read in John Stuart Mill's autobiography that when Mill was five years old he had read the *Dialogues of Plato*. Adler hadn't even seen the *Dialogues of Plato*, so he got a second-hand copy, read it and decided to be a philosopher instead of a journalist. On a scholarship he went to Columbia, where he finished the four year course in three years at the head of his class. At that time one had to be able to swim to get a degree; Adler couldn't learn to swim. As he puts it, "no swimmer, no A. B." It was not until after six years of teaching that he became the recipient of a Ph. D. in psychology (1929) from Columbia.

In 1926 Adler married Helen Boynton. They live near the University of Chicago, where Adler has taught since 1930, first in the philosophy faculty, then in the law faculty. With Dr. Hutchins (see sketch this issue) he was co-teacher of the famous course in philosophy of education. He has also been an assistant director of the People's Institute in New York. Since 1937 he has been a visiting lecturer at

MORTIMER ADLER

St. John's College, Annapolis. There, as at the University of Chicago, a return to the traditional basis of education has been established: close study of the classics of the Western World.

Known as one of America's foremost lecturers, Dr. Adler spoke during his 1940 tour on the themes of his recent books and on such topics as Progress in Progressive Education; The Social Influence of the Movies; Communism and Christianity; The Limitations of Science.

Besides *How to Read a Book* Dr. Adler is the author of *Dialectic* (1927); *Diagrammatics* in collaboration with Maude Phelps Hutchins (1932); *Crime, Law and Social Science* in collaboration with Professor Jerome Michael (1933); *What Man Has Made of Man* (1937) and *Art and Prudence* (1937).

The last-named book, ostensibly about the movies, is for the most part a formal, academic analysis of the views of Plato, Aristotle and St. Thomas Aquinas (of whom Adler is a disciple) on the relation of art to morals. Adler states that everything that can be said about films today was well said before films even existed. He calls "communication or social education" a function of art; as such, the cinema is a real successor to the arts as practiced by the ancients. He believes that the movies, like all other arts, should be judiciously regulated by moral and political authorities, the criteria to be applied not to production but to reception. Art stimulates the passions and sublimates them through "purgation." If "purgation" does not take place, social harm may result. Dr. Adler thinks most of the movie researches to date are doubtful as to method and inconclusive as to results.

Otherwise, he makes some extreme claims for the movies: "The arts, enriching the

imagination and providing vicarious experience which can be directly appreciated, are almost indispensable in social education, both for children in schools and for the adult population. Of the arts, those of fiction serve best because of what they represent; their proper object of limitation is all of human life. Of the arts of fiction, the movies are at once the most popular and the most vivid representation of contemporary society. Their vividness, which is held to be responsible in part for the power they have over children, makes them exceptionally useful as an educational instrument."

How to Read a Book is another projection of Dr. Adler's theories on the meaning of a liberal education. He believes that a smaller proportion of Americans is literate now, in the real meaning of the term, than in the eighteenth century. As his reason for writing the book he says: "You know how many times people say, 'It's a good book, but it's 'way over my head.' That's all nonsense. Any person of intelligence has no right to say that any book is over his head. The technique of proper reading is intended to elevate one's head to those things that formerly were over one's head.

If one has no skill in reading he may even have difficulty in reading the funnies for pleasure. Once he has acquired skill he can find pleasure in reading Homer and Dante." Adler maintains that books should be lived with as friends: with this idea, he wanted to call his book *How to Become Friends with Books and Be Influenced by Them*. But the publishers didn't think much of that as a title.

The book itself was written during 16 days, a chapter a day. Each night Adler went to a movie, 16 in all. Apparently he reads more slowly than he writes: he cannot read more than two hours at a sitting, because he finds it quite fatiguing. His favorite relaxation, as may be gathered from his frequent references to the game in *How to Read a Book*, is tennis.

AITKEN, WILLIAM MAXWELL, 1ST BARON BEAVERBROOK See Beaverbrook, W. M. A., 1st Baron

ALDRICH, WINTHROP WILLIAMS

Nov 2, 1885- Banker

Address: b. 18 Pine St, New York City;
h. 15 E 78th St, New York City

Winthrop Aldrich, chairman of the board of the Chase National Bank, organized the Allied Relief Fund, one of the largest and most important charities in the United States for overseas relief during the Second World War. Aldrich's contributions in time and money to charitable and welfare work are notable, and it is not surprising that he should add the chairmanship of the Allied Relief Fund to the dozen or more directorships of welfare organizations he already heads. By October 1940 Mr. Aldrich had helped Allied Relief raise about \$1,600,000 in cash in addition to \$800,000 worth of donated supplies. Allied Relief was merged with the British War Relief Society and Mr. Aldrich carried on as president of this nationwide organization. Because of his "distinguished public service" Mr. Aldrich was awarded the Goodrich Medal at the New York World's Fair in October 1940.

Winthrop Aldrich is the son of Abby Pierce Chapman Greene and the late Senator Nelson W. Aldrich of Rhode Island, who was a power in the Republican party and sponsor of the high tariff. Winthrop was born in Providence, Rhode Island, the tenth of eleven children. His sister Abby married John D. Rockefeller Jr., and his friendship with his brother-in-law had much to do with starting Aldrich in the banking business.

As a boy Aldrich attended the Hope Street High School in his home town of Providence, Rhode Island and then went to Harvard. He was graduated from the Harvard Law School in 1910, tenth in his class, then came to New York, where he got a job with the firm of Byrne and Cutcheon. He had a "ponderous thoroughness" and an intense desire to do a job by himself and soon became a valuable man in corporate law work for his firm. In 1916 he was made a junior partner.

That same year he married Harriet Alexander, daughter of Charles B. Alexander, a New York lawyer, a marriage which allied him to a social aristocracy as important as the financial aristocracy of the Rockefellers. Aldrich was establishing himself as an important member of society. He bought a town house, built formal and informal summer houses, traveled a good deal and was active in charities and clubs. He and Mrs. Aldrich have four daughters and one son. About half his time is taken up with welfare activities. Golf is a hobby but he finds little time for it or for yachting.

He added to his knowledge of yachting with a technical course in navigation at the School of Navigation in New York City and was commissioned a lieutenant in the United States Naval Reserve. During the First World War he was successively commander of patrol boats, navigating officer

of the *Niagara* and of the cruiser *New Orleans*, which operated as a convoy to transatlantic troop ships.

After the War his brother-in-law, John D. Rockefeller Jr., suggested that Aldrich leave his junior partnership at Byrne and Cutcheon and enter the law firm of Murray, Prentice and Howland, for years chief counsel of the Rockefeller interests. He was chosen by his firm to represent the old Equitable Trust Company, a Rockefeller bank, and for eight years, from 1922 to 1930, devoted almost all his time to the bank's affairs.

He also handled successfully an outside job for John D. Rockefeller Jr., the famous proxy fight in which the Rockefellers were successful in ousting Colonel Bob Stewart from the chairmanship of the Standard Oil Company of Indiana. Then, when the Equitable Trust Company merged with the Seaboard National in 1929, Aldrich handled the legal complexities of the merger. And when Chellis A. Austin, the young president of the new bank, died of heart failure three months after he was installed in his new office, Aldrich was called in to take over Austin's duties temporarily, since he knew more about the business than anyone else. Aldrich had protested, "I'm not a banker, I'm a lawyer," but a banker he became.

Three months later, when there was announced another merger of the Equitable Trust Company, this time with the Chase National Bank which Albert H. Wiggin had built up in a series of mergers, Aldrich was made president of the new Chase National Bank. He was there primarily to see that Equitable's interests were served in the merger and was looked upon as a newcomer who did not know much about banking.

Before the year was out, however, Aldrich had learned a great many things about the Chase National Bank. Under the direction of Wiggin, then chairman of the board, Chase Securities Corporation had been organized for underwriting investment loans and selling securities. Under Wiggin's management the Bank and the Securities Corporation had poured large sums into speculative loans which became increasingly sour as the depression deepened during 1931 and 1932. Aldrich finally went to mat with Wiggin on the issue. The important interests on the board of directors sided with Aldrich, who won his insistent demands for a conservative banking policy. Wiggin resigned on January 10, 1933 and Aldrich succeeded him as chairman of the governing board.

Two months later Aldrich made his famous depression banking statement during the banking moratorium of March 1933, and it has become one of the classics of Wall Street. Aldrich called for a complete divorce of commercial and investment banking. Wall Street reverberated with anger. Aldrich was accused of breaking Wall Street tradition by not asking other bankers' advice and not taking them into his confidence.

Pach Bros.

WINTHROP W. ALDRICH

But he made good his statement. In April he formally proposed to his directors the discontinuance of Chase-Harris-Forbes securities, an affiliate of the Chase National Bank. Congress enacted a law paralleling Aldrich's suggestion that affiliates selling securities be completely separated from commercial banks.

Only a month before his unconventional statement Aldrich had testified before the Senate Finance Committee. At that time, according to his own declaration, he knew nothing about Wiggin's personal speculations. In the fall of 1933, when Wiggin testified before the Senate Banking and Currency Committee that he personally had made \$10,000,000 cash profits in open-market trading in Chase National Bank stock while Chase subsidiaries had lost money trading in pools, Aldrich jumped to his feet to protest that this was news to him. He declared he did not "approve of it and would not condone it while he was connected with the bank."

But there was general bitterness against the bank and its officers at this time and Aldrich's statement did him no good publicly. Some business and Wall Street observers turned a cold shoulder on Aldrich, first for his March 8, 1933 statement and now this, coming as it did on revelations of the bank's bad investments.

The bank came through with greater resources at the end of the year, however, and by 1936, despite the depression, was in better condition than it had ever been before. Aldrich's management has been entirely successful.

Aldrich has none of the smiling back-thumping cordiality expected by some of the banking fraternity. He enters his office "with stiff, cold strides" and goes to his

desk by the nearest route. But of his moral rectitude and his intense loyalty to the ideas which have been bred into him there can be no doubt. They are not the kind of ideas "that would have encouraged reckless speculation or market rigging or fundamentally unsound practice of any kind."

Winthrop Aldrich is not a colorful figure. "A deliberate, precise, well-tailored gentleman," he cannot be catalogued or classified easily. His New England background has given him reserve and disinterest in personal publicity. To his staff he is friendly and approachable. Aside from his duties at the Chase National, his charities and his membership in more than two dozen clubs, yachting has been in the past his special pleasure. In the days when he had more time for it the New York Yacht Club was his favorite club. He climaxed a successful yachting career in 1930 by managing the New York Yacht Club Syndicate which built the cup defender *Enterprise*. He sailed as the navigator under Skipper Mike Vanderbilt when the *Enterprise* defeated the late Sir Thomas Lipton's *Shamrock V*.

ALEXANDER, ALBERT VICTOR May 1, 1885- First Lord of the British Admiralty; leader in the Cooperative movement
Address: 1 Victor St, S. W. 1, London, England

When Ramsay MacDonald included A. V. Alexander in his administration in 1929 as First Lord of the Admiralty, one press comment was: "At least he will be the first Cooperator and the first Baptist lay preacher to be the ruler of the King's Navy." There proved to be no need for misgivings. Alexander turned out to be a wise administrator then, and today, as Lord of the Admiralty again, he is again a wise administrator. Political observers now believe that in the twentieth century only one other First Lord has been a bigger man in the post—Winston Churchill (see sketch this issue).

Alexander is a Socialist. Not a campaigning, fighting, fiery Socialist, but one who believes in the cooperative movement as the cure for most social ills. Without conspicuous oratorical gifts or a wide, world view of political questions, he has

nevertheless become a figure of importance in the progressive movement. He has figured in no "scenes," he has denounced nobody, he has emphasized not the abolition of Capitalism but the paramount virtues of Cooperation. And in doing this, as in acting as Lord of the Admiralty, his method has been one of quiet industry, of fact accumulation, of thorough knowledge.

Albert Victor Alexander was born in the pleasant seaside resort of Weston-super-Mare, the son of Albert Alexander, an artisan engineer. His boyhood was spent in the neighboring port of Bristol, where he went to public school. He left at 13 to become a junior clerk in the offices of the Bristol Education Committee. He was capable at his job, played football enthusiastically on weekends and began to read and study. Evenings he attended classes at the St. George Technical School in Bristol and generally, as the Victorians used to say, "improved himself."

When Alexander was 18 he left the Bristol Education Committee and went to work for the Somerset County Education Committee, with which he remained for 17 years, rising to be its chief clerk and serving as secretary to the Somerset branch of the National Association of Local Government Officers. Outside office hours he developed two absorbing interests. One was Cooperation, on which he made himself an expert. Eventually he became vice-president of the Weston-super-Mare Co-operative Society, after working on its management committee. The other was the Baptist religion. He became active in it locally, frequently preaching its doctrines.

With the coming of the First European War, Alexander joined the Artists' Rifles. After becoming a corporal he took a commission, served through the whole period of the War and rose to the rank of captain. After the War, in 1919, he acted as Education Officer for the Southwestern District.

It was in 1920 that Alexander secured his first national post in the Cooperative movement, as secretary to the Parliamentary Committee of the Cooperative Congress. When, in 1921, there was a proposal in Parliament to tax the undistributed dividends of the Cooperative societies, Alexander successfully led the opposition. He led it successfully again when the proposal was brought up in 1933.

In 1922 Alexander put up for Parliament in the Hillsborough division of Sheffield against a Cabinet Minister who had had the big majority of 7,000. Alexander won, by 3,318, and increased his majority in the 1924 election. During these two years in Parliament he acted as whip to the Cooperative Party. In 1924, when Labor formed its first government, he was appointed to the minor post of Parliamentary Secretary to

the Board of Trade. Thrown out by a second election that same year, he was absent from Parliament until 1929 when, in Labor's second administration, he was made First Lord of the Admiralty and sworn a Privy Councillor.

Even though the First Lord is only the political chief who is advised on technical matters by Sea Lords, still there were a good many explosions in officers' messes when the appointment was announced. It wasn't long, however, before Alexander had won the respect of both officers and men by his grasp of essential detail and his obvious care for efficiency and the welfare of personnel. He improved the working conditions and quarters of the common sailor and at Dartmouth (the Naval College) saw to it that not only the wealthy public school boys but also secondary school boys should be eligible for entry.

His position on broad issues of policy was considered sane and sound. Like most progressives he is a pacifist by conviction, but still feels that the aims of peace would not be furthered by unilateral naval disarmament. He did what he could to make the Five-Power Naval Treaty of 1930 an effective instrument for peace; he went to Paris and, with the late Arthur Henderson, did his best to compose Franco-Italian differences. One of his aims was to abolish the submarine, but in this he failed.

When Labor suffered its crushing defeat in 1931, Alexander again lost his seat and returned to Cooperative work. In 1932 he was one of those who helped form a new National Cooperative Authority. In 1935 he was re-elected to Parliament and, even though he was in the Opposition when the present War broke out, the First Lord of that day, Winston Churchill, often consulted with him. When Churchill as Prime Minister formed his government in May 1940, he was quick to appoint A. V. Alexander head of the Admiralty.

Alexander is a man of medium height, clean-shaven, with a keen and intelligent face. In the House the general opinion of him is that "he is appreciated, but is not big, jolly or hearty enough to become popular." He is married to Esther Ellen, youngest daughter of the late George Chapple of Tiverton.

ALLEN, GRACIE July 26, 1905- Radio and motion picture actress; member of team of Burns and Allen

Address: c/o National Broadcasting Company, Hollywood, California

Gracie Allen, whose full name is Grace Ethel Cecile Rosalie Allen, is the scatter-brained goof, the allegedly lightweight mental part of the team of Burns and Allen. In real life she is not so daffy. She and George Burns have been one of the major attractions of the networks since 1931.

As a guest on the *Information, Please* radio program in the summer of 1939, Gracie stacked up favorably with the most select experts, which is hardly in keeping with her professional dumbness on radio and screen. She played opposite James Cagney in a serious Irish playlet for a Screen Guild show, and did it very well. And one year the University of Southern California psychology students honored her by voting her Hollywood's most intelligent actress.

The actress' association with George Burns dates back to 1922, when she appeared for the first time with Burns at the Hill Street Theatre in Newark, New Jersey. Gracie had started her professional career in San Francisco, where she was born. Her father was a song and dance man, and when she was three and one half years old she joined his act. Later she attended a convent school in San Francisco, but at the age of thirteen or thereabouts joined three older sisters in vaudeville as a hooper. Next she joined the Larry Reilly Company doing jigs and dances and playing Irish colleen parts. When the Reilly Company got to Hoboken, New Jersey, Gracie left over a question of billing. She thought she deserved billing other than the "and company." Reilly decided she didn't.

GRACIE ALLEN

Vaudeville jobs were scarce, so Gracie decided to take up stenography. She was taking a secretarial course in New York when she met George Burns, then teamed with Billy Lorraine in a song and dance act at Union Hill, New Jersey. One of Gracie's roommates was doing an act at the same theatre, and Gracie met George backstage one night.

The team of Burns and Lorraine was just on the verge of breaking up, and Burns (Nathan Birnbaum, born January 20, 1898, a Manhattan youth who had been doing variety turns since he was 12) asked Gracie to work with him. Gracie left stenography, and her career of professional giddiness began. At first Gracie asked the straight questions and Burns gave the quip answers, but it didn't work, so Burns reversed the routine. Gracie became the garrulous, dumb girl of the act and Burns claims that theirs was the first mixed act to coax laughs without funny clothes.

The Burns and Allen pay envelope for the first three days of their act at the Hill Street Theatre was \$15. In 1940 they were reputed to be earning \$9,000 a week for their radio act. But they put in hundreds of weeks of vaudeville before they got anywhere near that figure. They had steady work, however, and realized their ambition to play on the Orpheum Circuit touring the West Coast.

Back in New York they broke in a new act and celebrated the event by taking time off, while they were playing in Cleveland, to get married. This was in 1927. Burns quipped, "I owed Gracie \$200 so we decided to take a gamble."

In New York they were seen by a Keith scout and the next day signed a five-year contract, the longest up to that time. Their salary is reported to have rocketed from \$400 to \$750 a week, and they took summers off to play in Europe. Their debut in radio was made in England in 1930, when the British Broadcasting Company asked them to do their act on the air.

Burns and Allen were playing at the Palace in New York on the same bill with Eddie Cantor in 1931 when they next appeared on the radio. Cantor, who at that time was broadcasting on a network program, asked Burns if he would allow Gracie to appear as a guest on his program. Gracie nearly stole the show from Cantor. The next day Burns and Allen had a radio offer. Since then they have remained in radio steadily, with little time off between changing sponsors.

Gracie's scatterbrained prattling and dumbness have made her a household byword in the United States. Gracie popped in on countless programs in 1933 looking for her supposedly lost brother, and created such a sensation that her real brother George, a San Francisco accountant, had to go into hiding until the gag blew over. Her latest exploit on the Burns and Allen

radio broadcast has given the act columns of publicity, for in 1940 Gracie entered the Presidential race as a candidate of the Surprise Party, and appeared unannounced on half a dozen network programs to air her politico-comic aims. "With what party are you affiliated?" she is asked. Gracie answers: "Same old party—George Burns." When it is pointed out that candidates always affiliate themselves with a party, Gracie says, "Well I may take a drink now and then, but I never get affiliated." Her political philosophy "is not one of overconfidence. I realize the President of today is merely the postage stamp of tomorrow," she says. Her *How to Become President*, prepared by the Gracie Allen Self-Delusion Institute, was published on June 19. The 1940 political campaign was not her first entrance into politics on the air. Once before, when Burns and Allen decided their program needed a little shot in the arm, Gracie ran for Governess of the State of Coma and created quite a sensation.

At home the comedienne is simple, unaffected, untheatrical. Her voice is mellow and entirely unlike that high-pitched thin voice she uses in her act. Of Irish descent, Gracie Allen is an attractive, petite brunette. Her hair is an auburn tone, her eyes hazel and her skin a creamy white. Most of the year she and her husband, George Burns, live in a 12-room Beverly Hills, California house with their two adopted children, Sandra Jean, born July 1934, and Ronald John, born July 1935.

The private lives of Burns and Allen have been without scandal or headlines, except for the trial of George Burns in 1939 on a charge of buying jewelry smuggled in by Albert Chaperau and avoiding paying the duty on it. Burns pleaded guilty and was fined \$8,000.

Their radio act is an amiable bit of husband-and-wife teamwork. George knows that Gracie can get the laughs and has purposely selected the minor rôle for himself. While they employ script writers, George Burns himself often writes the jokes for Gracie Allen. He does not have the slightest jealousy of her popularity, but off the radio and screen, when they are at home, it is George who entertains the guests. Off the air George Burns is said to be one of the funniest men in the world, as well as a keen, matter-of-fact businessman who knows the show business.

Burns and Allen made their motion picture debut in short subjects while they were still in vaudeville. Later they appeared in feature pictures: *The Big Broadcast, We're Not Dressing, Love in Bloom, College Humor, Six of a Kind, The Big Broadcast of 1935, Soup to Nuts, Here Comes Cookie, The Big Broadcast of 1937, College Holiday, College Swing* and the *Gracie Allen Murder Case* (Gracie alone).

Apart from radio and screen work, Gracie has found time to indulge in a bit of painting in her own style of surrealism. In 1938

she gave an exhibit of her revolutionary surrealism in a Manhattan gallery. Some of the typical titles of pictures were *Gravity Gets a Body Scissors on Virtue as Night Falls Upside Down* and *Eyes Adrift as Sardines Wrench at Your Heartstrings*.

ALLEN, JOEL NOTT 1866—Mar 11, 1940 Artist

Joel Nott Allen, famous portrait painter, died at Port Jefferson, New York, March 11, 1940, at the age of 74. Born at Ballston Spa, New York, the son of the Rev. Edward B. and Margaret Copper (Nott) Allen, he attended the Mount Pleasant Military Academy in Ossining, New York, and studied art under Robert Blum and H. Siddons Mobraay as well as at the Art Students League and the Metropolitan School. Mr. Allen's work is represented in permanent collections in the National Gallery, Washington, D. C.; the Gibbs Memorial Gallery, Charleston, South Carolina; the New York Chamber of Commerce, the Museum of Natural History and the Lotos Club, New York; and numerous private collections.

ALMAZAN, JUAN ANDREU (äl-mä-zän' huän an-drē-ōō') May 11, 1891- Defeated 1940 candidate for President of Mexico

December 1940 Bulletin: General Juan Andreu Almazán, officially defeated for the Presidency of Mexico in the elections of July 7, 1940, claimed that the Almazánistas had actually polled 90 per cent of the total votes and that he still had every intention of taking office on December 1. While he was seeking the support of American financiers and political leaders for his cause his fol-

Associated Press

JUAN A. ALMAZAN

lowers set up a rump Congress in Mexico City and were reported as using Texas as a base for operations in the north. Sporadic revolutionary attempts and guerilla warfare resulted in many deaths, and the hope of forestalling outright civil war which would give the United States a reason for intervention at this critical time was most likely the cause of increasingly conciliatory policies on the part of President Cárdenas' government and increasingly conservative statements on the part of President-elect Avila Camacho (see sketch this issue) as inauguration day drew nearer. In fact, Camacho has been accused of having appropriated Almazán's program in an attempt to win over his supporters. One of the most loyal of these was evidently the organ of the Spanish Fascist government, which in August 1940 described Almazán as "the future Mexican President, friend of Franco." In November 1940, however, prospects for a revolution seemed unlikely, especially after the United States government recognized Camacho's election. On November 27 Almazán, who had returned to Mexico, renounced his claim to the Presidency, although his followers continued to demonstrate.

From June 1940 issue:

On July 7, 1940, a new President will be elected in Mexico. If the United States press seems to be taking an abnormal amount of interest in the elections, it is because revolution is expected to be one of its by-products. On April 3, 1940 Cordell Hull (see sketch this issue) sent a note to the present government of President Cárdenas, calling attention to the strained relations now existing between the United States and Mex-

ico which have grown out of Mexico's 1938 expropriation of foreign oil and mining concessions and suggesting arbitration of the dispute. Since that time relations with Mexico have grown even more strained. On May 1, after organized demonstrations against "Yankee imperialism" in all of Mexico's 28 states, came the reply of the Mexican government refusing international arbitration for what it considered a domestic issue. A private and direct agreement was reached with the Sinclair oil interests, however, and the government indicated its willingness to negotiate with any other oil companies that care to do so. Of the remaining companies, it is Standard Oil that has the biggest stake in Mexico.

Up to this time the hope of United States oil interests has seemed to lie with conservative General Juan Andreu Almazán, who is opposing the Cárdenas party's candidate for President, General Manuel Avila Camacho, and who favors a policy of co-operation with the United States. The General claims to doubt the government's sincerity in promising a fair election, and has stated that he will hold a private election the day before or on the day of July 7; if votes in the two elections do not tally, he threatens force. "If the government attempts to thwart the will of the people by manipulating votes at the election of July, I shall know what course to follow." Two weeks before the election the Dies Committee (see sketch this issue) also proposes to hold an inquiry in Texas with regard to alleged efforts by Communists and Nazis to take over the Mexican government. This proposal, Mexican authorities charge, is designed purely to aid Almazán, whose clique would probably present testimony about such a conspiracy, and to give the United States an excuse for intervention. In the meanwhile there are rumors of heavy arms smuggling across the United States border and of a coming march against Mexico City or the establishment of an independent Rightist government in Northern Mexico by Almazán's followers. As a precaution the government will mass its troops to rally popular support and to overcome the opposition.

Forty-nine-year-old Juan Almazán has long taken an active interest in Mexican politics, although previously he was more concerned with bullets than ballots. He was born in 1891 in the mountains of Guerrero. His family were wealthy landowners, among the seven per cent which formed the aristocracy of Mexico at that time. When he quit his medical studies to join Francisco Madero's forces, which exiled dictator Díaz in the bloody Revolution of 1910, it may have been merely because of natural adventurousness, for it is certain that once in uniform he never showed any desire to return to medicine. In 1913, the year that Madero was forced out of office and murdered, Almazán was already commander of the garrison of Morelos. The reactionary

Huerta moved into power. Twenty-two-year-old Almazán did not revolt against tyranny for the second time, however, but served with Huerta. In fact "since Díaz' time," he says, pointedly, "I have never revolted against established government."

Almazán profited by the chaos of the middle '20s, revolt or no revolt, and became a "self-made general," leading 15,000 men. When Calles headed the government in 1924 it was Almazán who was chosen to command Monterrey, the country's most important army zone, and he held that same post under the three Calles-made Presidents who followed.

In 1928 Almazán was backtrailing Don Quixote in Spain—"on a well-fed and spirited Rosinante." In 1929 he distinguished himself by his quick suppression of a threatened revolt. In the meanwhile he was in a position to add to his private fortune. Privately he developed the resort property from Monterrey to Acapulco on the south Pacific coast. He became head of a construction company which landed one fat government contract after another and which in 1931 successfully took charge of one of the great engineering jobs of the world, the Pan-American highway. Often his soldiers were used in the work of construction; the Monterrey army post was entirely soldier-built, as was his summer home and resort center, constructed in 1933 on a mountain shelf 3,000 feet above Monterrey.

In late 1934 Cárdenas and the Party of the Mexican Revolution (P. R. M.) came into power, but Cárdenas was rather careful to leave Almazán alone. It was noted that in 1938 Almazán was not called upon to hunt down the rebellious Cedillo, and that there were practically no expropriations in Almazán's adopted state of Nuevo Leon. But Almazán was waiting for the psychological moment to make his appearance on the political scene. The young government was having its difficulties; six years was hardly long enough for the country to make a successful economic and financial adjustment to Cárdenas' sweeping reforms. The Constitution declared that the President may not succeed himself, and Cárdenas, loyal to its principles, refused to run again.

In 1939 General Manuel Avila Camacho, Secretary of National Defense and not known as a "strong man," was chosen as the candidate of the P. R. M., with the endorsement of Vicente Lombardo Toledano (see sketch this issue), Mexico's John L. Lewis. Although Mexico has never in all its history had a truly democratic election, Cárdenas promised that in the 1940 election the President would be elected by the people. The new law of Federal elections, the lack of political prisoners in the jails and the freedom of the press enjoyed by the opposition as well as by those sympathetic to the government seemed also to promise well.

In 1939, when Washington cut the price paid for Mexican silver and thus added the "next-to-last straw" to the country's financial worries, General Almazán, "big, erect, handsome in a leonine way," finally decided it was time to come down from his mountain shelf and offer to save the country.

Almazán is "supported by the Right and talks Left." He claims to have the backing of a large section of labor and of the P. R. M., but Northern Mexican industrialists are known to be solidly behind him, and some have claimed that he is backed by foreign oil interests. Vice-President Garner is one of his good friends outside his own country. His campaign is financed by "patriotism bonds, non-redeemable and suitable for framing," by his own personal fortune and by the fortunes of his friends.

Although calling himself "profoundly nationalistic," Almazán still opposes those forces which foster an anti-Yankee spirit in Mexico. "We can never have either the sympathy or cooperation of the American people to become a strong nation unless we establish bonds of true friendship with them. This must be based upon conscientious respect of our mutual rights," he has said.

To the Mexican people he promises peasant ownership of land instead of the present collectivist system. His speeches run like this: "Do you really own the land today? Or have you just traded the old landowner for a greater one in Mexico City?... I will see that you own the land. You, Pablo, will have your 10 acres. You, Pedro, will have yours. You may cultivate it or you may sit and look at it. But when the workingman's crop comes in there will be no bookkeeping agent to rob him of it. That is what we fought for in 1910."

He claims that the present government and unions are overrun by corrupt politicians and racketeering labor leaders. "People of Mexico," he cries, "you overthrew your oppressors in 1910, but are being enslaved anew today by thousands of parasites and vultures who are reducing you to a deeper, more abject misery."

Of the reforms of the Cárdenas government he says: "This is a very fine dream. But are you eating?"

A Catholic himself, he has the support of a large number of Catholics because of his promise of freedom of education. His advocacy of woman suffrage has won him the backing of many Mexican women. Few observers at this time believe that his following is strong enough to assure his election against the Cárdenas candidate, however, even though Almazán has partially succeeded in splitting the ranks of union labor and of the Party of the Mexican Revolution.

An election campaign in Mexico has little in common with a fireside chat. Camacho posters are ripped down during the night and replaced with Almazán posters; the next night finds the Almazán posters torn down. Already there have been

ALMAZAN, JUAN—*Continued*

many pre-election killings, and at one time Almazán was given a bodyguard of 150 soldiers by Cárdenas.

Almazán maintains a costly home in Mexico City, but usually he spends most of his time in his "mountain aerie," 600 miles to the north. There he has a private zoo, where he can divert himself with all varieties of the country's wild animals. "I am a mountain man," he insists. "I do not feel right where things are flat."

ALTENBURG, ALEXANDER 1884—Mar
 12, 1940 Artist

Well-known artist and member of the
 firm operating the Altenburg Piano Com-
 pany of Elizabeth, New Jersey, Alexander
 Altenburg studied art in Europe and
 toward the end of his life spent most of
 his time painting there. He won favorable
 comment from American and European
 critics for his French landscapes. The
 French government purchased three of his
 paintings. A diploma of honor was awarded
 him at the Bordeaux International Exposi-
 tion in 1927. His works hang in the
 Luxembourg Museum, the Salon d'Automne

and the Jeu de Paume, all of Paris, the
 Brooklyn Museum and the 57 Fifth Avenue
 Gallery, New York.

Altenburg died after a long illness, at
 the age of 56, leaving a widow and three
 brothers.

AMSTERDAM, BIRDIE Mar 25, 1902-
 Judge

Address: b. 51 Chambers St, New York City;
 h. 299 E 11th St, New York City

The first woman justice elected to the
 Municipal Court in New York County is
 38-year-old Birdie Amsterdam. The attrac-
 tive brunette judge was inducted into office
 January 3, 1940 by Presiding Justice Pelham
 St. George Bissell.

Judge Amsterdam's primary interest is
 social service. "To my mind, law is a so-
 cial institution," she says. "A jurist should

BIRDIE AMSTERDAM

be socially minded, should be sympathetic, understanding, tolerant, patient and humane. Of all the institutions in our government, the courts are the bulwarks of Democracy. Theirs is the responsibility for safeguarding citizens against any invasion of their personal or civil liberties."

Born in New York City on March 25, 1902, Miss Amsterdam was one of six children in a family of Austrian Jewish immigrants. Today, two brothers are physicians, one a pharmacist; Miss Amsterdam's older sister was formerly a nurse, and her younger sister is shortly to be admitted to the Bar.

At the age of 12 Miss Amsterdam was graduated with honors from a grammar school in the heart of New York's crowded tenement district. To continue her schooling she worked in a candy store and at Mt. Sinai Hospital during the day and after high school attended evening classes in banking and economics at the College of the City of New York. Her law degree she obtained from New York University Law School.

In 1923 she opened her own office and practiced law for many years alone. Later she became associated with her brother-in-law and took an active role in politics. At one time she was a co-leader in Tammany Hall.

Miss Amsterdam's election to the Municipal Court is for a 10-year term during which her salary is \$10,840 a year. But money is of minor importance to her; many of the clients in whom she has become most interested have been too poor to pay her anything for her legal aid.

This attitude Judge Amsterdam explains by saying: "At an early age I was taught to do justice, to love mercy and to walk humbly with my fellow man. This precept I have endeavored to practice at all times, and I hope to be given the strength of heart and mind to continue to dispense justice to the fullest measure of sympathy and mercy."

Judge Amsterdam's father, Joseph Amsterdam, is dead, but Mrs. Essie Amsterdam is living. "Any success I've had," says the justice, "I owe to those two people."

ANDERSON, MARIAN Feb 27, 1908—Negro contralto

Address: b. 30 Rockefeller Plaza, New York City; h. 762 S Martin St, Philadelphia, Pennsylvania

When Toscanini heard Marian Anderson sing he said: "A voice like hers come once in a century." The 75,000 people who came to hear her before the Lincoln Memorial on Easter 1939—the greatest crowd since Lindbergh's triumphal homecoming—and the thousands who buy tickets for her concerts months in advance are heartily in agreement.

This singer who, according to *Variety's* box office score, is topped in popularity only

MARIAN ANDERSON

by Nelson Eddy and Lily Pons, and whose concerts are now booked for two years in advance, was born of poor Negro parents in South Philadelphia in 1908. Her start was an early one. "Indeed," she says, "I have expressed myself through my voice as long as I have known myself." At six she joined the junior choir of the Union Baptist Church and at thirteen the senior choir as well. After her father died when she was 12, she helped support her family by singing at church concerts.

During her second year at the South Philadelphia High School for girls her remarkable voice gained the attention of John Thomas Butler, the distinguished Negro actor. He sent her to Mary S. Patterson, who offered to teach her without pay. Some months later the Philadelphia Choral Society gave her a benefit concert and sent her to work with a leading contralto and teacher, Agnes Reifsnnyder, of Philadelphia. When she was 19 her high school principal, Dr. Lucy Wilson, helped her meet Giuseppe Boghetti, the famous teacher.

Boghetti remembers her first audition well. It came at the end of a long, hard day's teaching when he was weary of singing and singers, and there was a tall calm girl who sang *Deep River* in the twilight and made him cry.

In 1925 Boghetti entered Marian Anderson's name in a singing contest, the winner of which was to sing at the Lewisohn Stadium in New York accompanied by the New York Philharmonic Orchestra. She won against three hundred other singers and her concert was a triumph. An important manager placed her under contract. Nothing happened. Engagements were negligible. Everyone said: "A wonderful voice—it's too bad that she's a Negro." Marian Anderson spent a year being coached by Frank La Forge and left

the United States, discouraged by the barriers of racial discrimination.

Her first concert in Germany cost her \$500. This was the last time Marian Anderson ever paid to perform. From then on success was swift. She sang before King Gustav in Stockholm and before King Christian in Copenhagen, and received one of his rare invitations from Sibelius, the great Finnish composer. When she came in to see him, Sibelius said to his butler: "We will have coffee." After she sang, he shouted: "Not coffee, *champagne!*" To her he dedicated his song, *Solitude*.

On December 30, 1935 Marian Anderson gave her first New York recital after her return from Europe, standing throughout on one foot, her other foot in a cast. In 1936 she was asked to give a solo at the White House. When President Roosevelt said to her: "Oh, hello, Miss Anderson, you look just like your pictures, don't you?" she had the only attack of stage fright of her life.

Despite her tremendous success, when her agent tried to book a concert at the D. A. R.'s Constitution Hall in Washington for Easter 1939, the D. A. R. told him that "all dates were taken." Immediate protests were made by famous musicians. Heifetz, scheduled to play in Constitution Hall, said he was "ashamed" to appear there, and Walter Damrosch, Deems Taylor (see sketch this issue) and others fought against this discrimination. Leading clergymen and statesmen protested, too. The fight was climaxed by Mrs. Roosevelt's (see sketch this issue) announcement in her syndicated column that she was resigning from the D. A. R. and by Secretary Harold Ickes' securing of the Lincoln Memorial Hall for her Easter concert. This concert was used as the subject of a mural design contest for the new Department of the Interior building, announced by the Federal Works Agency's Section of Fine Arts in October 1940.

Marian Anderson is now the most popular concert singer in America and possibly in the world. Critics can't praise her tone and expressiveness enough. They call it a "voice of many rewarding timbres, clear and silvery in the soft upper tones, full and warm in the lower register"; they rave "over its sheer loveliness." With its three octave range it is particularly amazing in songs like the *Erl-könig* or *Der Tod und das Mädchen*, in which she uses both her lower register and her soprano.

Her repertoire is varied—two hundred songs in nine languages, Purcell and spirituals. No program of hers is complete without spirituals. "They are my own music," she says, "but it is not for that reason that I love to sing them. I love the spirituals because they are truly spiritual in quality; they give forth an aura of faith, simplicity, humility and hope."

It's been a life devoted to music and to her people that Marian Anderson has led. She has never married. Her friends are few, Kosti Vehanen, her coach and accom-

panist, being her only close one. Her home is still in South Philadelphia across the street from the house in which she was born.

On July 2, 1939, Mrs. Roosevelt presented Marian Anderson with the Spingarn Medal, given annually to the American Negro who "shall have made the highest achievement during the preceding year or years in any honorable field of endeavor." When Mrs. Roosevelt presented it she told Marian Anderson: "Your achievement far transcends any race or creed."

ANDERSON, MARY Aug 27, 1872- Di-
 rector of the Women's Bureau, United
 States Department of Labor

Address: h. 528 17th St, N W, Washington,
 D. C.

Mary Anderson, who has spent over twenty-one years as a bureau chief under five administrations, is today the dean among women in key appointive positions in the Federal government. Her job as head of the Women's Bureau of the Department of Labor has been to formulate standards and policies to improve working conditions for women, to increase their efficiency and to develop their opportunities for profitable employment. In doing this she has had to break down prejudices; she has had to build up understanding; she has had to inspire confidence among government officials, congressmen, employers, employees, labor unions, all kinds of women's organizations, economists and social agencies.

Miss Anderson was born in the small city of Lidköping in Sweden on August 27, 1872, the youngest of seven children. Her home was on a farm and Mary passed her days churning, carrying wood, helping with the housework, spinning and weaving. An older sister who had gone to America wrote back glowingly of life there, and when Mary was 16 she joined her. First she lived in Ludington, Michigan where her sister was working.

Mary couldn't speak a word of English and found herself working as a cook,

MARY ANDERSON

spending every free minute studying English. But this lasted only a year, for her sister married and moved to West Pullman, near Chicago, Illinois, taking Mary with her. Mary got a job in a garment factory and then in a shoe factory. For 18 years she earned her living by stitching shoes.

Mary didn't just do her job. She began to analyze the difficulties confronting the workers in that factory; she began to see that even though women had their own peculiar problems, it was only when all workers stood together on important issues that progress could be made. Much of her spare time was spent with her "local" of the International Boot and Shoe Workers' Union—after 10 hours of daily stitching in the factory she would dash off to union meetings, or to meetings of civic and educational groups in Chicago.

Because of "her innate ability and enthusiasm," eventually she was made president of Local 94, one of the oldest and best-known in the shoe industry. As president she traveled to other shoe centers, began to meet labor leaders in many industries and later became the only woman on the executive board of the International Boot and Shoe Workers' Union.

The American women's movement saw in her an invaluable aid toward furthering the progress of women wage earners, and she was asked to leave her shoe operator's machine to take a full-time position as organizer for the National Women's Trade Union League. Eight years of this work proved excellent experience. Mary Anderson learned to speak at a moment's notice; she gained knowledge of industrial, economic and legal matters, of sectional and national labor conditions, and particularly of the handicaps and hardships of women workers.

ANDERSON, MARY—*Continued*

When the United States entered the First World War Miss Anderson was drafted into service. She explains how it all happened: "The suddenness of it took my breath. It was at the beginning of the World War when . . . I was busy helping a thousand women out on strike in Chicago. Mrs. Raymond Robins, then president of the League, announced to me at 9 o'clock one morning: 'You will have to take the noon train to Washington today.' She explained that I was to attend the meeting of the woman in industry section of the Council of National Defense. I protested that I didn't want to desert the girls, but Mrs. Robins insisted she would take my place. I never dreamed that what appeared to be just a brief interlude would end up in steady work in Washington."

Miss Anderson's first job was to supervise the laboring conditions of women munitions workers. One war job led to another and in July 1918 she was appointed assistant director of the Woman in Industry Service "to safeguard the interests of women during the War and to make their services most effective for the national good."

After the War she was appointed director of the Woman in Industry Service to succeed Mary van Kleeck, who resigned in August 1919, and when, in June 1920, Congress converted this agency into the permanent Women's Bureau, Miss Anderson was retained as director, the first "labor" woman to hold any responsible position in Washington. During the 20 years she has headed this bureau she has made intensive studies of conditions and problems among wage-earning women; she has been instrumental in formulating standards and policies for their safe and efficient employment; she has cooperated with many important organizations, assisting and advising in special projects pertaining to the welfare of women workers. It was she who was responsible for calling two important conferences on woman in industry in the United States, attended by representatives of all national organizations of women. When she attended the Seventeenth International Labor Conference at Geneva, Switzerland in June 1933 she was appointed chairman of the American delegation of official observers. In April 1937 President Roosevelt appointed her adviser to the United States Government Delegate to the Technical Tripartite Conference on the Textile Industry.

One of the busiest officials in Washington, gray-haired Miss Anderson is also one of the most approachable—ready to meet anyone who calls at the bureau. Women workers everywhere feel that Mary Anderson, the former factory worker, is still one of them, vitally concerned about their welfare. They know that her aim is "to safeguard

the interests" of the millions of women in the United States who earn their living.

ANDERSON, MARY [obit] See Navarro, M. de

ANGELL, JAMES ROWLAND (än'jĕl) May 8, 1869— Educational counselor for the National Broadcasting Company

Address: b. 30 Rockefeller Plaza, New York City; h. 155 Blake Rd, Hamden, Connecticut

Dr. James Rowland Angell, who in June 1937 retired as president of Yale into the still very active position of its president-emeritus, actually merely changed "his base of educational endeavor from New Haven to New York, from a university to the air." Since that time he has been NBC's educational counselor, numbering the "students" under his guidance by the millions rather than the thousands.

Dr. Angell has spent by far the greater part of his life on university campuses. He is descended from nine generations of Rhode Islanders. His grandfather was president of Brown from 1868 to 1872, and his father, James Burrill Angell, was president of the University of Michigan for 38 years. His mother was Sarah Swope (Caswell) Angell. James Rowland himself was born in Burlington, Vermont on May 8, 1869—on the campus of the University of Vermont, where his father was president for a brief time. When he was 11 years old he spent a year with his parents in Peiping, where his father had been sent as Minister to China, but it wasn't long before he was back on a campus, and he ended up by attending the University of Michigan himself. He studied under John Dewey, played shortstop on the baseball team, won the university and state tennis championships, played clarinet in the university band, became a member of Phi Beta Kappa and Delta Kappa Epsilon, received his B. A. in 1890 and his M. A. a year later. It was also at Michigan that he fell in love with Marion Isabel Watrous of Des Moines, Iowa, whom he married in 1894.

Young Angell's great interest was psychology, and he next spent a year at Harvard studying under William James and Josiah Royce. He received his M. A. from Harvard in 1892, and then was one of the first to go to Germany to explore the field. In 1893 he was studying at the universities of Berlin and Halle, and he also traveled and studied at Vienna, Paris and Leipzig. Back in the United States the same year

he secured a position as instructor in philosophy at the University of Minnesota, and then in 1894 he became assistant professor of psychology and director of the psychological laboratory at the University of Chicago. For 15 years he was engaged in psychological experimentation. In 1901 he became an associate professor, in 1905 professor and first head of Chicago's department of psychology. In 1908 appeared his *Psychology*, the first textbook after William James' to come into extensive use in schools and colleges. The same year Dr. Angell became senior dean, and, in 1911, dean of faculties at Chicago. *Chapters from Modern Psychology* (1911) and *Introduction to Psychology* (1913) followed his first textbook, and from 1912 to 1922 he was editor of *Psychological Monographs*, a series of research publications. He was fifteenth president of the American Psychological Association, and, with John Dewey, who was at Chicago at the same time, did much to shift the emphasis in modern psychology to the process of adaptation of the individual to his environment.

After serving in 1914 as an exchange professor at the Sorbonne and from 1918 to 1919 as acting president of the University of Chicago, Dr. Angell came to the Carnegie Corporation as its president in 1920. He was there only a year, however, before he was called to be Yale's first non-Yale president, shortly after a sweeping reorganization. He accepted the position.

Some Yale alumni were described as "stricken with grief and shame" at the very thought of a president who wasn't a Yale man himself. Their shame, at least, couldn't have lasted long. Although Dr. Angell never went so far as to acquire a nickname on the campus, and his second wife, the former Mrs. Katharine Cramer Woodman, whom he married in 1932 (his first wife died in 1931), is said to have outshone her husband as a New Haven character, his 16 years at Yale were great ones in the history of the University. He inaugurated the new College Plan; he doubled the amount spent annually for maintenance and instruction, rebuilt the campus almost completely; he trebled the value of the Yale plant, quadrupled the University's endowment; during his presidency the School of Nursing and the Institute of Human Relations were founded, and the Medical School, the Law School and the School of Fine Arts enjoyed a great renaissance.

Since all Yale faculty-men must retire at 68, in 1937 Dr. Angell celebrated his sixteenth and last commencement as president of the University, bestowing an honorary LL. D. on his friend Cordell Hull (see sketch this issue). Major Lenox R. Lohr, president of NBC, saw his opportunity, and approached Yale's president-emeritus, still "lively as a cricket despite what he called his 'obvious and offensive senility.'" Said Major Lohr, in effect: "Your father was a pioneer; you've been a pioneer; in our opinion here at NBC there is a still greater

William Haussler

JAMES ROWLAND ANGELL

pioneering opportunity in a new field that we believe has great possibilities for human good and public service." In 1937 NBC was planning to devote a much greater part of the networks' total broadcasting time to "educational programs," and Dr. Angell was offered the position of educational counselor, with a free hand "to devise and suggest methods," an executive office at Radio City and a reputed salary of \$25,000 a year. After many conferences Dr. Angell accepted the post; he spent his first year studying foreign and American systems of broadcasting to determine just what the relationship between radio and education should be; and, following a survey abroad, he made the recommendations which at present pattern and guide NBC's expanding activities in the field of public service broadcasting.

Dr. Angell has always been concerned with the freedom of the university and has spoken against the teachers' oath bills which, he pointed out, certain university presidents must take, though Father Coughlin (see sketch this issue) does not. He has been almost equally disturbed at the cessation of the flow of small legacies caused by governmental taxation—according to *Time*, "who soaks the rich soaks him," and according to Dr. Angell himself, "the right to tax is the right to destroy." Nevertheless, as he said in 1936, "if our universities are fully to justify to the increasingly critical public their intellectual and moral freedom . . . they must . . . turn more of their attention toward those urgent and compelling problems upon whose solution depends the very existence of civilization itself." He finds the increasing study of the social sciences an encouraging symptom in this direction.

Dr. Angell is a member of numerous scientific societies, among them the psychology committee of the National Research Council,

ANGELL, JAMES—*Continued*

of which he was chairman from 1919 to 1920. He is vice-president of the National and International Committees for Mental Hygiene, since June 1939 has been national president of the English Speaking Union and is a director in the New York Life Insurance Company and the National Broadcasting Company. He holds honorary degrees from more than 20 universities and colleges, numerous decorations. Besides articles in scientific and popular journals, his recent works include *American Education* (1937) and *War Propaganda and the Radio*, a pamphlet published in 1940.

"A very successful social personality," he is a member of the Graduate Club of New Haven, the Yale Clubs of Boston and New York, The University Clubs of Boston and Chicago, New York's Century Club and the Cosmos Club of Washington, D. C. He has one daughter, now Mrs. William Rockefeller McAlpin, and his son, James Waterhouse Angell, is an "orthodox professor of economics at Columbia University."

The Order of the Past Participle, "that exclusive company of onetime college and university presidents who continue to function actively after retirement," also claims Dr. Angell as a member. He lives in Connecticut and commutes to Radio City, New York. His hobbies include sailing, golf and reading.

ANTONESCU, ION (än-tōn-čs-kōō' ē-ōn')
1886- Premier of Romania

Address: Bucharest, Romania

On September 5, 1940, only three days after his release from the prison where he had been interned for "prohibited political activity," General Ion Antonescu, known as the "Red Dog," was appointed Premier of Romania by hard-pressed King Carol II (see sketch this issue). Parliament and the constitution were dissolved and dictatorial powers acquired by the General. This did not appease his vociferous Iron Guard supporters, however, and after violent demonstrations on their part he was compelled the next day to demand the abdication of the King to whom he had sworn allegiance. Carol fled; his 18-year-old son Michael for the second time acquired a sceptre without much weight to it.

Among Antonescu's first acts as military dictator of Romania were to lift the press censorship, cancel the extraordinary police measures which had been in effect since King Carol's "one-party" rule, restore Maniu's National Peasants and Bratianu's National Liberals to their legal status and release Iron Guard prisoners. His intentions were obviously to establish a "broader national government with a strong army flavor, in which all political parties, as well as the Iron Guards, will be represented." He also issued "sweeping decrees aimed at those who became wealthy under 10 years of the rule of the deposed King," abolished Carol's Party of the Nation and the National Guard, and a great many arrests were made among those identified with the former government. Its anti-Semitic flavor was preserved, however, and even intensified, although Antonescu later announced that he "could not possibly accomplish miracles in one week," and that the Jewish population would suffer nothing if it did not "sabotage the régime either politically or economically." As for himself, he took over four cabinet posts—the Ministries of War, Armaments, the Navy and the Interior.

One of the major aims and also major difficulties of Antonescu's government was to appease Romanian resentment against Romania's losses to Hungary. Immediately after taking office the General dispatched messages to Hitler and to Mussolini assuring them both of Romania's devoted loyalty to the Axis powers and of her intentions to carry out the terms of the Vienna "arbitration" peaceably. In his alignment with Germany he had the support of the fascist Iron Guards, who even back in 1936 were calling for friendship with the Axis, but he also had some difficulty in reaching an agreement with them because of their extreme demands for power. Finally early in October 1940, shortly before Germany's occupation of Romania, the Premier appeared before an Iron Guard rally wearing the green shirt of the organization, and assumed supreme command. The Iron Guard murders which took place late in November, after Antonescu had officially aligned Romania with the Axis, seemed to show that he had lost authority over them, however.

Antonescu is officially a Nationalist, and although he has been tagged "pro-German" since his rise to power, he has been known as "pro-British" throughout most of his career. His present position might be ascribed more to tough-minded political realism than to natural sympathy with Nazi aims. He is something of a cosmopolitan. Born of an aristocratic family in Transylvania, then a part of Austria-Hungary, he was educated at military academies in France and married a Frenchwoman. During World War I he served in the Romanian Army (where the standing of graduates of French military academies was very high), finished with the rank of major and shortly after the Armistice was promoted to the rank of colonel.

ION ANTONESCU

During the latter half of the '20s he was a military attaché in Rome and London. Carol's 1930 *coup d'état* was partially arranged by a friend of Antonescu's, Major Precups (who in September 1940 was released by Antonescu after having been imprisoned for having later taken part in a plot against Carol's government), and Antonescu himself was at that time far from unfriendly toward the King. It was during Carol's rule that he became a general and was finally appointed chief of staff in 1937.

The summer of 1938 found him out of favor, however. Mr. M. W. Fodor, authority on Central Europe, tells us how it happened. Carol was giving a reception attended by Romanian society and prominent government officials, among them his chief of staff. Magda Lupescu (see sketch this issue) chose to appear on that occasion. Antonescu rudely refused to kiss her hand; he was "forced to go," demoted to the command of the third army corps. It was November 29, 1938 when he left the army, suspended because he had condemned Carol's suppression of the Iron Guard, and two days later there occurred the abortive revolt against Carol, most of the leaders of which were discovered and imprisoned. Antonescu was among them.

Freed not long afterward and given the post of Minister of War, Antonescu made himself one of the strongest critics of the policies of the various Romanian governments since the abolition of political parties. After the resignation of Tătărescu he is said to have appeared before the King and asked for a change in policies, but without success. In the early summer of 1940 he was forced to resign his cabinet post, and in July 1940 was once more arrested for opposing the cession of Bessarabia and Northern Bukovina to the U. S. S. R. (he

had always been known as anti-Soviet). His opposition to the surrender of territories increased his popularity with both the Iron Guard and Maniu's Peasant Party, however, and the greater part of both parties supported the replacement of Carol's royal dictatorship by his military dictatorship. One Romanian newspaper, at least, rejoiced:

"Here is General Antonescu, the man in whom the Romanian people have been putting their hope for a long time, the man who only three days ago was freed from the prison of Bistritza, where he was detained without justice and without judgment, the man who only now, in the eleventh hour and when the greatest part of our frontiers are lost, has been called to bring calm and consolation to a people embittered by a tyrannic form of government under which it has lived for ten years and during which time the youth of the Nationalist generation has been basely killed and from whom billions of *lei* belonging to the country have been stolen under the pretext of rearmaments."

General Antonescu has been described as "honest, serious, clever, well-informed." His photographs show him as bland, trim, square-jawed, with regular features and hair graying a little at the temples.

ARMSTRONG, EDWIN HOWARD Dec 18, 1890- Inventor; electrical engineer
Address: h. 435 E 52nd St, New York City

The method of eliminating static in radio by means of wide band Frequency Modulation, announced in 1939 and perfected in 1940, will soon revolutionize radio broadcasting and reception. Since Frequency Modulation may supply also the keystone in television and facsimile broadcasting, it is likely to remake the whole face of mass communication in the next decade. F M broadcasts may start in January 1941 commercially, and in the autumn of 1940 Major Armstrong gave a six-week series of lectures on this new art at the American Institute of Electrical Engineers.

ARMSTRONG, EDWIN—Continued

The story of this most important development in radio since its inception is largely the story of the work of one man, Edwin H. Armstrong, who modestly calls himself an electrical engineer, but who has to his credit three outstanding previous inventions in the radio field. He has been Professor of Electrical Engineering at Columbia University since 1936. In February 1940 he was one of 19 inventors and scientists awarded the American Pioneers' Plaque by the National Association of Manufacturers.

Edwin H. Armstrong was born in New York City December 18, 1890, the son of John and Emily L. (Smith) Armstrong. During his freshman year at Columbia University he commenced research with the vacuum tube. In his sophomore year, dissatisfied with Dr. Lee De Forest's explanation of how his tube worked, he set out to find an explanation for himself. His experiments led to the discovery that the vacuum tube was a generator of high frequency currents. Thus in 1912, at the age of 22, Armstrong invented the regenerative circuit for high frequency oscillations, revolutionizing radio transmission. The following year he filed for a patent on it; in 1914 De Forest filed an application for a patent embodying part of the same principle. A battle ensued that went on for some 18 years, with many costs, legal tangles and complexities. In 1924 the legal tide turned against Armstrong. In 1933 he again attempted to gain recognition of what he believed to be his priority to the invention, and won in the court of appeals, only to have the Supreme Court reverse judgment in favor of De Forest in 1934. But most radio engineers agree that the honor of the invention belongs to Armstrong.

After his graduation in 1913, Armstrong stayed on at Columbia as assistant in research to Michael I. Pupin. But at the outbreak of the War he went to France as a captain, later becoming a major in the United States Signal Corps in charge of aircraft and intelligence radio. Three months before the Armistice he perfected the superheterodyne circuit, which magnified the weakest signals on the shortest waves thousands of times. Major Armstrong returned to the United States with patents pending on this invention. Once again the question of invention priority came up, but was never passed upon. Armstrong went on with his work, however; and in 1920 he invented his superregenerative circuit, now in wide use in police and military radio, which has the distinction of earning more for him than any of his other inventions.

In 1929 Columbia University conferred upon him the honorary degree of Doctor of Science. He married Marion MacInnis December 1, 1923.

From the very start of his career Armstrong had been interested above everything else in the problem of conquering static.

Pupin had worked with him for a short time; but in 1924 he started out on his own to attack the problem. In 1925 he proved to his own satisfaction that radio waves and static had the same electrical characteristics. Discarding the dogmas already in the field, by 1928 he found himself on the right track. In 1933 he invited officials of the Radio Corporation of America to his Columbia laboratories to look at his system of special Frequency Modulation which eliminated static.

Frequency Modulation (F M for short) means changing the length of the radio wave. Frequency-modulated signals slip past such interference as lightning bolts or ice-box motors. Ordinary broadcasting uses Amplitude Modulation, obtained by changing the size of the swings of the signals. In F M all the swings of the waves are the same and modulation is obtained by varying the frequency. The wave-band is five times wider than that occupied by one A M station. If the receiving set is deaf to all amplitude changes, a system is constructed so insulated that static cannot crash in within the service area of the station.

At the 1935 demonstrations a sound reel recording was played, comparing the reception during a thunder storm of the old and new types of broadcasting—the latter showing a program free of static, though the station power was only four per cent that of the larger station. In demonstration also was the sending of a radio facsimile copy of the front page of a newspaper, static free. A musical program was transmitted at the same time. This was the first time in his experiments, Major Armstrong said, that music and the printed word were sent and received together.

The remarkable thing about F M is the brilliant clarity of reception secured. Faint musical passages come through perfectly. loud passages or sounds need not be tuned down. Homely, natural sounds are transmitted with fidelity—not by a sound-effects man, but by broadcasting the actual sounds themselves. A British journalist, after hearing the reception, told his readers at home that the reproduction was "ghastly" in its reality. He looked for gurgling water to run out of the loud speaker, and the scratching of a match seemed almost to burn his hand. In the pauses between numbers it was impossible to tell whether the station was on or off the air.

Armstrong set up his apparatus in the Empire State Building for further demonstrations, but RCA kept asking for more time before throwing its weight behind F M. Then Armstrong was asked to take his apparatus out to make way for television. He did so, but with no very friendly feeling toward RCA. Meanwhile he and his friend, Carman R. Runyon, who had an amateur radio station, worked together at the building of an F M transmitter. The results were so successful that in 1936 Armstrong applied to the Federal Communica-

tions Commission for a permit to erect a big F M station of his own.

Because television was seeking channels at the same time, the FCC held up Armstrong's permit, and it was not till 1937 that he constructed his own station, W2XMN, a 40 kilowatt station perched high atop the Palisades at Alpine, New Jersey. It has a 400-foot tower and three 100-foot cross-arms. If Armstrong had not used his own money to rush construction of this station, it might have been years before the public ever heard of F M. But W2XMN was heard clearly and steadily at distances of 100 miles. Armstrong gives credit for the development of the work necessary to two of his assistants, John Bose and James Day. Apparatus for the stations was designed in the Hartley Research Laboratories at Columbia University. The remainder of the equipment was constructed at Radio Engineers' Laboratory in Long Island City and the RCA Company of Camden, New Jersey.

Soon other F M stations were in operation. Among the first were Yonkers, New York; Hartford, Connecticut and Paxton, Massachusetts. The Yankee Network Incorporated, became interested, and set up an experimental station on Mount Asnebumskit, Massachusetts. This network is planning a high-powered station in New York City, and is moving toward a complete change over to the Armstrong F M system. In September 1940 there were 22 experimental stations licensed in the country, many applications for F M commercial stations pending.

The construction of F M receiving sets has been put on a commercial basis. Since July 1939 sets have been put on sale by the General Electric Company and the Stromberg-Carlson Company. Other companies are in process of preparing sets. The new sets, costing from \$75 to \$225, are constructed so that they will be able to receive both the old and the new kind of broadcasting.

An additional advantage of the F M system is that it will relieve the danger of air-wave monopoly, by making available a service on those ultra-high frequency channels that are comparatively unused at present. This promises to bring cheaper station operation and consequently more opportunity for local stations. Engineers envisage the possibility of replacing the wires used to transit programs between network stations with a system of low power, low cost F M radio relay transmitters.

A highly successful demonstration of F M capabilities was made in January 1940. The Major's co-experimenter, C. R. Runyon, sent out a program of music and speech over his F M station in Yonkers, New York. Armstrong's station W2XMN in New Jersey picked it up and relayed it to WIXOJ at Paxton, Massachusetts. From there the program was broadcast to

Bachrach

EDWIN HOWARD ARMSTRONG

an F M station at Mount Washington in New Hampshire, which reported reception absolutely clear. From here the signal was rebroadcast by a standard short wave station to a Yankee Network receiving outpost in Winchester, Massachusetts, sent by telephone wire to Boston, and thence back to Yonkers. This was an important demonstration because it pointed a way out of F M's major difficulty—limitation of range.

Frequency Modulation has a possible bearing upon television also. Since the range of a television broadcasting station is the horizon, this means that to achieve coverage television must have many more transmitters than radio. If television could be transmitted by F M, as Major Armstrong believes possible, an F M beam transmitter would handle as many frequencies as necessary in any given situation, over a completely static-free, undisturbed circuit, and could thus be substituted for the present co-axial-cable piping.

On the status of Major Armstrong's outstanding work, *Fortune* (October 1939) reports: "While the duty of the FCC in making short-wave-band allocations was clearly to get television on the air as quickly as possible (the British having already beat the United States by a couple of years), the Commission's failure to understand Frequency Modulation and to place the proper estimate on its technological importance is just as deplorable as the industry's failure to push it. Instead of encouraging substantial capital outlays, which the development of this invention would cause, the Commission has acted as a deterrent by relegating Major Armstrong to an experimental corner of the ultra-short-wave spectrum. What F M needs at the present time above all things is an allocation that

ARMSTRONG, EDWIN—*Continued*

will put it on a commercial status and will at the same time be large enough to permit it to operate to full advantage. Of the many ultra-short-wave bands that have been allocated but are not actually in use, one band six megacycles wide would accommodate thirty F M stations, and through duplication get F M off to a start all over the country. Relieved of the heavy duties of policing its present restrictive wave lengths, the FCC might thus open a new era of democracy in the air."

The last week in March 1940, the FCC had on its hands a bitter fight between Armstrong, and his advocates of static-less radio, and the television concerns. Armstrong was on hand to testify before the FCC and state the case for F M. He requested that F M be granted full commercial licenses, that its present maximum power of 1,000 watts be raised to 50,000, that a band of frequencies from 41 to 44 megacycles be allocated F M stations; that immediate permission for expansion of these allocations be made, since nearly 100 station applications from all over the country had recently come in. Since the 44 to 45 megacycle band is already television's number one channel, Armstrong's demand roused the RCA to battle all Armstrong claims. RCA and television received a set-back when the FCC withdrew its recently granted "limited commercial" status from all telecasters, fearful that the public might buy sets that would soon prove to be obsolete.

John Shepard III, of the Yankee Network, outlined a plan for a ten-year absorption by F M of present broadcasting methods, with a gradual change-over of transmitting and receiving equipment. Major Armstrong made some remarks of his own about television. "I am convinced," he said, "that the television people . . . will soon realize they can operate to better advantage in frequencies higher than those upon which they are now operating. . . . If I hadn't been so busy showing the world how good F M is, I might have shown the television boys how to do it."

On May 20, 1940 a Federal Communications Commission ruling opened the air lanes to commercial stations using F M. The fact that any number of properly spaced F M stations can operate in the same air channel solves a headache for the FCC since it can now satisfy an almost unlimited number of license applicants. Major Armstrong believes that there isn't any reason now "why every city in the United States which can afford a radio station cannot have an F M station." And already radio manufacturers are predicting a great boom in radio, in which millions of dollars will be spent and thousands of persons employed in making, selling and installing F M equipment.

Who's Who in America

ARNOLD, THURMAN WESLEY June 2, 1891- United States Assistant Attorney General in charge of the Antitrust Division
Address: b. Department of Justice, Washington, D. C.; Dover House, Jackson Hill, McLean, Virginia

Thurman Arnold, number one trust-buster of the nation, is a large, middle-aged man overflowing with human gusto, who "looks like a small-town storekeeper and talks like a native Rabelais." He has homesteaded in the foothills of the Rockies, run a sheep ranch, managed a thriving cattle-country law practice and taught at Yale. He has been Mayor of Laramie, Wyoming. In *The Folklore of Capitalism* (1937) and *The Symbols of Government* (1935) he has written satirical analyses of our legal, economic and political folk-ways, so witty and shrewd that some think the two books among the most significant of our time, but in *The Bottlenecks of Business* (1940) he stops kidding capitalism and asserts his faith in it—if the "economic toll bridges" which squeeze the American consumer can only be opened. It is possible to do it, he thinks, by applying the Sherman Antitrust Act.

Appointed United States Assistant Attorney General in charge of antitrust cases in March 1939, Arnold wasted no time in announcing a thorough-going drive against the trusts. His announcement created no small stir among the big cartels and trusts that had been hitherto left untouched by the very administration that was now determined to "thaw our frozen economic system" by attempting to give literal application to what had before been "beautiful generalities." Many scoffed at Arnold's ambition, maintaining that "in spite of more than 40 years on the books and decades of full-some lip service from eminent thinkers, the antitrust laws have never been enforced before." Modern restraints of trade, chiefly consisting in competition-limited practices by groups of businessmen, flourished undisturbed on every hand. The laws, they asserted, "preserved the ideal but not the substance of free competition."

Arnold recognized the validity of their skepticism; he himself had said that instead

THURMAN ARNOLD

of restricting monopolies, "the actual result of the antitrust laws was to promote the growth of great industrial organizations by deflecting the attack on them into purely moral and ceremonial channels. . . In this way the antitrust laws became the greatest protection to uncontrolled business dictatorships." He maintained that "the nation cannot distribute goods because its prices are out of line with the power of the people to buy. . . The power to fix prices without public responsibility is the same as the power to tax without public responsibility. In the long run it cannot exist without governmental interference and regulation." Analyzing the situation further, he compared the affairs of the United States with those of Nazi Germany: "By January 1933 German business was so monopolistic that almost everyone in the country had to belong to a cartel or a trade association, or a chamber of commerce, or some other organization dedicated to preventing competition. The distribution system was too rigid. . . It needed a general to order the workers to work and the mills to produce. Hitler made himself that general. . . I predict that unless steps are taken to reverse the trend and restore free competition, our economic system will limp along on two cylinders for a good many decades." Arnold remained obdurate to all arguments that in trying to break the trusts he was going against a natural historical development. He knew what he was doing and he "meant business."

Arnold's drive grew out of the activities of the Temporary National Economic Committee. One of the principal purposes of the committee headed by Senator Joseph C. O'Mahoney was to look into the laws against monopoly and restraints of trade and see whether they ought to be changed. Arnold maintained that the laws didn't

need changes, but enforcement, and said he could enforce them if adequate money and personnel were available. He succeeded in obtaining funds and enlarged his department to include about 190 lawyers in contrast to the 18 in the department in 1932.

The field which touched most closely the problem of the bottled-up savings of the nation—a major problem considered by the TNEC—was the building industry. Arnold appeared before the TNEC and read what some of his colleagues regarded as a "declaration of independence" for the building industry in which he announced the first nationwide antitrust drive in the nation's history.

By May 1940, Arnold's antitrust drive in the building industry had resulted in 74 indictments in 11 cities, involving 985 defendants, both corporations and individuals. Of the 985 indicted, 680 were individuals, 200 of whom were union representatives; 214 were corporations, 58 were labor unions, 32 were trade and other associations, and one was a partnership.

Arnold's inclusion of labor unions in these attacks aroused severe criticism of the Roosevelt administration on the part of trade unions and their friends. Though Arnold explained that his drive was aimed only at unreasonable use of the union's strength, opponents contended that in setting up his own standards for determining which labor unions are "lawful" and which "unlawful" he was, in effect, subscribing to the view that the antitrust law was also meant to police labor. They held that since the courts and not Arnold ultimately decide these cases, and the judges of these courts act on their own idea of what constitutes "lawful" labor activities, he was again opening the door wide to the revised use of antitrust laws against labor.

When the leaders of the International Fur and Leather Workers' Union were indicted on a seven-year-old charge that "a conspiracy existed to restrain trade" and that the strike they held affected interstate trade, friends of labor fought the indictment on the grounds that "if the right to strike is recognized only on condition that interstate commerce will not be restrained, affected, or interfered with, it means in reality that the workers are deprived of their right to strike." And though Arnold claimed that he was interested in convicting only "bad" labor leaders, many replied that "there are numerous laws under which corrupt union officials can be charged with specific criminality." Arnold, however, maintains that: "The principle applicable to unions is the same as that applicable to other groups specially protected by law. Investors may combine into a corporation, farmers into a cooperative and labor into a union. The Antitrust Division has the duty to prevent the use of such legal rights of association in an illegal way for purposes far different from those contemplated in the statutes."

ARNOLD, THURMAN—*Continued*

The movie, milk and tobacco manufacturing industries were only a few of the other places where Arnold looked and found "restraint of trade," hurting the consumer. He stubbed his toes, though, when he tried to institute similar suits against certain oil companies. The National Defense Commission claimed, in the fall of 1940, that such suits would "complicate and delay" the national preparedness program. Arnold didn't think so, but any action against the oil companies was delayed while he thought about other things that slow up the national defense effort—monopolistic patent restraints, for instance, which he calls the "economic Fifth Column."

Thurman Arnold has been characterized by Attorney General Robert H. Jackson (see sketch this issue) as "a cross between Voltaire and a cowboy, with the cowboy predominating." His origin is decidedly picturesque. His family comes of old, solid Connecticut stock, with a village named for them. The placid homestead was first deserted by his grandfather, Franklin Arnold, who went to darkest Africa as a Congregationalist missionary. Laboring in the African vineyard, Franklin Arnold made friends with a young German Lutheran colleague, Pastor Ramsauer. One day Ramsauer sickened of yellow fever. His sister, Marie, warned by slow mail, sailed to nurse him. When Marie's packet reached the Gold Coast, Pastor Ramsauer had been dead for months. Franklin Arnold gave Marie his sympathy and friendship, fell in love with her and married her. Some time after that the Congregationalists transferred Franklin Arnold to Laramie, Wyoming—where, to Franklin's dismay, the large majority of Laramians turned out to be Presbyterians. But Franklin Arnold wrestled with his conscience, changed his faith—and is still remembered in Laramie as a devout man. His son, Constantine Peter, became an able lawyer and prosperous rancher. Constantine's son was Thurman, a gangling, precocious youth, growing up in a part of the West which was still wild and woolly. He was good enough at his books to go, at the age of 16, to Princeton, where he was elected to Phi Beta Kappa. Harvard Law School and a brief practice in Chicago were followed by three years of fighting in Mexico and in France. In the interval between the Mexican campaign and the World War, he married Frances Longan, a Missourian. After the War he returned to Laramie to settle down. There he went into politics and was elected Laramie's Mayor and later went to the state legislature. In 1927, being offered the deanship of the law school at West Virginia University, he came East. Three years later he took a law professorship at Yale.

At Yale he was "a professorial nine-days' wonder." His lectures, to which he insisted on bringing his dog, Duffy Arnold, became celebrated for their fascinating discursive-

ness. He frequently started on a set topic, wandered off into the mythical aspects of economics, progressed to the mores of politics, and so on until, lost at last, he brought himself up short with a genial: "Now what the hell am I supposed to be talking about?"

While still a professor at Yale he worked as special counsel to the AAA, trial examiner for the SEC, and finally, in March 1939, received his appointment as Assistant Attorney General in charge of antitrust cases.

Arnold has two sons, George and Thurman Jr., who are away at school and college most of the time. He and his wife live alone in a comfortable, unpretentious old house a little way out in the country, not far from Washington. His wife, a famous housewife, "feeds New and Old Dealers by turns and together, while her husband talks at, to, around and through them."

MARGARET ASHMUN

ASTOR, NANCY WITCHER, VISCOUNTESS May 19, 1879- American-born member of the British Parliament

Address: h. 4 St James's Sq, London, S. W. 1, England

American-born Nancy Astor nearly all her life has been the subject of one kind of controversy or another. First woman member of the British House of Commons, temperance advocate, later reputedly the leader of the "Cliveden Set," in September 1940 she was the heroine of a ditty written by a British soldier in Egypt:

"And when the sandstorms blow,
and get in body and in kit,
And you start to cough your lungs
up and then begin to spit,
Just think of Lady Astor, who says
you are not fit
To fight for King and Country and
do your 'little bit'."

She was born Nancy Langhorne, the daughter of the late Chiswell Dabney Langhorne of Mirador, Greenwood, Virginia, and started life as a Southern belle, dancing all night, riding to hounds, noted for her vivacity, her wit, her charm—and her temper. Her sister Irene, who married Charles Dana Gibson, was equally celebrated. Nancy Langhorne was only eighteen when she married Robert Gould Shaw, and it was only six years later (in 1903) when she divorced him, taking their young son to England with her. There she met Waldorf Astor (who, incidentally, shares her birthday), and married him in 1906. He was then Conservative Member for Plymouth. Nancy helped him with his work in the constituency, and when he succeeded to the viscounty in 1918 and automatically passed to the House of Lords,

she decided to contest the division. Already a militant advocate of women's rights (in 1915 she had walked in a procession to ask Lloyd George to allow women to make munitions), she was the only woman elected in the "coupon" election of 1918, and since December 1, 1919 has been in the House without interruption as Conservative M. P. for the Sutton Division of Plymouth. Someone has accused her of starting "the evil tradition that the wife of a popular member has the natural reversion to her husband's seat."

It wasn't quite all roses, being the first woman to be seated in the House of Commons. There were a number of members determined to make her membership so uncomfortable that she wouldn't try to get it again. One story says that when a distinguished cabinet member finally congratulated her on her election she protested: "But I have been in the House six months and you have not taken the slightest notice of me." "No, I don't like women in Parliament," he answered, "and when you took your seat I endured the same kind of embarrassment as I would if a lady invaded my bathroom." But Lady Astor could be fully as rude as any male. "If I were as ugly as you," she quipped, "I should have no fear of any lady invading my bathroom."

The frequent frivolity of her remarks didn't help much, however, and when the House found that she was a "dry," a vigorous opponent of the brewers, it was material for a first-class battle—especially since the liquor question cut across all party lines. Nancy Astor was undismayed and sponsored a measure prohibiting the admission of people under 18 to licensed premises—a matter which all parties now consider non-controversial.

Lady Astor's talent for "incessant and irrelevant interruption," for picking quarrels with the "less responsible members of the Labor Party" on the slightest provocation, and for repartee which, "though always smart, would sometimes have been better left unsaid," continued to involve her in frequent scenes and to make her the object of such remarks as "Sit down!" "Shut up, Nancy!" "Go back to America." But Parliament eventually succumbed to her charm, and in the early '20s she was a picturesque symbol of woman's emancipation. Though without any sociological background to speak of, she showed herself particularly interested in exposing the evils of child labor in unregulated trades, in working for nursery schools, in the League of Nations, in anything affecting family life and the interests of women and children, and on one occasion she even had the courage to speak up strongly in favor of birth control. In 1922 she conquered the United States on a return visit. Even a writer for the *New Republic* who accused her of "always so infallibly hitting on the head only the largest and most accessible nails" couldn't help describing her as a

Pictures, Inc.

LADY ASTOR

"gay, friendly, girlish person, telling us all, with a gallant jerk of the head, things we already believe." In 1923 Lady Astor published *My Two Countries*.

It was at least two years before Munich that the term "Cliveden Set" came into being. Lady Astor's parties at Cliveden, her country mansion on the Thames, had long been famous for their vivacity, their comparative informality and the highly miscellaneous nature of their guests. One early observer gives a picture of the Socialist David Kirkwood, clad in a lounge suit, in animated converse with the Duke of Windsor, then Prince of Wales, robed in full evening glory. By the spring of 1936, however, Cliveden was famous because of rumors that it was a center of intrigue for a group with Hitlerian leanings. Described as Britain's "second Foreign Office," it was at Cliveden that British foreign policy was said to be decided by Sir Neville Henderson, Lord Halifax, Sir Samuel Hoare, Sir John Simon (see sketches this issue) and other members of the appeasement clique.

The existence of any such group was finally denied by Lord Astor in the *London Times* (which is mainly controlled by his brother, Major the Hon. J. J. Astor) in a letter which pointed out that at seasons when momentous matters were reputed to have been discussed at Cliveden the house was actually closed and shuttered. Lady Astor herself denied the legend in an interview published in the *Saturday Evening Post*, and staunchly affirmed her belief in both peace and democracy. After Munich she unapologetically admitted backing Chamberlain in trying to get appeasement in Europe and described the Prime Minister as "a first-class administrator and a real

progressive social reformer." In March 1939, however, she urged him to protest against the invasion of Czechoslovakia.

Shortly before World War II broke out Lady Astor was urging United States women to cable the Women's World War Veterans to fight against war. When War was declared her sons went into service almost immediately and in October part of Cliveden was converted into a nursery for evacuated children. Lady Astor's main battles were once more in the House of Commons. She fought for a curb on champagne imports, against an allowance to unmarried women living with soldiers equal to that for soldiers' wives, for the rationing of supplies to brewers. In the summer of 1940 she was active in pressing governmental action on the child evacuation plan. It was an open letter she wrote to the editor of the *London Daily Mirror*, jeering at London's crack regiments for "sunbathing in Egypt" while their homeland was facing such grave danger, that inspired one hussar to verse in September.

Lady Astor has one son by her first husband, four sons and a daughter by Lord Astor. Her constituency is in the heart of industrial Plymouth, definitely working class and she has always pulled every string to help her constituents. She has also contributed liberally to *crèches* and to boys' clubs, and as a Member of Parliament has stood quite consistently for laws protecting the more defenseless members of society. Nevertheless, back in the '20s, the late George Lansbury, Labor Member of Parliament, called her the most ignorant woman in the House on social questions and stated that for so wealthy a woman to interfere in matters concerning the poor was "disgusting." Someone else said that "there is always about her democracy the sense of the great lady being kind to the poor." Perhaps it is because as the wife of a millionaire, Lady Astor has herself never acquired any sense of responsibility toward money and is not the type of person who spends long hours in libraries acquiring data even on those problems she is emotional and obstinate about. And although she has always stood for legislation involving reforms like shorter working hours for women, she is also inclined to work her own secretaries 18 hours a day. "For her a declaration of good will is equivalent to a realization of justice."

Still, "it must be nearly impossible to dislike Lady Astor." A Christian Scientist by faith, she has been called "the Pollyanna of the political world" and "the most honest of hypocrites." Her charm—"that damned charm"—has been extensively and unsuccessfully analyzed. Unaffected in manner, with blue-gray eyes and a crooked smile, an ever-changing face and a gift for comic mimicry, she has "the gift of speaking in headlines"—although her remarks don't seem so excruciatingly funny in cold print.

Those who have called her a Puritan have had reasons. Temperate in conviction as well as practice, Nancy Astor keeps a pitcher of barley water prominently displayed on the table at St. James's Square; she dresses simply in Parliament, usually wearing a sober black or blue suit with a white blouse, a string of pearls and a chaste, three-cornered hat; and there has never been anything remotely scandalous about her private life. When, long ago, the journalist Horatio Bottomley published a scurrilous article called *Lady Astor's Divorce*, it took little time before he was exposed for embezzling and sent to prison. Announced Lady Astor triumphantly: "The brewers paid Horatio Bottomley to try to take my moral character away. Well, I've still got my character, but Bottomley is in jail."

There are dozens of stories about her, a good many of them dealing with her shockingly informal attitude toward the great and the supposed great. To Lloyd George she announced one day: "Oh, you old ruffian, I cannot help liking you." Of the Prince of Wales: "I love that boy." She once had a three-hour interview with Gandhi and told him what she thought of Hinduism. She once interviewed Stalin and asked him when he was going to stop killing people. When he commented on the strangeness of a small island like England ruling a third of the world she explained: "Look at the map. It can't be might; it must be right. It's something in their thinking."

Someone once said: "There are four Nancy Astors—the charmer, the pope, the showman and—one whom few people know—the good little girl."

ATHERTON, GERTRUDE Oct 30, 1857-
 Author

Address: h. 2101 California St, San Francisco, California

One of the most popular American novelists, Gertrude Atherton has sustained the lively interest of feminine readers throughout her long career by basing her novels on problems of vital interest to women. Author of more than 45 books, her California novels in particular are said to present a complete social history of San Francisco, where she was born, grew up and still lives. One of the many interesting phases of Mrs. Atherton's life is her participation in the activities of Career Women, a San Francisco organization, at whose birthday dinner in June 1940 she presided. And careers for women play an important part in her new novel, *The House of Lee*, published in September 1940.

The Lees, like many other wealthy San Franciscans, are affected by the market crash of '29. Three generations of gentlewomen—the grandmother, Mrs. Edington; the daughter, Mrs. Lee; the granddaughter, Lucy—face the necessity of finding jobs (they consider relief a vast disgrace) to augment their income, which has been abruptly limited to \$200 a month. Chang, their Chinese cook and butler, helps them keep up appearances by generously lending them his considerable savings. Grandmother, a strong-minded, rugged individualist of the old school, sallies forth and gets herself a fine position. Her more feminine-minded daughter earns money by teaching bridge to the new rich. Lucy, just out of college, determines on a career, but finds her intentions somewhat hampered by a suitor and the prospects of a good marriage. It is through Lucy that Mrs. Atherton expresses her irritation over Left ideologies: "The Pinkies and Lefties turn in their lips and bleat about the inevitable disappearance of 'class' every time one of us has to get out and work. . . . When a big concern closes down and throws hundreds of men out of work, the sentimentalists sob over them but don't give a thought to the stockholders who may be wondering where their next meal is coming from. *We don't count.*"

Gertrude Franklin Atherton was born October 30, 1857 on Rincon Hill in San Francisco. Her maternal grandfather (a grandnephew of Benjamin Franklin) was the editor of one of San Francisco's first newspapers and also a banker. Her mother, Gertrude Franklin, a Southern-bred girl who became a belle of the city, married Thomas Lodowick Horn, a Yankee businessman. After three years they were divorced. The only child, little Gertrude, was sent to be brought up on her grandfather's ranch near San Francisco. In her autobiography, *Adventures of a Novelist* (1932), Mrs. Atherton writes frankly of her childhood. She says: "I was the angel child in appearance, with golden curls and eyes of

ATALENA, pseud. See Jabotinsky, V. E.

ATHERTON, GERTRUDE—*Continued*

seraphic blue, but I must have been a little fiend. It had amused my father to stand me on the table when he was giving a dinner party and encourage me to kick the plates into the laps of the guests." Thoroughly spoiled by the whole family, Gertrude became a willful, egocentric "problem" child. No boarding school would keep her and no nurse stayed long with the family. Finally they got one who took Gertrude in hand and "spanked with gusto." The mother remarried, and Gertrude and her new father disliked each other intensely from the start. Mrs. Atherton thinks that the abnormal conditions of her home life "caused that dislocation of particles or whatever it may be that produces fiction."

Her early schooling was irregular, but she read a great deal. At 14 she first got the idea of becoming an "authoress" and produced several stories, mostly unfinished. When 17 she was sent to the Sayre Institute in Lexington, Kentucky, but when her stepfather died she returned to San Francisco. There George Atherton (a former admirer of her mother's) fell in love with her and proposed, she writes, until she gave in and married him. A son, George, was born; a few years later a daughter, Muriel. George died at the age of six. The children were given over to the care of nurses (Mrs. Atherton says she had no maternal instinct) and, since her husband didn't care about the things which interested her, she was bored to death with her marriage.

Accordingly she wrote a novel, *The Randolphs of Redwoods*, based on a local society scandal, which was published anonymously in *The Argonaut*. (In 1899 it was republished in book form as *A Daughter of The Vine*.) Although her husband violently disapproved of her writing, she

continued with it. However, her second effort, a historical novel, and her third were rejected by publishers with painful regularity. Then, while en route to Chile, her husband died on shipboard; his body, "embalmed in a barrel of rum," was sent home.

Gertrude Atherton definitely decided to make writing her career, even though her domineering mother-in-law, an eccentric aristocrat of Spanish blood, didn't believe women could be writers. "Si all were known, you find the mens write those books for them," she said. But Gertrude got her way and went to live in New York; then traveled in France and England. On a brief return to America Mrs. Atherton explored California with a view to writing about its rich, historical past. From the wealth of material she discovered came *The Splendid Idle Forties* (1902), *Rezanov* (1919) and other California historical novels.

Her work was first recognized in England. It was not till the appearance of *The Conqueror* (1902), a novel about Alexander Hamilton, that her reputation in America was made. It became a best seller and a critical success. But most of her novels thereafter were written abroad. Among the best of these was *Tower of Ivory* (1910)—"my own favorite of all the novels I have written," she says.

From 1916 to 1918 she was active in war work and received three decorations from the French government, including the Légion d'Honneur. But between 1916 and 1923 she found time to write five more novels, among them *The Living Present* (1917) and *The Avalanche* (1919).

Then came her biggest best seller in the field of fiction, *Black Oxen* (1923), in which she told the story of Mary Ogden, a woman of 58, who was reactivated by the Steinach method and returned to her world as Madame Zattiany, a new woman. It was a story based on Mrs. Atherton's own experience. Following a period of mental sterility she herself took the Steinach treatment under Dr. Harry Benjamin—a treatment consisting of X-ray stimulation of the sex glands. *Black Oxen* was denounced from the pulpit; but women from all over the world who hoped to renew their youthful energies wrote to Mrs. Atherton inquiring about the Steinach treatment.

Mrs. Atherton wrote several more novels—*Immortal Marriage* (1927); *Dido, Queen of Hearts* (1929) are among the best known—in rapid succession; then in 1932, when she was 75, she took another Steinach rejuvenation. At the age of 78 the energetic novelist, when interviewed, said she had implicit faith in the treatments. Her conversation was brilliant, her hair still bright and blonde, and, to enhance the youthful vigor, her cheeks were rouged and her fingernails carmined. A critic who has always admired her work, Isabel Paterson, says: "Her classic colonial profile [all her portraits are taken in profile] might have been drawn

GERTRUDE ATHERTON

by Peale or Gilbert Stuart. Her eyes are very blue, her hair pale gold; she is of middle height and of that erect carriage one associates with an earlier generation which used straight-backed chairs as a matter of self-respect."

Mrs. Atherton says that among her likes and dislikes are: "Hate shams, toadies, sewing, bores, insincere and narrow-minded persons; like my friends, and with exceptions, keep them forever; like a certain amount of social gaiety when I am not working, meeting new people, going to strange places; above all like reading; also like the theatre and some movies; hate visiting; have a charming family and like being with them, but I prefer living alone."

She has received several honorary degrees and is a member of a number of nationally known clubs. Coincidental with the publication of her new novel, Mrs. Atherton, who heads the list of California's 13 most distinguished women, was fêted at a luncheon at the San Francisco Exposition.

ATTLEE, CLEMENT RICHARD Jan 3, 1883- Lord Privy Seal; member of British Parliament

Address: Heywood, Stanmore, Middlesex, England

In the days before the Second World War began, England's Prime Minister Neville Chamberlain was faced, in many quarters, with a good deal of dissent and dissatisfaction. One of the most vocal dissenters was the Right Honorable Clement Attlee, leader of His Majesty's Opposition. To him the Munich settlement was a wrong one: "It is not a policy, it is only an attitude—an attitude of deference." Even after England united behind Chamberlain to fight the

Keystone

CLEMENT ATTLEE

War, Mr. Attlee insisted that the Labor Party supported the War but did not support the present government. To the government he directed embarrassing questions on the feeding of the army, on the supplying of war material, on the conduct of the War itself.

On May 7, 1940 he went so far as to brand Chamberlain and his War Cabinet as "failures" in the most violent Parliamentary debate since the War began. Those in command, he said, "are men who have had an almost uninterrupted career of failure," and "the British people are not satisfied that the War is being waged with sufficient energy, industry or results." Shortly after, Chamberlain asked Attlee and Arthur Greenwood (see sketch this issue), also a leader of the Labor Party, to serve in a coalition cabinet, but they refused.

When the Chamberlain government fell on May 10, partly because of their refusal, Winston Churchill (see sketch this issue) immediately formed a coalition cabinet in which Attlee was made Lord Privy Seal and Greenwood Minister without Portfolio. Attlee took up his duties immediately and announced to the British public that it was his hope that Britain would be a socialistic country when the War was over, with cake for none until all had bread. In his new post Attlee is Churchill's parliamentary spokesman, "the No. 2 boss of England." He has published *War Comes to Britain* (1940) since coming into office.

Since 1935 Clement Attlee has led Britain's Labor Opposition in the House of Commons. Since the beginning of the century, he has been fighting for the cause of socialism. He has seen the Labor Party grow from thirty members to over eight million; he has seen it grow from five repre-

ATTLEE, CLEMENT—*Continued*

sentatives in Parliament to three hundred. And, as he says, "throughout these years I have never wavered in my faith in the cause of socialism."

At first sight Attlee seems to be one of the more academic of British Socialists. He was born on January 3, 1883, the son of a London solicitor, and was brought up in conservative British traditions. He went to Haileybury, a fairly expensive "Public School," and afterward to University College, Oxford, where he took an Honours degree in modern history. He left Oxford to study law but didn't stay at the Inner Temple long. He became interested in social work and went to live in East London, where he supported himself by taking jobs on the docks.

"The condition of the people in that area, as I saw them at close quarters," he says, "led me to study their causes and to reconsider the assumptions of the social class to which I belonged. I became an enthusiastic convert to socialism." In 1907 he joined the Fabian Society, socialist group of which George Bernard Shaw was a famous member, and the Independent Labor Party. In 1910 he became secretary at Toynbee Hall, a pioneer "social settlement" for university men desiring to live in an industrial area to study working-class conditions.

Major Attlee's next post was that of tutor and lecturer at the London School of Economics. He stayed there from 1913 until he entered politics in 1922. In between, however, he served in the War—in France, Gallipoli and Mesopotamia—and retired as a major with a few bad wounds. In between, too, he began to have his first taste of politics, as Mayor of Stepney, East London, (1919-21) and Alderman (1919-27).

In 1922 Mr. Attlee became parliamentary private secretary to the leader of the Opposition; in 1924 he was made under-secretary of state for war; in 1929 he was chancellor of the Duchy of Lancaster; in 1931 postmaster general; and in 1931 deputy leader of the Opposition. In November 1935 he became the Opposition's leader, the first to draw the official salary of £2,000 a year.

Mr. Attlee's rise in the world of politics has been attributed to his sincerity rather than to his eloquence. He is not one of Britain's best speakers. He has a high-pitched, rather staccato voice. "His experience at the Bar molded the character of his public speaking, forensic and unemotional; it certainly has not given him crusading fire." The *Manchester Guardian* says of him that, in general, "he does not coin a striking phrase, he has none of Mr. Churchill's power of self-dramatization about him, but he has profound integrity. He is wholly devoid of jealousy and pose. His convictions are profound and he fights for them with a tenacity that one has to meet in order to appreciate."

He has always believed in and worked for a League of Nations. He still says that his party is working for "a world cooperative Commonwealth of Nations in which every nation, while preserving its own distinctive civilization and organizing its life on the lines best suited to it, will combine with the others for the good of humanity." He has always believed in and worked for socialism. To him socialism is "the dominant issue of the twentieth century."

According to his beliefs, the "only motive which should guide the economic mechanism is the public need and the public well-being." He continuously stresses that his party is strongly opposed to all dictatorships, whether from the Left or the Right, and that it is devoted to the defense of democracy. In fact, the socialism that Attlee supports is far from a radical doctrine. It "owes more to the *Bible* than to *Das Kapital* or to *State and Revolution*. To Attlee socialism is another stage in the historical broadening of freedom in his country to be reached by entirely constitutional means." Communism is anathema to him. Nevertheless it was Attlee who introduced the bill in the House of Commons to establish a war-time dictatorship in England.

"Clem," as he is known to his friends and the gossip writers, is now 57 years old, "short and unimpressive in figure, with a benevolent air reminiscent of a safely berthed schoolmaster." In Stanmore, where he lives simply, he has a wife (the former Violet Helen Millar) and four children, a collection of pipes, a kit of carpenter's tools, a bag of golf clubs and a set of gardening implements.

AULAIRE, INGRI D' (dō'lēr' ěN-grē) Dec 27, 1904- and AULAIRE, EDGAR PARIN D' Sept 30, 1898- Authors; illustrators

Address: c/o Doubleday-Doran & Co, 14 W 49th St, New York City

The 1939 Caldecott Medal, named in honor of the famous English illustrator Randolph Caldecott and presented each year to the

artist of the most distinguished picture book for children, was awarded to Ingri and Edgar Parin D'Aulaire for their *Abraham Lincoln*.

These author-illustrator collaborators are husband and wife. Ingri (Mortenson) D'Aulaire, the youngest daughter of a Norwegian government official, Per Mortenson, and Line (Sandsmark) Mortenson, was born in Norway in 1904. As a girl she was interested in painting and drawing and encouraged by Harriet Backer, a Norwegian painter, persuaded her family to let her study art in Munich. There she met Edgar, also an art student.

He was the son of a French portrait painter, Gino Parin D'Aulaire of Huguenot descent and an American mother, Ella D'Aulaire. He was born in Compoblenion, Ticino, Switzerland, September 30, 1898. As a child, under the influence of his artist father and of book collector friends, he made picture books with verses. Edgar fulfilled parental wishes by graduating from high school and studying architecture for one year. Then he gave up architecture and started a "pure study of nature" art training course at the Munich Academy.

Munich was in a state of siege in 1923. Ingri and Edgar, with many of the other students, fled to Paris. A year later they were married in Ingri's family's country place in Norway, but only after Edgar had earned the approval of the family by initiation into the Mortenson's annual 31 mile Christmas ski trip, although he had never been on skis before in his life.

The Aulaires established headquarters in Paris in a stable which had been turned into a studio. This became their base for six years. Edgar continued studying: "understanding of functioning of space, movement and expression" under Matisse; "principles of abstract composition" at Lhote's and "graphical arts" at Galani's. From their Paris base they traveled all over Europe and North Africa, Ingri doing portraits of children and Edgar studying frescoes in Florence and doing murals and illustrations in France and Norway. Two books illustrated by Edgar were published in Paris: Poe's *Aventures de Gorden Pym* with lithographs (1927) and a picture book with etchings, *Aventures Sentimentales* (1928). Fifteen titles with his illustrations were issued in Germany, including: Goethe's *Märchen* (1922), Poe's *Pfaals Mondreise* (1922) and *Blocksberg* (1925).

Pursuing their inclination to travel, the Aulaires came to America and liked it so well that they established their home here in 1929. Here they wrote and illustrated their first book for children, *The Magic Rug* (1931), based on their African travels. "We each had our different distinct way of expression," they say "and were as different as the countries we came from. When we paint we still manage to be ourselves." But when they began to make children's books they found that they might

Newspictures

INGRI and EDGAR D'AULAIRE

make a happy combination of Ingri's knowledge of children and Edgar's dramatic sense, so "we started to forget the You and I and became one unity with two heads, four hands and one handwriting when working on our children's books."

Working together, the Aulaires illustrated their books with lithographs in a technique derived from the old craftsmen. Each picture is sketched first on paper and then drawn with a lithograph crayon on a large stone block from which the lithograph is printed. This method enables them to use more colors and give a look of individuality and freshness to each picture. Edgar does the black or key drawing on the stone, and Ingri does the color work, drawing on a separate stone for each color, which means that for every color picture in *Abraham Lincoln* it was necessary to use five stones, for the pictures are in five colors.

For the writing of *Abraham Lincoln* the authors spent many months in discovering and getting the feel of Lincoln's land. With a car and tent they worked their way over the Lincoln trail. In spite of doubts, storms and hot weather they camped along the Ohio and Mississippi Rivers, high in the Kentucky hills, and in the broad Ohio valleys and recreated in their minds the country as Lincoln himself had known it. One reviewer wrote: "I think Lincoln himself might have enjoyed the humor of these designs: he had a liking for the grotesque, and the humor here is without malice and marked by evident affection."

The same procedure of careful research was used in writing *George Washington* (1936). The authors took a walking tour through the Virginia country which Washington had known as a boy. The figures of Lincoln and Washington were very real

AULAIRE, INGRI D' and AULAIRE, EDGAR PARIN D'—*Continued*

to Edgar: when he was a child his mother had told him many stories of her American childhood and of the adventures of her father, who owned a Southern plantation but had fought on the Northern side in the Civil War.

One of their most popular books, *Ola* (1932), the story of a small boy's wintertime activities in Norway and Lapland resulted from actual experiences in Ingri's homeland. It was followed by *Ola and Blakken* (1933), which described the adventures of Ola in the summertime on a farm with three girls and a cream-colored horse. *The Conquest of the Atlantic*, written the next year, recounted the story of travel across the Atlantic from Viking days to the present-day airplane flights. *The Lord's Prayer* was written in 1934. *Children of the Northern Lights* (1935), was the result of a journey by boat and sled into the north of Norway. Their latest book is *Animals Everywhere*, a first picture book for children published in the fall of 1940. Edgar has also illustrated a number of books which were published in America: Dhan Gopal Mukerji's *Rama* (1930), Dmitri Merejkowski's *Leonardo da Vinci* (1931), John Matheson's *Needle in the Haystack* (1930), and H. H. Ewers' *Blood* (1930).

The Aulaires live in a studio apartment on lower Fifth Avenue in New York City, an apartment with Norwegian furniture and walls covered with pictures they have painted in many parts of the world. Recently the studio has become enlivened by "the presence of Per Ola Parin D'Aulaire, who might have stepped out of the pages of the *Ola* book itself, but who is a very real blue-eyed, blond-haired little boy growing up as his father did, surrounded by the smell of brushes, wet paint on canvas and richly glowing pictures."

AUSTIN, WILLIAM LANE Jan 25, 1871-
Director of the United States Census

Address: b. Bureau of the Census, Washington, D. C.; h. 1412 Delafield Place, N W, Washington, D. C.

For the past 40 years William Lane Austin, with neat, housewifely precision, has been gathering statistics on business, manufacturing, mines, quarries, agriculture, crime, religion, death, income, housing. When he started in 1900 there were only 75,994,575 people living in the United States.

WILLIAM LANE AUSTIN

On the first day of April 1940, Mr. Austin started the sixteenth decennial census, in which he reckoned with a population of approximately 131,500,000. Actually the first figures released in November 1940 show the whole population of the United States as 131,409,881; with its territories and possessions, exclusive of the Philippine Islands, the population is 150,362,326.

Austin was born on "Hurricane Farm," Scott County, Mississippi, the son of Dr. Richmond Pearson and Sue D. (Lane) Austin. His family were of old plantation stock, some members of whom left England for America more than 200 years ago. For generations there have been Austins at "Hurricane Farm," most of whom became physicians and surgeons, surveying in the cool of the evening their cotton fields stretching "as far as you could see."

Young Austin received a degree from Harperville College in his home state in 1891; in 1897 and 1898 his Ph. B. and LL. B. from the University of Mississippi. In 1903 he married Eley D. Campbell of Forest, Mississippi.

In 1900 as the protégé of the late Senator John Sharp Williams he took a \$900 clerkship in the Census Bureau in Washington. A statistician of brilliant attainments, he advanced from grade to grade in the Bureau, mostly in Republican administrations—he himself is a Mississippi Democrat—until in April 1933 he was made director of the Census. Austin's own specialized work has been in agricultural statistics: statistics on plantations, cotton, tobacco, irrigation, drainage and horticulture.

"Bland-browed, still placid of disposition after 40 years of brooding on government statistics," Austin, who generally wears a ruby stickpin and carries a 150-year-old watch, has run into many Congressional

storms "over snooping census questions, and the present one does not worry him very much."

Austin remains cool over protestations such as the one delivered by Senator Charles W. Tobey of New Hampshire. "Ye gods!" said the excitable Senator, "Stalin and Hitler may play the game that way, but not in free America. Shame on our country for suggesting such a thing!" Even Mark Sullivan, ordinarily unruffled columnist, wrote that "the government curiosity about divorce, income, toilet facilities was an invasion of man's responsibility to God alone."

Austin knows that a census of the United States population every 10 years is mandatory. He knows that his department has been called "the greatest statistical organization in the world." The census took one month to complete and the results will be published during the next three years. With 135,000 workers in his department for the taking of the 1940 census he feels that the debate on the subject of how much the government is entitled to ask is purely political, since the census occurs during a presidential election year. He feels that possibly the Congressional hullabaloo might have been caused by the possibility that new census figures would result in a reapportionment of Representatives in some states.

People who are so indignant at the questions asked this year will find that the old-fashioned censuses were more impertinent than the 1940 cross-examination. In 1860, for instance, people had to report the value of all bonds, stocks, mortgages, notes, livestock, plate, jewels and furniture worth more than \$100, and in 1850 the man at the door asked: "Are you deaf, dumb, blind, insane, idiotic, a pauper or a convict?"

In view of those questions Austin thinks we should not balk at what the census taker asks. For the first time the 1940 census will show employment status and the amount of wages earned in the past twelve months. Also for the first time the Census Bureau will be able to present us with a complete inventory of housing conditions. "We shall finally know," says Austin, "how precisely President Roosevelt was speaking when he said that 'one-third of the nation was ill-housed.'"

Austin feels that the employment questions "are designed merely to give complete and useful facts on unemployment, America's greatest problem." Endorsement was given the income questions by many influential business, farm and labor groups.

When the census director grows tired of statistics he has two hobbies—books (mainly history and biography), and flowers, which he grows in a well-planned garden.

JOSEPH AVENOL

AVENOL, JOSEPH LOUIS ANNE (ă've-nöl) 1879- Former secretary general of the League of Nations

On July 26, 1940 Dr. Joseph Avenol resigned as secretary general of the League of Nations, saying the "realities" of the present time made his office no longer necessary.

Dr. Joseph Avenol is the son of Ernest and Renée (de Hansy) Avenol. He was educated at Poitiers and the School of Political Science of the University of Paris (LL.D.). He began his career in 1905 as an official of the French treasury and later he was appointed Inspector General of Finance.

During and after the World War he represented France in inter-Allied financial relations in London (1916-23). Then he became the French representative at the League of Nations, later deputy secretary general, and in 1932 he was appointed secretary general. In addition to these duties he was a member of the League of Nations Inter-Governmental Refugee Advisory Committee. In Europe he is regarded as one of its leading financial experts. Bald-headed, wearing large horn-rimmed glasses, he has been described as "shy, reticent and incapable of indiscretion." Among his chief interests are medieval parchments and art treasures.

AYRES, LEONARD PORTER Sept 15, 1879- Economist

Address: War Department, Washington, D. C.; b. Cleveland Trust Co, Cleveland, Ohio

In October 1940 Leonard Ayres accepted the position of head statistician of the Assistant Secretary of War's office. This meant that he took leave from the vice-presidency of the Cleveland Trust Company and gave up his other business posts in order to spend his time "almost entirely on the progress of procurement under present contracts." Defense efforts up to that time he characterized as "decidedly leisurely."

"The country's No. 1 bachelor economist," Leonard Ayres' varied experience has made him an authoritative spokesman for the viewpoint of American capital. The son of Milan Church and Georgiana (Gall) Ayres, he was born on September 15, 1879 at Niantic, Connecticut. He was educated at Boston University, where he acquired his Ph. B. in 1902 with Phi Beta Kappa honors. He then accepted a teaching position in Puerto Rico, and by 1906 had become general superintendent of schools for Puerto Rico and chief of the Division of Statistics in that country. In 1908 he returned to the United States to become director of the departments of education and statistics at the Russell Sage Foundation, a position which he held until 1920. During that time he published many educational studies. He had also, among other distinctions, received his M. A. in 1909 and his Ph. D. the succeeding year from Boston University; had served in the World War as chief statistical officer of the United States Army, of the American Expeditionary Force and of the American Commission to Negotiate Peace. The government awarded him the Distinguished Service Medal.

In 1920 Colonel Ayres became vice-president of the Cleveland Trust Company and member of its executive committee, positions which he has now held for 20 years. In 1924 he served as economic adviser of the Dawes Commission. He is director of many railroads and of other corporations. Since 1932 he has been chairman of the Economic Policy Commission and of the Research Council of the American Bankers Association and he is a member of and has held offices in a great number of other associations, statistical, educational and economic.

Colonel Ayres has utilized his practical knowledge of finance and economics as the author of numerous published works. Until *The War with Germany* (1919), these had been mainly monographs on education, but in 1921 he began to speak for business, to concern himself with the problems of depressions and recovery, and as a statistician, economist and banker, he has been speaking for business in person and in print ever since. Perhaps best-known of his analyses is *Economics of Recovery* (1933), "a conservative analysis of the origins and

LEONARD P. AYRES

progress of the depression and of the measures that have been enacted in this country to meet it." *Turning Points in Business Cycles* (1939) is a technical study in economics pointing a moral which Colonel Ayres has been preaching in simpler form for a number of years: that recovery cannot be brought about by pump-priming in the form of stimulated spending for consumer's goods. The monthly *Business Bulletin* of the Cleveland Trust Company was also written by Colonel Ayres.

Both in his speeches and in his writings, Colonel Ayres has maintained a consistent position in favor of an "orthodox" rather than a "planned" recovery. He believes that governmental interference undermines the confidence in the prospects for future profits necessary to make business men take present risks—that "our troubles are political, not economic." For years he has been repeating, in one way or another, that "it is as futile for us to believe that we can spend ourselves rich as for us to suppose that a man can drink himself sober." In other words: "In the old days we did not know much about business cycles, but we did know that recovery would always come after awhile because nobody interfered with it. . . . Business is optimistic by inclination, but now it has become pessimistic by information."

He also believes that "the really serious problem of this depression and of all American depressions, is that of putting back at work the producers of durable goods and keeping them profitably employed." But if the utilities were expanding "as they did in the last decade, their activities would largely solve the problem of the railroads, and the railroads and utilities together would largely solve our recovery problem."

As a prophet Colonel Ayres has a reputation that isn't quite undeserved. It is true that in December 1929 he didn't think a serious depression likely, and said so, in his annual business forecast before the Cleveland Chamber of Commerce; but in general his "batting average" has been about .850. It was also Colonel Ayres who in September 1918 predicted the First World War would end in the second week of November.

BACHRACH, ELISE WALD June 20, 1899—Mar 8, 1940 Artist

Although Elise Wald Bachrach did not seriously take up painting until a few years before her death, her oils, figures, still-lives and landscapes have been widely ex-

hibited throughout the country. She was born in New York City and attended Horace Mann School, later studying painting abroad. Mrs. Bachrach, whose home was in Great Neck, Long Island, maintained a studio in the artists' colony at Woodstock, New York, and also did some painting in the South.

BACON, PEGGY May 2, 1895- Artist; author

Address: 131 E 15th St, New York City

Friends like to think that no other woman would describe herself with so devastating a sense of humor as Peggy Bacon shows in her book, *Off With Their Heads* (1934): "Pin head, parsimoniously covered with thin dark hair, on a short dumpy body. Small features, prominent nose, chipmunk teeth and no chin, conveying the sharp weak look of a little rodent. Absent-minded eyes with a half glimmer of observation. Prim, critical mouth and faint coloring. Personality lifeless, retiring, snippy, quietly egotistical. Lacks vigor and sparkle." One writer feels that Peggy had to put this description in her book "purely" in "self-defense—a weapon of words to ward off potential howls of protest from others described in the book."

Forty-five years ago Margaret Frances Bacon was born in Ridgefield, Connecticut, the daughter of two well-known artists—Charles Roswell and Elizabeth (Chase) Bacon. As a child her parents noted that she began to draw pictures even before she could talk. Always she has been interested in drawing faces, not as likenesses, but by distorting lines and adding emphasis, as sly caricatures. She received a diploma from the Kent Place School of Summit, New Jersey in 1913 and then attended the Art Students League and the School of Fine and Applied Arts of New York City, where she studied with such famous artists as Jonas Lie (see sketch this issue), John Sloan, George Bellows and George Bridgman. While a student at the Art Students League she met a promising artist, Alexander Brook, and they were married, May 4, 1920. This marriage was dissolved by divorce in July 1940. Their two children, Belinda and Alexander (called Sandy), have both shown aptitude for art studies.

Both Miss Bacon and Mr. Brook have taught at the Art Students League, and she has taught art (1933-35) at one of the most famous progressive schools in the country, the Fieldston Ethical Culture School. There she taught children drawing and composition.

For years she has been writing poems and making illustrations for the *New Yorker* and making illustrations for many other periodicals,

G. Maillard Kesslère

PEGGY BACON

has been writing and illustrating a number of books and holding shows of her paintings in New York art galleries. She works in dry-point, pen and ink, pastel, etching. Pastels, drawings and drypoints by Miss Bacon are owned by the Metropolitan Museum, the Brooklyn Museum, the Chicago Art Institute, the Whitney Museum of New York, the Los Angeles Museum, Carnegie Institute of Pittsburgh and the San Diego Fine Arts Gallery. Many private collectors eagerly seek her paintings and caricatures.

When asked how she managed all this and a full social life, she said: "I'm really an indolent person, I think. I'm sure I'm not systematic—I've never been able to schedule my time. No two days are alike because of family demands, and because I must visit editors and visit the people I'm drawing."

The witty but unmalicious verbal notes she writes to accompany her caricatures are almost as famous as the illustrations themselves. "There is no propaganda in Miss Bacon's work," says Thomas Craven, art critic, "no art for art's sake, no esthetic humbug; she has fastened upon personalities and has depicted graphically with expert craftsmanship, the various ways in which strength and weakness, character and conceit, shine out in the expression of the faces and the structure of the head. And more: to a rather astonishing talent for likenesses she has added her own sly, delving wit and the controlled vitality of her own personality."

Although Peggy Bacon has guillotined her former husband in *Off With Their Heads* thus: "A violent stare compounded of rage and gaiety, slightly berserk . . . an air of force and energy . . . mercurial, overbearing and intense," he with characteristic masculine

gallantry has written of her: "Her crowded plates are collections of humanized objects, viewed with the ruthless eye of an Olympian spitting contemptuously into the populous valley below. These satirical observations are also expressed in words, and the combination of these two mediums is the forerunner of a plate. The presence of the double appeal—the literary idea combined with the fine expression of a clear vision—is the cause, I believe, for the wide public which enjoys her work, in spite of the complete absence of any ingratiating traits therein."

BAKER, RAY STANNARD [DAVID GRAYSON, pseud.] Apr 17, 1870- Author; historian

Address: Amherst, Massachusetts

The eight-volume biography of Woodrow Wilson for which Ray Stannard Baker received the Pulitzer Award for 1939 represents a labor of fourteen years during which Mr. Baker remained literally immured in tons of paper, lost to the world.

The last letter Woodrow Wilson wrote was addressed to him. On January 27, 1924, a week before the ex-President died, he wrote to his friend asking him to write the official biography. He said: "I would rather have your interpretation than that of anyone else I know." It has taken a long time to get Mr. Baker's full interpretation, but in 1939 the world had the two final volumes of the Wilson biography, and on May 6, 1940 Ray Stannard Baker was honored with the Pulitzer Prize of \$1,000 for the best biography of the year.

Ray Stannard Baker (known to part of his public as David Grayson) was born in Lansing, Michigan April 17, 1870, the son of

Major Joseph Stannard and Alice (Potter) Baker. As a child he attended a backwoods school in northern Wisconsin, where he began a habit of recording his rural experiences and observations in notebooks. He took his B. S. degree at Michigan State Agricultural School in 1889, studied law and literature at the University of Michigan and for a while played around with his father's real estate business. By 1892, however, he had decided he was a writer and nothing else. From cub reporter on the old Chicago *Record* he made himself sub-editor, then left the paper in 1897 to be managing editor and to write articles for *McClure's Syndicate*, having acquired the year before a wife (Jessie I. Beal, the daughter of the noted botanist). During all this time he was also a frequent contributor to *Youth's Companion*, and his first book, published in 1899, was titled *A Boy's Book of Inventions*.

From 1899 to 1905 he was associate editor of the famous muckraking *McClure's*. During this time his magazine articles on politics and business were collected in book form and published as *Our New Prosperity* (1900) and *Seen in Germany* (1901), following a trip to that country. Finally in 1906 he joined in the purchase of the *American Magazine* and became one of its editors along with muckrakers William Allen White (see sketch this issue), Ida Tarbell, Peter Dunne, John Phillips and others. Baker was associated with the magazine until 1915. His interest in sociology led him to travel in many countries and in 1908 he published a collection of articles called *Following the Color Line*, an exposition of the Negro problem as he found it in his travels. Another collection, *The Spiritual Unrest*, followed in 1910, the year in which his acquaintance with Woodrow Wilson began.

In the meanwhile Ray Stannard Baker was also publishing the contents of his private notebooks in the *American Magazine* under the name of David Grayson, and the farmer-philosopher author of *Adventures in Contentment* (published in book form in 1907) was enjoying a popularity of the best selling variety which never came to Baker under his own name. In 1910 came Grayson's *Adventures in Friendship*, in 1913 *The Friendly Road*, in 1915 *Hempfield*, in 1917 *Great Possessions*. Some of these titles are still selling.

The World War interrupted both Baker's and Grayson's literary careers temporarily, but brought Baker another. In 1918 he was selected as special commissioner of the State Department and sent on missions to Great Britain, France and Italy. The following year he was appointed director of the press bureau of the American Committee to Negotiate Peace at Paris and in this position was in constant and close association with Woodrow Wilson. A Republican by tradition, he returned from Versailles one of the President's most fervent admirers and a crusader for the League of Nations,

Blackstone

RAY STANNARD BAKER

determined to educate the country to an understanding of the conditions under which the Versailles Treaty was made. *What Wilson Did at Paris* (1919) was written in three weeks; in 1922 came the three volumes of *Woodrow Wilson and World Settlement*; and these were followed by *The Public Papers of Woodrow Wilson* in six volumes, which Baker edited with William E. Dodd. It would seem that literary devotion could go no further. But on March 6, 1925 a truck rolled up to the Baker home containing fully five tons of documents, letters, state papers—Ray Stannard Baker was beginning the task which his friend had set him, not to be finished for fourteen years.

In 1927 the first two volumes of the *Life and Letters* appeared; in 1931 two more volumes. Then while working on volume five Baker fell seriously ill. He had made contracts for the syndicate rights to the biography, and in the midst of his illness these contracts were canceled, Wilson's news-value having somewhat depreciated, if his historical value had not. But still in poor health, and with his income from the biography averaging no more than \$1,500 yearly, Baker continued. Farmer-philosopher David Grayson had been revived to support him in a financial way. In 1925 had appeared *Adventures in Understanding*, in 1931 *Adventures in Solitude*, in 1936 *The Countryman's Year*.

By 1935 the fifth book in the official biography was finished, in 1937 came the sixth, and last year, in time for World War II, the two final volumes were completed. Baker announced: "It appalls me when I think of it, and yet when I look back I have not the slightest regret. It was a grand experience! I thought I should be

overjoyed at being a free man again, yet I confess that I have felt in the past few months more or less like a lost soul."

Baker, round-featured, with a clipped moustache and rimless glasses, looks more like a businessman than the outdoors person that he is. Since 1910 he has lived in Amherst, Massachusetts, in a house which he himself built beside a giant elm, looking over miles of farmland to the hills. There he will have more leisure now for his favorite recreations of gardening, bee-keeping and tramping. He has four children—two sons and two married daughters—and, at 70, an enviable capacity for enjoying living.

BALDWIN, ROGER NASH Jan 21, 1884-
 Director of the American Civil Liberties
 Union

Address: b. 31 Union Sq, New York City;
 h. Dell Brook Farm, Oakland, New Jersey

The American Civil Liberties Union has been called "the organization which is doing the most fruitful work to advance the so-called Class War in America today," and it has also been called "the staunchest defender of American democracy." Its own statement of purpose is: "We stand on the general principle that all matters of public concern should be freely discussed without interference."

It has been charged that the American Civil Liberties Union defends only Communists and that its "occasional sideswipes at non-radical cases are little more than window dressing," but the Union itself says its cases are not of his own choosing; they are made for it by those who violate civil liberties. For the same reason that it defends Communists, it also defends Nazis and members of the Ku Klux Klan. It defends, not their doctrines, but their right to make them known as guaranteed in the United States Bill of Rights.

The Civil Liberties Union has come to the defense of Sacco and Vanzetti, the CIO, individual Communists, and it has also said that Henry Ford has a right to distribute anti-union leaflets if he wishes. When Mrs. Dilling, author of *The Red Network*, said the Union was financed by Moscow gold, the Union still offered to protest for her to the Federal Communications Commission when her speech was censored by Station WOW. "The fact that the A. C. L. U. fights for the rights of the American Communists with its left hand and for the rights of the Bund with its right is why both parties have charged it with inconsistency, incompatibility, favoritism and certain crimes that can be stated only in dirty words."

It was partly in answer to these charges that the Civil Liberties Union in February 1940 excluded from membership on its governing committees or staff any person "who is a member of any political organization which supports totalitarian dictatorship in any country, or who by his public declarations indicates his support of such a prin-

ROGER BALDWIN

ciple." Elizabeth Gurley Flynn, Communist member of the Board of Directors, refused to resign, and the board of directors announced her removal in May 1940.

One of the founders and the leader of the American Civil Liberties Union, which since 1918 "has made itself the guardian of free speech in this country," is Roger Baldwin. To some, "the union is the irradiation of his personality." Roger Baldwin has "a family tree that can be traced back to an acorn planted by William the Conqueror." It was from his family that the Baldwin apple obtained its name.

Roger Baldwin attended public schools in Wellesley, Massachusetts and was graduated from Harvard in 1904. In 1905 he received a Master's degree in anthropology from Harvard. After Harvard he went to St. Louis, where he taught sociology for three years and was chief probation officer from 1917 to 1910. His book, *Juvenile Courts and Probation* (1912), written with Bernard Flexner, was the outcome of the years he spent in social work in St. Louis. It was there that Baldwin fought his first free speech fight. The late Emma Goldman, anarchist, came to town and was refused a place in which to speak. Baldwin tried to get her one, but she wasn't the least bit grateful to him for his help.

When the First World War began, Baldwin went to New York and joined forces with other conscientious objectors in the American Union Against Militarism. After America entered, when it was no longer possible to halt the War, the principal work of this organization was snatching as many war opponents as possible out of the jaws of the Espionage Act. It became a work of legal defense, not propaganda. From this organization and the National Civil Liber-

BALDWIN, ROGER—*Continued*

ties Bureau the American Civil Liberties Union was born.

When Baldwin was drafted, he went to prison for a year rather than go to War. At his trial he said: "I know that as far as my principles are concerned, they seem to be utterly impracticable—mere moonshine. They are not the views that work in the world today. I fully realize that. But I fully realize that they are the views which are going to guide in the future."

After he came out of prison, Baldwin wandered all over the United States. He rode the rails, worked in a lead factory, in a brick yard, saw America. When he returned to New York it was to work for the newly formed American Civil Liberties Union and since 1920, as its director, he has been in the thick of every struggle for civil liberties in the United States and abroad. Many of these struggles have been famous. There was the Scopes "monkey" trial in Tennessee in 1925, in which the Union's lawyer, Arthur Garfield Hays, fought against the State's prohibition of the teaching of evolution. In 1938 and 1939 there was the fight against Mayor Hague's interference with civil liberties and the CIO organization in Jersey City which, after going to the United States Supreme Court, was won. Other struggles have been the small day-to-day ones to defend those whose rights have been infringed upon. From its office in New York the Union handles about 300 cases a year and at any given time has from 30 to 80 active cases on hand. With its branches all over the country, the Union is working on 75 to 100 cases a day.

Roger Baldwin is in the midst of all these cases, "a man of remarkable energy and executive ability." He himself tells us: "My public life for many years has combined a number of diverse activities, all relating to the maintenance of democracy and peace.

"While my jobs are mainly administrative, they require in this field continued public speaking, writing and teaching, in order to keep abreast of the manifold developments. A man engaged in so highly controversial a work must be clear in his own mind by taking a position on each major issue as it arises. The best recipe for that is teaching and public speaking. I have never confined myself to any one job, because it is so easy to fall into a routine which stifles growth. Most of the satisfaction in public work comes from fresh problems, new personalities and association with people on their best—their public—side.

"For recreation from a crowded routine I have made it for years almost a religion to escape to the country week-ends and for vacations. There I engage in all the juvenile sports in a rough wilderness retreat, where a canoe, a horse and a pair of skis will do full duty at the appropriate seasons." Very often Mr. Baldwin is accompanied into the

country by his second wife, Evelyn Preston, whom he married in 1936, and by whom he has one child.

Peggy Bacon (see sketch this issue) describes him thus: "Dusty hair, a bit bedraggled. Turn-out clean but careless. Manner tumblingly hurried. Personality generous, self-disciplined, aristocratic, Galahadian, full of fervor and violent integrity, emotional, ethical, tirelessly seeking the Grail. A genuine article." Today, when the American Civil Liberties Union feels we may have even more "denials of civil liberties," than usual, Mr. Baldwin continues to seek "the Grail" of civil liberties for all the American people—unionists, Negroes, capitalists, aliens, Communists, Nazis.

BAMPTON, ROSE Nov 28, 1909- Singer
Address: 128 Central Park S, New York City

Rose Elizabeth Bampton had a very happy twenty-third birthday. Her debut at the Metropolitan on November 28, 1932 fell on that birthday, and like everything else in her charmed career it turned out an unquestioned success.

Her debut was in a contralto rôle—Laura in *La Gioconda*. But today Miss Bampton is singing soprano rôles. Back in the South Park High School in Buffalo, where Miss Bampton grew up, she began her singing career in a school Christmas pageant as a coloratura soprano. Later, while she was a student at the Curtis Institute of Music in Philadelphia, she was engaged for a concert in Buffalo, and was considerably excited over singing professionally in her home town. But she arrived in Buffalo with laryngitis, and no voice. The story is told that a doctor who came to look at her throat said: "You're a contralto?" "No," whispered Miss Bampton, "I'm a soprano." The medico is reported to have laughed. "So you think, my dear. You may as well know now that you are a contralto."

In Philadelphia once more, Rose told her teacher about the incident, and recalled that she had been having trouble with high notes. A renowned throat specialist was consulted. "You're a contralto," he agreed. "You have a remarkable range, but you're a contralto."

So Rose Bampton became a contralto, and made her debut at the Metropolitan as such. After three years of contralto rôles at the Metropolitan she wearied of the wicked and frustrated females she had to portray. She referred to herself in opera as "always a bridesmaid, never a bride." She was determined to sing soprano rôles, to become an operatic heroine. For, as she knew, after years of singing many of the lower-range artists develop new color and ability to produce the coveted higher notes. As Lauritz Melchior, present-day Metropolitan Opera tenor who sang baritone rôles for four years, explained to newsmen: "The voice is like a skyscraper. It must be built on a firm bed-rock—then you can always build upward."

Rose Bampton did build her voice upward, and tried out her new soprano in Europe in the fall of 1936. She sang in Munich, Prague and Stockholm, but saved her United States soprano debut for the spring season. New York first heard her as a soprano in a Town Hall recital in March 1937, when she called upon her full range of two and a half octaves. Critics reported that "although her tones were rich and beautiful, Miss Bampton showed an overcautious interest in their production." However, they believed that when she became accustomed to her new power, she might be one of the most delightful lieder singers of the day. Their prophecy turned out true, for when she sang her first soprano rôle in *Il Trovatore* at the Metropolitan in May 1937, "audiences rejoiced that personable Miss Bampton was trustworthy in the high notes, could hit 'D' without difficulty, would now be able to sing soprano heroines instead of villainous contralto women."

Rose Bampton is the daughter of a Buffalo businessman, Samuel W. Bampton, an Englishman by birth. Her mother is an American whose family history dates back many generations in this country. Miss Bampton was born in Cleveland, and from there moved with her family to Massillon, Ohio, and later to Buffalo where she grew up. She led the life of a typical American child, the only girl in a family of three children. Although she studied piano from the age of six, it was not until she was in high school that she considered an operatic career seriously. She sang her first public solo in a high school Christmas pageant. A singing angel in the pageant had been taken ill, and the music director chose the tall, dark-haired, eager Rose Bampton to sing the part. "Chiefly," Miss Bampton says modestly, "because my name began with 'B,' and I sat in the first row." She was such a success that her teachers and parents encouraged her to take her voice seriously.

Her musical training began at the Curtis Institute of Music in Philadelphia. For four years she was the scholarship pupil

ROSE BAMPTON

of Horatio Connell, and during her fifth year at the Curtis Institute a pupil of Queena Mario.

In 1928 Miss Bampton began her operatic career with the Chautauqua Opera Association. She went next to the Philadelphia Grand Opera Company, with which she sang leading rôles through the Spring of 1932. She was something of a protégé of Leopold Stokowski, and the distinguished conductor engaged her for various appearances with the Philadelphia Orchestra. In April 1932 the stately brunette sang the part of the Wood Dove at the American première of Schönberg's *Gurre-Lieder*, both in Philadelphia and at the Metropolitan Opera House in New York, thus coming to the attention of the Manhattan critics. A month later she distinguished herself again at the Bethlehem Bach Festival and was encouraged by her teacher, Queena Mario, to apply for an audition at the Metropolitan Opera. After a second hearing Rose Bampton got the coveted Metropolitan contract, and made her debut, November 28, 1932 as Laura in *La Gioconda*.

Slender, brunette, with large expressive eyes, Miss Bampton is unpretentious, tremendously grateful for her voice. She is married to Wilfred Pelletier, one of the leading conductors of the Metropolitan.

Many American music lovers became acquainted with her through her regular programs on the National Broadcasting Company's network. She has sung throughout the length and breadth of the United States on concert engagements and with orchestras in Canada. She filled a London concert engagement in the home of Lady Astor (see sketch this issue) during the Jubilee celebration. She is scheduled to sing two

BAMPTON, ROSE—*Continued*

rôles in the 1940 to 1941 Metropolitan Opera season.

BANKHEAD, WILLIAM BROCKMAN

Apr 12, 1874—Sept 15, 1940 Late speaker of the United States House of Representatives

December 1940 Bulletin: Speaker Bankhead died at 1:35 a. m. September 15, 1940 at the Naval Hospital in Washington. He had been in poor health for the past several years. Representative Sam Rayburn (see sketch this issue) of Texas has been appointed Speaker of the House.

From October issue:

William Brockman Bankhead and his father before him have been representing Alabama in Washington for an aggregate of some threescore years. Sometimes called the "best-loved man in Congress," still the Alabama Congressman seems occasionally to fall in the shadow of the rest of his family. Some people know him mainly as the father of the glamorous actress Tallulah, and of the equally glamorous Eugenia, who has been married six times; others remember his Senator-brother, John Hollis Bankhead, who defeated Tom Heflin in 1930; and then there is a sister who was mentioned as a gubernatorial prospect for 1938.

Wide World

WILLIAM B. BANKHEAD

But in the House of Representatives there is little danger of Bankhead's being known simply as "Tallulah's father." "Broad-shouldered, bald, completely untheatrical" but grave and firm, it is Speaker Bankhead who "rises in the House when 'the gentleman from Palooka yields'—and no Republican hell-devil can stop his bitter blast: 'May I remind you, gentlemen?' And he steps forward with the grace of a leading man."

Long before the Civil War members of the Bankhead family were prosperous planters in Alabama, the name used for towns, hotels, mines, roads, farmsteads. William's father, "Cap'n John" Hollis Bankhead (he married Tallulah James Brockman), was both a prominent Alabama Senator and Representative, and helped sponsor the Bankhead Highways and Warrior River development. The family was always Methodist and anti-Ku Klux Klan. William was born in Moscow, Lamar County, Alabama on April 12, 1874 and was educated at the University of Alabama, where he played fullback on the University's first football team, achieved Phi Beta Kappa, took his B. A. in 1893 and his M. A. three years later. In 1895 he received an LL. B. from Georgetown University. Throughout his college years he had nursed dramatic aspirations (he had won the college medal for oratory, too), and after finishing law school he almost ran away from an apprenticeship in a Manhattan law office to become a great actor. His Southern accent actually brought him the offer of a rôle in Boston, but when he received a letter from his mother warning him of disaster and disgrace he decided to stick to the law.

His next venture was as a struggling lawyer in New York City again, where he promptly joined both the Anawanda Club and Tammany Hall. His first speech was made in the Bowery from the tail gate of a delivery wagon. He was soapboxing for Robert Van Wyck for Mayor, and he earnestly begged the New York populace to "vote every star." Finally, finding the city "too big a place for a country boy," he went back to the South to be his brother's law partner and in 1900 married Adalaide Eugene Sledge of Memphis, Tennessee. Entering politics in his own county, he was from 1900 to 1901 Madison County representative in the State Legislature, then for four years city attorney of Huntsville, and from 1900 to 1914 served as Circuit Solicitor of the fourteenth Judicial Circuit. In 1917 he went to Washington as Democratic member of the sixty-fifth Congress from the seventh Alabama District, after having been defeated in the previous election. In 1915 he married his present wife, the former Florence McGuire, his first wife having died and left him with two daughters, Eugenia and Tallulah.

His father's advice before he entered the House had been to "learn the rules." Bankhead followed this advice; he didn't make himself particularly conspicuous in the House, however. For a long time he was

merely an "amiable, well-liked but not particularly influential" Congressman with a vast knowledge of parliamentary procedure and well-disguised ambitions to become Speaker. On April 5, 1934 he was elected chairman of the House Rules Committee, but, when mentioned for the Speaker's office, temporarily abandoned his larger ambitions in favor of his friend Joseph Byrns from Tennessee. "You know I went fishing this summer with Joe Byrns down in the Gulf," Bankhead joked ruefully. "I now find I made a mistake in not throwing Joe overboard." But on January 2, 1935 Bankhead became majority leader in the House, and when on June 4, 1936 the House was shocked by the news of Byrns' sudden death, he himself was the natural choice for the office of Speaker.

As Speaker his duties are many and delicate: to "preserve order and decorum on the floor; to sign all acts, resolutions, writs, warrants and subpoenas ordered from the House; to use his vote to break deadlocks and to further the interests of his Party." Bankhead once summed up his own requirements for the office: "I should say that the most important is that the Speaker should be a parliamentarian. The second is that he should act impartially . . . and he should have a sense of humor."

These requirements and others that he didn't name have been filled by Speaker Bankhead more than adequately. He calls himself "a conciliator, not a combatant," and although he is generally known as one of the best speakers in Congress, with a resonant voice, an excellent vocabulary and an "unfailing sense of the dramatic," he can be counted on to get on his feet only when he really has something to say. Something of his unfailing calm and polished manner can be conveyed by two stories that people tell about him. Speaking for Al Smith in Alabama, back before his Speaker days, Ku Kluxers threw eggs at him. Brushing himself off, the Congressman turned to the chairman of the meetings. "Sir, I have been treated discourteously," he said—and continued his speech. At another time the early morning found the lower floor of his Washington house in flames. Roused from bed by his wife, Bankhead investigated and made his decision: "We had better return to our bedroom and await the firemen." When, after some time, the firemen arrived, they found the Congressman was as carefully dressed as always and he made his way down the ladder unescorted.

A consistent supporter of President Roosevelt even on his most unpopular proposals, it was Bankhead who on July 15, 1940 made the keynote address as temporary chairman of the Democratic National Convention. He himself also enjoyed a mild "boom" for the Vice-Presidency before former Secretary Wallace (see sketch this issue) carried the day. In spite of strenuous duties, his health is none too good: he suffers from occasional heart attacks

and digestive disorders, so fishing is his only recreation. His hobby is collecting the gavels used by Speakers who preceded him: he now has six, and his is the smallest of them all.

BANNING, MARGARET CULKIN Mar 18, 1891- Author

Address: 617 Irving Pl, Duluth, Minnesota

Mrs. Banning has written, on the average, a book a year for the past 20 years and has contributed short stories and essays on phases of American life and activities to many magazines. In September 1940 her latest book, *Enough to Live On*, was published. A critic calls it "a readable and moderately entertaining book but not exactly escape fiction for most people."

She maintained that basically Americans are moral, that our modern law is based on the Ten Commandments. She was supported in her contention by Chester A. Kreider, a business man. Lewis Browne, author and university professor, disagreed with both of them. He called Americans the most "casual law breakers" and stated that we obey the law only because it is prudent to do so.

A native and resident of Minnesota, Margaret Culkin was born in the town of Buffalo. She is the daughter of William Edgar, an editorial writer on a Duluth newspaper, and Hannah Alice (Young) Culkin. Graduating from Vassar (1912) with Phi Beta Kappa honors, she became interested in philanthropic and social work. Later she received a certificate from the Chicago School of Civics and Philanthropy, and was a fellow in research at the Russell Sage Foundation the following year.

Margaret Culkin married Archibald Tanner Banning, a Duluth lawyer, in 1914. Two of their four children are living: Mary Margaret, the oldest, is taking post graduate work in physics at Johns Hopkins University, and her brother, Archibald Tanner Jr., is to complete his undergraduate work at Harvard in 1940.

MARGARET CULKIN BANNING

Six years after her marriage Mrs. Banning's first novel, *This Marrying*, was published by Harper's. Her stories appeal to many American women, for they deal with problems which always confront them. She describes her own contribution to literature: "The only possible reason why women should read anything I write might be because I might get a glimmer of truth once in awhile and would pass it right along."

Out in Society (1940) is the story of what a girl gets into when she is in society, and what she gets out of it if she is out in it. Among her many novels are *The First Woman* (1935); *The Third Son* (1934); *The Iron Will* (1936); *Prelude to Love* (1929); *Mixed Marriage* (1930), *Too Young to Marry* (1938); and *Enough to Live On* (1940). Many short stories, articles and essays have appeared in magazines such as *Collier's*, *Delineator*, *American Magazine*, *Good Housekeeping*, *McCall's*, *Ladies' Home Journal*, *Saturday Evening Post*, *Pictorial Review*, *Atlantic Monthly* and *Harper's Magazine*. She has also published works in England.

Much comment was aroused and many reprints issued of *The Case for Chastity*, which Mrs. Banning wrote for the *Reader's Digest* (August 1937). This article was "based on extended research and interviews and on data supplied by doctors, psychologists and others who deal daily with difficulties arising from sex conduct."

Her productivity as a writer does not preclude other activities. She takes very seriously her duties as a citizen and as a mother. She is interested in her city, is a trustee of the Duluth Public Library Board and is interested in the Duluth Symphony Orchestra. In 1935 she was selected as the year's first citizen for the Duluth

Hall of Fame for her outstanding record in leadership in civic and welfare work—the first woman ever to have received this distinction.

She is interested also in houses, gardens, riding, current problems of women, war-relief work, Vassar College Alumnae and other clubs. She writes: "I belong to about 38 organizations and always intend to resign from 37."

Active in politics, Mrs. Banning is restless as a member of the Republican Party, yet unconvinced either that we can do without party government or that socialism would be practical. To become a Democrat instead of a Republican seems to her like turning over in bed. Much of her short-story material has developed out of the practical experiences of herself and other women in the political world.

An interesting speaker on either the radio or lecture platform, Mrs. Banning is chic, charming and unhurried. She has a flair for taking the impersonality out of hotel rooms—for always creating a homelike atmosphere about her. "As for writing," she says, "I do it everywhere. I write in the cottage and in the North and in the South. I wrote one of the *Letters to Susan* in Spain on the night before the Revolution and another in Paris that same year. I write on trains and on other people's typewriters. But in Duluth I have a bare room overlooking Lake Superior which is the best place in the world to be a professional writer, and when I can spend seven hours a day there for a few months I feel that I'm really on the job and earning my living."

BARBIROLI, JOHN (bar-bī-rōl'li) Dec 2, 1899- Orchestra conductor

Address: 113 W 57th St, New York City

John Barbirolli, "a musician of taste and fire and intensity, electric, vital, sensitive, dynamic, experienced," opened the ninety-ninth season of the New York Philharmonic-Symphony Orchestra in October 1940. Its permanent conductor since 1937, he has come a long way in popular opinion since he came as a young unknown to take Toscanini's place.

He had a reputation abroad, however, both as a conductor and as a cellist. But John Barbirolli started his musical career as neither; he had intended to be a violinist. Born in London, the son of Lorenzo Bar-

birolli, an Italian, and Louise (Ribeyrol) Barbirolli, a Frenchwoman, young John began to study music early. A boy whose father and grandfather had both played in the orchestra of La Scala in Milan had no trouble in getting encouragement from his family. It made them unhappy, though, to watch him play the violin: he kept striding up and down the room, always walking, never still. John's grandfather suddenly got an idea, and it wasn't long before John's practicing had been transferred from the violin to the cello and John was sitting in one place as he played.

By the time he was 11 he had received a scholarship to Trinity College of Music and had given his first public performance—the solo part of the Saint Saëns' Cello Concerto in A Minor. By the time he was 14 he had really started his professional career and, as he says, "it wasn't long before I had played everywhere except in the street—theatres, music halls, cinemas, in opera, orchestra and in chamber music. I went right through the mill. I think now it was the best possible thing that could have happened to me."

When he was 16 Barbirolli became a member of the Queen's Hall Orchestra in London, "and it was good schooling," he comments, "to work my way through such a large repertoire of orchestral works." He also played in the Beecham Opera Company at Drury Lane and got jobs once in a while in small theatre orchestras. He liked theatre jobs—"not much to do. . . All we did was to play the people to and from the bar in the intermissions. In the long waits between the act intervals I studied scores."

He kept studying scores because his real ambition was conducting, not cello playing ("bandmasters in parks were my heroes when I was young"). He got his first chance at conducting when he was in the army under a colonel who fiddled enthusiastically and formed a small orchestra. The War over, Barbirolli returned to London feeling everything was a "mess." "Progress had been stopped for four years. Young men returned to their homes and had to start life all over again. So far as I was concerned," he adds, "I had my cello and I turned to that."

He became cellist of the International String Quartet in 1920 and stayed with this quartet until 1924. Then he began his first professional conducting. In 1925 he founded a chamber orchestra, the Barbirolli Chamber Orchestra, which was widely heard. After listening to a performance of it Fred Austin, of the British National Opera Company, offered him the position of conductor in his company. "In Newcastle, during my opening week," he says, "I conducted opera by Puccini, Verdi and Gounod—quite a job for a youngster with no previous opera experience."

This was in 1926. In 1927 Barbirolli became guest conductor of the London Symphony Orchestra and of the Royal Philharmonic Society concerts, and in that

same year started his seven years' association with the International Opera Company at Covent Garden, London. From 1933 to 1936 he conducted the Scottish Orchestra and the Leeds Symphony, so successfully that "both organizations increased their audiences measurably and extended their seasons."

In 1936, after having conducted all of England's great orchestras and after having been a guest conductor in Russia and Finland, Barbirolli was invited to New York by the Philharmonic to have charge of the season's first 10 weeks. It was a hard job. Toscanini had just left and his memory was shining. But Barbirolli announced that he did not "intend to follow in the maestro's footsteps. . . I feel that music must go on. I am a simple person who is passionately in love with music. I wish to serve it."

When he first ascended the Philharmonic podium audiences were prepared to think him too young, too inexperienced for the leadership of that august body. But they watched him, "planting his feet widely, chin down," as he "swayed his shoulders delicately through the lyrical passages, hunched forward to demand a pianissimo, twitched his kinetic torso and wagged his flying tails to call for quickened tempi." And they listened to him. And they called him "a young conductor of high promise, venturesome, resourceful."

In that same year Barbirolli was appointed conductor of the New York Philharmonic for three years, the first permanent conductor of the Philharmonic since 1921. Music critics hailed the appointment as a "significant decision, marking a new era in the history of the Philharmonic Society," and pointed out how important it was to have a conductor of artistic integrity who could mould the orchestra into a "consistent personality and technical unity." The appointment was attributed also to the "amazing" attendance gains. In 1940 Barbirolli's engagement was extended until the season of 1942 to 1943.

At the end of the 1939 to 1940 season Samuel Chotzinoff (see sketch this issue) suggested that "a capacious critic would perhaps say that the Philharmonic-Symphony, as a virtuoso body, continued this last season to show a certain deterioration." However, audiences continued and continue to be pleased. Much of this pleasure may be due to Barbirolli's ingenuity as a program maker. His tastes are catholic, he plays no favorites and he searches for novelties with "commendable zest." He himself says he has no favorites. "I love all music. Sometimes, as when I play Beethoven's Seventh Symphony, I think that is greatest. Again, perhaps when I am playing Brahms' Fourth Symphony, I think, 'What could be greater than this?'"

"A fiery, small man" who "dances about the podium, cutting the air with a great circular beat, stamping his foot, changing his baton from one hand to the other,"

JOHN BARBIROLLI

Barbirolli still insists that the more simple the baton technique the better, and that "with his eyes a conductor can convey many things for which the baton is impotent. A lift of the eyebrow, a look—nuances, subtleties." He is even more firmly convinced that the best technique is unimportant if the conductor himself is not a "born conductor." "No matter how much conductors study . . . their real progress begins only after the business of formal study has ended. . . A man either possesses the sum total of magnetism, communicativeness and perceptive ingenuity which make a master composer or he does not."

A conductor, even one with all these qualifications, is aided by being able to play "some if not all of the instruments he directs." And he "must be a good psychologist." Barbirolli feels that he knows how to handle an orchestra. He explains his first sessions with the Philharmonic thus: "All the men in the Philharmonic are A-1 musicians and I treated them so. I let them save all their nervous tension for the performances. The rehearsals were gay and carefree. . . I never worked them six hours a day as some conductors do." But he did, and he does often, rehearse one number hour after hour, insisting it be played as it was written. Then, "perhaps midway through the session, he will rap smartly with the baton, pass his fingers through his black hair and say: 'It is not good enough.' Then he may pause with a smile and add: 'It is not improper to become inspired in the cause of music.'" Barbirolli often, too, gets off gentle witticisms to his men like: "Gentlemen, that passage should sound like the night. You're playing it like the morning after."

"A short, slightly dark young man, somewhat Napoleonic in aspect, with a hint of Mediterranean intensity in his face," John Barbirolli is actually very British, except when he is on the platform. He was born in London's Bloomsbury, likes Bloomsbury and still maintains a four-room flat there. He likes Yorkshire ham, cricket matches and trim, English clothes. His wife, Evelyn Rothwell, is as British as he. They were married in July 1939, seven months after Barbirolli had received a divorce from Marjorie Parry, English opera singer, his first wife, whom he married in 1932. The present Mrs. Barbirolli was one of England's outstanding oboe players, soloist of the Scottish Orchestra of Glasgow, the Adolf Busch Ensemble and the Glyndebourne Festival Orchestra.

Since their marriage Mrs. Barbirolli has given up her career, though she did play with the Vancouver Orchestra in the summer of 1940 when Barbirolli was conducting it. She shares many but not all of his enthusiasms—he is a gourmet, an authority on liquors, and his idea of relaxation is to get all his shoes out of the closet and shine them brightly.

BARCLAY, MCCLELLAND May 9, 1893-Illustrator

Address: 36 W 59th St, New York City

McClelland Barclay says he is "considered by some a versatile artist." This illustrator who created "The Fisher Body Girl" has also become known for his marine paintings, his portraits, his sculpture and his industrial designing. He has even taught art. In the summer of 1939 he started a school of his own on Long Island in which he tried to help young artists develop in a direction best suited to their particular talents. Before that he instructed many of the younger illustrators now appearing on the pages of America's magazines.

Good, sound art training is the basis for the success of this popular illustrator. He was born in St. Louis, Missouri, the son of Robert and Minnie G. (Hamilton) Barclay. It was in St. Louis that he received his first art lessons. His first known painting

McCLELLAND BARCLAY

was made when he was seven: he met Mark Twain and rushed home to do an oil portrait of him. After attending Central High School in St. Louis and studying at the St. Louis Museum of Fine Arts, Barclay moved with his family to Washington, D. C. There, from 1909 to 1912, he studied at the Corcoran School of Art. The next two years he spent at the Art Students League in New York. Five years later he returned to study and spent two years at the Chicago Art Institute. Barclay himself says that he has studied art as long as he can remember and expects to keep on studying.

McClelland Barclay's first illustrating job came in 1912, and from that date on his sleek, smooth, rounded, long-limbed young ladies and his firm-jawed young men have graced the pages of the *Saturday Evening Post*, *Good Housekeeping*, *Cosmopolitan* and other magazines. Innumerable advertisements for innumerable products have been enlivened and made attractive by his drawings, though "The Fisher Body Girl," a series of advertisements that ran for nine years, made the most money for Barclay and brought him the most fame.

Barclay married the model for "The Fisher Body Girl," Helene Coghill Haskin, in 1930. Many times he painted her picture in numerous poses and molded a portrait head of her. Later, when she became ambitious for a screen career, they were divorced, but they have continued to be friends.

Like most artists who draw beautiful women, Barclay is frequently called upon to judge beauty shows, or to give his opinions on the relative merits of American and foreign women, or to present his criteria of beauty. After many years of doing this he still believes "the modern American girl is the most beautiful any race or age has produced."

Barclay's ability to set things down clearly and attractively has nowhere been better illustrated than in the many posters he created during the last War. His recruiting poster was awarded first prize by the Conference Committee on National Preparedness; the Red Cross gave him another first prize for his *Fill the Breach*; his Marine Corps recruiting poster, *The Human Cross*, was awarded still another first prize.

McClelland Barclay likes to box and sometimes puts on the gloves with Arthur Donovan, noted referee and boxing coach at the New York Athletic Club. He is also a strong swimmer, plays a fast game of tennis, skis and rides horseback. He likes to rough it in the woods, too, or, even more, his great pleasure is to go to a lonely island off the coast of Maine, where he paints the waves. He doesn't smoke, he says, or "play cards, drink liquor or play golf."

BARLOW, HOWARD May 1, 1892- Symphony orchestra conductor

Address: b. Columbia Broadcasting System, 485 Madison Ave, New York City; h. 435 E 57th St, New York City

Howard Barlow, conductor of the Columbia Broadcasting System Symphony, was engaged as director of the Baltimore Symphony Orchestra for the 1940 to 1941 season. This did not affect his duties as conductor of the radio orchestra.

It seems quite natural that American music, just a stepchild to most symphony conductors, should find a staunch champion in Howard Barlow, a plain American from Plain City, Ohio, to which his family tree branched off from its New England beginnings. Barlow, the son of Earl W. and Nettie (Dunham) Barlow, made his debut at the age of six, in Urbana, Ohio, bravely singing a hymn at a Sunday School social. While his family hopefully anticipated the day when the youngster would enter his father's furniture manufacturing business, Howard heard a player-piano version of something from *Il Trovatore*, and immediately decided that he wanted to become a composer. So he studied the trumpet, piano, cello and drums. Of this period of musical devotion, he says: "Music was my greatest source of enjoyment, and as our town boasted neither music teachers nor music stores (except the place where dance records were sold), I was hard put to it to find the enjoyment I wanted. My only pieces were a book of Czerny exercises, Schumann's *Album for the Young* and a volume of baritone songs. I learned all of these on the piano, and then began all over

HOWARD BARLOW

again practicing them on the violin and the violincello. After that, I came to a stop."

Howard Barlow's family moved to Mt. Carmel, Illinois, then to Denver, where Howard became a pupil of a music teacher in the public schools, the late Wilberforce J. Whiteman, father of Paul Whiteman. Later he went to the University of Colorado, and Reed College in Oregon (B. A. in English literature), and then he received a scholarship to Columbia University in New York. While his family, a little less hopefully now but with admirable persistence, continued to suggest the furniture business, Barlow registered at a New York agency as an "American singer." Nothing came of that but he did get jobs conducting choral groups in New York City and surrounding places.

After the War, in which he served as a private and sergeant, he resumed his career, conducting several American music festivals, notably the MacDowell series at Peterboro, New Hampshire. In 1923 he formed an all-American orchestra of 75 musicians which did well for two seasons in New York, although bucking such strong opposition as the New York Philharmonic and the Damrosch Symphony. Barlow then obtained a job as music director at the Neighborhood Playhouse on Grand Street, where he arranged the music for its productions of *The Dybbuk* and *Grand Street Follies*. Under the name of Thomas Tilton he appeared as a singer.

On December 12, 1926 he was married to Miss Jeannette Thomas of Portland, Oregon. To the well-grounded musician the puny youngster called radio then made an appeal. On September 18, 1927 Howard Barlow stood before twenty-two musicians and "at precisely three o'clock" led them into Luigini's *Ballet Egyptienne*. With this hour of symphonic mu-

sic the Columbia network was inaugurated. In line with Barlow's oft-reiterated interest in American music, he conducted for the radio that evening selections from Deems Taylor's *The King's Henchman* (see sketch this issue).

"Because of its inherently democratic nature," says Barlow, "I believe that radio can be used to explore the vast field of native American music. The American performer and the American composer must be given a full, free chance to show what they can do in taking their places beside the foreign artists. So far, we have done this in only a limited way. We have progressed beyond the point where Americans were refused a chance in the arts and had to change their names—from Norton to Nordica!—to be heard at all. But there is still vast room for improvement. . . The one thing the American composer needs today is not a finishing year abroad, but a chance to be heard *at home*."

In 1937 he introduced six works by famous American composers who had been commissioned by the radio to write music specifically for broadcasting. Relatively unknown American composers have also had their works played. "None of them," he says of some 100 compositions out of 200 submitted to him, "was below the average of new, untried works anywhere in the world. We have an immense amount of creative talent, earnestness and vitality. . ."

Barlow is an expert program maker, memorizes everything and has been known to conduct for as long as a year and a half without repeating a major work. Muscular, with fine dark eyes and receding hairline, he is not the arty, musical type. He has made guest concert appearances with orchestras in Philadelphia, Duluth, Washington, D. C., and has conducted both Stadium concerts in New York City and Metropolitan Opera concerts.

Struggling small-town musicians anxious to know about "pull" for New York radio and musical work will be heartened by Barlow's: "When I arrived in New York myself, my only letter of introduction was to a cheese merchant."

BARNEY, SAMUEL E. 1859—Feb 23, 1940 Civil engineer

Samuel E. Barney, professor emeritus of civil engineering at Yale University, died at his home after a heart attack. He was 81 years old. A native of New Haven, Connecticut, Mr. Barney was a descendant of the family which settled Salem and Taunton, Massachusetts. After being graduated from Yale in 1879, he became a consulting engineer for various municipalities and corporations and was an expert on the construction of breakwaters, watersheds and railroads. One of his important assignments was to make a valuation of the land taken for construction of the Ashokan Reservoir in the Catskill Mountains. He is survived by a widow, Mrs. Ida Bushness Barney, and two daughters.

BARNOUW, ERIK (bar'now) June 23, 1908- Radio writer; instructor in radio writing and production at Columbia University
Address: 4414 Cayuga Ave, New York City

"Tall, dark, handsome Erik Barnouw, Holland-born, Princeton-built, author, dramatist, summer-stock trooper who might have become a matinee idol had he not chosen backstage radio writing" is in 1940 an instructor in radio writing and production at Columbia University. Monday and Tuesday nights he imparts to students facts about "commercials" and "continuities," about directing programs and "ad libbing" which he learned in the nine years he spent writing for Camels and General Foods, *True Story* and Barbasol, Orson Welles and *Liberty*.

Erik Barnouw has been teaching at Columbia since 1937 and in 1938 lectured on radio and drama at the Writers' Conference at the University of Colorado. In 1939 his *Handbook of Radio Writing* was published, a "thoroughgoing text on the tricks of the trade, with liberal examples quoted from radio worthies." According to the radio writer Norman Corwin (see sketch this issue) it "should be as much a part of every radio writer's equipment as a receiving set, a typewriter and a dictionary." The book starts with a general appraisal of the market and then proceeds to analyze the tools, technique, methods and devices of radio writing. It also gives "many interesting slants on radio both as a market and as a madhouse."

Erik Barnouw, his two brothers and his sister were all born in The Hague, Holland, where their father was a teacher in a Gymnasium and during the World War a foreign correspondent for *The Nation*. Erik went to elementary school in The Hague until the end of the War, when his father came to America to become one of the editors of the *Weekly Review* and later Queen Wilhelmina Professor at Columbia.

Then Erik attended Horace Mann School in New York City.

From Horace Mann, Erik Barnouw went to Princeton University in 1925. At Princeton he was editor of the *Nassau Literary Magazine* and collaborated with Joshua Logan on one of the Princeton Triangle Club musical plays. "It was called *Zuider Zee*," he says, "and was about the boy who put his finger in the dyke, about whom I had never heard until I came to America." He also wrote, alone, a non-musical, three-act comedy satirizing Princeton, entitled *Open Collars*, successfully produced and later revived at Princeton and at a number of other colleges. Mr. Barnouw now says rather ruefully that "although I'd hoped to annoy the University with it, a little bit, the dean commended it and the Princeton University Press published it."

At college Barnouw made most of his spending money designing Christmas cards and bookplates for other Princetonians. One summer he spent tutoring a wealthy Scotch baronet on his estate in Scotland; another he spent being one of the founders and directors of the summer stock company at Falmouth, Massachusetts, first called the University Players. The group included Margaret Sullavan, Henry Fonda, Joshua Logan and Bretnaig Windust.

After he was graduated from Princeton in 1929 Barnouw spent some months as an actor in the Cukor-Kondolf Stock Company in Rochester, New York, but left this to join the writing staff of *Fortune*. Before the year was out he was in Europe traveling on a scholarship and studying under Max Reinhardt at his theatre seminar in Vienna.

Late in 1930 Erik Barnouw was back in the United States and in early 1931 he was working as an advertising writer for Erwin Wasey, Incorporated. For five years he

ERIK BARNOUW

BARNOUW, ERIK—*Continued*

stayed with the firm, moving up from writer to radio program director, directing programs for Camels, General Foods, Good-year, Philco, Barbasol. In 1935 Barnouw became program director for another advertising agency, Arthur Kudner, directing programs for *True Story* and *Liberty*. He left to become a free-lance writer and, for a year, from 1936 to 1937, wrote the NBC serial, *The Honeymooners*. The best-known series he has done for radio is, probably, the *Pursuit of Happiness*. He has also contributed to the *Campbell Playhouse*, *Main Street* and the *Cavalcade of America*.

Mr. Barnouw says that the kind of scripts he prefers and specializes in are historical scripts and the adapting of classics. It is interesting to note that his *Handbook* gives as a sample script a radio version of *Macbeth*. Other Shakespearean plays have been arranged for school use and some of them have been published by *Scholastic* magazine.

In 1939 Erik Barnouw was married to Dorothy Beach, who comes from Fair Haven, Vermont and was a scholarship pupil of Madame Louise Homer.

BARR, FRANK STRINGFELLOW Jan 15, 1897- Educator

Address: St. John's College, Annapolis, Maryland

Stringfellow Barr is an educator who believes that a college education should be a liberal education, that it should prepare "men for the business of living—concerned that they meet not only their bills but other and subtler obligations which free men must meet." Only if American colleges scrap their text books, abolish the elective system and relinquish specialized education can they prevent the onset of another dark age.

These are the ideas on which the curriculum of St. John's College in Annapolis, Maryland is based. When Barr became president of this college in 1937 he and its board, made up of liberal educators and now headed by President Hutchins of the University of Chicago, decided to revive the traditional liberal arts college course. His and Hutchins' plan for a college education consisted of four years of reading and discussing the great books of the past.

To get a degree seniors must prove that they know the 120-odd classics of the world backwards and forwards; they must show competence in the liberal arts; they must have the ability to read at least two foreign languages; they must be proficient in mathematics and must have spent 300 hours in laboratory science. Their teachers are the great thinkers of the past. Dr. Barr asks

STRINGFELLOW BARR

interviewers: "Aren't you sorry for the students in all the other colleges who have nobody to teach them but oafs like me?" From the great thinkers of the past the students get all their knowledge, through reading, through working out the old principles in practical fashion, through seminar discussions of the classical works, through analyzing and criticizing terms and propositions, arguments and contradictions.

John Dewey is one of the critics of the St. John's system. He admits that this type of liberal education is the best possible—but only for those who can master it. It isn't the kind from which all students can benefit. Dr. Barr, however, points to his student body, many of whom come from small towns in Maryland and half of whom are working their way through school, and their evident absorption in their work. When others criticize the system on the grounds that it is impractical, Stringfellow Barr tells them that the student who has consorted with great minds can learn specialized subjects in a few months and probably more thoroughly than if he had studied them on the campus.

Stringfellow Barr was born in Suffolk, Virginia on January 15, 1897 and did much of his educational work in Virginia. He received his B. A. from the University of Virginia in 1916 and his M. A. in 1917. Because of his unusual record there, he was made a Rhodes Scholar (after a period driving an ambulance in the War), and spent the years from 1919 to 1921 at Oxford, from which he also got a B. A. and an M. A.

Dr. Barr continued with his studies after Oxford—at the University of Paris and at the University of Ghent. In 1924 he returned with his wife, Gladys Baldwin, whom he married in 1921, to Virginia to become

assistant professor of modern European history. He stayed at the University of Virginia, as associate professor and professor, until 1936. At Virginia he was one of the university's most popular lecturers, famous, too, for his work in editing the *Virginia Quarterly Review*, probably "the South's most distinguished literary magazine."

While there he contributed, as he has continued to contribute, articles and book reviews to the country's important magazines and published his *Mazzini: Portrait of an Exile* (1935). In his writings he began to develop those ideas of modern, "liberal" education for which he is now well-known, ideas which formed and still form the basis for lectures all over the country.

In 1936 President Hutchins (see sketch this issue) of the University of Chicago drafted Dr. Barr to help him with a projected revival of the traditional liberal arts college course, but "red-haired, stocky" Professor Barr stayed there only a year and then left, with Scott Buchanan, to put President Hutchins' ideas into practice at St. John's. In May 1940 Dr. Barr inaugurated for CBS a weekly Sunday afternoon program, *Invitation to Learning*, on which Professor Barr and other educators discuss the great books read at the college.

BARRETT, WILTON AGNEW Oct 26, 1885—Feb 18, 1940 Motion picture critic

Wilton Agnew Barrett, executive secretary of the National Board of Review of Motion Pictures since 1923, died at the age of 54 after a heart attack.

He was born in Philadelphia in 1885 and was graduated from the University of Pennsylvania in 1909. That year he joined

WILTON A. BARRETT

the staff of the National Board, shortly after its organization by the People's Institute. Under his direction the Board began to review films. In time they were reviewing 98 per cent of all films produced. Credited with developing the Board's weekly bulletin method of classifying pictures for adult or children's consumption, he also started the monthly magazine which reviewed important films. Later he organized the committee on exceptional photographs which annually selects the 10 best motion pictures.

Critics said that "his knowledge of motion pictures in all their ramifications was surpassed by few people in the United States either within or without the industry." He never worked in the industry and thus was able to maintain a detached attitude toward it.

Long an ardent foe of censorship, Barrett maintained that the Board was not a censorship organization, but merely a body to help the motion picture-goer select his film fare intelligently. The Board has consistently opposed all forms of state censorship and any proposal for national censorship. While Mr. Barrett believed strongly in decency in motion pictures, he maintained that the people themselves are the best judges of motion pictures. He wrote a book of poems, *Songs of the Journey*, and was a frequent contributor to poetry magazines and general periodicals.

EMILY DUNNING BARRINGER

BARRINGER, EMILY DUNNING Sept 27, 1876- Surgeon; gynecologist

Address: b. 114 E 54th St, New York City; h. New Canaan, Connecticut

Retiring as director of gynecology after 21 years at the Kingston Avenue Hospital, Brooklyn, New York, Dr. Emily Barringer was given an honorary dinner by her staff at the New York Academy of Medicine on March 2, 1940. On retirement, she becomes honorary consulting surgeon.

A pioneer in a profession which was virtually closed to women, Dr. Barringer was influential in opening the way for women physicians to obtain positions in the medical and surgical services of the New York City hospitals.

Dr. Barringer was born at Scarsdale, New York, September 27, 1876. After receiving a degree of B. S. from Cornell University in 1897, she entered the Cornell Medical School affiliated with Bellevue Hospital and was graduated with honors as the second in her class in 1901. She won first place in competition for a position at Mount Sinai Hospital, but the appointment was denied her because of her sex. She appealed to Mayor Seth Low, who ratified the appointment. She then took part in the competitive examination for Gouverneur Hospital (Bellevue and Allied Hospitals) and again won first place, and this was also denied her because of her sex. The following year brought the reform Mayor, Seth Low, and learning of the above, he said that if a woman physician won a place at the examination for Gouverneur Hospital, he would ratify it. Dr. Dunning again entered the competitive examination for Gouverneur Hospital, and this time won fourth place. True to his word, Mayor

Seth Low ratified the appointment, and Dr. Dunning became the first woman ambulance surgeon of New York City. As the city's only woman ambulance surgeon she attracted much attention and comment in the press of the day. She was known as "the beautiful girl on the Bowery run" during the year her route included the lower East Side.

In 1904 she married Benjamin Stockwell Barringer, also a surgeon. They have two children, Benjamin Lang and Emily Velona, and live in New Canaan, Connecticut.

Dr. Barringer is president of the Women's Medical Association of New York City, and has served for several years as chairman of the medical committee on minimum standards for delinquent girls of the National Committee on Prisons and Prison Labor. She is a fellow of the College of Surgeons and the New York Academy of Medicine. She has always been an active worker for the passage of progressive medical legislation. Her hobby is architecture; for recreation she likes skating and dancing.

BARTHE, RICHMOND (bär-tā) Jan 28, 1901- Sculptor

Address: 285 Eighth Ave, New York City

Richmond Barthé is a successful sculptor who has had only a couple of months of sculpture lessons in his life. His works can be seen at the Whitney Museum in New York and in museums all over the country, and he was awarded a Guggenheim Fellowship (April 1940) which gave him a year's real freedom for creative work.

Barthé is untaught because Jo Davidson advised him to be so. Born of mixed Creole, Negro and Indian stock in Bay, St. Louis, Mississippi, Barthé lived there until he was 23. As a youth, his talent was obvious, and a Catholic priest there, together with the novelist, Lyle Saxon, who lived next door to the home where Barthé worked as houseboy, encouraged him. Southern art schools would not admit him because he was a Negro, so he went to the Chicago Art Institute to study, earning his way by waiting on tables. It was towards the end of his stay at Chicago that he became interested in sculpture and came to New York for advice from Jo Davidson.

He stayed clear of sculpture lessons as Davidson suggested and within two years had taught himself enough to have a one-man show at the Chicago Women's City Club. This exhibition, his first, won him a Julius Rosenwald Fellowship. His first sculpture commission was to do a head of Toussaint l'Ouverture for the Lake County Children's Home at Gary, Indiana. In 1931 came his New York debut for which he received much critical praise. In 1932 he worked at the Art Students League for a couple of months. Shortly after he was invited by the Whitney Museum to exhibit there, and after that showing three of his sculptures were bought for the museum's permanent collection.

In 1934 Barthé took his first trip to Europe on a tour which, he says, "opened up a new world," and from which he obtained representation in private collections in Austria, Germany, Romania, France and England. In America, later, he was commissioned by the Treasury Department to do two eight and one-half by forty foot bas-relief panels for the Harlem River Housing Project Amphitheatre depicting a Negro dance group and the Exodus scene from *Green Pastures* and by the Federal Arts Project to create a military figure of heroic size for the dining hall at West Point. More recently he was commissioned to execute a memorial for James Weldon Johnson, Negro writer.

RICHMOND BARTHE

Most critics agree that it is not in his larger works—not even in those like the impressive and moving *Mother and Son* at the New York World's Fair, which shows a mother mourning over the body of her dead son, on whose neck is a rope mark—that he shows his full genius, but in his smaller figures. In them he meets Cellini's requirements that a sculpture should appear to advantage from many points of view. The *Blackberry Woman* at the Whitney Museum, for instance, is a statue "whose hard silhouette, legible from all around, is complemented by the beautiful view from above in which one gets the full value of the spreading feet and the low relief still life of leaves in the tops of the baskets." In these smaller figures Barthé has realized the racial genius for concentrating on an emotional state to the limit of the powers of the body. He has done this in *Benga* and *Wetta*, in the dignified but almost trance-like *African Boy Dancing*.

In these sculptures and in most of his others Barthé is a "physical" artist in the sense of his being immensely interested in the physical and spiritual life of the human body and very little concerned with mythological and literary ideas or the pursuit of fascinating processes and materials. Perhaps his best works are the simple, dignified studies of Negroes—his favorite among his own works is his first study in marble, a portrait head of his friend, Jimmy Daniels, a Negro singer. It's not Harlem Negro life which interests him, though he has presented it—in *Lindy Hop*, for instance—but the primitive and more simple aspects of his people's culture.

Barthé doesn't feel that he can show these aspects by artificial stylization—he prefers to simplify "naturally," keeping the spiritual and rhythmic qualities of his figures.

BARTHE, RICHMOND—*Continued*

His knowledge of anatomy is, as it has to be, strong. He learned it at the Art Institute of Chicago when he was studying drawing and he learned it as a student of dancing under Mary Radin of Martha Graham's group. Consequently he isn't so much at the mercy of models as most sculptors. "Indeed, models are at his mercy, for they are often obliged to do things which he is able to do and wants them to do."

In keeping with his desire to achieve simplicity, Barthé isn't much interested in materials for variety's sake. Although he has produced terra cottas and has one popular success in marble, most of his work has been meant for casting. Usually he models his figures in plasteline, a putty-like substance. He makes his own armature or skeleton out of lead wire and plumber's pipe and builds on this framework with plasteline bit by bit until the figure is finished. He then covers the finished plasteline model with green soap to form a protective covering, and finally casts it in plaster. From the plaster model, workmen in a foundry cast the final figure in bronze.

Barthé is known as a sculptor not only of figures but of portraits "which are much more than the traditional 'heads' which glut the galleries." Best known of his heads, perhaps, are those of Jimmy Daniels, of Maurice Evans (see sketch this issue) as Richard II and of John Gielgud as Hamlet.

Barthé is "a handsome representative of his race," a staunch Roman Catholic with none of the old plantation attitude about him but still with a feeling for the homely features of religion. He is anxious now to emphasize in sculpture the personal charm of Christ and His popularity during his human life. "Jesus was always being asked out to dinner," Barthé says. "People were crazy about Him."

BARTOK, BELA (bär-tük' bā'là) Mar 25, 1881- Hungarian pianist; composer

Address: c/o Boosey & Hawkes Artists Bureau, Inc, 43 W 23rd St, New York City

Béla Bartók, Hungary's most outstanding modern composer is, according to critic Lawrence Gilman, "a tone-poet who is both an uncompromising modernist and the reviver of the ancient past . . . and is the most eminent of living Hungarian com-

BELA BARTOK

posers." He made his second appearance in the United States early in 1940 at the invitation of Mrs. Elizabeth Sprague Coolidge—to take part in the Coolidge Festival of Music. During that season Bartók performed with violinist Joseph Szigeti (see sketch this issue) in the Library of Congress, where they played his *Rhapsody* for violin and piano, and participated in a concert given in his honor by the League of Composers at the Museum of Modern Art in New York City. Besides his many solo appearances, Bartók also made several recordings of his works, and supervised the performance and publication of his latest composition, *Mikrokosmos*, 153 progressive piano pieces, a gigantic work that represents more than 10 years of labor.

In May 1940 Bartók returned to Budapest to organize Hungarian folk songs and returned to the United States in October to fulfill engagements as concert pianist and lecturer. His tour started on November 3 when he played his *Sonata* for two pianos and percussion at the concert of the New Friends of Music in New York, with his wife, Ditta Pasztory-Bartók, playing the second piano. From New York he started on his tour of the country to appear as soloist with orchestras in Cleveland, Pittsburgh, Montreal and in recitals and lectures at a score of universities, colleges and clubs.

Béla Bartók was born in Nagyszentmiklós, in the heart of "Alföld," the Hungarian Plain, on March 25, 1881. His father, the director of an agricultural school and an excellent pianist and cellist, died when Béla was only eight years old. His mother was forced to teach for a living and traveled all over Hungary with her family, teaching in small villages. Béla acquired through these travels a broad ac-

quaintance with his native land that later proved of great value in his composing.

Music came naturally to Béla. By the time he was 10 he had already made a public appearance as pianist, and had composed several small piano pieces. In 1893, when his mother procured a post in Pressburg, Béla began his first systematic musical education—which, at that time, was almost exclusively German. He also wrote many compositions tinged with the influence of Brahms, none of which has been published. He studied piano under László Erkel and composition with Ernst Dohnányi. His spare time was spent in the many opera houses and concert halls of Pressburg, where he intensely absorbed all the different kinds of music. His final studies were taken at the Royal Hungarian Musical Academy at Budapest. While at the Academy he composed his first large works—a rhapsody for piano and orchestra and an orchestral suite—both extremely Hungarian in spirit.

Upon graduation from the Royal Academy in 1905, at the age of 24, Bartók collaborated with Zoltan Kodály on a study of native folk music. This resulted in the discovery of an entire library of unknown Hungarian folk songs—some 13,000 of them, which in 1940 Bartók is organizing for publication. The Hungarian gypsy music of the type played by Emery Deutsch is termed by Bartók "semi-popular music." "This music," he says, "is non-peasant in origin. It is the music of an educated class. . . There are hundreds of these melodies. Liszt used some of them, and Brahms, too. But they are not of folk origin, in spite of general belief. You might say they have the same function in Hungarian music as jazz and swing in the United States."

In 1907 Bartók was appointed professor of piano at the Royal Hungarian Musical Academy at Budapest, where he remained for five years. In 1913 he visited Biskra to investigate native Arabian folk music.

In the meanwhile he worked intensively on his own original music—which had a long and fierce struggle for recognition. At this time he turned toward Western European composers, particularly Debussy. This influence is in his newer compositions where, making no use of the musical literature of nineteenth century Hungary, he forms his own musical language based on the elements and spirit of Eastern European "primitive" folk music.

With the 1917 production of the ballet, *The Woodcut Prince*, at Budapest, Bartók finally received the recognition he deserved; "his unique vocabulary was beginning to become more and more decipherable." On March 1918 his *Second String Quartet* was performed for the first time. From that date onward he was recognized as the leading figure in Hungarian music.

The style of all of Bartók's compositions is greatly influenced by his enthusiasm for and

prolific study of the folk music of Hungary. But there are certain distinct phases in his development of it. The first, comprising the *Funeral March*, the two *Rhapsodies* (for piano and orchestra and for solo piano) and the two orchestral *Suites*, is throughout dominated by a specifically national mode of thought, which is merely the outcome of the exploitation of certain melodic or rhythmic peculiarities of Hungarian folk music. "They belong to that movement which took rise towards the end of the last century and sought to base itself upon national sentiment and racial idioms."

As Bartók gained in individuality, the national element in his works decreased. Then followed an extraordinarily fertile period in which several piano pieces were composed, subjective investigations of the purely spiritual values of sound. "Looked at broadly," says Cecil Gray, "his whole artistic development is a progress from nationalism to complete individuality—or universality, if one prefers it."

In all his music—whether it is rich and elaborate or austere and restrained—Bartók shows a "definite logic and tonality in his harmony." "Every note of his music means something; it is there for a purpose and for a musical purpose." And whatever the method he uses, whatever the effect he works for, he is a "master of expression. His originality is the outcome of inclusiveness, not exclusiveness; Bartók is a fine stylist precisely because he has no style."

Bartók's fiftieth birthday was virtually uncelebrated in his native land, for Bartók had antagonized Hungary early in his career, when he simply and soberly declared Eastern Central Europe to be bound together by an inextricably intertwined folk lore. He said this when a lofty nationalistic purism was strongly prevalent throughout Hungary—definitely at the wrong time. Through Western Europe and the United States, however, his birthday was known and celebrated, for today Béla Bartók is one of the most popular of all contemporary European artists.

Bartók is enormously shy. He does not relish conversation even with his best friends; and he speaks with a soft and hardly audible voice. His preferences in modern music are few and far between—he reserves his greatest admiration for Stravinsky (see sketch this issue).

On November 25, 1940 Columbia University conferred an honorary degree on Béla Bartók. In awarding the degree Dr. Butler (see sketch this issue) called him: "A distinguished teacher and master performer of the piano; internationally recognized authority on the folk music of Hungary, Slovakia, Romania and Arabia; creator through his composition of a musical style universally acknowledged to be one of the great contributions to the twentieth century literature of music; a truly outstanding artist who has brought high distinction to the spiritual life of his country."

BARTOK, BELA—*Continued*

Bartók is a very hard worker—work, as a matter of fact, is his greatest diversion—and though he composes little, each of his compositions requires a colossal amount of revision and rewriting before he will permit it to be published. He spends much time, too, instrumenting various classical works by Bach, Mozart and Beethoven and writing books and numerous articles for musical journals dealing with the instruments, dialect and folk lore of his own land.

BATES, ERNEST SUTHERLAND Oct 14, 1879—Dec 4, 1939 Author; editor; critic

On December 4, 1939, a few minutes after completing his new book, *American Faith*, a treatise on American religious beliefs, Dr. Bates died of a heart attack at his home, Edgehill Inn, Spuyten Duyvil, New York.

Born at Gambier, Ohio, son of Cyrus Stearns and Laverna (Sutherland) Bates, he was a graduate of the University School of Cleveland; received his B. A. and M. A. degrees from the University of Michigan (1902 and 1903); and in 1908 a Ph. D. from Columbia. His original intent was to enter the ministry but after studying philosophy he gave up the idea, although he continued a lifelong interest in the Bible. Probably his most important book, a best seller both here and in England, was *The Bible Designed To Be Read as Living Literature* (1936), which he edited, and in which he omitted lineages and repetitions and made radical changes from the arrangement of the King James version. His immense vitality, scholarship, range of interest and concentration can be shown by his literary output for the same year, 1936, in which he published *The Story of the Supreme Court*; *The Story of Congress* and *Hearst, Lord of San Simeon* (in collaboration with Oliver Carlson).

He was a tutor of English at Columbia University in 1907 and 1908 and for the next 17 years taught English at the University of Arizona and English and philosophy at the University of Oregon. Except for his Columbia doctor's thesis in 1908, Bates had never published a book and had con-

ERNEST SUTHERLAND BATES

tributed chiefly to scholarly journals. Nevertheless, in 1925, he courageously resigned his post at the University of Oregon in protest against curtailment of academic freedom, and came to New York to make his living by his pen. From 1926 through 1929 he was literary editor of *The Dictionary of American Biography* and from 1933 to 1936 he was an associate editor of *The Modern Monthly*. As a book reviewer for the *New York Herald Tribune* since 1929 he had become favorably known for his wide knowledge and sound judgment of social topics.

The man who wrote *Biography of the Bible* and edited *The Four Gospels* would not ordinarily be thought of as an authority on the theories of Karl Marx, but Dr. Bates' capacities easily encompassed both fields. Much of his writings was based on the research in which he was engaged for many years and which he did not complete—a gigantic, detailed history of the whole of American culture.

Dr. Bates was married first, to Miss Florence Fisher of Bay City, Michigan, in 1902; and after her death, to Miss Rosalind Boido of Tucson, Arizona. After a divorce he married Miss Gladys Graham at Astoria, Oregon, in 1920. By his second marriage he had a son, who now lives in Los Angeles.

In addition to the works listed above, he was the author of *This Land of Liberty* (1930); *Mary Baker Eddy—The Truth and the Traditions* with J. V. Dittmore (1932); and *American Hurly-Burly* with Alan Williams (1937).

BATISTA Y ZALDIVAR, FULGENCIO
(bă-tēs'tă ē zāl-dē'vār fōōl-hēn'sē-ō) 1901-
President of Cuba

Address: War Office, Havana, Cuba

Colonel Fulgencio Batista is "a swarthy, chunky, middleweight edition of Jack Dempsey, with a velvet smile and an iron fist." *Time* has called him "the most likeable of Caribbean dictators." For seven years he has been the real ruler of Cuba, while Batista-made Presidents came and went. In October 1940 the Colonel took a leave of absence from the army which he heads to fill the Presidential office himself and announced to the press: "the revolutionary cycle has ended. I wish to be good and to be loved by my people. I have no triumph. It is an ideal that has triumphed—the ideal of the revolution."

His career has been as fantastic as that of most dictators. The son of a poor truck gardener, he was born in the backwoods of Oriente, a province at the extreme east of Cuba. His grandfather was Chinese; he himself is a racial blend of white, Negro, Indian and Oriental. At nine he was in school in an American missionary establishment in Oriente; at thirteen he was an orphan slaving in the cane fields. He worked as tailor's apprentice, grocery clerk, bartender, railroad fireman, engineer, conductor; he studied to become a barber; during the 1920 sugar boom he found himself administrator of an Oriente cane plantation. Finally, at the age of 20, a civil service examination brought him into the army as a stenographer.

That he was the best stenographer in the Cuban Army there seems little doubt. "Ingratiating, ever-smiling," he "had been particularly well-known to the officers for his energy, his accuracy, his dependability. 'Leave it to Batista!' had been a byword." But even the best stenographer in the Cuban Army couldn't have risen above the rank of sergeant without the events of September 4, 1933.

A "clique of *políticos* and army chiefs" (with more than a little indirect help from Sumner Welles, then Ambassador to Cuba)

Underwood & Underwood

FULGENCIO BATISTA

had finally succeeded in ousting the "butcher-dictator" Machado. Backed by Welles (see sketch this issue), Dr. Carlos Manuel de Cespedes was then made provisional President. Cuba, rejoicing at the overthrow of the hated dictator, nevertheless accepted Cespedes unenthusiastically. Anarchy and terrorism prevailed.

On September 4, 1933, twenty-four days after Cespedes had taken office, a group of six sergeants headed by Batista walked into officers' quarters and painlessly took over, while students and fellow conspirators, joined by military and police units, seized barracks, forts, ships about Havana. Incredibly, by the end of the day Batista was master—and without bloodshed. A military junta of five, selected to take over the government, chose as provisional President Dr. Grau San Martin, a liberal and a doctor, while Batista assumed the rank of colonel and chief of staff of the army and began to whip it into shape.

Ten days later President Grau established a virtual dictatorship until there could be a meeting of the Constituent Assembly. He announced a policy that sounded rather like "Cuba for the Cubans" to anxious United States citizens who owned four-fifths of the Cuban national wealth. Batista had to suppress revolts both from the Right and from the extreme Left. Dr. Grau began to concentrate on pro-labor, anti-banking decrees, soon acquired a "pink" label. The United States continued to refuse recognition to the new government, desperately in need of its credit. Things went on like this for months until Batista, convinced that the United States would withhold recognition until a President whose policies were agreeable to Washington was chosen, secured Dr. Grau's resignation on January 14, 1934. Not long afterward conservative President Mendieta

took office and the Cuban government was recognized.

In the meanwhile Batista was consolidating his own position, having settled down with his wife and children in the middle of the Columbia barracks on the edge of Havana. He "put shoes on the barefooted, amateur army of 9,000," set about increasing its man power to the largest in Cuba's history, drilling it into fitness and making himself popular with his men. Modern barracks were built for them; civilians did the potato-peeling; the sergeants became lieutenant colonels and took over pieces of the country for themselves.

Ruling military cliques seldom make themselves popular with the people, however. The Mendieta government went from arbitrary decree to more arbitrary decree. Unions were dissolved; strikes and threatened insurrections were brutally put down; the Cuban third degree was a commonplace; the press was censored; Batista made his own appointments to the universities; army officers, it is claimed, went in for embezzling and smuggling on a grand scale. And zigzag policies brought sugar prices down in a country where "sugar is the real dictator," resulting in widespread unemployment and near-bankruptcy for the government.

After two years of Mendieta, Sumner Welles persuaded Batista to hold a constitutional election for his successor. President Gomez was legally elected and duly installed in 1936, but the rule of machine gun and rifle abated very little. Seven months after Gomez took office he was impeached for "interfering" with Congress: Batista had wanted Congress to levy a nine-cent tax on each sack of sugar produced in Cuba to finance a program for the rural schools; the President had fought the measure. He was replaced by his Secretary of State Bru, a Batista man, who remained President of Cuba until 1940.

The Batista régime was not totally black, of course. As soon as he could Cuba's "man on horseback" went ahead with a program of building schools in remote rural districts, installing army sergeants as teachers, and thousands of children and adults began to learn to "read, write, delouse themselves, ply trades." Hospitals, particularly tuberculosis sanitoriums, and orphan asylums were built in great numbers. There were attempts—though by no means entirely successful—at cooperative agricultural projects, social security for workers and farmers, government control of the sugar industry. Nevertheless the anti-Batista forces were strengthening themselves, and in 1938 seventy per cent of the electorate stayed at home on voting day to boycott him. A change seemed imminent. Something had to be done.

Promptly Batista did another about-face. He ordered the Cuban *Falange* (an offshoot of Spanish Fascism) to dissolve itself. He legalized the Cuban Communist Party. He

emerged a great "progressive" and "democrat," disavowing the more shady of his accomplices, apparently trying at the same time to gain the support of the Left and of certain parties of the Right. He made visits to President Roosevelt (in Washington, it is said, he was society's darling) and Mexico's Cárdenas, and was greeted with flattering demonstrations on his return. He preached against totalitarianism.

Finally, in December 1939, he quit his job, called for the election of a Constituent Assembly to draft a new Constitution, announced that he would become a candidate in the Presidential elections of February 1940 under the new rules. In voting for the delegates the Batista faction was left behind; it was opposition candidate Dr. Grau San Martín who headed the assembly, and while the Constitution was being drafted the elections were postponed three times. Nevertheless seven political parties threw their support to Batista, and on July 14, 1940 he was elected President of Cuba against his one rival. Even Dr. Grau had at one time withdrawn his candidacy and remained in the race only at Batista's request. Oddly enough, the Communist Party and the Socialist-Democratic coalition were among the groups which supported the once violently anti-Leftist Batista, while Dr. Grau had the support of the Cuban ABC, a group which nearly overthrew his liberal régime in 1933.

At the 1940 Havana conference Batista made a startling suggestion in regard to the disputed European possessions in the Western Hemisphere. "Why not give them independence?" he asked.

Batista and his wife, the former Elisa Govinez, have two children: a daughter, Mirta, and a son, Rubén Fulgencio (nicknamed "Papito"). Cuba's strong man is "a bantam in size, with a body of steel and a jaw of bronze, his crowning glory a glistening comb of coarse black hair, which he tosses about in eloquent gestures." He combines a sense of the dramatic with a sense of humor, talking very fast with a flowery vocabulary. By training he is more sportsman than economist or sociologist, but he is said to admire the American New Deal even more than American baseball. He is passionately fond of cockfighting, has a stable of his own.

Of him Carleton Beals once said: "One would have to travel to the East to find a similar combination of oily courtesy, intellectual keenness, insight into men, devious astuteness, ruthless purposefulness and extreme cruelty."

BEAVERBROOK, WILLIAM MAXWELL AITKEN, 1ST BARON May 25, 1879- British Minister of Aircraft Production; newspaper publisher
Address: h. Cherkley, Leatherhead, Surrey, England

When in May 1940 a reorganization of the British government gave Lord Beaverbrook, newspaper king of Shoe Lane and personal friend of Prime Minister Churchill (see sketch this issue), the office of Minister of Aircraft Production, he was surprised by his own popularity. Few commentators stated anything more unfriendly than the hope that "the Puckish-looking little peer and publisher will make the figures of bomber production rise as successfully as he has the circulation of the *Express*." Since few newspapers have come in for so much concentrated criticism as Lord Beaverbrook's three—the London *Daily Express* (largest in the world, published in three cities, circulation 2,500,000), the London *Sunday Express* and the *Evening Standard* (run largely by his subordinates)—this reception must have been something of a shock for the "146-pound Hearst of Britain."

It didn't upset him too much, though. With characteristic energy and genius for manipulation Lord Beaverbrook went to work. After a lightning survey of the status of aircraft production, his orders sent factory heads from all over the kingdom scrambling for interviews with him. He ordered Lord Nuffield ("the British Ford") to submit to a merger of his new aircraft works with the old-guard firm of Vickers-

Margaret Bourke-White

LORD BEAVERBROOK

Armstrong, Limited, purring: "The thanks of the nation are due to Lord Nuffield." He conferred with United States Ambassador Joseph Kennedy (see sketch this issue) on speeding up shipments from the United States, "and almost certainly Ambassador Kennedy and Minister Lord Beaverbrook clicked with each other and with President Roosevelt." Even though this tremendous job he has on his hands is a completely new one, it seems unlikely that "the Beaver" has ever found anything too much for him.

In October 1940 Lord Beaverbrook was officially made a member of the War Cabinet, keeping his present position in charge of aircraft production. By that time he had actually doubled production, though by methods that "even his mildest critics" label "slightly cracked."

His talents as a businessman can hardly be overestimated. Born (quite without a title) in Maple, Ontario, May 25, 1879, Max Aitken was the son of a poor Presbyterian minister, William Aitken, and Jean (Noble) Aitken. He was selling newspapers when he was six—perhaps a kind of prophecy of his career. There wasn't much formal schooling for him, but he didn't have to go to school to decide that he wanted to be a millionaire. It didn't take long, either. After washing drugstore medicine bottles, selling sewing machines, bonds, the young man found his backer in an elderly Halifax financier and became a promoter. He engineered mergers of banks, utilities, steel and cement companies. His last merger of 13 cement companies into the Canada Cement Company, Limited was "almost a dominion scandal," but in 1907 he liquidated his holdings for \$5,000,000 and went to London with his bride of the year before, Gladys, daughter of Major General Charles Drury.

Here Max Aitken enlarged his ambitions. According to his own statement, "if the chief function of the American is to make money, the chief function of the European is to enter politics." To politics there are front doors and back doors. Aitken tried both. He sold Bonar Law some life insurance, became his private secretary, eventually his closest friend. He himself was elected to Parliament in 1910 on the strength of speeches for a high tariff, kept his seat for six years on the same platform, but didn't create enough of a stir there. Back doors best suited his talents; he was a promoter; he would be a power behind the throne. He stood behind and "promoted" Bonar Law, behind the scenes "shifted cabinet ministers like puppets," made an alliance between Lloyd George and Bonar Law, "merged" the Lloyd George "Win the War" Cabinet in 1917 and finally won a peerage for his services. (He selected Beaverbrook, a small town not far from his Canadian birthplace, as a name more distinguished than "Maple.") In 1918 Lord Beaverbrook was Minister of Information and Chancellor of the Duchy of Lancaster.

Already he was in the newspaper business. In spite of warnings, in 1917 he had bought the "sick-dog" *Express* mainly to support Bonar Law. The first year he lost \$1,000,000, the second year \$300,000, the third year he broke even; after that the paper began to prosper. His first real challenge was from Lord Northcliffe of the *Mail*, who began a free insurance war with him; at one time both were offering accident insurance policies of 10,000 pounds to their subscribers. Then there was the famous premium war of the London newspapers, when bewildered readers found themselves offered everything from free can openers to free radios. But in spite of competition, "by giving London a cockneyed version of low-brow United States journalism," Lord Beaverbrook found he could do phenomenal things with his paper's circulation. He even came to the United States to study Hearst's methods, and he was a good pupil.

The original purpose of the newspaper was gone. In 1923 Bonar Law died of cancer of the throat. He had resigned as Prime Minister the year before, and his last words for Max had been: "You're a curious fellow." But Beaverbrook's paper could still be used as a "crusading" organ, could make and break other political figures. His political views as a whole corresponded so closely with those of press-tycoon No. 1, Lord Rothermere, that a new word came into the British vocabulary: "Beavermere." "Empire Free Trade" was the cornerstone of Beavermere policy. This meant forming all the peoples of the British Empire into a sort of great customs union which would "devote itself to repulsing foreign competition and which would buy only the products of the commonwealth that would thus be attained." E. F. T. also implied isolationism: absolute hostility to the League of Nations and all

the organizations which support it; no boundary guarantees, loans or alliances with any other country; no greater local autonomy for India and other colonial possessions. The Beavermere frontier was not the Rhine, but South Africa.

Although the papers of Lord Beaverbrook and Lord Rothermere professed to be Conservative, "in the past decade they have been politically consistent only in their inconsistency." In February 1930 after battling for a long time against Baldwin's free-trade candidates, Lord Beaverbrook and Lord Rothermere formed a United Empire Party whose program soon attained such popular support that the Conservatives were forced to adopt a milder version of Empire Free Trade, including nearly all its program but food taxes. Beaverbrook and Rothermere next offered to cease fighting Baldwin if they could have a controlling hand in choosing his next ministry, but the offer was rejected indignantly and the long feud between the newspaper barons and Baldwin was resumed. A writer much later summed up the feud by saying: "Did Beaverbrook get anything from it? Yes. He got an attack of asthma. He has it still. He is no longer a political force. He is a medical problem."

Besides using tactics designed to harass Baldwin and to mold the policies of the government, Beaverbrook and Rothermere sometimes threw their weight behind political parties other than the Conservative. Perhaps it was not as politically inconsistent as it seemed when the *Express* announced its support of new Prime Minister MacDonald, with only the warning: "If Mr. MacDonald and his colleagues attempt to force nationalization upon the industries and utilities of the country then the *Daily Express* will oppose them by every means in its power." But when in his crusade for Empire Free Trade Lord Rothermere waxed publicly enthusiastic about Sir Oswald Mosley (see sketch this issue) and his Blackshirts, Lord Beaverbrook refused to follow. His motto was: "Empire ever, Nazi-ism never." In matters of foreign policy, however, his newspapers were consistent propagandists of the belief that the British Empire had no quarrel with Fascism and that no crisis could lead to war. He criticized the Locarno agreement, besought England to keep out of the League, pleaded that Ethiopia be left to Mussolini's tender mercies, apologized for Franco in Spain. In 1938, during the Czechoslovakian crisis, the *Daily Express* staff drilled for a dash to the gasproof cellar beneath the "Black Glass House" in London, but *Express* headlines asserted confidently: THE DAILY EXPRESS DECLARES THAT BRITAIN WILL NOT BE INVOLVED IN A EUROPEAN WAR THIS YEAR, OR NEXT YEAR EITHER, while circulation reached an all-time peak. Both Rothermere and Beaverbrook gave their official approval to Munich, agreeing that the partition of

Czechoslovakia might be the best means of preserving peace, and Chamberlain was praised by the *Express* as a "champ."

Only one dream involving alliance with a foreign power did Lord Beaverbrook ever permit himself, and that was the dream of an Anglo-American union which would rule the world. In 1936 he was the leading advocate of a military and naval alliance in the Pacific between the United States and Great Britain, perhaps forgetting that in 1932 he had been the most violent advocate of repudiating Britain's war debts to the United States.

Exactly how great an influence the newspaper magnate's opinions, as expressed in his papers and his books: *Politicians and the War* (1928); *My Case for Empire* (1930); *Resources of the British Empire* (1934), have had on recent British diplomacy it is impossible to say. But certainly his editorial policies have come in for a fair share of ridicule even from his own employees. One of them, Evelyn Waugh, in a novel, created the character of Lord Monomark of the *Daily Excess*, "a ludicrous egocentric who eats little but raw onions and oatmeal, is surrounded by slavish sycophants who toady to his ignorant misconceptions, abuses his distracted underlings and usually triumphs by some absurdly fortuitous accident." Another, the famous cartoonist, David Low, (see sketch this issue) for a long time has drawn cartoons for Beaverbrook's own *Evening Standard* which reduce his employer's pronouncements to absurdity. Colonel Blimp, "red-faced, walrus-mustached, paunchy Tory," is pictured as Lord Beaverbrook's typical subscriber, and has continually been caught in the middle of such statements as: "Gad, sir! Lord Beaverbrook is right! We must give up the League of Nations until it promises to have nothing to do with foreigners," or "Gad, sir! Lord Beaverbrook is right! The Tory Party must save the Empire if it has to strangle it in the attempt." Perhaps Lord Beaverbrook's most beguiling characteristic is his astonishing tolerance of such criticism. The impish publisher only chuckled when a poll of the *Express* staff on the question—"Do you approve of *Express* policies?"—returned an almost unanimous NO.

Even those who don't much like Lord Beaverbrook's ideas seem to be susceptible to his charm. John Gunther called him "one of the most provocative, original and lively public men in England." He knows all sorts of people—gamblers, taxicab drivers, aviators, steel workers, machinists. He knows people because he has a boundless curiosity and all his life has been asking questions and actually listening to the answers. Quite frankly a vulgarian, he's fond of slapping his trouser pockets and saying: "I have all the money any man can want!" while "conservative Britons shudder." Yet among those who find his company stimulating are such public figures as

BEAVERBROOK, WILLIAM—*Continued*

Air Secretary Sir Archibald Sinclair (see sketch this issue), United States Ambassador Joseph Kennedy, Prime Minister Winston Churchill and such intellectuals as Rebecca West and Noel Coward. In his home, palatial Stornoway House in London, a typical day for the restless little publisher used to be: up before 8 a. m.; listen to a typed summary of news; conferences; calls; bouts with two dictaphones; an hour's ride or walk; tea; a nap; dinner (with three or four uninvited guests who, if the conversation should grow dull, are likely to hear "Oh, God, I'm bored!"); later in the evening, a Bible reading. All this time Beaverbrook would be in almost continuous touch with his editors by telephone. "A bumptious, result-getting, self-made man," he owns a racing stable and the latest model in airships. Lady Beaverbrook, the former Gladys Drury of Halifax, Canada, died in 1927, leaving him a daughter, Jan (Mrs. Drago Montagu), and two sons: Max Jr., and Peter. Lord Beaverbrook has resigned from any active direction of the newspapers. His son, the Honorable Max Aitken, is now nominally the head ("though no doubt pa has his say"), and in 1940 was also a squadron leader in the British R. A. F.

BEEBE, LUCIUS Dec 9, 1902- Columnist; photographer of railway engines

Address: b. c/o New York Herald Tribune, 230 W 41st St, New York City; h. Wakefield, Massachusetts

Orchidaceous oracle of café society, Lucius Morris Beebe has been polishing up the glass of fashion and the mold of form in his famed column, *This New York*, since 1933. His elegantly archaic prose, with Boston inflections, informs over one and a half million readers of that glittering rivalry among the 500 "Chosen" to be seen at the right table at the right place. Many of his devotees may be amazed to learn that "Luscious Lucius" (Walter Winchell's term) is an authority on railroading. But his particular interest in steam engines is not the anomaly it might seem, since he regards them as symbols of the romantic, vanishing past. He has become a noted photographer of locomotives. His first book of annotated photos of the rail monsters in action, *High Iron*, appeared in 1938; his second, *Highliners*, was published in April 1940.

The 103 photos in *Highliners*, most of them of powerful old-timers, show why railway enthusiasts regard the streamlined electric locomotive with disdain. Beebe's own affections lie "close to the less pretentious roads of the Middle and Southwest and their often far from up-to-the-minute equipment." Some of the photos (not all are by Beebe) are excellent for their drama, others for their beauty of mechanical composition. In a foreword, Beebe says of his work: "Railroad photography in its most satisfactory form is conditioned by a technique that is neither known nor understood by photographers honored and successful in other specialized fields of endeavor. There are conventions governing train photography as rigid as the unities of the French classic drama and as exacting as the uses of diplomatic protocol." He writes of the difficulties of indicating motion, since modern speed cameras stop all action so completely it is difficult to tell whether the train is static or rolling at high speed.

Lucius Beebe is the descendant of a long line of Tory men of property. Junius Beebe, son of a wealthy dealer in leather, married Eleanor Merrick, whose father was a Harvard professor and close friend of Eastern *litterati*. Lucius, their fourth child, was born at Wakefield, near Boston, Massachusetts, December 9, 1902. He spent his early years on the Beebe 140-acre farm, and encountered fist-fights at public school. The town blaster became his hero and friend, and Lucius was a leader in the rural

sport of blowing up outhouses. This was the beginning of the Beebe legend of practical joking. Expelled from two private schools, he was sent to Roxbury, in Connecticut, and from thence went to Yale, the destiny of his most elect classmates.

Deciding to be a scholar and a dandy, he dressed from the start in cutaway and gold-headed cane. His rooms had Picasso drawings, a roulette wheel and a revolving bookcase-bar. His cultural pursuit resulted in a book of verse, *Falling Stars*, published while he was still a freshman. In his sophomore year an anti-prohibition outburst brought him to grief with the head of Yale's Divinity School, and he was dismissed. A year later he transferred to Harvard, for which President Angell (see sketch this issue) apologized to President Lowell. He attracted attention with new forms of practical joking, but managed to be graduated with the Class of '27, stayed at the Graduate School for a year to study poetry. He published a second volume of poems, a book about Villon, and for his Master's thesis wrote on Edwin Arlington Robinson and the Arthurian legend. He got the idea of printing and distributing as rare items several copies of a deleted passage from Robinson's *Lancelot*. Highly incensed at a bibliophile who informed Robinson of this, Beebe called on the traitor, who, in course of argument, suffered a fractured skull. Harvard, like Yale, washed its hands of the undaunted Lucius. "Nothing matters but the gallant gesture," he said.

After a literary session on the Boston *Transcript* he applied for a job on the New York *Herald Tribune* in 1929. His height, 6 feet 4 inches, and his weight, 180 pounds, so impressed City Editor Stanley Walker that he was hired as a reporter. After attending a fire in a morning coat, covering the wrong banquet and wasting his Boston erudition on petty thieves, he was transferred to the drama department. His portrayal of Hollywood as a den of iniquity caught the eye of the *Tribune's* syndicate manager, who felt that Beebe was just the man to exploit the Babylonian mire of New York society. Beebe's trial column, happily accepted in the hinterlands, was duly established as *This New York*. From the beginning it was a success, particularly among Manhattan's ineligibles. The column of the "sandwich man for the rich," as Kyle Crichton called Beebe, was taken up by many other papers, including one in an Alaskan fishing community.

Beebe has turned down fabulous offers from Hearst and Hollywood agents: money is no object to him, since he has a private income of some \$20,000 annually. He is a bachelor and lives in a New York hotel suite. The apartment is decorated with innumerable photographs of Beebe; its closets hold the most publicized male wardrobe outside Hollywood. He owns about 40 suits at a time, has one dress coat lined with mink and collared with astrakan, sports valuable jewelry. But he leads a

N Y Herald Tribune

LUCIUS BEEBE

more circumspect life than his column suggests: gets up at 7:00, reaches the *Tribune* by 8:30, goes, after lunch, to the Turkish baths at the Biltmore and begins his social life at 6:00. This includes a theatre first night and a drop-in at El Morocco, where he picks up most of his column material. During the year he gives lectures to club ladies, spends vacations on the family farm. Though he has produced no more poetry (modern forms baffle him), in 1934 he wrote *Boston and the Boston Legend*, a 100,000 word study of his native city, which sold at \$5 and aroused the ire of liberals by his flippant treatment of the Sacco-Vanzetti case.

His politics are strictly Republican, he has no patience with organized labor and is repelled by the American Newspaper Guild, which he calls "shabby, degraded and spurious." Some of his classmates have said he is intolerant and overbearing, but generous to his friends. Beebe claims he has not been respected enough and has been too often treated with derision. Once O. O. MacIntyre, upon meeting him, confused him with the scientist Beebe and asked if he had been catching any interesting fish. He likes to be known as a gourmet and to perpetuate such legends about himself as that of his nostalgic sleigh-race (he the lone racer) to the Central Park Casino. An incurable romantic, he has a genuine Bourbon hostility to change. "He would much rather be a bright leaf on the stream of a dying civilization than a fertile seed dropped in the soil of a new era."

BEL GEDDES, NORMAN *See* Geddes, N. B.

BENCHLEY, BELLE JENNINGS Aug 28, 1882- Director of Zoological Garden of San Diego

Address: b. Zoological Garden, San Diego, California; h. 5106 W Point Loma Blvd, Ocean Beach, California

San Diego's "Zoo Lady," the only woman zoo director in the world, has written a book about her experiences as "housekeeper, chief dietitian and consulting physician as well as homemaker" for her family of thousands in the Zoological Garden of San Diego. *My Life in a Man-Made Jungle* (1940) talks of animals not as though they were humans, but as though they were individuals—amazingly complex and temperamental individuals, too. Their personal likes and dislikes and eccentricities Mrs. Benchley has learned not only to know but to understand and respect during some 13 years of association with such friends as Jiggs, the orangutan (orangutans are "natural engineers"); Bum, "the affectionate condor"; Empress, the teasing elephant; Marie, the baby walrus who demanded her milk by saying "Ma"; and, perhaps most intimate friends of all, Mbongo and Ngagi,

the largest gorillas in captivity. Mrs. Benchley builds up and tears down a great many reputations—in fact, after learning that Hollywood's old horror-reliable, the gorilla, is not only affectionate and the one animal that will look straight into the human eye but also more fastidious than most people, the reader is ready to question almost everything he thinks he knows about animals.

Mrs. Benchley's book is warmly and simply written, and, besides dozens of fascinating anecdotes, contains a sizable chunk of information that will be completely new to anyone but another zoo director. Her duties aren't simple. A zoo director must work long hours, sometimes weeks without so much as a day off, years without a vacation. She must be prepared to meet "whatever the day brings forth," whether it is being nurse to a baby monkey or shipping "fifty dog or sand fleas" to a flea trainer. Mrs. Benchley tells in her book how she "brought back a sick Galápagos tortoise by feeding it raw alcohol mixed with castor oil, and putting it to bed close to the furnace; how the doctor operated on a stork that had swallowed but not digested a nail; how the beavers went all but crazy with furious damming activity when their pool was drained; and of Babe, the thousand-pound grizzly, who, in tropical San Diego, appeared to hibernate—and produced two fourteen-ounce babies." She tells how the modern zoo is built and arranged, how the specimens are acquired, how the animals are fed and cared for. She tells about curious relationships between animals and their human caretakers and about even more curious relationships between animal and animal—a bantam rooster which became the devoted admirer of a seal, a ring-necked dove which incubated, hatched and adopted a black bantam rooster, a Canadian goose which played Damon to a baby Patagonian seal's Pythias. There are a great number of excellent photographs.

Born near Larned, Kansas on August 28, 1882, the daughter of Fred Merrick and Ida Belle (Orrell) Jennings, Belle spent much of her childhood wandering over the rolling hills and rugged, rocky beaches of California's Point Loma with her younger sisters and brothers. She got acquainted in a friendly way with the rabbits, squirrels and birds that she saw; and she was taught to identify birds and shells and to classify flowers—otherwise, she says, nothing much in her youth showed that she was destined to spend much of her life in a zoo. In 1902 she was graduated from the San Diego Teachers College, and four years later married William L. Benchley.

It was in 1923 that she found herself a middle-aged woman with a son of high school age, Edward, to support. She had been divorced from her husband, and her only experience in earning a living had been as a teacher in Orange County, California. For short periods in 1923 and 1924

BELLE BENCHLEY

she was in charge of the Benchley Packing House in Fullerton, California and worked as cashier at the Hugh Miller Company, and then, in October 1925, a civil service examination brought her an appointment as bookkeeper in the Zoological Garden of San Diego.

It was more than a bookkeeper's job, though. There was a great deal of telephone-information work. People asked questions like: "How long is a hippo's tail?", asked her to prescribe for their sick canaries, inquired about the gestation period of an elephant, wanted her to identify snakes from only a vague description. She went to some trouble to answer their questions, and found she was learning a lot. The president of the Zoological Garden evidently found the same thing, for he first tested her out by getting things "in a hell of a mess" and going East to see what she would do with them, then, in July 1927, appointed her head of the Zoo staff: executive secretary of the Zoological Garden of San Diego.

For others with zoo-keeping ambitions Mrs. Benchley recommends a knowledge of the animal world gained from general study, "an insatiable curiosity," all organized so as to be usable automatically and patience for trying and trying again to solve the unexpected problems which inevitably come up. There must be no lapse in caution—it's foolish not to be afraid at the proper time. And there must be, above all, what can only be described as the "animal instinct," without which even knowledge and curiosity and patience aren't much good. That Mrs. Benchley had all these is very evident from her book.

As Mrs. Benchley became known to the animals as a friend whom they could trust and to the children of San Diego as the "Zoo Lady," she gradually found herself

BENCHLEY, BELLE—*Continued*

also something of a celebrity on the West Coast. Her speaking engagements increased—in 1939 she gave 150 half-hour talks; she spoke over the radio; appeared in news-reels; she contributed articles to *Nature Magazine*, *Westways*, *Parks and Recreation*, *Zoonooz* (the publication of the Zoological Society of San Diego); and became reconciled to seeing herself in print “in ungainly smocks such as no stout woman should ever wear and with my hair streaming in what one reporter said was ‘no particular style.’”

Mrs. Benchley is still “a most domestic person,” however. Famous for her dinners before she achieved more national fame, she is fond of collecting recipes for Christmas cakes and cookies from European countries, rolling pins, fancy cooky cutters in animal shapes. Another hobby of hers involves animals, too. From all over the world people have sent her wild animals in all sorts of materials, although her own collection is confined to early American glass picturing animals or in animal shapes. She used to collect American Indian blankets and baskets as well, but since she had to dispose of many of them when her home was broken up, only “a few real collectors’ pieces” are left.

BENNETT, JAMES O'DONNELL May 1, 1870—Feb 27, 1940 Journalist

James O'Donnell Bennett, retired staff member of the *Chicago Tribune*, died of coronary thrombosis at the age of 69.

He was born in Jackson, Michigan, a son of Charles Henry and Mary (O'Donnell) Bennett. His uncle, James O'Donnell, a United States Representative from Michigan and editor of a paper, encouraged him in his desire to become a journalist. While a student at the University of Michigan, he made an outstanding record in drama and literature. After serving as press representative for a group of Shakespearean players he entered newspaper work in Chicago in 1892, and, with the exception of brief periods when he worked with Julia Marlowe, he remained a newspaper writer until his retirement from the *Tribune* on February 1, 1939.

One of his outstanding pieces of work was his report of the Eucharistic Congress in Chicago in 1926. Newspaper people

Chicago Tribune

JAMES O'DONNELL BENNETT

regarded his stories as masterpieces of reporting. Older citizens of Chicago remember him chiefly as a drama critic, although he wrote in every field. He served as reporter, critic, columnist and correspondent in the First World War during his 48-year career. He was the author of *Much Loved Books* (1927); *Private Joe Fifer* (1936); and compiler of *When Good Fellows Get Together* (1908).

BENSON, EDWARD FREDERIC July 24, 1867—Feb 29, 1940 Author

E. F. Benson, prolific author of sprightly novels, numerous biographies, essays and poems, died February 29, 1940, at the age of 72. Benson was born at Wellington College, England, where his father, Edward White Benson, who later became Archbishop of Canterbury, was headmaster. He was one of six children. One of his brothers became the Very Reverend Monsignor Hugh Benson, a priest in the Catholic Archdiocese of Westminster, the author of several religious books, articles and pamphlets; he died in 1914. Another brother, Arthur Christopher, was master of Magdalene College, Cambridge, from 1915 until his death in 1925. He wrote numerous biographies and poems.

In *Our Family Affairs* (1921) E. F. Benson wrote of some of the events of his busy childhood. During his early years, all the members of the family were ornithologists, conchologists, geologists, poets and literary folk. An important influence of this early home life was a joint literary effort called the *Saturday Magazine*, to which every member of the family contributed when the children were home for holidays. The requirement of each was "at least four pages of prose or one page of verse" written on the father's sermon paper. Later E. F. Benson was to write of this enterprise: "This habit gave us all a certain ease in expressing ourselves if only because we expressed ourselves so freely." It was continued for years, even after the children were in college and were succeeding in more ambitious literary endeavors.

As a youth, E. F. Benson had a tutor, A. H. Beesley, whose knowledge of prose and of history later earned him a place as a historian. His more formal education young Benson received at Marlborough College and at King's College, Cambridge, where he was a Craven and Prendergast student. During his school years he edited *The Marlburian*, in which may be seen his imitations of Addison and Tennyson. During this period, too, he became interested in archeology. While he was at Cambridge, he discovered remains of Roman monuments embedded in the wall of the city of Chester, and William Gladstone showed him how to make blotting paper "squeezes," or casts, of the inscriptions.

After pursuing archeology for a while at King's College, Benson went to Athens in 1892 as an assistant in researches for the British Archeological Schools and remained there until 1895, at the same time writing novels. In the years 1895 to 1897 Benson spent his winters in Egypt doing work for the Hellenic Society, returning to Greece for the rest of the time. During these years he was writing steadily. After 1897 he gradually settled to writing as a career.

E. F. BENSON

In 1893, while he was in Athens, Benson's best-seller, *Dodo*, was published, as well as his *Six Common Things*. *Rubicon* appeared the following year. The manuscript of *Dodo* had been lying in a drawer for years, coming out now and again for revision. The novel created a mild sensation and, as P. W. Wilson said in the *New York Times* Book Review more than 40 years later, "the amusement was the more enjoyable because Dodos [modern girls of the period] had not been included up to that time within the ecclesiastical entourage of Primates at Lambeth Palace." The success of *Dodo* later proved something of a handicap to its author, for regardless of the great number of books he wrote meanwhile, years later he was frequently referred to as the author of *Dodo*.

From 1893 until 1936, with the exception of the years 1899 and 1909, Benson published at least one book every year. In some years there were as many as three. Altogether, he published 79 works. Creative ability, finished literary style and facility of writing were qualities of all his work. His was a keen wit that was never malicious, and a humor that was never forced. Of *As We Are: A Modern Revue* (1932) one critic wrote: "There is no room in which to dwell upon Mr. Benson's understanding, sympathetic and moving depiction of the War-generation."

Among his most successful novels were *Mammon and Co.* (1900); *The Princess Sophia* (1900); *The Relentless City* (1903); *The Challoners* (1904); *The Weaker Vessel* (1913); *Dodo Wonders* (1921); *Paying Guests* (1929) and several about the amazing Lucia Pillson, the first of which, *Queen Lucia*, appeared in 1920 and the last, *Trouble for Lucia*, the fall before his death.

BENSON, EDWARD F.—*Continued*

Benson also wrote a number of biographies and histories which were well received. In 1938 he published *Queen Victoria's Daughters* which Queen Victoria dominated, as she had in real life dominated the lives of her children. The New York *Times* said of it: "Mr. Benson . . . still writes with the urbane ease of a later Victorian novelist—a contemporary Anthony Hope, Stanley Weyman and the rest whose neatly worked-out romances, when we turn over the leaves, are as silks and satins still fragrant with crumpled roses that recall what can never be again. It is pleasant and cultured writing. These Victorians of the drawing room knew their language and, in the days before syncopation, were satisfied with a serene and melodious tempo." Although he wrote the book with obvious affection and respect, with his usual competence and sense of human values, the author was not prevented from indulging in "occasional irony of a suave and gentle sort." For this work, the Royal family turned over to Benson correspondence which had not been previously published.

His other biographical and historical works include *Sir Francis Drake* (1927); *The Life of Alcibiades* (1929); *Ferdinand Magellan* (1930); *As We Were* (1930); *Charlotte Brontë* (1932) which has been called "the first really fair biography of the Brontë family that has been written," *King Edward VII* (1933); *Queen Victoria* (1935); and *The Kaiser and English Relations* (1936).

Mr. Benson, who was made a member of the Order of the British Empire in recognition of his literary works, also served as Mayor of Rye from 1934 to 1937, and was an honorary fellow of Magdalene College, Cambridge.

BENSON, JOHN 1872- President of the American Association of Advertising Agencies

Address: 420 Lexington Ave, New York City

The late Edward W. Bok, for 30 years editor of the *Ladies' Home Journal*, established a series of Annual Advertising Awards "to encourage merit and stimulate improvement in advertising." Administered by the Har-

vard School of Business Administration from 1924 to 1930, the awards were discontinued early in the depression. In 1935 the magazine *Advertising and Selling* revived them and has continued to sponsor them.

The gold medal for distinguished services to advertising in 1939 was presented to John Benson, president of the American Association of Advertising Agencies, at the Annual Advertising Awards dinner in New York City on February 15, 1940. President Roosevelt sent Mr. Benson a letter of congratulation which said: "I am especially glad to know that this award is bestowed upon you for having made most constructive contributions to the betterment of advertising during the past years. Advertising which stresses truth and fairness to the public can be an immense aid in spreading distribution and in stimulating and maintaining production."

John Benson, the greater part of whose life has been devoted to the service of advertising, was born in Erie, Pennsylvania in 1872. He went to Erie Academy and also took lessons in English composition from a group of Harvard professors who called themselves the Hawkins Correspondence School of Cambridge, Massachusetts. His first job was learning the coal business as a miner in the pit of the Youghioghny River Coal Company.

In 1906 he married Cora Handy of Chicago, and went, still on coal business, to Green Bay, Wisconsin. His top job was general sales agent of a small company. He was ambitious for more and tried to scribble business stories for the Sunday edition of the old Chicago *Tribune*. But there was no living in that. A friend advised him: "If you have a bent for writing, why not try ad-

JOHN BENSON

vertising? That would give you a better chance to eat."

Benson tried advertising for William D. McJunkin, a young Chicago agency head, who paid him \$20 a week for a time and then offered him a partnership. After three years John Benson went into business for himself, attracted a few loyal clients and became senior partner of Benson, Gamble, Johnson and Read. It took him 23 years to get there, though. And they weren't easy years, even for a "studious and non-gregarious chap who was grizzling into middle age with four children."

He didn't get there in a flashy way, either. All he ever did in his agency, actually, was to hold the original loyal clients and attract a few more. Fancy writing wasn't in him. "He had, by early advertising standards, a hopeless penchant for the truth, and he not only told the truth but battled for it as a member of almost all the associations and committees which a serious advertising man could join."

In the first years of the First World War a group of successful advertising men felt that the five regional associations of advertising agencies in this country should unite for self-protection and for higher standards. The first meeting was held in Buffalo and the Four A's—the American Association of Advertising Agencies—was founded. In 1922 John Benson was elected president of the Four A's and in 1927 was asked to become permanent president on full time. John Benson—"quiet, informed, but self-effacing"—thought it over for a year and then accepted.

As president of the Four A's and as advertising man Mr. Benson prophetically said in 1930: "Advertising does not yet command sufficient confidence to become a buying guide. There is not enough information and helpful suggestion in it. Most advertising is too partisan. It tells too many half-truths. It does not look *through* the consumer's eyes." It is this creed that aids John Benson immensely in Washington where, through him, officials have learned the Four A's point of view: that legislation is right which (1) serves the public interest, and (2) restricts honest advertising as little as possible.

BENTON, THOMAS HART Apr 15, 1889- Artist

Address: h. 3616 Belleview Ave, Kansas City, Missouri

A novel and brilliant promotion scheme that has brought considerable attention to a group of American artists was devised by motion-picture producer Walter Wanger for his sea picture, *The Long Voyage Home* (1940). Nine famous painters were brought to Hollywood to do scenes and characters from the movie. The pictures, shown during August at the Associated American Artists' Gallery in New York, then toured the country through the museums.

Notable among the group, which included such names as Grant Wood, Luis Quintanilla and James Chapin (see sketches this issue), was the dynamic muralist, Thomas Hart Benton. As his subject from the movie Benton painted a crew on the London docks shaking their fists at the captain of a rival tramp steamer. Benton approved the Wanger scheme, saying it was "a sign of growing intelligence in Hollywood." He reported a fine time in the movie colony; but added that his main reason for being there was to study the locale for drawings he was doing for a limited edition of John Steinbeck's (see sketch this issue) *Grapes of Wrath*. He has already made a striking group of these drawings to illustrate the advertisements for the motion picture version of *Grapes of Wrath*.

A pioneering force in American art, Thomas Benton has been called by the art critic, Thomas Craven, "the most prominent, vigorous and virile of our painters." His famed Americana murals in New York, Chicago and his native Missouri have aroused much critical controversy, but a large American public has seen and liked them. Benton was born in Neosho, Missouri on April 15, 1889, the son of Maecenus E. and Elizabeth (Wise) Benton. He was named after his great-uncle, old Thomas Hart Benton, Missouri's first Senator. His father, Colonel Benton, was a lawyer with political aspirations, and as a boy Thomas accompanied him on his political tours. When his father was elected to Congress he went with him to Washington every autumn and returned in the spring. During the summers, however, young Tom had to take care of the farm: his father didn't want him to forget good old pioneer Missouri ways. His father had also decided that a Benton could be nothing but a lawyer. But his son perversely preferred the town bums and colored boys to Senators and judges, dime novels to studies. His love for drawing was totally incomprehensible to his father, but his mother encouraged him.

Ned Scott

THOMAS HART BENTON

Benton's first mural, he says, was painted at the age of six. It was a very long freight train in charcoal which ran up the stairway on the new cream-colored wall paper—the engine puffing heavy black smoke because of the steep grade. The storm of protest, rather than appreciation, which greeted this early effort was only a prophetic forecast, the artist wryly observes. During the Spanish-American War the young artist graduated to battleships—mostly the *Maine* being blown up. He also drew Indians, not like those found on the Indian territory nearby, but wilder ones.

At 17 he decided to be a professional artist and got a job drawing cartoons for the *Joplin American* at \$14 a week. Then, feeling the need to get away from the small town and to associate with his own kind, he went to Chicago in 1907 to study at the Art Institute. There he couldn't stand making drawings of plaster casts and sneaked into the life classes. In Chicago they didn't think he was much of a genius either, so with his mother's backing he set out for Paris at the age of 19. Paris was ecstasy. But the conventional art schools repelled him just as they had in Chicago, and he set about painting by himself—thereafter "to flounder for 15 years without a compass in every direction." After three years he came back to New York, a great misfit with his pose of the typical Bohemian Paris artist. After a while he managed to pick up a few jobs, such as painting the portraits of the movie queens of the day for Rex Ingram. At that time his "serious" work was cubism and symbolism in the Paris manner. Taking up "synchronism," he exhibited a few pictures in the Forum show of 1916.

The War came, and Benton decided the safest place would be the navy. They first put him to loading coal boats in Virginia,

then he was transferred to the architectural service as a draftsman. This War experience marked the turning point in his art career: he came into contact with real things and with real American types. He began to express himself objectively and to break from the old pre-War art crowd influences. He also got married (in 1922)—to Rita Piacenza, an art student in the free art classes he taught at nights just after the War. She designed hats to help eke out their precarious income. Through a friend they were introduced to parties given by the high strata of New York's underworld. Here Benton met and began to paint some of the types in his series of "American portraits."

Benton went on developing his interest in American subjects and learned much from the American artist Burchfield's way of painting native backgrounds. His first public success came in Philadelphia when his canvases attracted the attention of the collector, Albert Barnes. Summers he and his wife went to Martha's Vineyard, Massachusetts, where Benton painted the landscape and the old people of the countryside. Two children were born to them.

A return visit to Missouri in 1924 renewed his interest in Missouri types. He wanted to know a great deal more about America and started going places, traveling the back roads and byways throughout the country. Leisurely, often on foot, with a pack of drawing materials in his knapsack, he visited the towns and homes of common American people. He studied life in the Texas panhandle oil fields, on Mississippi towboats; he visited coal mines, steel mills, shipbuilding plants. He made trips on Ohio, Missouri and Mississippi river boats; and he lived among mountain people in the Ozarks and Tennessee. The account of this rich, first-hand contact with American lives, customs and folkways Benton has given in his delightfully written autobiography, *An Artist in America* (1937), illustrated with several drawings.

His interest in the vast panorama of America's present and past led him naturally to the field of mural painting. His first mural on a contemporary American theme was done for the New School for Social Research in New York City and met with severe criticism as well as praise. The preliminary studies of the mural were purchased by the Whitney Museum, and the values of his pictures went up. He then painted a mural for the Whitney Museum.

In 1933 he was commissioned to do the Indiana mural for the World's Fair at Chicago. This mural of Indiana history Benton felt represented his best work, and the folks at the Fair liked it too, even if some New York critics did not. Fellow Missourians wanted him to paint a similar mural for the home state, and in 1935 he was commissioned to do one for the state capitol at Jefferson City. Of this work he said, "I wanted plain Missouri people like the farmers to like my painting, and when my total design was not affected by their objections

to some detail of fact I remedied the matter for them. I had all the evidence necessary to make me believe that my realistic conception of Missouri's social history and life was in line with the reputedly realistic psychology of the state's people." Representations of Frankie and Johnny, Kansas City's notorious Boss Pendergast and certain other realistic episodes and figures in Missouri's history drew pained and loud protests from local and neighboring stuffed shirts among editors, educators and politicians: "a great state is grossly libeled," they said. But the common folk refused to feel disgraced, and were proud of their state mural.

The critics themselves never agreed about Benton because, as Thomas Craven has pointed out, he falls into none of the ready categories of modern art. "To the conservatives he is a Red; to the radicals, he is a chauvinist. His art is too specifically real, too deeply impregnated with what I shall risk calling the collective American spirit, to touch the purists, methodists, and doctrinaires. . . . He has the rawhide individualism, the cynical laugh, the rough humor, the talent for buffoonery, and something of the typical Westerner's sentimental slant on life." His designs in these murals were full of violent contrasts, with one unit rhythmically set against another to express the tense energy and raw power of America in development. Benton does not have a particular social alliance, painting without satire and with equal representation café society and striking workers, politicians and farm hands.

Although he helped found in New York the Associated American Artists, organized to stimulate wider interest in contemporary American art, Benton decided to go back home to live, and in 1936 the offer of a teaching job in the Kansas City Art Institute clinched his decision. His interest in American types and themes continued; but an exhibit of his later work held in New York in 1939 showed that his work was undergoing further change.

Among the 1939 paintings were symbolic nudes, still lifes and simple landscapes, all showing Benton's new and careful study of textures. The change began with his *Susanna and the Elders*, the manner being echoed in *Persephone*, in which subtlety is the keynote. Benton gives complete, sculptural life to each of the many forms represented in the paintings, which are done in highly-glossed oil tempera. Landscapes such as *Shallow Creek* and *Weighing Cotton* are studies in objective realism. Of these Howard Devree has written: "Benton appears to have come nearer maturely artistic stature in his easel paintings than in any earlier work. . . . His color is more lively and clearer; his textural grasp sure and pleasing; his designs convincing; the strength of his draftsmanship makes itself felt; he is reassuringly painstaking of space and perspective." Since, however, Benton's art has changed constantly during the course

of his career, most observers of his work believe that—considering his volatile nature and wide range of interests—he will continue experimenting, changing, developing—perhaps in other new directions.

BERG, PATRICIA JANE Feb 13, 1918-Golfer

Address: h. 5001 Colfax Ave, South Minneapolis, Minnesota

Patty Berg turned professional in July 1940, ending one of the most amazing amateur careers in the history of women's golf. When she was 17 no one outside of Minneapolis, her home town, had ever heard of her; at 20 she had won every amateur golf title of importance.

At 22 she said goodbye to the ranks of the amateurs to sign up with a Chicago sporting goods company at a salary reported to be \$7,500 a year. "That's \$145 a week," as one newspaper writer commented at the time. "Quite a lot of money for a girl just 22 years old and taking her first job." Patty's duties on her \$145-a-week job with the Wilson Sporting Goods Company are largely educational, with appearances at summer camps for girls and golf-coaching schools.

Miss Berg has realized almost painlessly the dream of thousands of girls to play golf and to be paid for it. She has always had a natural aptitude for sports. As a little girl she played quarterback on a boys' football team, played baseball, and was the despair of her mother, who couldn't keep tomboy Patty's clothes mended.

When Patty was 13 her father, Herman Berg, a Minneapolis grain broker and golf enthusiast, brought home to his young son a membership to a golf club. "Where is mine?" Patty teased. "Just because I'm a girl is no reason not to give me one." So Mr. Berg got his tomboy daughter four old clubs, supplied her with a golf club membership and made her promise to go out for practice every day. The Bergs probably thought golf might keep Patty from such pastimes as football and baseball.

Patty got her first golf clubs in 1932. "In the beginning my game was awful," she said. Nevertheless, Patty soon played pretty good

PATTY BERG

golf. Her father was her chief instructor. A year after she got those first clubs she qualified for the championship flight in a Minneapolis tournament. By 1935 she had won the Minnesota state championship, a title she won again in 1936 and in 1938.

The young golfer first came into the national limelight in 1935 when she entered the women's national, which that year happened to be played on her home course, the Interlaken, in Minneapolis. Patty amazed the galleries with her 200-yard-drive and her earnestness. She beat five opponents in a row and got to the finals, where she faced the famous Glenna Collet Vare, who that year had returned to the golf wars to win her sixth national title. Mrs. Vare defeated young Patty, but not before Patty had given her a few anxious moments.

From then on Patty Berg was important sports news. She furnished lively copy for the sports writers, who predicted that it would "only be a matter of time before the 17-year-old would prove herself the foremost woman golfer in the United States." The little girl who had only been playing golf three years had "what it takes," they declared—"the competitive spirit of a Bobby Jones or a Gene Tunney" (see sketch this issue). One sports writer called her a "Bobby Jones" in skirts.

Patty has always been a favorite of the galleries. She proved as great an attraction for golf as Helen Wills Moody was for tennis. Red-haired, blue-eyed, freckled-faced, her nose shiny, her face devoid of makeup, Patty is all business on the golf course. About five feet one, sturdy and weighing about 110 pounds, she is an appealing figure on the links. For a long time she wore the same old sweater and hat in tournaments because she said they brought her luck. She usually wears slacks or a skirt and a sweater

for playing and has a blue beret perched on the top of her head. Sometimes after a bad shot the galleries can hear her mutter, "Patty, you bum." She has a nice direct grin and, despite her red hair, she has yet to show temper on the links.

During a tournament Patty retires at 8:30 p. m., lining up all her clubs (thirteen irons and five woods) against the wall of her room. Her mother and father used to follow their daughter's progress anxiously. Mrs. Berg, who has been lame since girlhood, could not follow her daughter hole by hole, but she watched her until she was a mere speck in the distance. Mr. Berg did follow, and when things went badly for Patty he whittled away furiously at a piece of wood.

In three years the hard-driving Patty won 13 titles. After her performance in the women's national of 1935 she did some sensational playing on the Florida circuit in the winter of 1936, winning the Punta Gorda, Florida and the Miami-Biltmore, Miami, Florida tournaments. The officers of the United States Golf Association rewarded her with an invitation to accompany the Curtis Cup Team to Scotland in May 1936 for the women's international matches with Great Britain.

In 1937 Miss Berg came through to the finals of the United States women's national again but was defeated by Estelle Lawson Page. Patty was so jittery in the finals she could hardly hold a club, and sports writers laid her defeat to her youth and lack of long experience. But the following year, in 1938, she again faced Mrs. Page in the United States women's national finals and this time she dethroned the champion. At 20 Patty Berg was the national women's golf champion. It marked the best season of her career—her tenth victory in 13 tournaments.

That year, in addition to the women's national golf championship, she won the women's Western championship, the Western derby championship, the trans-Mississippi championship, the Minnesota state championship and several winter Florida tournaments. The Associated Press sports writers selected her as the outstanding woman athlete of 1938.

She well deserved the title, for little Miss Berg was a natural athlete. A few years previously she had taken up speed skating and won the midget championship of Minnesota the first time she entered, placing third in the nationals the next winter. When she was attending high school in Minneapolis she won a score of ribbons for track victories.

That eventful year of 1938 Patty also entered the University of Minnesota as a freshman. Busy with her studies, she did not play as much golf in 1939.

As a professional Miss Berg takes her place with five other well-known women golfers—Helen Hicks Harb, Mrs. Opal S. Hill, Helen Dettweiler, Helen MacDonald and Mildred (Babe) Didrikson. These six

make up the entire list of well-known women golf professionals.

When she was 19 years old Miss Berg solemnly told an interviewer that she would not marry—she was just going to play golf. It is a pretty good game at \$7,500 a year.

 Who's Who in America

BERGMAN, INGRID 1916- Motion picture actress

Address: c/o David O. Selznick Corp, Culver City, California

When Miss Bergman, Sweden's leading film star, came to Hollywood in the spring of 1939 to do the English version of a Swedish success, *Intermezzo*, no one paid any attention to her. Even in Hollywood, while she and Leslie Howard were making *Intermezzo: A Love Story*, she went about as she pleased with nary an autograph hound on her trail. The film made an immediate sensation and people, entranced by her beauty and acting, announced a new star in the Hollywood firmament.

At 24, Miss Bergman had been an actress in Sweden for six years—two on the stage and four in the films. Before that she was a student for 11 years at the famous Stockholm Lyceum for Flickor. She is a bit tired of explaining that in Swedish *Flickor* means "girls" and has nothing to do with films. At school when she was 15 she took part in a play with such success that theatrical impresarios asked her to go on the stage. Then she spent a year at the Royal Dramatic Theatre School and was ready to play ingenues at the Oscar and Royal Theatres of her native city. After she made *Intermezzo* for the Svensk Filmindustri, she came to the notice of David O. Selznick.

When reporters met her in New York in January 1940 after her vacation in Sweden, they were amazed at her charm and the fresh beauty of her glowing Scandinavian coloring, which needs no makeup. She looks no more than 18 now. Taller than average (5 feet 8), she has light brown hair, deep blue eyes, an athletic figure, and a quality of deep serenity. Ordinarily a glamour star hides her marriage and parenthood, but Miss Bergman amazed hardened ship's reporters by appearing with her 15

INGRID BERGMAN

months' old daughter, Pia, slung over her shoulder in a fur-lined "papoose bag."

"It would be wonderful," commented a reporter, "to have a picture of you with Pia peeping from the bag over your shoulder." "I'd love it, too," she replied, "for naturally I am very proud of her. But it is impossible. Strict orders from Selznick." Pia, whose odd name is a combination of the initials of the names of Ingrid and her husband, a doctor and professor at the Swedish Royal Academy of Medicine, is a smaller edition of her mother. Ingrid has been married three years and her husband was anxious to accompany her to Hollywood, but he is of military age and must remain in Sweden.

"I hope," says Miss Bergman, "that my next picture won't be made for a long time, so that I will have an opportunity to perfect my English. Of course I shall take lessons and I shall have a teacher right with me on the lot when I make the picture—I had one in *Intermezzo*, too—but the best way is to live in the country for a while." Her English seems delightful to listeners. She explained that she could always speak it a little, for in Sweden it is taught in the schools along with French and German.

In the spring of 1940 Ingrid Bergman opened in a revival of Molnar's *Liliom* on Broadway. The critic for *Theatre Arts* said: "She brings to the part of Julie a lovely, fresh innocence that has about it something of the peasant solidity, the strength of bone and fibre under its youthful charm which is an authentic contribution to the part. Her slight accent is no handicap to this very 'foreign' play, especially as she speaks with great clarity and has a pleasantly modulated voice." Other critics were equally kind in discussing her rôle.

BERGMAN, INGRID—*Continued*

She is a little frightened at becoming an American star. "In Stockholm I go everywhere alone. They recognize me, but no one pays any attention." One thing she is sure of: "If I become famous in Hollywood I will not forget my husband in Stockholm. My husband knows I would come back to him. He is a very clever man."

BERLE, ADOLF AUGUSTUS JR. (bēr'-lē) Jan 29, 1895- Assistant Secretary of State
Address: Department of State, Washington, D. C.

To be an official in the United States State Department these days demands the utmost in intelligence, understanding and energy. Adolf Augustus Berle Jr., "a ball of intellect and nervous energy," who has advised the Roosevelt government on taxation, on railroads, on banking; who has been City Chamberlain of New York and chairman of its Planning Commission; who had advised Secretary of State Hull (see sketch this issue) on trade treaties and conferred with foreign ministers, has the wide experience and dynamic vitality necessary in these ticklish times.

As Assistant Secretary of State he has called on both capital and labor to subordinate, during the European War, their respective desires for greater profits and higher wages in order to obtain the highest degree of national unity. This he considers essential for the freedom of the United States and even for the "ultimate salvation of civilization." As Assistant Secretary of State he has argued against "selfish isolationism" which is "neither possible, practical nor peaceful," and in its place urged a policy of "cooperative peace." We must stay out of the War, he insists, and yet remain "good neighbors." As Assistant Secretary of State he has been busy speaking and writing on President Roosevelt's foreign and domestic policy and he has been busy working out plans to deal economically with Latin America.

This is not the first time that Secretary Berle has appeared in a position close to the President. In 1932 he was one of the original "brain trust" that helped formulate Roosevelt's policies during his first years in office, its "cockiest member." Already known as a brilliant lawyer and a thorough analytical economist, it was he who advised President Roosevelt on bank and corporation affairs.

A. A. Berle is an infant prodigy who has made good. His father, Dr. Adolf Augustus Berle, a liberal minister and sociologist of Boston, had his own educational ideas, which he passed on to his son shortly after he left the cradle. At fourteen Adolf Jr. entered Harvard with high examination marks and short pants, and in 1913, only three years later, was graduated with honors. A year later he had his master's degree, and at 21 was the youngest man ever to graduate from the Harvard Law School.

Right out of law school he entered Louis Brandeis' law office. He stayed there for a year until he went to the War as a lieutenant in the infantry. He also saw service as an army intelligence officer, and his trips into the Caribbean added the sugar business, Latin American law and Caribbean politics and sociology to the subjects on which he was later recognized as an expert.

After the War Berle practiced law with the New York firm of Rounds, Hatch, Dillingham and Debevoise until 1923. In that year, at the age of 24, he went to the Peace Conference as an assistant to Frank Howard Lord, American High Commissioner to Poland, in the redrafting of the Eastern frontier of Germany. The solution finally incorporated in the draft treaty was absolutely unacceptable to him, and he resigned.

Back in New York he began active work in the Henry Street Settlement. He became interested in the welfare of Indians and defended their rights in several lawsuits. But the main line of his legal work gradually carried Berle into the accepted channels for a respectable and ambitious young corporation lawyer in New York City. He became an active Republican, relieved of financial cares by his marriage in 1927 to Beatrice Bend Bishop of New York. From 1925 to 1928 he lectured occasionally at the Harvard School of Business and in 1927 accepted a professorship in corporation law from Columbia University. He stayed at Columbia until he went to Washington, active as a teacher, as a lawyer and as an author of substantial and authoritative books on corporation finance.

In 1928 appeared his *Studies in the Law of Corporation Finance*; in 1930 his *Cases and Materials in the Law of Corporation Finance* (with Dr. Gardiner C. Means); and in 1932, also with Dr. Means, his most famous book, *The Modern Corporation and Private Property*. This now standard book is based on the most elaborate studies that have been made of the growth of American corporations, and its conclusion is that "the rise of the modern corporation has brought a concentration of economic power which can compete on equal terms with the modern state—economic power versus political power, each strong in its own field. The state seeks in some aspects to regulate the corporation, while the corporation, steadily becoming more powerful, makes every effort to avoid such regulation."

When Mr. Berle appeared before the Congressional Monopoly Investigation Committee in 1938 it was his books that inspired a good many of his suggestions. He cautioned the trust busters that bigness did not mean badness, and he criticized the technique of the New Deal for indulging in "shotgun imposition of regulation without adequate definition of standard." Yet, then and since, Berle has clung doggedly to the hope that bankers and business men will realize that restraint, higher standards of conduct and a sense of social responsibility are imperative if the capitalistic régime is to survive.

During the first Roosevelt campaign Berle did useful odd-jobs of economic analysis, sloganeering and drafting, but when Roosevelt was elected he refused office in the New Deal, preferring to be free to continue his teaching and practice. Yet as a "brain truster" he spent two or three days a week in Washington and during the one-hundred-day Congressional Session of 1932 to 1933 had a hand in varied pieces of legislation. He helped to write the Bankruptcy Act, the new Securities Act and the National Recovery Act. He was legal counsel to the Agricultural Adjustment Administration in obtaining sugar production and marketing agreements. Most important, he was special advisor to the Reconstruction Finance Corporation in charge of untangling the mess of railroad finances. As such he was primarily responsible for the system of Federal coordinators which Roosevelt adopted as his transitional railroad policy. As such, too, he infuriated Wall Street by his uncovering of one bit of skulduggery after another on the part of the railroads and banks.

In 1933 Berle was sent to Cuba as financial advisor to the United States Embassy there and arrived just as the second revolution broke out. From then on he became involved in New York City rather than Federal politics. From 1934, until the office was abolished by the new city charter in 1937, he served as City Chamberlain of New York under La Guardia (see sketch this issue), whose election he had supported long before the practical politicians and reformers could agree to pick the "Little Flower." Then he became chairman of the City Planning Commission, a member of the City Housing Authority, chairman of a committee to study the New York substitute teacher system.

In February 1938 he rejoined the Roosevelt Administration as Assistant Secretary of State. Under-Secretary of State Sumner Welles (see sketch this issue) is supposed to have been responsible for bringing this short and slender "financial and legal genius" back to Washington, for he worked closely with him at the Pan-American Conference at Buenos Aires. There was some opposition in Washington to the appointment, for Berle's "show of self-esteem had irritated many government officials with whom he came in contact." As one writer

A. A. BERLE JR.

put it: "Berle is an infant prodigy who has irritated everybody by continuing to be a prodigy after he has ceased to be an infant."

When Berle went to the State Department in February he retained his Columbia professorship because the new post "may not last more than a few months." In August of the same year he resigned, saying that his work on the pending British trade agreement was done and affirming to President Roosevelt his support of "your administration and you personally . . . against all your enemies, foreign and domestic."

In September of that same year President Roosevelt announced that Berle's resignation would not become effective on September 15th as originally was made public, but that Berle would continue in office for an indefinite period because of the international situation, though a leave would be granted him. In April 1939 that leave was cancelled. And with the world as it is today it looks as though it will be a long time before this "cocky little devil" of the sharp mind and the sharp pen will return again to the teaching of corporation law.

Who's Who in the Nation's Capital

BERRY, MARTHA MCCHESENEY Oct
7, 1866- Educator; social service worker
Address: Mount Berry, Georgia

The story of the Berry Schools, founded by Martha Berry, is the story of a woman who devoted her life to an ideal of service, and who through her unselfish devotion to that ideal opened the gates of opportunity to thousands of poor Southern boys and girls.

Martha Berry was brought up to a life of ease and pleasure. The daughter of Captain Thomas and Frances (Rhea) Berry, she was born on a plantation, several miles from Rome, in northwest Georgia, in the upland district on the edge of the higher Appalachian belt. She and her sisters enjoyed the advantages of travel and a fashionable education. Martha Berry attended a finishing school in Baltimore, and came home to the huge white-pillared plantation house to take her place in the society of Georgia.

Almost at the door of the Berry plantation were the poor cabin homes of the Georgia mountaineers, people of English and Scotch ancestry, the sturdy, adventurous type which formed the backbone of early America. But as the hillside soils were depleted, and as their contacts with the rest of the world grew less frequent, the later generations lived in poverty and ignorance. Even as a young girl Martha Berry was aware of the little ragged mountain children, growing up illiterate and unkempt.

One Sunday afternoon she gathered several of these neglected waifs in the old log cabin on her father's plantation and told them *Bible* stories. They came again the next Sunday, and the next, and Martha Berry soon had a real Sunday School class. She rode out into the remote mountain sections where preachers never went, and invited the mountain folks down for Sunday services at the little log cabin. She became known as the "Sunday Lady" of the mountains.

As she came in closer contact with the mountaineers, she saw fine young boys and girls growing up neglected, with no chance for an education of even the most rudimentary sort, no chance to make anything of themselves! Georgia, once the proudest state in the union, had a deplorable record in providing public education. For these mountain boys and girls there seemed to be little future.

And Martha Berry decided to do something about it. In the little log cabin across

the road from her home she opened a school where all who liked might come and learn. Thus in 1902 was laid the foundation for the Berry Schools. Five boys were in Miss Berry's first class. At the end of the first week came wash day. But the boys were mountain-reared. They refused to wash their clothes, their bed or table linen. Washing was women's work.

Martha Berry, who had always had Negro servants to wait on her, rolled up her sleeves and stepped to the wash tub. "Very well, boys," she said sweetly, "I'll wash your clothes for you." Rather than see Miss Berry do the wash, the boys capitulated. Miss Berry had solved the first of many problems which were to beset the Berry Schools.

In 1940 when Martha Berry was selected to receive the second annual humanitarian award of the Variety Clubs of America, a nation-wide showmen's organization, the Berry Schools had 25,000 acres of land and 125 buildings, including an accredited college. Less than eight per cent of the students who were graduated from the schools paid for tuition or board. The others earned their way by working for the schools.

From the earliest days of the school the students worked for their tuition. Mountain pride had prevented them from taking charity. Some boys brought a few chickens, others a few yards of hand-woven cloth. One boy came driving a team of oxen to work for his year's tuition. Ways had to be found to help the boys earn their own way, and to make use of what they brought. They made gardens, raised stock, planted fruit trees.

The boys built the first school dormitory of 10 rooms. Friends donated furniture and dishes. Miss Berry bought cots. The school grew and soon it was impossible to accommodate all who came. The girls wanted to come, too. Miss Berry had not hesitated to sink her own small fortune into the school, but still boys and girls had to be turned away.

Determined to give an opportunity to as many boys and girls as she could, Miss Berry went to New York in an attempt to raise funds. She had few influential friends, only a list of people known to subscribe to worthy causes. Her first check was from R. Fulton Cutting, who gave her \$500, enough to send 10 boys to school for one year. Since then other philanthropists, persuaded by Martha Berry's eloquence, have given thousands, even millions, to the schools.

For Miss Berry is as determined and as undaunted by obstacles as she is kind and charming. And she has devoted all her energy and all her life to her mountain boys and girls.

The result has been the Mount Berry School for Boys, the Martha Berry School for Girls, the Berry Model Practice School and the Berry College—the latter established in 1926. All are operated with a view to fitting boys and girls for some definite work

in their community. The school is a self-sustaining city. A mill has been built, granite for the buildings has been dug from the hills, there are orchards, there are herds of cattle and goats, there is an automobile shop, a bakery.

The Berry Schools have an enrollment of 1,300 students from 11 Southern states, and about 5,000 applicants are turned away each year. Each student devotes two days, or 16 hours a week, to some form of labor in the operation of the schools. No city boys or girls, or those who can pay their way without working at the school, are admitted. The boys wear overalls, the girls chambray dresses and sunbonnets. In addition to the scholastic work there is practical training in farming, dairying, orcharding, truck gardening, landscaping, forest management, road construction, carpentry, blacksmithing, plumbing, cabinetmaking, brick manufacture, bricklaying, printing, laundry work, shoe repairing, automobile mechanics, general merchandizing, stenography, office work, cooking, sewing, millinery, nursing, cafeteria work, dental assisting, school teaching, music and the ministry.

Aside from the satisfaction she has enjoyed at seeing her missionary vision come true, Martha Berry has had honors heaped upon her by an admiring nation. The Georgia Legislature honored her as a "distinguished citizen" in 1924; she was awarded the Roosevelt Memorial Medal for services to the nation in 1925. She received the Pictorial Review Award of \$5,000 for outstanding service in 1927; was voted one of the 12 greatest American women in a nationwide poll in 1931; received a gold medal from Town Hall of New York for accomplishment of lasting merit, 1931; was appointed the only woman member of the Board of Regents of the University System of Georgia, 1932; received the biennial medal of the Society of Colonial Dames for eminent patriotic service, 1933; and was received at the Court of St. James by the King and Queen of England in 1934.

These are only a few of the honors which "Mother" Berry has received. A doctor of pedagogy from the University of Georgia, 1920, honorary degrees have been bestowed on her by half a dozen universities and colleges.

But she has built herself a more lasting memorial—the gratitude of more than 10,000 boys and girls who go out in life with new vision and opportunities because of Martha Berry's work in founding and directing the Berry Schools.

A sign marked "The Gate of Opportunity" stands at the entrance of the schools. To it might fittingly be added another sign: "Opened by Martha McChesney Berry."

BETHE, HANS ALBRECHT (bā'tē häns al'brēht) July 2, 1906- Physicist
Address: 104 Northway Rd, Ithaca, New York

Professor Bethe was born in Strasbourg, Alsace-Lorraine. After studying at Kiel, Frankfurt and Munich (Ph. D. 1928), he

HANS A. BETHE

taught at various German universities. Because his mother was Jewish he found it necessary to leave Germany in 1933 and go to England, where he taught and continued his researches in physics for a year. In 1935 he came to Cornell as assistant professor of theoretical physics and in 1937 was promoted to a full professorship. In 1940 and 1941 he is visiting professor of physics at Columbia University.

In 1939 Professor Bethe received the Morrison Prize of the New York Academy of Science for his researches in astrophysics concluding that "carbon must be the stuff that enables the sun to turn fragments of hydrogen atoms into sunshine." In January 1940 he made headlines again for confirmation for the first time of the theory that "the forces holding the nucleus of the atom together are transmitted by the recently found meson, the elementary particle." The meson had been first recorded two years before in cosmic radiation by two professors of the University of California, Anderson and Neddermeyer, and simultaneously by Street and Stevenson of Harvard. Dr. Bethe's findings were published in *Physical Review* in 1940.

"Modest, demure" Dr. Bethe is considered by American physicists a man with extraordinary mathematical equipment. He is the author of five major treatises and dozens of articles on nuclear physics. *American Men of Science* (1938) gives his interests as follows: "Theory of atomic collisions, metals, atomic nuclei, absorption spectra of crystals and atomic spectra, particularly those of hydrogen and helium, quantum electrodynamics and properties of very fast particles."

In the summer of 1939 Professor Bethe married Rose Ewald, daughter of a famous German theoretical physicist now exiled by the Nazis and living in Ireland. He likes

"skiing, economics and riding on trains, but spends most of his time mulling over theoretical physics. His tools: a stack of reference books, a batch of paper, a slide rule, a fountain pen, a powerful brain."

BEVIN, ERNEST 1884- British trade union leader; present Minister of Labor
Address: b. Transport House, Smith Sq, London, S. W. 1, England

Soon after his appointment as Minister of Labor at the beginning of May 1940, Ernest Bevin said: "I hope the War Cabinet will not allow vested interests, profits or anything else to stand in the way of maximum production. If this is the policy of the government I will ask my people to work like hell to save the lives of our lads." This plain, forceful statement in the language of the people epitomizes the character of the man. From humble beginnings as a farm boy he has risen to his present great responsibilities (his latest is as a member of Churchill's War Cabinet) through proved merit as a trade union organizer and administrator. Trade unionism has been his life. He had never even been in Parliament until June 22, 1940 when he was reported to have been returned unopposed at a by-election in Central Wandsworth (London).

Bevin is a huge, ruddy-faced, bull-like man, with a voice to match. He has always been a fighter of redoubtable quality, and in the past has been the implacable political enemy of the present Prime Minister, Winston Churchill (see sketch this issue). Personally, however, they warmly respect each other, and Churchill has described Bevin as the ablest figure in British industry. His biggest single achievement so far has been the amalgamation of large numbers of separate unions into one huge body called the Transport and General Workers' Union, which numbers over half a million members. He has done valuable work on the Economic Committee of the Trades Union Congress (the co-ordinating body for all British trade unions) and in 1920, in a famous 11-hour speech, was instrumental in securing a minimum wage for the dockers. An enormous worker, forthright and unsuited, he mistrusts the intellectual wing of the party. He is earnest, combative, sometimes dictatorial, and has high ideals, some of which he has seen come to realization.

Born in the country village of Winsford, Somersetshire, Bevin lost both his parents

before he was eight and was brought up by a sister in Devonshire. But she was very poor, and in 1894, when he was only 10, she sent him to work on a farm, where he received his board and 12 cents a week. Very soon he left for the nearest large city, Bristol, where he became successively page boy at a restaurant, tram conductor, shop assistant and vanman. He was fired from tram conducting for making an excited speech at a Sweated Industries exhibition. As a truck driver his work lay at the Bristol docks; so when he came to join a union it was the Dockers' Union (Carters' Section).

He had frequent periods of unemployment, and from 1905 to 1909 was secretary of the West of England Unemployment Movement. The trade union pioneer, Ben Tillett, perceived that he had energy and merit and persuaded him easily enough to make union organization his career. In 1911 he became branch secretary of the Dockers' Union; then district secretary, national organizer and assistant general secretary. He saw that the weakness of the movement for collective bargaining lay in the multiplicity of unions covering similar trades and set to work to negotiate amalgamation. All these activities covered the period from 1911 to 1919.

In 1920 Bevin went up to London, and in February of that year delivered the famous 11-hour speech before the Transport Workers' Court of Inquiry which resulted in the dockers' receiving a standard minimum wage. By this speech Bevin first sprang into nationwide renown, and was dubbed "the dockers' K. C." (a King's Counsel being the highest grade of advocate in England).

Bevin had made an attempt at Parliament in 1918, contesting Central Bristol, but was heavily defeated by Sir Thomas Inskip. In 1919 he acted as one of fourteen mediators in a big railroad strike; in 1920 he became joint secretary of the Council of Action (a body envisaging political changes to be brought by industrial action); and in 1921 he did good work on a Tramway Inquiry.

The year 1922 brought the great triumph for which he had worked for many years, the merging of thirty-two unions into one big national organization, the Transport and General Workers' Union, with himself as general secretary. The fine headquarters building of the Union, Transport House in Westminster, London, now houses not only its own people but the Trades Union Congress itself. Its board room contains a bronze bust of Bevin by E. Whitney-Smith, presented in gratitude for the amalgamation and unveiled in 1930 by Ben Tillett.

Meanwhile Bevin's first two years in London had been filled with another major occupation. In 1920 Labor's newspaper, the *Daily Herald*, was a thin and poorly run sheet; and Bevin was one of those trade union leaders who believed that the movement's vital interests demanded an up-to-date and influential organ. He and his fellow unionists worked tirelessly to improve the *Daily*

Herald. The turning point came in 1922 when the editorial direction was given over to H. Hamilton Fyfe (see sketch this issue), a journalist who had done distinguished service on the *London Times* and the *Daily Mail*. In four years he raised the circulation from 130,000 copies to 450,000. Bevin was co-opted to the directorial board; but from Fyfe's autobiography, *My Seven Selves*, it does not appear that he was very helpful on the editorial side. Fyfe resigned in 1926. The paper is now jointly run by the publishing house of Odhams and the Trades Union Congress and circulates well over a million copies. Thus another dream of Bevin's has come true.

In 1926 Bevin was on the general council of the Trades Union Congress and took an active part in the general strike. It was he who announced its beginning to the press. The same year saw him visiting the United States as member of a Government Industrial Mission of Inquiry. In 1929 he served on the Macmillan Committee on Finance and Industry and in 1931 again attempted Parliament, contesting Gateshead without success. He created some stir in 1933 with a well-thought-out scheme to deal with the crying problem of unemployment, his chief suggestions being the retirement of elderly workers on pension, the raising of the school-leaving age to 16, and the introduction of the 40-hour week.

Like most prominent Labor leaders in England, Bevin has often been assailed not only from the Right but from the extreme Left. In November 1933 there was heard an action by Bevin against the Communist organ, the *Daily Worker*, for alleged libel contained in an article accusing Bevin of betraying trade union interests. The decision was in his favor, and he was awarded the enormous sum of £7,000 (about \$28,000) in damages.

Wm. Vandivert

ERNEST BEVIN

BEVIN, ERNEST—*Continued*

In September 1936 Bevin reached the highest position in the whole British Labor movement by his election as chairman of the General Council of the Trades Union Congress; and he had the unusual honor of being elected for a second term in 1937.

When Neville Chamberlain resigned office early in May 1940, Bevin was an obvious choice for high office, despite his lack of Parliamentary experience. It says much for Mr. Churchill's real desire to form the strongest possible government regardless of party lines that he should incorporate into his team this old adversary, whose views differ so radically from his own.

Bevin has begun well, but he has a colossal task in hand, not the least part of which is to adapt the ample reserves of available labor to the specific task of making munitions. He has wide compulsory powers for transference and so forth, but the British have noted with real satisfaction that so far he has not had to use them. Perhaps only a man with Bevin's record of service to labor could have ventured to ask the working man to work twelve hours a day for seven days a week.

BEVIS, HOWARD LANDIS Nov 19, 1885- President of Ohio State University
Address: Ohio State University, Columbus, Ohio

On February 1, 1940, Dr. Bevis left his position as professor of law and government at Harvard University and took over the presidency of Ohio State University. He succeeded George Washington Rightmire, president from 1926 to 1938, who has retired. Dr. Bevis was born on a farm at Bevis, Ohio, the son of Edgar and Cara (Corson) Bevis. He studied and later taught law at the University of Cincinnati, and first won fame as a Cincinnati political reformer. Urged by a classmate, Alma D. Murray (whom he married in 1914), he aided in the election of the first woman to Cincinnati's school board. While teaching law he took part in the practical work of organization politics—work which he considered a diversion from the serious duties of a professor. When he found that Cincinnati needed cleaning up he drafted a new city-manager charter.

HOWARD LANDIS BEVIS

Dr. Bevis was appointed Director of Finance for Ohio when former Governor George White took control of the state government in 1931. It was a difficult task, for funds of the state were dangerously low and revenues were falling. Bevis effected drastic economies by cutting Ohio's budget from \$86,000,000 to \$48,000,000. From 1933 to 1935 he sat as a Supreme Court judge, then was called upon to reorganize the state's finance department for Governor Davey. That task accomplished, he accepted a professorship at Harvard.

"Tall, ruddy, leathery Howard ('Stick') Bevis is a Methodist and a Democrat," and is well acquainted with the problems of administering the nation's fifth largest university. It has an enrollment of more than 13,000 students, and was founded in 1870 as a land-grant college with its main function to help farmers. Even now less than a fifth of its students enroll in the arts college.

Dr. Bevis is the author of *Cochran's Law Lexicon* (3rd ed.); *Ohio Law Quizzer*; and is co-author of *Private International Law in Ohio Jurisprudence*. He is also a frequent contributor to law periodicals.

BIRGE, RAYMOND THAYER Mar 13, 1887—Physicist

Address: b. University of California, Berkeley, California; h. 1639 La Vereda St, Berkeley, California

On February 29, 1940 Mr. Raymond T. Birge, University of California physicist, when presenting the Nobel Prize to Professor Ernest O. Laurence (see sketch this issue) announced the discovery of a radioactive form of carbon by Dr. S. Ruben and Dr. M. D. Kamen of the Radiation Laboratory of the University of California.

Since germs consume living tissues which contain carbon, and their excretions (which also contain carbon) are often the poisons that cause sickness, it should be possible to give animals the new electrified substance in food and then study how bacteria use it for their own ends. Other

forms of radioactive carbon lose their electrical qualities rapidly, but the type discovered at the University of California has a relatively long life.

Dr. Birge has been chairman of the department of physics at the University of California since 1933. He was born in Brooklyn, March 13, 1887. He received B. A., M. A. and Ph. D. degrees at the University of Wisconsin. He was instructor in physics at Syracuse University, (1913-18), and at California has been professor of physics since 1920. In 1913 he married Irene A. Walsh of Redfield, South Dakota; their home is in Berkeley, California.

Dr. Birge has specialized in spectroscopy; band and line series relations in spectra; carbon and oxygen isotopes; probable values of general physical constants.

BLAKE, NICHOLAS, pseud. See Day-Lewis, C.

BLAKER, RICHARD Mar 4, 1893—Feb 19, 1940 Author

Richard Blaker, British novelist and screen writer, died at Santa Monica, California, after an illness of several weeks. He turned to fiction writing after receiving his master's degree at Oxford. His first novel, *Voice in the Wilderness*, was published in 1922. Among his popular books were *Medal Without Bar*, a war novel published in 1930; *Here Lies a Most Beautiful Lady* (1935); and *Love Went A-Riding* (1938). His last screen assignment was with Samuel Goldwyn on *MacIntosh*. He is survived by his widow, Mayo Blaker, and a daughter.

RICHARD BLAKER

BLANCH, ARNOLD June 4, 1896- American artist

Address: b. c/o Associated American Artists, 711 Fifth Ave, New York City; h. Woodstock, New York

"Temperamentally, he disagrees. He disagreed with millions of his countrymen in 1917. He disagreed with his father and became a painter, and, at one time or another, he has disagreed with most of his contemporaries on the subject of painting."

That is how a critic once characterized Arnold Blanch, 26 of whose most recent paintings were shown at the Associated American Artists' Galleries April 15 to May 4, 1940. They included both landscapes and portrait work—the products of eight months of travel through the West and the South—and other paintings stretching back over the last five years since his last exhibition. Of his landscapes the New York *Herald Tribune* said: "They reflect an honest search after truth, but that truth is curiously tinged by a somewhat gloomy sentiment. It is in only one landscape, *Suwanee River*, that Mr. Blanch appears willing to strike a cheerfuller note." The New York *Post* speaks of the artist's blend of "romanticism", "tart realism" and "ironic humor," and finds the *Flower Makers* and *The People* strongest of his paintings. *Cue* particularly approves of *Sunday Landscape* and another landscape called *Swamp Folks*, but finds "*Suwanee River* and other artificially colored pictures . . . no more of the place than Al Jolson is Mammy's boy." *Time* considers him a remarkably unaffected painter who succeeds in presenting the United States scene without trimmings—"no gravy, no ketchup." It appears that the critics also disagree when it comes to Mr. Blanch.

He was born in the little town of Mantorville, Minnesota on June 4, 1896, the son of Louis and Bertha (Adler) Blanch. His mother painstakingly painted on china, his aunt conscientiously copied paintings and he began to draw as soon as he could hold a pencil. When the family moved to Minneapolis, Arnold attended the Minneapolis School of Fine Arts, and after four years of cast-copying and life classes won a fellowship for the Art Students League in New York. At that time such men as Robert Henri, John Sloan, George Bellows and Kenneth Hayes Miller were working and teaching there, and it was the latter who exerted a particular influence on the young student.

When War came the 21-year-old Blanch, then working as a commercial artist (he once designed advertisements for Pluto Water), was drafted into the American Expeditionary Force. He was unhappy about it until he managed to secure a year's educational leave in order to travel through Europe, visiting the museums, studying the old masters and painting in out-of-the-way places. Upon his return he did commercial work again for awhile, then around 1923 moved to the artists' colony at Woodstock with his wife, Lucille Blanch, another former student of the Minneapolis School of Fine Arts. There the young couple performed the almost unique feat of living by art alone, with occasional not-too-profitable ventures into running a cafeteria, looming rugs, hunting and fishing for their food. In 1926 two years later he again left the United States—this time to study in Italy; and upon Blanch gave his first one-man exhibition; his return in 1929 gave a second one-man show.

In 1930 he was offered a teaching position at California's School of Fine Arts in San Francisco and he promptly accepted, crossing the continent in his trusty old Ford. Although he had won prizes before, it was while in California that substantial recognition first began to come to him as an artist, for during this period of teaching the Metropolitan Museum, the Whitney Museum and the Palace of the Legion of Honor all purchased paintings of his.

In 1933 both Mr. and Mrs. Blanch were given Guggenheim Fellowships to travel abroad for a year, and for the third time Blanch painted in Europe, for the most part working near Renoir's home in Southern France.

In 1938 the painter was awarded the third Carnegie International Award of \$500 for *The People*, shown in the recent exhibition. In the same year he was awarded the Carol H. Beck Medal for his *Portrait of a Man*, and his *Portrait of Doris Lee* has very recently been purchased by the University of Nebraska.

A great many of the paintings in the recent exhibition have as their source a summer spent teaching at the Colorado Springs Art Center in 1939. Although known as a

"Rehn member" of the Woodstock colony, a painter of many New England scenes, Blanch took advantage of his new geographical situation to make excursions to all parts of the West and the Southwest. In the winter he extended these excursions further South, and the result was a group of paintings ranging from the sharp mountain scenes of Colorado and the West to portraits of Negro preachers, Southern farmers and Suwanee River scenes. The year before, while an instructor at the Art Students League, he had completed murals for the post offices at Norwalk, Connecticut and Fredonia, New York.

As an artist, Arnold Blanch cannot be easily summed up. He has always been known as a painter of the "American scene," but his rejection of art for art's sake has never been so complete as in recent years. Most critics agree that his pictures have become more and more informed by philosophic statement, by his increasing interest in the world around him; one critic has said that even his earliest landscapes were characterized by more drama, more human comment than most, and that his simplest nudes and portraits were "more earthy, more aware of life as growth," than those of most of his contemporaries. In the past few years he has been generally known as a social painter, although *Time* describes his recent exhibit as "unburdened with 'social significance.'"

Blanch once stated his artistic credo thus: "A painter should not only create art, but use art in order to create." He felt that the fault of the public's indifference to art lay with painters, who "in their frantic endeavor for self-expression have lost the art of being understood," and he defended the "literary" element in his painting by saying: "I can go much further with a canvas now. The longer I work, the more possibilities open up. The canvas grows increasingly interesting as I paint on it, and when you just look around for a pleasant landscape or an attractive still-life to paint, that never happens." Whether or not this is his present theory, it explains a large part of his work.

Critics' estimates of his talent have varied; as is not unusual, some have praised his painting for the very qualities which others have found distinctly unpleasant. His New England scenes (such as *The Farmer, New England, Red House*) were briefly described by one critic as "drab and not very characterful landscapes," often "freighted with macabre symbolism." Another critic found in them "a nostalgia for the heroic past of our own country. His hunting and fishing take him back into this past—give him a sense of vigor and of solitude that are typical of it. And from these excursions come brooding, often lonely, pictures, imbued with a sense of tragedy." *The People*, the picture which won the coveted Carnegie Award in 1938, was described by one critic as "a mystifying and rather confused

Peter A. Juley & Son

ARNOLD BLANCH

statement of some sort of political ideology unredeemed by quality of painting" and brought forth the following unenthusiastic comment from another: "The artist appears to have a curious distaste for the people whose cause he pleads, and in this picture the figures resemble a group of actors waiting for the cue to vent the injustices of their fate. Meanwhile one can imagine that the artist, laying down his brush, is saying to himself virtuously: 'Thank God I'm not a lyric painter.'"

Conflicting with his apparent preoccupation with current social and economic problems is Blanch's love of rural, almost pioneer life. Though he has never worked in his native state (which, in turn, has never honored him by buying one of his pictures), "gray-thatched" Arnold Blanch still confesses a "chronic nostalgia for Minnesota." But he does not believe in regionalism in American art. "I shall never again believe," he said after his recent travels, "that an artist should settle in one place to paint. I have become conscious of the rich material all over the country, and I should like to go back again to Colorado, Arkansas, South Carolina, Georgia and so many other artistically exciting locales." He did get to Colorado in the summer of 1940 when he taught at the Colorado Springs Fine Arts Center.

BLITZSTEIN, MARC (blits'stine) Mar 2, 1905— Composer

Address: 496 Hudson St, New York City

In April 1940 Marc Blitzstein was awarded a Guggenheim Fellowship to help him continue his work in musical composition. An unorthodox composer whose experiments in new forms and tonalities once made him one of the more difficult moderns to listen to, with *The Cradle Will Rock* and *I've Got the Tune* he became one of America's popular musicians.

The Cradle Will Rock has been called "the American opera that many of us have waited for." On its opening night in December 1937 it looked as though we would have to wait for it a good while longer. Blitzstein had written it and Orson Welles had directed it for the Federal Theatre, but the Federal Theatre suddenly cut down on its activities and on opening night the crowd stood before the closed doors of the Maxine Elliott Theatre. They were told to wait, the cast came out and sang songs. Suddenly a little man in the crowd stepped up and offered to take everybody over to his theatre, the Venice, 20 blocks away. An upright piano was loaded on a truck and everybody went over to the Venice, where, without scenery, without orchestra, Blitzstein played the score of his opera and the rest of the company acted from seats in the audience. When the play was finally put on commercially much of this informality was kept.

The story of *The Cradle Will Rock* is the story of a capitalist who fights unionization. Mr. Mister controls Steeltown; he has a judge, a college president, a news editor and a doctor under his thumb and by bribery and intimidation has coerced them and other leading citizens to serve on a "Liberty Committee" to fight the union. The action centers in a night court. Here are a prostitute, a broken-down druggist and the "Liberty Committee" (brought by mistake). Here is painted a picture of the whole of Steeltown.

John Mason Brown called *The Cradle Will Rock* "the most exciting propagandist *tour de force* our stage has seen since Clifford Odets' *Waiting for Lefty* burst like a bombshell on this town." Its material is familiar enough, but its technique is original and striking, and it drives its point home with a vigor and cogency that cannot be denied. Realism and stylization, tragedy and farce, burlesque and passionate propaganda are mixed at will, "but to good effect." In fact the only critic who failed to be impressed by the force of this opera was George Jean Nathan, who said that *The Cradle Will Rock* "strikes me as being little more than the kind of thing Cole Porter (see sketch this issue) might have written if, God forbid, he had gone to Columbia instead of Yale."

It has been said that "Blitzstein's music has become alive since he embraced the people's cause; his best art has been propaganda art." Blitzstein himself firmly believes that we "must use art to fight Fas-

cism." He says he got these liberal ideas "by seeing talented young people thrown out into a world of topsy turvy values. . . I soon saw that the artist, the writer, the composer suffered. There seemed to be two ways out for the sensitive artist: one to live in a world bounded by G clefs and Bach and the small talk of musicians—a world of half-notes; the other I took. Feeling that sharp, acute discontent I analyzed, dissected. Finally I realized that this world I never made needed change and as an artist I could use my music as a weapon in that struggle."

Marc Blitzstein was born in Philadelphia, where "there's a Blitzstein active in every progressive movement," on March 2, 1905. He went to grammar school there and became a scholarship student at the University of Pennsylvania. But he flunked gym and flunked out. "I didn't care," he says, "that is, after a while. I had decided on a musical career long before." He had given concerts at five and composed at seven, and at fifteen appeared as solo pianist with the Philadelphia Orchestra.

Blitzstein attended the Curtis School of Music, where he studied composition with Rosario Scalero, and commuted to New York to study piano with Alexander Siloti. After he decided to become a serious concert composer he went abroad, in 1926, to study with Nadia Boulanger in Paris and with Schönberg in Berlin. Schönberg is said to have regarded him as "his most talented United States pupil," and in turn Blitzstein was influenced by Schönberg, as well as by Stravinsky (see sketch this issue) and Hindemith.

Back in America he lectured for women's clubs—"You know the sort of thing. West 86th Street to 1 University Place—dowagers, debutantes and do-littlers. I was a blender of musical pills." He lectured on music at Columbia University, Vassar and, later, at the New School for Social Research. And he continued to compose. He composed orchestral works—*Jig Saw* (1927), a ballet; a *Romantic Piece* for orchestra (1930); a piano concerto (1931). He composed chamber music—a piano sonata (1927), a string quartet, a serenade for string quartet and *Percussion Music for the Piano* (1929). He composed choral works—*The Condemned*, (1933) a choral opera, and the *Children's Cantata* (1935).

Many of these works have been performed at concerts of ultra-modern music in New York, Paris and London and show him "a vigorous and original voice in modern American music." He himself does not consider his music experimental; "for materials I use what has been bequeathed to our generation of composers by the pioneers of the movement called 'modern music.'"

Blitzstein's *Triple Sec* (1928), which was a "little opera" given its première by the Philadelphia Orchestra, was later incorporated into the *Garrick Gaieties* of 1930. This was Blitzstein's first excursion into

Musical America

MARC BLITZSTEIN

the theatre. Another opera, *Parabola and Circula*, followed in 1929. He continued to do more in the same style. Then, as a member of a composers' collective, he met Hanns Eisler and Bertoldt Brecht, and it was Brecht who gave him the idea for *The Cradle Will Rock*.

Since *The Cradle Will Rock*, Blitzstein has composed the music for the Mercury's *Julius Caesar*, for Hemingway's movie, *The Spanish Earth*, a sketch for *Pins and Needles*. He is also the author of *I've Got the Tune* (1937), a radio song-play about a composer who wrote a tune but couldn't think of any words for it. In the play he travels around the world with his secretary, "Beetzie, the shorthand speed queen," in the hope that he will find someone who wants his tune. All the wrong people get hold of it first—a decadent German woman who runs a salon, a suicide, a Fascist organization. But it finally finds its rightful home when it is used by May Day paraders. In 1939 Blitzstein composed another opera, *No for an Answer*, based on the chances of young aliens in the modern world, which will probably be produced on Broadway in the 1940 to 1941 season. Since then he has been writing the music and songs for the documentary film *Valley Town* and composing the music for *Native Land*, also a documentary film.

When he's not traveling, which he does a good deal, Marc Blitzstein lives in New York City, active as critic and lecturer as well as composer and pianist. He has no special method of composing, but works whenever the mood seizes him. His great interest these days is in operas such as *The Cradle Will Rock*. But don't call them operettas where he can hear you. He hates the term. "To me it conjures up a world

BLITZSTEIN, MARC—*Continued*
of Viennese waltzes and Yum-Yums from the *Mikado*."

BLOCK, RUDOLPH See Lessing, B., pseud.

KATHARINE BURR BLODGETT

BLODGETT, KATHARINE BURR Jan 10, 1898- Research physicist

Address: b. Research Laboratory, General Electric Co, 1 River Rd, Schenectady, New York; h. 18 N Church St, Schenectady, New York

Dr. Blodgett has achieved outstanding recognition as the discoverer of a long-sought-for process for making glass invisible. She was born at Schenectady in 1898, the daughter of George Redington and Katharine Buchanan (Burr) Blodgett. In 1917 she received a B. A. from Bryn Mawr and a year later Chicago University gave her an M. S. degree. Since 1918 she has been a research physicist in the laboratories of the General Electric Company in her home town. In 1924 she took a leave of absence and went to England for further study at the Cavendish Laboratories of Cambridge University. That year she received her Ph. D. from Cambridge.

A plump, pleasant-faced woman with sleeked-back dark hair, uptilted nose, horn-rimmed glasses over a pair of merry eyes, she received front page recognition in 1939 when she discovered a method of coating glass which made it invisible. The coating is colorless and exceedingly thin, in fact four millionths of an inch. The day after her discovery was announced, two scientists using a somewhat similar principle also announced their formula for invisible glass.

As a basis for her "non-reflecting" glass, Dr. Blodgett used scientific principles relating to the properties of thin films discovered by a co-worker at General Electric's laboratory—Dr. Irving Langmuir (see sketch this issue), Nobel Prize winner in chemistry.

"The process," said Dr. Blodgett, "is still in a laboratory stage." With scientific caution, she does not admit that it can be offered to the public yet. "However, we are hopeful

that we may soon do so," she says. When the new glass is placed on the market it will make it possible to see pictures framed under glass from all angles. Glare from reflected light has always been a problem of museums. Other uses are glass for automobile windshields, show cases, eye glasses and telescopes.

Dr. Blodgett is a petite person, just five feet tall. Resembling the unscientific members of her sex, she "loves gardening, is afraid of snakes, cooks well but won't if she can help it." She is a very modest person who admits that she is still puzzled by finding her name heading lists of outstanding women of 1939. In the book *Excursions in Science*, edited by Reynolds and Manning, (1939), she discusses in popular terms her work with Dr. Irving Langmuir in calculating the thickness of films that makes glass invisible, and explains the system of measuring gradations of color reflected on the films.

BLUM, LEON (blōom lâ-ō') Apr 9, 1872-
 Ex-Premier of France

In September 1940 Léon Blum was among those former French leaders uncomfortably quartered at the Château Chazeron not far from Riom, France, waiting to be tried there by the Vichy government. His Popular Front had been accused of "disrupting French home life, spreading sloth and dissatisfaction among French workers and generally running France by orders from the U. S. S. R.; he himself was indicted on October 19 for "betrayal of the duties of his charge." While he waited, before being taken to Riom in November 1940, the one-time Premier of France kept quietly to himself, "wearily stroked his straggling mustache, said little, did little"—probably thought much.

Léon Blum was born on April 9, 1872 at 151, Rue Saint-Denis, Paris. His father, Auguste Blum, an Alsatian Jew, was a fairly prosperous manufacturer of silks and ribbons; his mother, Marie Picart, was liberal-minded; his maternal grandmother, blind, but the owner of a bookstore, had "profound radical convictions" and used to hold political salons twice a week. Léon was the second of five boys, healthy and happy, his only handicap short-sightedness; his family expected him to become a brilliant

LEON BLUM

writer or an illustrious lawyer or both. From a little private school called the Pension Roux he went in 1881 to the Lycée Charlemagne, thence to the Lycée Henri IV, where he studied philosophy under Bergson, and in 1890 to the Ecole Normale Supérieure. Here he read philosophy for a year and failed two examinations, but after he transferred in 1891 to the law school at the Sorbonne he took his law degree in 1894 with highest possible honors. Not long afterward he passed the examination for *Conseil d'Etat* and became *auditeur* in that body. This meant that for 26 years his chief work was to aid the State in drafting legislation, in determining the bearing of new laws on those already in existence and in settling claims of individuals against the State. He was eventually to reach the top rank in civil service and become *maître de requêtes* (solicitor general).

Even before he was out of school Blum had begun to frequent the literary salons of Paris, becoming acquainted with well-known figures like Hérédia, Mallarmé, Valéry, Gide, Anatole France, becoming known himself as an intellectual and something of a dandy. His earliest passion was for the theatre, at which he was a frequent first-nighter, and in 1892 he began to contribute dramatic criticism to the snobbish *La Revue Blanche*. His anonymous *Nouvelles Conversations de Goethe avec Eckermann* was published there; after being introduced to horse racing at Longchamps he became so expert that he collaborated with Tristan Bernard in running its sporting page; next he was its literary editor until 1900; and he wrote for the review until it died in 1903.

After that it was dramatic criticism for *La Petite République*, *Le Matin* (for which he wrote until 1920) and, later, *Comœdia*. The young lawyer also contributed count-

BLUM, LEON—*Continued*

less articles on law, literature and life to other publications, but all so much on the *précieux* side that it is hard to believe he was already interested in anything so vulgar as politics. The librarian of the Ecole Normale had given him his first ideas of socialism; during the years of the Dreyfus controversy, from 1894 to 1899, Blum became an ardent Dreyfusard; and in 1899, three years after he had met and conceived a great admiration for the Socialist leader, Jean Jaurès, he joined the Socialist Party.

From that time until the First World War Blum was an active Socialist, but still more an active journalist and man of letters. Both in 1902 and 1906 he refused when Jaurès urged him to stand for election to the Chamber, although when Jaurès founded *L'Humanité* as a Socialist daily early in the 1900's he became one of its chief contributors. His chief literary interest was still in the exclusive and the *précieux*, however. His book, *Du Mariage*, published in 1907, scandalized many by its advocacy of premarital experience for women. An excellent duelist, in 1912 he fought his last duel—with a dramatist whose work he had criticized. In 1914 he published one of his best critical works, *Stendhal et le Beylisme*.

The murder of Jaurès on July 13, 1914 not only robbed Blum of a close friend and beloved leader, but did much to drive him into active political life. When the Socialist, Marcel Sembat, took a portfolio in the "National Union" Cabinet and asked him to act as *chef de cabinet* he finally agreed. Sembat resigned in December 1916 and no Socialists served in the ensuing Clémenceau government, but the anonymous *Lettres sur la Réforme Gouvernementale* which came out in *La Revue de Paris* at the end of 1918 gave Blum's ideas as to how the administration could be captured and run by Labor.

Early in 1919 Blum was made chairman of the Socialist Party executive board and elected to the Chamber from the first division of Paris. This meant giving up the *Conseil d'Etat* post; so Blum sat for the Bar examination, was admitted and soon had a lucrative practice, specializing in commercial and financial cases. He was able to live and entertain in comfort, but the stories about his being a millionaire and owning a magnificent collection of silverware have been discredited.

Blum's first speech in the Chamber profoundly impressed the deputies, and he was made Parliamentary Secretary to the Socialist Party. In 1921 he was a leader of the dissident group when the Socialist Party split at the national convention at Tours, the majority favoring affiliation with the Third International. *L'Humanité* thus became the Communist organ, but that same year Blum founded *Le Populaire* as the official organ of the Socialist Party. He gave the paper life and vigor and in time made it a powerful political force. Blum refused to think of collaborating as

a member of a minority party in any government coalition, however. He opposed the governments of Millerand and Poincaré and the occupation of the Ruhr, was ejected from Parliament by Communist intervention in 1928 and remained outside for a year.

Returning in 1929 as deputy from Narbonne (an agricultural and mainly wine-growing constituency), Blum grew to be an increasingly prominent figure in the years when a Popular Front of Communists, Socialists and Radical-Socialists was being created to combat the growing power of Hitler and the increasingly violent tactics of native Monarchist and Fascist organizations. On February 12, 1934 Blum and his onetime enemy, the Communist Marcel Cachin, spoke from the same platform at a big popular demonstration—and the Popular Front was in being at last. A gifted speaker, but obviously more at home in conference-room meetings than on the platform at huge mass meetings, to some Blum seemed a strange figure as its leader. On February 13, 1935 the scholarly intellectual nearly lost his life when he was attacked by a group of Fascists. Nevertheless the 1936 elections were an overwhelming victory for the Left, and on the evening of June 4 Blum became Premier of France's first Popular Front government.

He had waited a month before taking office, although the reactionary groups were desperate and rumors had been circulating that the Fascist leagues were about to stage a *coup*. In the meanwhile he had been making far-from-militant speeches asking for patience both from the "200 Families" and the Popular Front and had announced: "We want to collaborate with all the nations of the world, whatever their internal policy, in eliminating the causes of conflict which might someday lead to war. We reject war absolutely." Labor had been growing restive, showing its power by a wave of "stay-in" strikes. Blum took office on the crest of the wave, formed a Cabinet of Socialists and Radical-Socialists, and a week later most of the strikers were back at their machines. Promised social legislation was pushed forward with remarkable speed: the 40-hour week, vacations with pay, obligatory collective bargaining, the nationalization of the armament industry, the abolishment of the regency of the Bank of France, the dissolution of the armed Fascist leagues.

In spite of their enthusiasm for these measures the more Leftist elements soon began to question the foreign policy of Blum's government. Foreign Minister Delbos was observed making overtures to both Italy and Germany, saying that France had no intentions of doubting Hitler's promise to keep the peace; and there were still no conversations between the general staffs of France and the U. S. S. R. The cornerstone of Blum's policy seemed to be Franco-British amity. When in July 1936 Franco's insurrection began in Spain, Blum

made a trip to London. After two days of conversations both he and Delbos decided to follow the British lead of observing strict neutrality, and Delbos proceeded to collect assurances from Italy and Germany that they would not interfere. Soviet proposals for aiding Spain were rejected, also advances on the part of the Turkish government. Blum declared a policy of "non-intervention," saying Britain would not support France if she should be drawn into war. Nevertheless the Right began to accuse his government of secretly sending arms and planes to the Loyalists, and on August 8 the embargo was made official. A cry of "Arms for Spain! Airplanes for Spain!" went up from the Left, and the Right was delighted, seeing the Socialist Party splitting wide open on the issue.

Big Business, always critical of the effect of Popular Front social legislation on the national economy, wasn't exactly inclined to help stabilize Blum's government. Attacks on the national currency resulted in the autumn of 1936 in devaluation and the Tripartite Monetary Agreement between France, Britain and the United States. As the conflict over Spain grew more serious, Blum and his government continued to claim that Italy and Germany were observing the non-intervention agreement and to paint vivid pictures of the war into which France might be drawn by changing her policy. A great many Socialists as well as Radical-Socialists were won over to this view, and as the dividing line between the different parties in the Popular Front grew more and more sharp over this issue, more legislative concessions had to be made to the Right.

In 1937 came the Paris Exhibition, designed to raise money, but the same year there was a new flight of capital from France. Though Blum had once said: "I would rather have a king than grant full powers!" he was forced to ask Parliament for decree powers in June 1937. On this issue he was defeated in the Senate, and although his Cabinet would not have had to resign, since a bill winning three times in the Chamber becomes law even though the Senate rejects it, Blum tendered his resignation. The one-year rule of his government was at an end. Two years later Blum said: "It was not the financial difficulties which conquered us; it was not even the adverse votes of the Senate—nothing would have overthrown us if we had not had the feeling that the working class was no longer responding to our advice."

During Blum's term in office appropriations for national defense had been highest in the peacetime history of France, but even at the time certain Rightist circles claimed that many of them were going for other purposes. In any case, the Vichy government accuses the Popular Front government of having squandered these funds

by laws restricting production and thus leaving France totally unprepared for war.

In the succeeding Popular Front government Blum served under M. Chautemps as Vice-Premier. When on March 12, 1938 Hitler invaded Austria, Chautemps resigned and left his countless troubles to the Socialist leader. Blum wanted for the first time to form a Cabinet which would include both the extreme Left and the extreme Right, from Thorez to Marin, but the Right refused to collaborate. Again it was a group of Socialists and Radical-Socialists which he headed; again his was a policy of "non-intervention" in Spain; again he was defeated in the Senate. This time Blum was Premier only three weeks before resigning.

Although since that time Blum has held no Cabinet post, his political influence has been great. In September 1938 he was urging Roosevelt to act for peace in the Czechoslovakian crisis, but he could not approve of Munich, feeling more shame than relief at the shape that particular peace took. In January 1939 he quit law to devote all his time to politics and in March of that year he was opposing the bill to give Daladier (see sketch this issue) dictatorial powers. With the outbreak of World War II, however, his voice became remarkably similar to Daladier's. He was a strong supporter of the War; he defended the illegalization of the Communist Party; he scolded the British Laborites for their original opposition to pre-War conscription. In May 1940, attending the British Labor Party conference, he ridiculed the suggestion that the French government might impose a military tyranny on the nation and said the death penalty for the spreading of "seditious propaganda" was a "penalty for treason to the French people." After the fall of France it was reported that he had left the country, his last public appearance having been at the National Assembly at Vichy on July 12, where he voted against the Pétain (see sketch this issue) dictatorship; but on September 15, 1940 he joined France's two War Premiers in "administrative custody." During the interval he had been staying with friends in his electoral district near Narbonne, editing the newspaper, *République Sociale*, which attacked the Vichy government's suppression of the Masons and other secret societies.

Blum's "gray hair, long face with the spectacles and the wispy walrus mustache, his bent lean figure and the flailing motions with which his stringy arms accompanied and emphasized his words" for a long time have been a familiar sight to the French people and a delight to the caricaturist, as was his big black Latin Quarter hat. Though not quite so much ascetic as esthete, Blum is almost a teetotaler, smokes denicotinized cigarettes and isn't a really famous gourmet. In 1924 he said: "For 30 years I have done precisely the thing for which I was least fitted. What I really love is solitude and books." When Anthony Eden (see sketch this

BLUM, LEON—*Continued*

issue) saw Blum for the first time it was said that the conversation languished altogether until the two of them plunged into an enthusiastic discussion of Proust.

Blum doesn't have a great deal of physical stamina, has no shoulders, "only antennae," is noted for his high-pitched voice. It is said that his impeccable manners often made him seem distant and even cold, particularly before a working-class audience. After the Popular Front had been in control for a week an opponent consoled himself, saying: "After all, Léon is an aristocrat and a gentleman." Blum's tendency to compromise has been called both his strength and his weakness, and some have questioned his political realism. For instance, he received Dr. Schacht on the day Hitler doubled the length of military service in Germany and greeted him hopefully with: "You know that I am a Jew and that I do not agree with the anti-Semitic measures in Germany. And now we can talk things over!"

In 1896 Blum married Lise Bloch, whom he had known since childhood. A year after her death (December 1931) Blum married Thérèse Peyreyna, also Jewish, who died in January 1938. He has one son by his first marriage.

A. T. Beals

FRANZ BOAS

BOAS, FRANZ (bō'áz fränts) July 9, 1858- Anthropologist

Address: b. Department of Anthropology, Columbia University, New York City; h. Grantwood, Bergen County, New Jersey

It is to be expected that Franz Boas, "one of the world's most distinguished anthropologists," should be a firm and articulate foe of Nazi racial theories. In *The Mind of Primitive Man* (1911) he demonstrated conclusively that races and sub-races were mixed; that no language was superior to another or better capable of expressing ideas; that there was no such thing as a pure race or even a "superior" one. "If we were to select the most intelligent, imaginative, energetic and emotionally stable third of mankind, all races would be represented," he said.

In 1931 Dr. Boas went back to his native Germany to receive an honorary degree from Kiel University. From 1933 on he bitterly denounced the "race nonsense" preached by Hitler, Goebbels and Streicher, and sadly contemplated the decline of science in Nazi Germany. In retaliation for this his books were withdrawn from circulation in the library of Kiel University. According to first reports they were burnt. His only comment on the burning was: "If people want to be crazy what can you do about it?"

Dr. Boas believes firmly in the principles of democracy which are inherent in his anthropological theories, and during the past years has been one of the staunchest fighters for the freedom of science and thought. In 1938 he headed a committee of American scientists which issued a manifesto in December of that year, signed by 1,284 leaders in the field of science. This manifesto stated: "American scientists hold fast to their conviction that science is wholly in-

dependent of national boundaries and race and creeds, and can flourish only when there is peace and intellectual freedom. It is in this light that we publicly condemn the Fascist position toward science."

He has been a vigorous and articulate opponent of the Dies Committee (see sketch this issue), insisting that it is "fundamentally opposed to the spirit of our Constitution and to the democratic principles of free discussion." Since February 1939 he has been chairman and guiding force of the American Committee for Democracy and Intellectual Freedom, which works with educators and scientists on public issues. In April 1940 he received this year's Teachers Union Medal for outstanding services in the cause of education for democracy. He was one of the members of the Committee who signed a statement challenging Dr. Butler's (see sketch this issue) position on "academic freedom" in his speech to the Columbia faculty in October 1940. Dr. Boas explains his activities for democracy by saying: "My ideals have developed because I am what I am and have lived where I have lived; and it is my purpose to work for these ideals because I am by nature active and because the conditions of our culture that run counter to my ideals stimulate me to action." He urges that we "be ready to maintain our democratic ideals in these turbulent times," that we "shun war unless it is carried to our shores."

Professor Franz Boas was born in Minden, Westphalia, Germany on July 9, 1858. He tells us that "the background of my early thinking was a German home in which the ideals of the Revolution of 1848 were a living force; my father liberal but not active in public affairs, my mother idealistic but with a lively interest in public matters.

"An early, intense interest in nature and a burning desire to see everything that I heard about dominated my youth. I lived in the surrounding world without speculation, naively enjoying every new impression." From 1877 to 1881 Franz Boas attended the German Universities of Heidelberg, Bonn and Kiel and in 1881 received his Ph. D. from Kiel, with a thesis on *The Nature of the Color of Water*. "My university studies were a compromise," he tells us. "On account of my intense emotional interest in the phenomena of the world, I studied geography; on account of my intellectual interests, I studied mathematics and physics."

After graduation Boas wanted to go to Greenland on a ship which was to bring back a corps of meteorologists. Boas financed the trip with a newspaper contract for travel articles. During his stay in Baffin Land he became so deeply interested in the culture of the Eskimos that he stayed a year. "A year spent as an Eskimo among Eskimos had a profound influence on the development of my views . . . because it led me . . . towards the desire to understand what determines the behavior of human beings." When Boas had finished a book about the Eskimos, he was an anthropologist for life.

After a year in the University of Berlin he went to the United States to marry Marie A. E. Krackowizer, the daughter of a distinguished surgeon, an emigrant who had fled to America from Austria. For a while he was associate editor of *Science*, after which he joined the faculty of Clark University and was in charge of anthropology at the Chicago World's Fair from 1892 to 1895. On expeditions to the northern Pacific coast he studied Indian art, music, religion. His *Tsimshian Mythology* is regarded by experts as a classic concordance of North American myths.

In 1899 Dr. Boas joined the faculty of Columbia University, where in his first years "he was something of a storm center. To his German-trained mind the idea of popularization was repugnant. He snorted savagely that some of the students whom his renown had attracted had no business to be anthropologists." Later he softened and even went so far as to write a few books for popular consumption, notably *Anthropology and Modern Life* (1928).

Dr. Boas taught at Columbia until 1937, when he became professor emeritus. During his years there he was president of the American Association for the Advancement of Science (1931) and an honorary member or fellow of all of the world's leading anthropological societies. During these years he published *The Growth of Children* (1904); *Changes in Form of Body of Descendants of Immigrants* (1911); the *Mind of Primitive Man* (1911); *Primitive Art* (1927) and *Anthropology and Modern Life* (1928).

Changes in the Form of Body of Descendants of Immigrants was written at the request of the United States Department of Immigration, which was interested in finding out just what changes, if any, had taken place among the immigrants' descendants. Dr. Boas piled up evidence to show that changes in appearance, in time of puberty, in motor habits do take place.

In his books, in his many writings, Franz Boas has invaded almost every branch of the science of anthropology—linguistics, primitive mentality, folklore, ethnology, growth and senility, the physical effects of environment. "He reminds his colleagues of the oldtime family doctor who did everything from delivering babies to pulling teeth."

Even after these many years in America, Dr. Boas still speaks with a German accent. "The entire department of anthropology calls him 'Papa Franz.' He has no hobbies except playing the piano, which he does very well, and his grandchildren, who go to him with personal problems and tough Latin passages."

FRANCES PAYNE BOLTON

BOLTON, FRANCES PAYNE (bōl'ton)
 1886- First United States Congresswoman from
 Ohio

Address: b. House of Representatives, Wash-
 ington, D.C.; h. Lyndhurst, Cleveland, Ohio

When rich, socially prominent Mrs. Frances
 Payne Bingham Bolton was elected in Feb-
 ruary 1940 to fill the unexpired term of her
 husband, Chester Castle Bolton, United
 States Representative from Ohio, who died
 October 1939, she also inherited his title of
 "the richest man in Congress." Good look-
 ing, middle-aged, mother of three grown
 sons, Mrs. Bolton did not need to enter
 politics as a profession. She made just one
 public speech, and that a short one, for her
 Congressional campaign. After her victory
 she returned to the United States Treasury
 the \$10,000 check which Congress had voted
 her as a widow of a member, with the com-
 ment that "to accept this under the circum-
 stances would be excessive." It indeed
 would be pin money to the widow of Repre-
 sentative Bolton, old-guard Republican, son
 of the late Mark Hanna's business partner.
 Bolton had made a fortune in the steel
 business. His personal check for \$125,000
 had assured the city of Cleveland the 1936
 Republican convention, his money had en-
 tertained political big-wigs at the convention.

Mrs. Bolton is supposed to be even richer
 than her husband. Daughter of a pioneer
 Cleveland banker and industrialist, grand-
 daughter of Senator Henry B. Payne, she
 married Bolton in 1907. She took part in
 social, philanthropic and civic activities, but
 except for campaigning for her husband
 since 1932, her Congressional campaign was
 her first personal political venture.

Her philanthropies have reached from
 Miami, Florida, where she spends much of
 her time, to backwoods Kentucky, where she

financed a log cabin nursery center. "She once took a flyer at improving the lot of chorus girls." In 1929 she gave \$1,250,000 of the fortune left her by her father to endow a school of nursing at Western Reserve University. She lives at Lyndhurst, a suburb of Cleveland.

"Like her husband, whose 1938 campaign expenditures came to \$120.94, Mrs. Bolton refused to spend any money to get elected. When, three years ago, a political boss blasted away at "royalists of the Republican party" and "pocketbook domination of its councils," Mrs. Bolton replied, "none of us has any rights except those we earn." Mrs. Bolton was elected to serve 10 months, the unexpired term of her husband. She will be the seventh woman member of Congress, and the first to be elected from Ohio, whose twenty-second district she represents.

BOOKER, EDNA LEE Newspaper reporter; author
Address: c/o Macmillan Co, 60 Fifth Ave, New York City

One of the first, and probably one of the youngest woman correspondents in China, Edna Lee Booker reports her activities and adventures over a period of 18 years in *News Is My Job*.

Miss Booker has been a newspaper reporter since she was 16. She was born in Danville, Virginia and taken to California as a little girl. She was sent back to a girls' school in Missouri, majored in journalism, and returned to Los Angeles to take a job as a reporter on the Los Angeles *Herald* for one year. She learned the "ropes" from "brilliant—temperamental" Adela Rogers St. John. For a few months she worked on the San Francisco *Call-Bulletin*, then attended a denominational school for two years.

She had two childhood ambitions: to be a reporter when she grew up and to go to China. The second was stimulated by listening to a distant relative of her mother's. Mrs. Carrie Chapman Catt (see sketch this issue), tell of her experiences trying to start a woman suffrage movement in China. Later Mrs. Catt was selected by *American Women*, for contributions to the Woman Suffrage and Peace Movements, as one of the 10 outstanding women of 1937.

In 1921 Miss Booker was able to realize both her ambitions. She went to China as a reporter on the *China Press*, leading American daily in Shanghai, and correspondent for the International News Service in the Far East. Her family permitted her to go only after she accepted an invitation to stay with friends during the year's assignment.

Learning the history and understanding the background of the city which she was "covering" necessitated the learning of its language. "Morning after morning," she writes, "I would study aloud as did the children in the old Chinese schools. I began to acquire a small vocabulary, and strutted each new expression; but after calling the duck we were having for dinner a 'tender shoe' I subsided."

From her first assignment, covering a parade the City God put on for the Hungry Ghosts in Shanghai, she soon graduated to more serious reporting. One of her most dangerous and difficult assignments was to

EDNA LEE BOOKER

interview the powerful war lords of China. Going far back into the war-torn interior (1922), she was successful in interviewing General Wu Pei-fu, the same General Wu who was unsuccessfully sought by the Japanese militarists in 1939 to head the puppet government at Peking.

She achieved the distinction of being granted the first interview ever given a woman correspondent by Marshal Chang Tso-lin, the Mukden Tiger, the audience having been arranged by Marshal Chang, who years later figured so prominently in the kidnapping of Generalissimo Chiang Kai-shek (see sketch this issue) at Sian-fu.

After the successful completion of this assignment she next interviewed Dr. Sun Yat-sen. He was in hiding on his gunboat following his dramatic midnight escape from Canton. She followed him down the Pearl River under shell fire, handling the boat herself when her boatman was wounded.

Early in her career Miss Booker married John Potter, American realtor from Pennsylvania. She then resigned from the *China Press*, continuing to report for the International News Service. From life "peaceful as a chapter out of David Grayson's *Adventures in Contentment* (see sketch this issue), six weeks after her marriage she went out on a story." The story was of a band of some thousand bandits who had derailed and wrecked the famous Blue Express train, the pride of China. Miss Lucy Aldrich of the Rockefeller family was among the kidnapped passengers. "For the first time I began to wonder about a newspaper career and marriage. I might be away two weeks, or two months, and I had been married six weeks! News was my job—but was it?"

Her subsequent career demonstrates that it was. She covered the Japanese earth-

quake; the flood disaster of the Yangtze Valley in which the Lindberghs (see sketch this issue) figured; the anti-foreign riots in 1925 and 1927; the Sino-Japanese War over Shanghai in 1932; the aerial bombardments of Canton and Hankow in 1938. She lived a life full of adventure and rich experience, traveling over 50,000 miles of Far Eastern hinterland during her 18 years of reporting. She has interviewed war lords, followed guerilla armies, covered bombings, earthquakes and floods, and come to know China and its people. She has spent summer months with her family in a village at the foot of the Great Wall of China; has visited a little known tribe in the mountains of Fukien; has penetrated far up the Yangtze Gorges into Szechuen and on southward into Yunnan.

News Is My Job ends on a serious note—a firsthand account of Japan's ruthless aggression, vivid pictures of "Free China" and an appeal for action on behalf of the Chinese people. Her book has been variously reviewed. *Christian Century* says: "A well informed and eminently readable account of the fortunes and misfortunes of China from 1922 down to the middle of last year (1939), by a newspaper woman who resided in Shanghai through those years, and knows conditions and events with an expert and penetrating eye." The *Boston Transcript* writes: "The defects of the book are principally superficiality."

A personal friendship with Miss Soong Mei-ling, now Madame Chiang Kai-shek (see sketch this issue), began early in the reporter's career. She played tennis with Miss Soong, listened while she talked of her dreams of Democracy and Christianity for China; attended her wedding; kept in touch with her during the years when as Madame Chiang she was rising to fame as first lady of China. Recently Miss Booker made a hazardous trip into the far interior of Free China to talk with Madame Chiang, to bring directly from her a message to the women of America.

She was in Addis Ababa in Ethiopia at the outbreak of the Italian-Ethiopian War. With her husband and two children, Patty and John Jr., she has traveled twice around the world, spending considerable time in Germany, Italy, France and England.

In the fall and winter of 1940 Miss Booker lectured in the United States to women's clubs and college groups, describing her own experiences, talking on The Miracle of New China; America's Stake in the Far East Today; the New Woman of China; and Journalistic Careers for Women. A charming speaker, Miss Booker has not lost her Southern drawl after so many years abroad. She is blonde, with china-blue eyes and the placid appearance of a young matron of the "rocking-chair brigade."

Miss Booker is an active member of the American Advisory Committee in Shanghai, that group of representative American business men and missionaries who handle the

disbursement of much of the money contributed by the Red Cross, Bowl of Rice, Famine Relief and Church groups for civilian relief in China.

BORAH, WILLIAM EDGAR June 29, 1865—Jan 19, 1940 United States Senator

Dean of the Senate and member from Idaho for almost 33 years, William Edgar Borah died at his Washington home after a short illness which began with a cerebral hemorrhage. He was 74 years old.

When C. O. Johnson wrote *Borah of Idaho* in 1936, he filled more than 500 pages and even then was forced to confess that the biography was far from complete. "The shaggy, unpredictable doyen of the United

States Senate lived long and lived hard. The story of his life is a long story, but never a dull one."

William Edgar Borah was born at Fairfield, Illinois, June 29, 1865, the son of William Nathan and Elizabeth (West) Borah. The Borahs, of mixed Irish and Bohemian ancestry, were an old American family, having come to this country in 1760, and with restless courage moved first to Pennsylvania, on to Kentucky, then across the Ohio River to Wayne County, Illinois. William was one of 10 children. His father, a prosperous, hard-working farmer, was a devout Presbyterian. Young Borah had the typical American school boy education of his time in a tiny place called Tom's Prairie. Then he attended the Southern Illinois Academy at Enfield, Illinois and the University of Kansas.

The late Senator's "first love was not statesmanship, politics, or even the law, but the theater. The crusty old Senator who never went out socially in Washington and never entertained, went frequently to the theater." His first ambition was to be an actor. At one time as a boy he ran away from his Illinois home and joined a run-down Shakespearean company in which he played Mark Antony. Growing tired of his slim food supply after three weeks, he returned home where he could be assured of three good farm meals a day.

While a student at the University of Kansas he "cut grass, waited on tables and did odd jobs" to finance himself through law school. In 1890, an accredited member of the Bar, he went to Lyons, Kansas and started to practice law. Day after day his office remained empty, and he gave the citizens one year to become clients. After that he closed up and, impelled by the inherited urge to "go West" decided to seek his fortune in Seattle. A chance acquaintance on the train suggested that he stop at the thriving Western metropolis of Boise, Idaho (population 2,500). There Borah saw a drunken lawyer trying a case and decided that if a drunken one could succeed, a sober lawyer ought to make a living. Borah during his whole lifetime never used coffee, tea or tobacco and was a total abstainer from liquor.

Boise was then a raw frontier town, and its horse stealing, cattle rustling, vice, gambling and gunplay gave the young lawyer plenty of practice. Later he became especially successful as a jury pleader (his Shakespearean training standing him in good stead), and he won fame for his participation in some sensational criminal trials as a State Prosecutor. One of these legal battles which Borah did not win but which brought him national fame was the case in which Clarence Darrow defended Will D. ("Big Bill") Haywood and others on charges of killing Governor Steunenberg during a strike of Idaho miners. Darrow described Borah then as "the ablest man" with whom he had ever contended.

WILLIAM E. BORAH

While busy with the law, Borah took time to play an active part in politics. He ran unsuccessfully for Representative as a "Bryanite Republican" in 1896. A year before he had married Miss Mamie McConnell, daughter of Governor McConnell. Borah had been McConnell's secretary. The Borahs had no children.

In 1903 the young lawyer ran for the United States Senate and lost because he would not consent to a "deal" with the legislative caucus. "Send me absolutely free, or not at all," he told them. Four years later he toured the state with the slogan "King Caucus must go." This time the party leaders could not stop his election—and the people of Idaho, so proud of the "Big Potato" of the Senate (as his colleagues called him), never considered sending anyone to Washington to take his place during a third of a century.

Many people thought that Borah was a struggling young attorney when he was first elected Senator, but in reality he was Idaho's most successful attorney with the state's largest lumber and mining companies as clients. He had amassed \$100,000 before he went to Washington. At his death there was much surprise at announcements that he had left \$207,000 in life insurance policies and government bonds. It had been thought that he was a poor man, so simply did he and Mrs. Borah live.

Young Borah was a terrible disappointment to the Old Guard Republicans, led by Senator Aldrich of Rhode Island. As a freshman Senator he already showed that strong streak of independence of thought which for a third of a century made him one of the imposing lights of the Senate and which was to carry the name of Borah to world-wide fame.

At once he became the champion of the underdog. Senator Aldrich told him that unless he stopped his advocacy of such laws as the eight-hour day and taxes to be paid on income, he would receive no patronage. "I don't want any," replied the amazing Borah. When Aldrich tried further to get Borah's Idaho constituents to make him "behave," he received the following letter from Idaho:

"I want you to understand clearly that in any case, I have no influence with Senator Borah, and if you discover anybody in Idaho who has, I would be grateful to you if you would send me his name."

Borah went to the Senate as a Progressive Republican, but during the years he got himself called conservative, reactionary, changeable, radical, bitter isolationist, fearless individualist, champion of the underdog. Nothing that stood in the way of his principles mattered to him—whether it was party politics or the interests of his own state. Once he remarked, "I will travel with the devil, if he is going in my direction."

A relentless fighter, Borah was co-leader of that "little band of willful men" who bitterly opposed Woodrow Wilson's foreign policy. He helped organize and led the fight against confirmation of the Versailles Treaty. Before the League of Nations Covenant had reached its final written form, Borah delivered the epic address which brought him world fame on November 19, 1919 and which dealt the death blow to the entrance of the United States into the League of Nations. From that moment he was looked upon as a leader "of isolationist sentiment in the Senate."

Borah, a student of Shakespeare and a practiced orator even in his school days, could disarm his most dramatic opponents by the force of his words. No customary Congressional bombastic oratory or excessive gesticulation marred the power of his words. The classic eloquence of his famous 1919 speech brought tears to the eyes of Senators, and Vice-President Thomas Marshall sent him a note: "Even a mummy on a pedestal could not remain silent after such a speech." It was declared by hearers the greatest ever delivered in that forum. Viscount Grey, then acting British Ambassador, said of Borah: "I have watched this debate most carefully and in all my experience I have never heard a debate on a higher plane than that conducted by Senator Borah."

Many opposing speakers heaped recrimination on President Wilson for his adherence to the League of Nations, but Senator Borah never let personal criticism enter his speeches. Shortly before Wilson died, he passed Borah while driving in Washington and said: "There is one irreconcilable whom I can respect."

Like every man in public life, Borah had his critics. Some felt that he voted on each occasion "as the spirit moved him" without a feeling for the inter-relation of the past and the future. Although he helped

to bring about the Washington Disarmament Conference in 1921, they maintain that his inconsistency in defeating the League of Nations lost the very peace which the Disarmament Conference would have made possible.

Others criticized his changeableness, which was the source of many Senatorial discussions. Once when someone remarked that Borah's Ferry in Kentucky was named for Borah's ancestors, a Senator interrupted to remark that the name was "entirely appropriate, as our distinguished colleague has spent a lifetime going from one side to the other."

President Coolidge, on hearing that Borah had started out for a horseback ride (his favorite exercise in his younger days), remarked with his sparse Vermont humor: "I'm amazed that he can ride at all. I had always understood that a rider had to go in the same direction as his horse."

During his thirty-three years as a Senator Borah served under seven Presidents. Although all seven at times chafed under his objections, all respected his influence, his honesty and his force. In the eulogy delivered at his death, Senator Vandenberg (see sketch this issue) placed Borah "in the company of Clay, Webster and Blaine as a statesman who failed the Presidency, yet outshone successful rivals."

"I follow issues, not men," Borah frequently said—and that is primarily what cost him the Presidency. He had been a Presidential possibility as early as 1912. Several times he was offered the Vice-Presidency but declined it. He explained his failure to be nominated with: "I would rather be Borah than President."

In his long life as a Senator there was no important piece of legislation which could be called his own, although he influenced many members of Congress. He himself remarked that looking back over his years in the Senate, he was "proudest of doing what little I have been able to do to keep us out of Europe. I mean in terms of abiding by Washington's advice against entangling commitments. I do not mean isolation in economic matters of trade and so forth."

In addition to his strong isolationist policy, he campaigned for peace; for the release of political prisoners after the World War; was a leader in the dismissal of Harry M. Daugherty as attorney general during the Senate investigation of oil lands; urged restoration of normal relations with the Russian government; disagreed with President Hoover's farm relief policy.

He opposed some of the New Deal's emergency legislation; opposed President Roosevelt's proposal to reorganize the Supreme Court; shared in the unsuccessful fight against revision of the neutrality act in 1939. He felt deeply the present plight of Europe and insisted that we were in the war already except that we hadn't sent soldiers over. On his desk when he died

was a planned protest against British interference with American mails. "I suppose they'll start howling again that I'm anti-British," he said. "I'm not anti-British, and I never have been. It's just that they do so many things to us that need to be called to the attention of the American people."

The late Senator spent most of his time in Washington and very little in Idaho. He referred to his wife as "Little Borah" and discussed all legislation with her beforehand. He was fond of meeting the press (who adored him) lying on an old couch in his office with an army blanket pulled up over him. Members of the press frequently said that when other Senators spoke they emptied the Senate chamber and filled the cloak rooms; when Borah spoke the chamber was filled and the cloak rooms emptied. He lived simply and ate little. His clothes, dark and loosely cut, were often unpressed and threadbare. One vanity he had—his small feet which were shod in expensive shoes, beautifully polished.

His death saddened Washington. Of him President Roosevelt said: "The Senate and the Nation are sadly bereft by the passing of Senator Borah. We shall miss him and mourn him, and long remember the superb courage which was his. He dared often to stand alone, and even at times to subordinate party interest when he presumably saw a divergence of party interest and the national interest."

"Fair-minded, firm in principle and shrewd in judgment, he sometimes gave and often received hard blows; but he had great personal charm and a courteous manner which had its source in a kind heart. He had thought deeply and studied patiently all the great social, political and economic questions which had so vitally concerned his countrymen during the long period of his public service."

"His utterances commanded the close attention of the Senate and of a far-flung audience whenever he spoke. A unique figure, his passing leaves a void in American public life."

In France it was recalled by the press that Borah had once said: "It is false to say I do not love France." In London, the *Daily Mail* observed that Senator Borah was "known to the average man in this country better than almost any other United States politician." *Le Matin*, French journal, said that once Borah declared that if he knew France "perhaps I would love her, but I wish to know and love only America." The German press praised Borah for "courage, decency and upright methods of combat which made him respected by friend and foe alike."

BRAUCHITSCH, HEINRICH ALFRED HERMANN WALTHER VON (brou'-kích hîn'rik hër'män vâl'tër fôn) Oct 4, 1881-Commander in chief of the German Army

Colonel general Walther von Brauchitsch was little known to the man in the street in Germany or to the world at large when he was made Commander in chief of the German Army in 1938. An American military expert remarked that a "military mediocrity" had been selected for the post. But after the lightning Polish campaign, Von Brauchitsch was hailed as one of Germany's great military heroes.

In the cafés of Germany, men talk of Von Brauchitsch as another Von Hindenburg, and whisper that he would be the logical successor to Adolf Hitler, should anything happen to the Führer. However, experts say that he is in no way comparable to Von Hindenburg as an officer. He is molded in the same tradition of army caste, and is the typical German officer, self-effacing, obedient, and has the thoroughness and persistence that has made the army the highest expression of German efficiency.

He has an impressive physical façade. Tall, handsome, the grimness of his face is punctuated by gray, intelligent eyes and softened by a humorous mouth with a readiness to laugh.

His life has not been spectacular or brilliant. But he has succeeded in ingratiating himself both with the old army class and with the Nazis, and not even his divorce from his middle-aged, wealthy wife, Elizabeth von Karstedt, and his marriage to the younger and more attractive Charlotte Schmidt, daughter of a Silesian judge, have cost him anything in official regard. He has two sons and a daughter.

Born in Berlin, a member of the old Prussian feudal aristocracy (he traces his forebears to 1259), Von Brauchitsch had little choice of a career. As the fifth son of a cavalry general, Bernhard von Brauchitsch, and Charlotte von Gordon von Brauchitsch, he was destined for the army. He attended the Französische Gymnasium in Berlin, one of the best junior colleges in pre-War Germany, and in 1900, at the age of 19, was commissioned a lieutenant in the Royal Elizabeth Guard Grenadiers. But the Grenadiers wore corsets and led a gay life, and Von Brauchitsch got his father to transfer him to

Transatlantic

WALTHER VON BRAUCHITSCH

an artillery regiment. At the outbreak of the First World War in 1914, Von Brauchitsch had risen to the rank of captain. Throughout the World War he remained a general staff officer, and saw no fighting. Instead he was assigned to solving the logarithmic puzzles for staff officers on the Western Front. At the end of the War, like thousands of other officers, he was relegated to the reserve corps, his career apparently ended.

But General Hans von Seeckt, then reorganizing the Reichswehr to conform to the Versailles Treaty, got Von Brauchitsch an appointment as a major in Stettin. Three years later the young officer was in command of the artillery section of the Defense Ministry, and a key figure in Germany's miniature army. Next he became a lieutenant colonel, and served a term with a Prussian artillery regiment. His career, however, seemed to lie in office work, and after a succession of paper assignments he was appointed chief of military training of the Reich with the rank of colonel in 1930. He became a major general in 1931, and Reichswehr chief of artillery in March 1932. The next year, when Hitler came into power, Von Brauchitsch was given command of the East Prussian military area, one of the most important in Germany because of its vulnerability from both Poland and Russia. He was largely responsible for the construction of the new fortifications built there after 1933 to make East Prussia impregnable from the East.

Von Brauchitsch is not given to strutting, and has no interest in Hitler's Aryan gibberish. But he is an ambitious careerist. During the years he spent in an army swivel chair, he studied hard, mastering his own specialty, artillery, and then poring over the more theoretical aspects of warfare. And he became a strong believer of strong defense

as a prelude to any kind of warfare. But most important to his career was the fact that he had convinced himself that Hitler was a God-sent means to an end—the destruction of the Versailles Treaty, and the resurrection of the German Army. Like his Junker-class colleagues he was a die-hard monarchist; but unlike most of his colleagues he was able to see in the Führer's avowed mission to regain for Germany her pre-War position, a reinstatement of the Reichswehr officer-class to its rightful place in the sun, and thus to give his sincere allegiance to the Nazi.

Marked as a man whom Hitler could trust, Von Brauchitsch's rise was rapid after the Nazis came into power. His chief of staff in East Prussia was General Walther von Reichenau, closest of all army officers to the Nazis, and the two men became good friends. In 1937 Von Brauchitsch became chief of the Leipzig Group Command, a key post that secured his future.

At this time Hitler was having trouble with his army leaders. Loyalties were split between the old army group opposing Hitler's impatience to begin his grabs of territory and the Nazi leaders in the army. When the purges came and General Werner von Fritsch, former Chancellor General Kurt von Schleicher, and General Field Marshal Werner von Blomberg lost their jobs, Von Brauchitsch played safe, and kept quiet. His good friend Von Reichenau recommended him to Hitler as the man to lead the army.

In February 1938 Von Brauchitsch took over the command of the army with the rank of colonel general, and became a member of the Secret Council created to advise Hitler on foreign policy.

Von Brauchitsch sold himself to Hitler and won the reputation of being the most skillful politician in the army and the most powerful military man among the politicians. He had one advantage over his colleagues in that he regarded the Führer as a gifted politician, and treated him as an equal and not as a parvenu as did many of the aristocratic officers. He became a confidant of the Führer, and won his friendship further by his approval of the Führer's first gamble in reoccupying the Rhineland in 1936. The reoccupation was against Von Brauchitsch's better judgment, but he believed the French and British would do nothing.

Von Brauchitsch also supported the Austrian seizure, although he is supposed to have told Adolf Hitler before the Anschluss, "Mein Führer, if you want to use the army to support a bluff by military pressure, you can depend on us. For more serious business we are not yet ready. Wait a few months—only a few months." A few days later he had taken over the command of the Austrian Army. Von Brauchitsch said the same thing before he marched into the Sudetenland, and also before he occupied Moravia and Bohemia. The army was not ready. But in August 1939 as motorized divisions began concentrating in Slovakia, Silesia and East

Prussia, Von Brauchitsch *was* ready and the campaign hung on him. Von Brauchitsch accomplished the job of taking Poland in 19 days, not counting the brave but futile hold-out by the citizens of Warsaw.

Von Brauchitsch's insistence on the completion of the fortifications in the West, when he took command of the army, had worked out as he had expected. Without its West Wall, where a major battle was in progress the middle of September 1939, Germany might have been overrun almost as fast as it overran Poland. But with the Western frontier fortified, Von Brauchitsch could plan his attack, and he chose the *Blitzkrieg*, the war of movement. He knew that to deliver a lightning blow Germany needed not only a superlative air force, but plenty of motorized strength, and he had concentrated on building up the armored motor divisions of the army. In 1937 Germany had only two such divisions. By September 1, 1939 she had six, each with an average strength of thirteen thousand men, besides a fleet of eight thousand tanks. It was this force that swept through Poland so swiftly, and took the rich Polish coal fields at the precise moment England blockaded Germany.

Von Brauchitsch not only deliberately prepared the conflict with Poland, but was one of the most important champions of a rapprochement between Germany and the Soviet. To him, the deeply-rooted Nazi feeling against Bolshevism did not count: only purely military points of view were possible and admissible as decisive. After 1919 it was the leading Reichswehr officers, among them Von Brauchitsch especially, who supported German tool deliveries to the Soviet in order that factories might be erected in Russian territory to make army equipment for Germany. A lot of hard work was needed, however, before he could succeed in bringing about far-reaching negotiations between Germany and Russia. When the Soviet ratified the pact in 1939, he knew that the campaign of Germany against Poland would be assured, and that the anticipated movement of the German Communists in the interior had been throttled.

The office of the highest military command in Germany today is an important one. Though Von Brauchitsch is an honest patriot, and an expert in military, political and economic affairs, it has long been known that his true leanings are in nowise toward National Socialism. He has shown himself to be a decisive alterer of Hitler's military policy; he also stands in opposition to Goering in his belief that the army must have precedence over the air force. It cannot be said definitely that he is playing a double game; but of all men in Germany it is he alone who in case of need could use his weapon, the command of the army, against the ruling régime, for general opinion holds that the Nazi dictatorship could be replaced in the future only by a military one.

BRIDGES, ALFRED BRYANT RENTON

See Bridges, H.

BRIDGES, HARRY

July 28, 1900- Labor leader

In the autumn of 1940 Harry Bridges is once more being "investigated." Perhaps so much governmental curiosity has never before been directed against a single person, but then perhaps Harry Bridges "isn't a

HARRY BRIDGES

single person but a shrewd, tenacious, resourceful organization reaching into many fields of business and industry." Though in January he was officially cleared of Communist connections, in May 1940 the House of Representatives singled him out for deportation by passing a special bill that didn't mention any crime. The Senate Immigration Committee and Attorney General Jackson (see sketch this issue) found its constitutionality dubious, but authorized a special squad of FBI agents to investigate his "general status and activities in San Francisco, Seattle, Portland and Los Angeles" in order to determine once more "whether he ever was or is a member of the Communist Party." Under the Smith Act, passed since Bridges' first trial, an alien can be deported for having been affiliated with the party.

There is no doubt at all that Harry Bridges is an alien. He was born in Melbourne, Australia on July 28, 1900, christened Alfred Bryant Renton Bridges, but soon nicknamed Harry. His father, Alfred E. Bridges, a fairly prosperous real estate man and "a regular British Tory," began teaching him the real estate business when he was barely in his teens by sending him out to collect rents from poor families. He didn't enjoy it. His mother, Julia (Dorgan) Bridges, whose family had migrated from Ireland to Australia, reared him in the Catholic faith. That didn't stay by him long, either. Nor did he like the job he found when he left St. Brennan's Parochial School at 16: clerking in a retail stationery store. He went away to sea as soon as he could, was in two shipwrecks off the Australian coast, and finally in 1920 shipped on a barkentine bound for San Francisco. He was already pretty militant. Two of his uncles had been actively interested in the

Labor Party, he himself belonged to the sailors' union and had taken part in strikes, he had read Jack London and books on labor, economics and sociology and he had been having a good look at the world for three years. When the skipper of his ship tried to make the men work on a religious holiday young Bridges led the men in objecting, and when they docked at San Francisco he paid his head tax and quit. (He was later legally admitted to the United States.)

Then followed two years on American vessels. Bridges sailed around South America, Central America, Mexico, New Orleans, acquired the nickname "Limo," in 1921 was arrested for picketing in a New Orleans maritime strike, did a "trick" with the Coast & Geodetic Survey, was quartermaster on a government ship chasing rum-runners—then in 1922 decided to settle down in San Francisco as a longshoreman.

It wasn't long—in 1924—before he and some other men tried to organize a branch of the International Longshoremen's Association. It collapsed, however, when somebody embezzled the union's funds, and it wasn't until 1933 that an attempt to get the majority of longshoremen into a non-company union was successful. Harry Bridges was on the payroll as organizer and not very important until a strike for recognition of their union, wages of more than \$10.45 a week, a 30-hour week, a coastwide agreement and union control of hiring halls was called on May 9, 1934 after the owners refused to negotiate. Soon the other marine unions and the teamsters joined them and shipping stopped. The newly-formed Joint Maritime Commission of which Bridges was chairman was pledged to hold out for a coastwide agreement, and the men won virtually all their demands when on July 31 the government's National Longshoremen's Board handed down an arbitration, but only after the strike had expanded into a general strike that the press called a "revolution."

Harry Bridges was by this time "the bogey man of the Pacific." He was "privately and publicly damned as a Communist, an alien agitator, a ruthless doctrinaire, an unscrupulous wrecker with a lust for power." But the longshoremen elected him president of the San Francisco I. L. A. local, with a weekly salary of \$40. Bridges neither affirmed nor denied that he was a Communist, but freely admitted his willingness to accept Communist assistance and advice.

Next, "before the shipping industry knew what was going on," Bridges had formed the Maritime Federation of the Pacific, which in 1935 seven marine and water front unions voted to set up. In 1936 Bridges was elected president of the West Coast district of the I. L. A., his salary raised to \$75.

By September 1936 the 1934 award to the marine unions had lapsed, and while the unions demanded further gains the employers refused to renew their contracts

unless concessions were made. On October 30, 1936 a strike was called for all unions affiliated with the Maritime Federation. All Pacific shipping stopped like clockwork, rather than gradually, as in 1934. It was the most costly seamen's strike in the nation's history, and dragged on until February 1937, when the unions won. The West Coast I. L. A. then began to organize the warehousemen of the Pacific Coast as their affiliate, and unionization of lumber-workers, industrial workers and even the Newspaper Guild was speeded up. Harry Bridges began to sing the praises of the CIO; by June 1937 the longshoremen and warehousemen as well as many other West Coast unions had joined forces with John L. Lewis. In July 1937 Bridges was appointed West Coast regional director of the CIO. That same year the National Maritime Union was formed, with jurisdiction over most of the seamen in the Eastern and Gulf ports.

"Anti-Bridges agitation from such powerful groups as the Associated Farmers, the Waterfront Employers' Association, the Southern Californians, Incorporated, and scores of business and civic organizations aided by most urban newspapers and virtually all the rural press" was, logically enough, stronger than ever. "Deport the alien agitator!" was their cry and that of the American Legion and Dies (see sketch this issue) Committee, and in February 1938 Bridges asked the Department of Justice to determine his status once and for all. Under pressure from other groups Miss Frances Perkins (see sketch this issue), Secretary of Labor, finally issued a warrant for his deportation on the ground that he was a Communist. The hearing was postponed pending the Supreme Court's decision on a similar case and the warrant not reissued until June 1939, when for 10 weeks Professor James M. Landis of the Harvard Law School sat on Bridges' case as a special examiner, hearing conflicting testimony as to his beliefs and connections.

During the entire trial Bridges denied membership in the Communist Party, although he said he considered Communists good unionists and would work with them. He denied that the welfare of the workers was identical with the welfare of their employers . . . admitted believing that the United States should be so far socialized as to liquidate big companies and substitute public ownership of their properties, but also thought it could eventually be done "under the Constitution we've got now" and affirmed his faith in democracy, which "we [in the unions] practice every day." He also said that he had long wanted to become an American citizen. His first papers, filed twice, had lapsed both times because of technicalities.

Professor Landis' final verdict, rendered in January 1940, was: "That Bridges' aims are energetically radical may be admitted, but the proof fails to establish that the methods he seeks to employ to realize them are

other than those that the framework of democratic and constitutional government permits." Organized labor, most particularly the CIO, greeted the verdict as a great victory.

It was not a final victory, however. The costly ship clerks' strike had been Bridges' first water-front defeat, and many West Coast employers claimed he hadn't been able to get anything for his men since 1936. They warned the East that he was therefore on the move, inspecting Eastern opportunities in the warehouse field. Having made one New York raid on Local 65 of the United Retail and Wholesale Employees' Association, by the summer of 1940 Bridges was asking the CIO for jurisdiction over all warehouse workers, thus arousing the URWEA's belligerency. And in the meanwhile Congress had been acting. Representative Allen of Louisiana had denounced Landis' report as a "white-wash," and introduced a bill into the House that would deport Bridges to Australia. Dies and others contended that Bridges had once cried, "To hell with the President of the United States!" and advocated the sinking of American warships; it was also claimed that "the warehouse union linked with water-front workers could even interfere seriously with military operations anywhere in the nation," and it was true that Bridges had once shown a certain amount of power by ordering union members not to load scrap iron into the hold of an Italian freighter during the Ethiopian War. Representative Vito Marcantonio of New York, who led a futile fight against the bill, read a long letter from Bridges himself in which he pointed out that as CIO director he had investigated Nazi and Fascist activities in aircraft and munitions plants on the coast and turned the names of suspects over to the Department of Justice and the Department of Labor.

When the Allen bill was passed in the House 330 to 42, a large part of even the conservative press condemned it and Attorney General Jackson stated his "emphatic disapproval" of "the first deportation in which the alien was not even accused either of unlawful entry or of unlawful conduct while here." Finally, on August 15, 1940 the Senate Immigration Committee blocked the bill, approving instead a measure to investigate Bridges' "subversive" connections.

"Dark, razor-faced, with the quick, lithe movements of a fencer," when in action Harry Bridges nervously struts back and forth on the platform with "a sort of sailor's walk," speaking in a "soft, low, emphatic voice" that used to have a pronounced Australian accent but has now lost most of it. Under pressure he is unfailingly cool. Away from his duties he "would rather hang around a beer parlor on Skid Row than argue over the coffee dregs in some intellectual's study." He lives in a modest apartment, drives a Ford, dresses unpretentiously, stops at sailors' hotels and eats sailors'

BRIDGES, HARRY—*Continued*

food and is a strong believer in rank-and-file control of unions. "Labor unions cannot sell out their followers when all decisions are subject to referendums," he says. He is "incorruptible by cash, favors or flattery."

His daughter, Patricia, (he married Agnes A. Brown in 1924) is his devoted admirer. And although it is reported that Harry Bridges' influence in the Pacific Northwest has been waning in recent months and that in November of 1940 he was at odds with John L. Lewis over certain West Coast jurisdictional issues, it is said any critics among his men are likely to be answered with: "What are you guys kickin' about? Harry's gotcha better pay and conditions, ain't he?" But a great many other people in the United States think of him as "a composite of Stalin and Boris Karloff."

 Who's Who in Australia

BRISTOW, GWEN (brī'stō) Sept 16, 1903- Author
 Address: h. 726 N Rodeo Dr, Beverly Hills, California

Miss Bristow sends us the following biographical sketch: "According to the archives, the ancestor who bequeathed me my surname left England in 1647 and came to live in Virginia. One of his progeny married a Miss Tazewell, and they moved to South Carolina, the colony where the family that was destined to produce my mother was already planting rice not far from the town of Charleston. The Bristows knew nothing about them, however, and did not discover their existence for more than two hundred years, because the Bristows were planting cotton in the up-country—that is, the hill region north of the Santee River—and the up-country and the low-country were a long way apart in those days.

"My mother's forebears were Scotch, German, English and French. My predecessors on both sides were very devout. As a young man my father [Louis Judsen Bristow] was a newspaper correspondent, and while serving in the army during the Spanish-American War he combined military duties with covering the war for the *Charleston News and Courier*. After the War he entered a theological seminary and was ordained a minister. He and my mother [Caroline Cornelia (Winkler) Bristow] were introduced when he happened to visit her home town and she asked a mutual friend to make her acquainted with the reporter-soldier whose newspaper articles she had read with so much enjoyment. They were married a year later and went to live in Marion, a village near the coast, north of Charleston. It was there that I (their first child) was born September 16, 1903.

"So many people ask writers when they first decided they were going to be writers that I might as well say immediately that I cannot answer because I don't remember. It simply never occurred to me that I was going to be anything else. From the time when I first discovered the use of a pencil I have never been able to see a pile of white paper without wanting to scribble on it.

"My first appearance in print occurred when I was 12. Our school had won first place in the competitions of County Field Day, and I wrote a piece about it which was published on the weekly School Page of *The State*, Columbia, South Carolina, and it had my name printed at the end. The morning the article appeared I spent a quarter, which was all the money I had, buying copies of the paper. I do not remember what became of them.

"During the next few years my effusions were printed only in the school paper, but when I was graduated from high school I covered myself with what I believed to be deathless glory by writing a play in two acts that was presented by the graduating class. Believing the theatre to be my destiny, I wrote several other plays while I was in college, which, when they were presented, made me so pleased with myself that I was probably hard to live with. By this time, however, I had discovered the joys of writing for profit; for I had gone into the essay business. I would write anything assigned by any teacher to anybody, with a price range of from twenty-five cents to three dollars, depending partly on length and partly on whether the purchaser insisted upon getting a good grade for the essay or would be satisfied with a passing mark. The emoluments of this undertaking kept me happily provided with pickles, chocolate bars and eventually a typewriter.

"That college, by the way, deserves a book all to itself. Founded in 1837 as the Judson Female Institute—named for Ann Hasseltine Judson, an early foreign missionary—it has been a landmark in Alabama

ever since. Released from that famous institution [B. A. 1924], I went as fast as I could where I had wanted to go all the time, the Pulitzer School of Journalism at Columbia University in New York. I had a wonderful year. As clergymen rarely get great financial rewards in this world and there were younger children in our family to be educated, I had precious little money, but that was in the joyous days before the depression and it was easy to earn more. I was nursemaid to rich women's children, typed theses for graduate students, wrote rags-to-riches biographies of successful businessmen and sold them to trade journals and was secretary to a Central European baroness who had come to this country after the War.

"From the School of Journalism I went to work on the New Orleans *Times-Picayune* [1925]. As a newspaper reporter I had the time of my life. I covered holdups, murders, meetings of the Rotary Club, football games and investigations of Huey Long; sat around waiting for juries to make up their minds, nearly got shot during a jailbreak and roasted alive on a burning oil tanker, interviewed celebrities, criminals and political candidates, wrote Sunday feature articles about romantic spots, went out on still-smashing expeditions with the Prohibition raiders, rode the elephant in the circus, covered a Mississippi River flood, and was married [January 14, 1929].

"My husband, Bruce Manning, was a New York newspaperman who after an illness had been advised by his doctor to look for a job in a milder climate. He was a reporter on a rival newspaper, the *Item*. One of the biggest compliments either of us ever received was that nobody on either paper suggested that our being husband and wife might interfere with our doing our best to beat each other on exclusive stories. It didn't; on the contrary it made us grimmer professional rivals than ever, and our eagerness to outwit each other was responsible for some of the best stories we ever dug up for our respective papers.

"Meanwhile we were both doing a lot of private scribbling between assignments. It was not easy to write at home, for the tranquility of our apartment was persistently broken by the man next door, who had the loudest and most raucous radio I have ever heard, which he played from nine o'clock every morning until eleven o'clock every night. Requests, threats, even appeals to the police had no effect on the mechanical screams that poured from his window, and we could not find another comfortable apartment at a price we could afford to pay. Bruce and I got some spiritual relief by devising various schemes to murder that man without being caught up with. One evening at dinner, with the radio blaring next door, we made up an exceptionally diabolical plan of murder. While we were polishing it up the idea struck us that this particular plot against our neighbor could be written, and might be sold, and might

GWEN BRISTOW

bring enough money to enable us to move.

"The book was called *The Invisible Host* [1930]. It was made into a play by Owen Davis called *The Ninth Guest*, and later made into a moving picture under the latter title.

"With a book, and a play, and a movie, Bruce and I immediately got very grand and of course very silly. We quit the papers, took a house on the Mississippi Gulf Coast, and settled down to what we thought was the literary life, which meant having a lot of house parties and writing more detective stories. We did write three more books of murder, which we both blush to remember, and might have spent our lives on that beautiful beach had not the depression—which we had heard of, but ignored—suddenly swooped upon us and sent us scurrying for shelter. I ran back to New Orleans and the *Times-Picayune*. The managing editor smiled wisely and told me I could go back to my old desk. Bruce began writing radio scripts about a gangster named Angelface.

"While I continued to cover the events of the day for the paper I wrote another novel, which nobody would publish. Bruce was occupying his spare time writing stories for the screen, one of which was finally sold to a Hollywood studio. We jubilantly quit work again and departed in grandeur, this time to Connecticut, where Bruce went on writing screen originals and radio scripts and I wrote another novel. This made four novels, not counting the detective stories we had written in collaboration. Nobody would publish that one either.

"Then all of a sudden Bruce was given a chance to come to Hollywood and do a real screenplay. When we arrived here I had grimly determined not to write any more novels. I had written four, and no publisher would have anything to do with

BRISTOW, GWEN—*Continued*

any of them, and when I looked at the manuscripts I had to confess in all honesty that they deserved no better. As I had really worked hard on them, it seemed obvious that I had been mistaking desire for ability. I had written good newspaper stuff and collaborated with Bruce on detective stories, but I had concluded that I might as well own up to it that a serious novel was beyond me. There was no reason why I should go on writing anyway. Here I was in the fabulous town of Hollywood, and my husband's salary, though small by Hollywood standards, was sufficient to support me in idleness. So I sat down in the well-known sunshine and decided to be idle.

"Then, as the vacant weeks dragged along, I discovered that I was the victim of a certain mental aberration. There is a Latin phrase for it: *cacoethes scribendi*. It means that you are impelled to write, and neither outer circumstances nor inner determination to the contrary can stop you.

"There was no provision for a study in our apartment, because I had announced decisively that I was done with writing, and my husband did his at the studio. So, almost stealthily, as if I might be caught at a shameful occupation, I set up a card-table in the corner of the bedroom, bought some yellow paper at the dimery and began to write Novel Number Five. There was no reason for writing it except that I was unhappy not writing it.

"It was the summer of 1934 when I came to Hollywood; by the next summer I was half way done with a novel of Louisiana in colonial days. My plan was, if somebody would be so kind as to publish this one, to write three novels, each complete in itself but the series forming a record of several typical families who might have lived in Louisiana from the time of the Colonial settlements until the twentieth century. The first of the series, *Deep Summer*, was finished in the spring of 1936 and sent off with prayers and jitters.

"After several weeks during which I soothed my impatience by beginning the second novel of the series, pretending to be confident that *Deep Summer* would be published, which I certainly wasn't—I received a blessed letter. It said that the Thomas Y. Crowell Company would take *Deep Summer* on condition that they could wait a year to bring it out, as their current list was complete. Waiting a year to see my book in print didn't matter to me at all. I got a taxi and went to the Brown Derby on Vine Street for lunch. I do not remember what I ate. I do remember looking around at the celebrated people having lunch at nearby tables and thinking, 'You are merely movie stars, but I have written a book.' I went home and spent the afternoon writing furiously on my next novel, which was to be called *The Handsome Road*.

"When *Deep Summer* was published [1937] Louisiana State University invited me down to make a lecture tour. I scampered all over the state in a car driven by Annette Duchain of the university's graduate school, whose job was not only to drive and to make the introductory talk, but to stand around with a watch so she could drag me away from one town in time to reach the next, for the university had given me a schedule that demanded not only split-second efficiency but the constitution of an ox. In short, I lectured in twenty-one towns in nine days. I did it again the next year when *The Handsome Road* was published [1938], only this time it was thirty-six towns in fourteen days. It sounds horrible, but I'm afraid I must own that I enjoyed it. Just before my third book, *This Side of Glory*, was published, I went on another lecture tour, this one in the Middle West; it occupied the months of February and March, and I nearly froze to death. I don't think I ever really appreciated the California climate before.

"*This Side of Glory* was published in the spring of 1940. The first part of it was written in a hotel room in New York, on stationery that the bellboys kept bringing up with wondering remarks on the extent of my correspondence, and the book was finally finished in my home in Beverly Hills. We live in Beverly Hills now, for when it became apparent that we would be denizens of the moving picture colony for some time we bought a house here. There were two unnecessary luxuries I had dreamed of all my life—not delights I thought I would ever experience but just sweet wistful yearnings to indulge at moonrise. One was a swimming pool and the other was a private study with a really big desk, an even bigger sofa and plenty of windows. Now at last I have both. The swimming pool sounds much more glamorous than it looks, for it is not one of the blue-tile-with-dolphins-spouting-spray affairs pictured in the fan magazines, but we can swim in it, which is quite good enough for us.

"My husband works at Universal Studio, where for several years past he has been turning out scripts, mostly for Deanna Durbin. The first Durbin script he worked on was *One Hundred Men and a Girl*, the most recent to be produced was *First Love*.

"A lot of people ask us how we manage with two writers in the same family. It's really very simple. He never sees anything I write until it is printed and I never see anything he writes until the picture is on the screen. So, as that leaves us nothing to argue about, we can spend our leisure time outdoors playing games, which is what we both like to do anyway."

 American Women
 Who's Who Among North American Authors

BRONSHTEIN, LEV DAVIDOVICH See Trotsky, L.

BROOKES, GEORGE S., REV. Congregational minister

"Within the shadow of my thirtieth birthday I sat alone with bowed head in a corner of the Pennsylvania Railroad station wondering which way to take in this country of opportunity. A battered trunk and a battered courage were my sad companions. Will tomorrow be like yesterday? Is America really for everybody or for the few? Where shall I sleep tonight? These were the questions I asked myself."

And these are the questions Reverend Brookes answers in *Thank You, America!* (1940), his tribute to his adopted country. "After the flip criticism of hasty visitors, who often reveal unflattering truth with holy glee, it is a welcome change to hear the grateful praise of one who, though not blind to faults, sees America as still the land of opportunity," writes one reviewer.

George S. Brookes, the son of a bricklayer's laborer, was born in a mining town conspicuous for its unattractive appearance, in the Black Country of the English Midlands. His pious and poor parents took him out of school at the age of 13 to start working in a nut and bolt factory; then, on the advice (for a shilling) of a phrenologist, they apprenticed George to a printer. At the end of seven years he progressed from printer's devil to compositor, but had no steady job. In the meantime he had married the same girl "he used to play hopscotch and make mud pies with" and they had three children. Tales of travelers returned from "the land of promise" across the ocean inspired him to go to America. Having no funds or relatives "worth a shilling," he penned, printed and published a booklet, *Silent Memories* (1912), of which sympathetic friends bought copies enough to pay his passage.

A social worker advised the newcomer to go to Philadelphia because New York was so congested that authorities were offering free transportation to all immigrants who were willing to move on as far as that. After days of seeking employment and living in the railroad station, which he described as "clean, cheap and comfortable," he went to work on the *Homestead, Pennsylvania Messenger*. In spite of his "greenness" he made real progress and by December of his first year had become foreman of his shop.

Because of his thorough knowledge of the Bible Mr. Brookes was asked to become pastor of a small Welsh Congregational Church at a weekly salary of \$15. With the two salaries (\$18 from the newspaper) he was able to send for his family in 11 months. But his most thrilling adventures were in getting an education. An older friend suggested that if he had more schooling he might look forward to a ministerial career. He was astonished at the idea of a

Bachrach

GEORGE S. BROOKES

grown man going to school, but he was assured that such a thing might happen quite easily in America, and so it did.

By special supplication Mr. Brookes was permitted to study and take an examination in a few months for a course of reading that usually required three years. The examination resulted in his ordination in the Western Pennsylvania Association of Congregational Churches and Ministers and was followed by a full time pastorate at Sharon. He gave up newspaper work.

It wasn't long before he received a call to the village church at Seal Harbor, Maine with the chance to study at Bangor University. The community spirit in the summer colony was strong, and when John D. Rockefeller Jr., William Adams Brown and others drew up a plan for a community church, it was, and continued to be, successful. Other members of the summer congregation included Henry Van Dyke, Harry Emerson Fosdick (see sketch this issue), Francis G. Peabody and Fritz Kreisler.

In 1918 Reverend Brookes was graduated from Bangor Theological Seminary, presenting as his thesis *Where Christianity and the War Meet*. It was based on the principle that religion and war should fight together for the defense of right against wrong, the weak against the strong. He writes: "It would take more than a shoestring of courage to deliver that thesis now." He learned by teaching. He taught school in addition to his ministerial duties, increased the interest in the community and established a library in the school from the proceeds of entertainments. As an instructor he managed to keep just a little ahead of his students. Reverend Brookes moved to the First Congregational Church of Ellsworth, Maine and was graduated from the University of Maine in 1925, receiving a

BROOKES, GEORGE S.—*Continued*

B. A. from the University of Orono and B. D. from Bangor Seminary at the same time.

When he became naturalized in 1919 he queried: "Why 37 out of every 100 Englishmen enjoying all the advantages of American life have not become citizens is an enigma to me. Here is everything we need to make life happy—a real home among all nationalities; the help of a friendly education; an asylum of freedom, tolerance, equality; a marvelous chance to develop self-respect, independence and enterprise. What more could we ask?"

While pastor at Rockville, Connecticut, Reverend Brookes studied over a period of 10 years at Hartford Seminary and in exchange for a decade of research received a Ph. D. His research resulted in his writing *Friend Anthony Benezet* (1937), a biography of an eighteenth century American Quaker, a teacher and philanthropist notable as one of the earliest crusaders against slavery. It was dedicated to "America, whose institutions of learning I increasingly enjoy and appreciate." His later book closes with: "You bestowed upon me your choicest gift—all the rights and privileges of citizenship in the best country of the world. So thank you, America!"

BROWNSON, JOSEPHINE Catechist; awarded Laetare Medal for 1939 in recognition of outstanding work in Catholic education

Address: 1440 Seyburn Ave, Detroit, Michigan

In 1883 Notre Dame University established the custom of awarding the Laetare Medal each year to an outstanding member of the Catholic laity. Miss Brownson is the eleventh woman to receive the medal, the first since 1934. It is the first time since the inauguration of the award that a descendant of a former medalist has received the honor. Her father, the late Major Henry F. Brownson, well known journalist, received the award in 1892.

In 1906 Miss Brownson established the Catholic Instruction League in Detroit to give religious instruction to Catholic children attending public schools. When Miss Brownson received the Laetare Medal there were some 400 teachers and 13,000 students under her supervision. Formerly an instructor of mathematics in a Detroit school, she resigned her position to devote her time to religious instruction.

In announcing the award, the Rev. John F. O'Hara, president of the University of Notre Dame, made the following statement: "While this year's Laetare Medal is awarded in tribute to the pioneering spirit and the long faithful devotion of Miss Brownson to the cause of religious instruction, it contains at the same time a recognition of a very important section of Pope Pius XI's program of Catholic Action. Miss Brownson was one of the first Catholics in any country to organize on an extensive scale the catechetical instruction ordered by Pope Pius X in his encyclical *Acerbo Nimis* published in 1905."

Miss Brownson was the recipient of a Papal decoration, *Pro Ecclesia et Pontifice*, in 1933, conferred on her in recognition of her contribution to the cause of Catholic Action by the late Pope Pius XI in 1933. The literary traditions of her family, begun by Orestes A. Brownson, her grandfather, the celebrated "father of American philosophy," and convert to the Catholic Church, are carried on by Miss Brownson. She is the author of *Catholic Bible Stories from the Old and New Testament* (1919); *Living Forever* (1928), a text in religion for high school students; *Stopping the Leak* (1928); and the Learn of Me series of eight books for the first eight grades in religion: *Come Unto Me* (1938); *Feed My Lambs* (1938); *Come and See* (1939); *Keep My Commandments* (1939); *Thou Art Peter* (1938); *Living Water* (1939); *I Am the Vine* (1939); and *To the Heart of the Child* (1934).

Among others who have received the Laetare Medal in former years are: Dr. Albert Zahm, occupant of the Guggenheim chair of aeronautics in the Congressional Library; Honorable Alfred E. Smith; John McCormack, Irish tenor; Richard Reid, Southern editor and writer; and Dr. Irvin

American Catholic Who's Who

BRYAN, JULIEN HEQUEMBOURG
(bri'an) May 23, 1899- Photographer

Address: Bronxville, New York

One of the most widely printed photographs to come from European war zones was that of a little Polish girl kneeling in a field beside the blood-stained body of her older sister. Julien Bryan took this photograph—along with many others—in Poland during the days of the German invasion in September 1939. Well-known as a photographer and lecturer, a man who has been in all parts of the globe to take pictures of people, Julien Bryan had been in Bucharest, and planned a bit of quiet picture-taking in Warsaw en route to America. He was taking a bath in his Warsaw hotel on September 4, 1939 when the German bombing of Poland began and he learned that the American Ambassador, and all correspondents and press photographers had left the city. It was a photographer's dream come true—and in spite of the great danger, Bryan stayed on: "I had the siege of Warsaw all to myself."

The story of this siege of Warsaw has been told by Julien Bryan in a documentary film, *Siege*, and in a book published in April 1940 by the same name with a foreword by Maurice Hindus. The first part of the book is a dramatic narrative of Bryan's personal experience; the second part is a group of 48 full-page photographs. His are the only uncensored pictures of the Polish invasion. Well-written, factual, vivid—Bryan catches with an artist's eye the small, significant detail—the text is an account of a city and its people under fire for three fearful weeks. The courageous Mayor of Warsaw gave Bryan all possible assistance, for the Poles were anxious that the outside world should have a photographic record of what was happening to them at the hands of the Nazis. Bryan was encamped most of the time, with several refugees, in the cellar of the American Embassy. Bombings and shellings were less feared by day when planes could be seen, than at night, when one could only listen and wait. Soon finding, as the Poles did, that fear could be best overcome by activity, Bryan worked hard. "I was much happier when busy in the open, and toward the end was excited but not terrified as I filmed bombers power-diving a few hundred yards away." The Poles, he says further, took the whole siege patiently, bravely, asking only one question: why do not England and France help us?

Bryan took pictures of a bombed hospital, women and children killed in a shelled apartment house, a cellar in a maternity hospital, coffins unearthed in cemeteries, breadlines, peasants killed by machine guns in the fields, dead horses in the streets. There is quiet humor as well as pathos in some: a peasant woman with her cow in the city streets, selling milk from house to house; a family in the midst of its salvaged household goods carrying on in the open the small, everyday routine of washing, cooking, sleeping. Several of the pictures, apart from the story, are actually of more propaganda than artistic value. Among those notable as definite contributions to photographic art (and considering the extreme difficulties under which they were taken, it is remarkable there are so many) are: a child refugee with her dog in her arms, the strikingly strong face of an old woman who had saved two spoons and a pair of scissors, another shawled woman holding a loaf of bread, a patient's unfinished meal on a hospital bedside table, the faces of four Polish women who have looked upon death.

Bryan and other foreigners in Warsaw were evacuated September 21, courteously aided and given safe passage out by the Germans. Before he sailed home from Stockholm, he tells of going, in Germany, to see a moving picture of the taking of Poland: throughout its showing, he says, there was not one sound of applause.

Julien Bryan was born in Titusville, Pennsylvania, May 23, 1899. On his tenth birthday someone gave him a camera, and his life career was settled for him then and there. He took pictures all during his high school days in Titusville; a camera went to Princeton with him. But in 1917 he left college to serve at the front with the French ambulance service. He had no idea that the war pictures he took then, and the lecturing for the government he did at the age of 18, were to begin his career as a documentary photographer and popular lecturer. He went back to Princeton after the War; while he was still an undergraduate his *Ambulance 464*, describing and illustrating his experiences in the War, was published. He was so eager to study other nationalities that between his junior and senior year he shoveled coal on a liner to get to Europe, made pastry on another boat to pay his way home.

After he was graduated, Bryan, following family tradition, became interested in the ministry and spent three years at the Union Theological Seminary and Columbia University. But he soon found that a career within four walls was too limited for him, and around 1920 began the travels with a camera that have been his adventure and his living. During a 20-year period he has visited and photographed scenes and people in the Orient, Mexico, Siberia, Soviet Russia, every part of Europe. No little part of his success taking pictures in

JULIEN BRYAN

strange corners of the world is due to the fact that he genuinely likes people. He says: "I have never yet encountered, in years of exploring foreign countries with a camera, a national group or people who were inherently hostile to all outsiders." A good many primitive groups looked upon him with suspicion at first: their confidence had to be won slowly, and care taken that their *mores* and their hospitality were never violated. He had amusing experiences and friendly treatment among such peoples as the Tungus, who look like Eskimos and cultivate reindeer. When he showed them a picture of Santa Claus and his reindeer flying over housetops, they said: "Artist no good. He's drawn the reindeer all wrong—and besides, even our children know that reindeer can't fly!"

It was in 1930 that he first went to Russia, with a party led by Maurice Hindus, and took films which were shown on his return to the United States in several theatres. Burton Holmes became interested and invited Bryan to tour with him in the spring of 1933 on a joint program, "Russia as it was—Russia as it is today." Since then he has gone back again and again to Russia; in the summer of 1939 he was in Holland, Belgium and Switzerland. His films have been featured by the *March of Time* program, and his many lecture tours have been enthusiastically received not only because of his photographs but because of their educational value.

Bryan himself is a big, friendly person with a broad smile, an inquiring nose and a high forehead with receding hair. As the photographs reproduced in *Siege* indicate, he takes considerable pains with his work. He says that he does not "shoot" scenes at random, taking pictures of just pretty or unusual things. "Instead I map out and

film, in a methodical, analytical way, a logical series of scenes that tell the true story of the life of the people there." In his pictures and lectures he has tried, he says further, to give Americans a truer understanding of how other nations live and work and play, in an effort to counteract those unjust prejudices we are apt to harbor against people in other lands. "I have learned one thing from my travels; that whatever the dictators and the militarists of the world may desire, the vast majority of all populations, the common people like ourselves, want peace and are bitterly opposed to war."

Julien Bryan is married, and lives with his family on Perry Street in New York City. His wife teaches dancing at Sarah Lawrence College, and he has a young son, born in 1939. Bryan has never yet toured America to photograph it, but during the summer of 1940 he hopes to go on a camera tour of South America. He says he feels that the United States will last a few more years, and wants to do the other countries first.

BRYCE, ELIZABETH MARION, VIS-COUNTESS 1853—Dec 29, 1939 Widow of Viscount Bryce; promoter of Anglo-American friendship

Viscountess Bryce, widow of the famous Liberal statesman and British Ambassador to the United States (1907-19), died in London at the age of 86. Daughter of Thomas Ashton, she was married to Lord Bryce in 1889 and continued an active public career after his death in 1922. He was the author of *The American Commonwealth*, internationally known analysis of political and social life in America. Lady Bryce had been president of a committee of the English Speaking Union; long a powerful supporter of better understanding among English-speaking peoples; and a worker for rights and welfare of women in England.

BRYSON, LYMAN July 12, 1888- Educator
 Address: b. Columbia University Teachers College, 525 W 120th St, New York City; h. 400 W 118th St, New York City

During 1939 and 1940 Professor Lyman Lloyd Bryson of Columbia University has acted as dinner host and conductor of the Columbia Broadcasting System's informal forum, *The People's Platform*. This is just one of the programs he has charted as chairman of the

LYMAN BRYSON

CBS Adult Education Board, which is attempting to present adult education in new and stimulating forms.

Each evening that the program is presented Professor Bryson has four guests discuss a topic with which they are familiar or on which they are experts. Before they go on the air he gets them talking easily over dinner, served in the studio, and then the microphone picks up their informal, unrehearsed conversation. It is he who gets the shy ones to voice their opinions and keeps the orators from making rehearsed speeches—who, in fact, keeps the program moving vigorously.

Educational work, in one form or another, has been Lyman Bryson's interest for many years. He was born in Valentine, Nebraska on the edge of an Indian reservation, the son of a pioneer druggist, George E. Bryson, and Nancy Melissa (Hayes) Bryson. His boyhood was spent in the cattle country and in Omaha and his first job was that of reporter on the *Omaha Bee*. After he received his B. A. from the University of Michigan in 1910 he spent several years in Omaha and Detroit as a reporter. He then went back to the University with his wife, Hope Mersereau, whom he had married in 1912, to teach in its rhetoric and journalism departments and to get his M. A. in 1915.

When the War came Lyman Bryson went East and worked for the army several months, then for the American Red Cross at National Headquarters. In 1919 the Red Cross sent him abroad. There he was put in charge of the Junior Red Cross program and later made aide for the commissioner for Europe. Then, for the International Red Cross, he was director of the Junior Division until he became director of publications. He says: "I was constantly on

the move in Europe and later in Asia investigating social conditions in the interest of international philanthropy."

From 1925 to 1932 Professor Bryson was an extension lecturer at the University of California and during his last three years in California acted as executive director of the California Association for Adult Education. In 1934 he was visiting professor of education at Teachers College, Columbia University and from 1935 on professor there. While at Columbia Professor Bryson started the "readability laboratory," the aim of which is to develop new versions of books on economics, sociology, politics, political economy, rewritten in simple, vigorous style.

Professor Bryson believed that a true picture of the readers of America "would count out about 15,000,000 adults who cannot read well enough to understand anything that has a serious meaning." Because he felt the need of a "common language" for difficult works, he asked the American Association for Adult Education for funds to develop writers for the mass of people. With about 20 writers he set to work. It wasn't easy, for, as Professor Bryson pointed out, "it is not a mere matter of using shorter words, shorter sentences, shorter paragraphs. It reaches deeper than that. It is a matter of developing a style so distinctive that as yet it isn't on the market."

Most of Professor Bryson's educational ideas and theories are presented in his textbook, *Adult Education* (1936). Here are given the historical background, the philosophical and theoretical bases and the practical workings of the adult education movement in America. It has been called "the ideal introduction to adult education," and commended for its simplicity and directness.

Professor Bryson is, perhaps, best known for his work in the development of public discussion. At California University, as Forum Leader for the Des Moines, Iowa Adult Education Project (1932-34), as lecturer on social and educational topics at Town Hall, New York, at the Chautauqua Institution at Chautauqua, New York and before many clubs and forums all over the country, his aim was always to stimulate discussion in his audiences. And he was one of the first college teachers to develop courses in discussion methods. Undoubtedly he has had a good deal to do with the spread of the forum movement in the United States.

In what he calls "more frivolous moments", "ruddy, shake-haired" Professor Bryson has written a number of short stories, a prize-winning one-act play (*The Grasshopper*) and poetry. "My volume of verse," he says, "is a very scarce collector's item—or it would be if anyone wanted to collect it." Away from teaching, Professor Bryson is, he insists, "a very fancy billiard player and an enthusiastic but very bad tennis player." He collects nothing but

books, likes comedies but never goes to a serious film and prefers, in the order named, French and Chinese cooking.

BUCHAN, JOHN, 1ST BARON TWEEDSMUIR (bûk'an) Aug 26, 1875—Feb 11, 1940 Governor General of Canada; author

Lord Tweedsmuir, born John Buchan, Governor General of Canada since 1935 and author of some 60 books, died less than a week after suffering a brain concussion resulting from a fall. He was 64 years old. Just before his death, he had completed and sent to his publishers (Houghton Mifflin) the final chapters of his autobiography, which was published in 1940 under the title *Pilgrim's Way: An Essay in Recollection*, as well as a manuscript of a completed novel, entitled *The Mountain Meadow*, which is expected to come out in the spring of 1941.

John Buchan was born in Peeblesshire, Scotland, the son of the Rev. John and Helen Buchan. With the aid of scholarships he managed to work his way through Glasgow University and then Brasenose College, Oxford. Considered one of the finest scholars of his time, young Buchan was a "small, thin, retiring and studious lad who found satisfaction in debate and became president of the Oxford Union."

After two years in South Africa, as private secretary to Lord Milner, he returned to England, joined the publishing firm of Thomas Nelson and became a director of Reuter's News Agency. During the World War he was a member of the Headquarters' Staff of the British Army in France, and was later promoted to director of information in the War Office. From 1927 to 1935 he represented the Scottish Universities in Parliament. As a speaker then he was polished and eloquent, one of the few who maintained "the grand manner." Once his oratorical delivery was interrupted by a heckler's shout of "let us pray," but as time went on he lightened a natural solemnity and became a popular speaker.

Shortly after his appointment as Governor General of Canada he became the first Baron Tweedsmuir, choosing the title from Tweedsmuir in Peeblesshire, where his family had lived for generations. As Governor General he arranged the visit of the King and Queen of England in 1939 and also delivered an historic speech in September of that year when Canada declared war on Germany.

All through the years from college on, Buchan continued to write as a journalist, novelist, biographer and historian. Once in

Karsh

JOHN BUCHAN, 1st BARON TWEEDSMUIR

an interview in Canada he said: "I've written too many books; they weigh upon my conscience." He worked at top speed and turned out a book a year for many years. Some of his books were frankly thrillers, but even these showed his sound training as a classical scholar. Probably his finest stories were the trilogy of secret service work in the World War—*The Thirty-Nine Steps* (made into a prize winning movie); *Greenmantle* and *Mr. Standfast*. These brought him fame in the United States. In non-fiction, he was the author of *Augustus*; *Oliver Cromwell*; *A History of the Great War* (four volumes); his juvenile books included *A Book of Escapes and Hurried Journeys* and *Prester John*.

BUCHMAN, FRANK NATHAN DANIEL, REV. (book'man) June 4, 1878- Clergyman; founder of the Oxford Group religious movement

Address: 61 Gramercy Park N, New York City

To assert that a bespectacled, obscure ex-Lutheran minister and Y. M. C. A. secretary, driven from the campus of Princeton University, should have a leading place in determining British foreign policies may sound fantastic, but it is true. During the Munich discussions and the successive international crises of the summer of 1939 Dr. Buchman was busily engaged on the Continent and in England in presenting his religious principles of peace in our time and appeasement to English statesmen. In Great Britain endorsers of the principles of Dr. Buchman's Moral Rearmament increased by the thousands. Moral Rearmament means "to keep the peace and make it permanent; to make the wealth and work of the world available to all and for the exploitation of none; and with peace and prosperity as our servants and not our masters, to build a new world, create a new culture, bring in the Golden Age."

Moral Rearmament's grandiose but seemingly impractical pronouncements have been endorsed by the leaders of Great Britain in a pamphlet (1939) of which 500,000 copies have been sold. In that same year Britons opened 5,000,000 milk bottles with MRA on their tops; 10,000 billboards were donated to Dr. Buchman to advertise MRA for a month; half a million letters were marked MRA.

The proverb—a prophet is without honor in his own country—might have been written for Dr. Buchman, who, although an American, has never aroused enthusiasm in the United States comparable to that which he enjoys in Europe. He was born of solid Swiss-Dutch stock in the small town of Pennsburg, Pennsylvania, son of Frank and Sarah A. (Greenawalt) Buchman. His father, a local hotel owner of German-Lutheran religious belief, claimed descent from a clergyman who was the successor of Zwingli in the chair of theology at Zurich.

In 1899 young Buchman was graduated from Muhlenberg College (awarded a D. D. there in 1926) and then went on to study for the ministry at Mount Airy Lutheran

Theological Seminary. Students there at the time speak of him as "a fair but not exceptional student" who was ordained in 1902.

"In his early environment," said the late Ernest Sutherland Bates (see sketch this issue), "he found the two religious traditions that have raised him to greatness. The Lutheran Church, which never broke away completely from its Catholic origin, retained auricular confession as a means of spiritual growth. . . . According to Quaker belief, it was possible for every man to obtain spiritual guidance from God by consulting the Light Within. Through combining these two essentially antagonistic principles, as no one with a logical mind could have done, and vulgarizing both of them in subjection to salesmanship needs, Dr. Buchman was at last able to cross-breed the exotic flower of 'Buchmanism.'"

After his ordination Dr. Buchman's rise in the ministry was slow. For a while he served as pastor at Overbrook, Pennsylvania. Then he founded the first Lutheran settlement house for poor boys at Philadelphia in 1907. The "awakening" to which he traces the origin of the Oxford Group occurred in 1908 when he had gone to England after an angry quarrel with the trustees of the organization. One afternoon, low in spirit, he stopped at a wayside church where he heard a woman preacher. "It produced in me a vibrant feeling," he said, "as though a strong current of life had poured into me, and afterwards a dazed sense of a great spiritual shaking up."

From that moment he was a "called" man with an unshakeable mission. He discovered within himself a new power—he could "change the life" of a friend. In 1909 he returned to the United States and became Y. M. C. A. secretary at the Pennsylvania State College. There he evolved the principles of his "life-changing" religion, which he called *A First Century Christian Fellowship*. He found much sin on the campus and began to convert or, as he called it, "change" students. As time went on he "perfected himself in the great art of extracting confessions from adolescents."

By 1915 he was seeking new pastures and became a missionary, beginning the travels which have taken him around the globe "as casually as other men drive around the block." He went to Japan, India, Korea under Y. M. C. A. auspices, then worked in France during the War looking after German prisoners. At the close of the War he gave his first house party in a summer resort in Kuling, China. A wealthy Chinese diplomat converted to the new evangelism invited 80 people to his country estate. Buchman succeeded in "changing" several guests who confessed their sins and promised to be led by God in the future. Generous sums of money for further "life-changing" were made available to Dr. Buchman. From the first he developed his ability to extract money from converts painlessly. He found that "money

Portrait by M. David

FRANK BUCHMAN

rolls in with freedom and timeliness that are considered truly providential." In later years, when he was asked why he and his workers always traveled in luxurious liners and stayed at swank hotels, he answered: "Why not? Isn't God a millionaire?"

Buchman came back to the United States to introduce his new form of evangelism to the great universities—Yale, Harvard and Princeton. The last named furnished him with intensive work against sin. In house parties there he revealed the principles of "sharing" and "guidance" to enthusiastic students. "Sharing" was the old Catholic-Lutheran principle of private confession transmogrified by having the confessions made in the presence of the whole group. Then a "quiet time" came when "guidance" was given from above during a period called "listening-in to God."

Naturally students' confessions were mostly trivial in nature or a matter of sex experience. The erotic nature of the meetings came to the attention of the president of Princeton and he promptly banished Dr. Buchman from the grounds. Although suffering a severe setback, Dr. Buchman did not give up, but moved his field of operation to Oxford University, England, a place which "for an American aiming at a crusade, ranked high among unlikely places." Armed only with "his own quasi-messianic sense of mission and a letter of introduction," his success was spectacular. Although the authorities rebelled, Dr. Buchman changed the name of his movement to the Oxford Group and became "soul surgeon" to most of the British aristocracy. The Oxford Group sped along a sex-tinged confession path mainly among the moneyed class. In 1924 the Reverend Buchman came to the United States to find results rather disappointing, for "only a few sheepish

sheep were gathered into the fold." But in subsequent trips his success increased and thousands all over the country flocked to hear him speak.

In England once again, Dr. Buchman, smarting under the criticism of vulgarity in the sex confessions of callow college students, dropped such confession almost completely from his movement. He also began a more general campaign for working-class people in the movement when it was criticized for appealing only to persons of wealth and social position. The list of his supporters contained an imposing array of those highly placed in government, religious and professional life. Buchman and his workers traveled in the best society, put up at the best hotels and with a seemingly never-ceasing flow of money went from nation to nation expounding the principles of "sharing" and "life-changing" before enthusiastic crowds which many times numbered 25,000. A limerick went the rounds:

"There was a young man from Peoria
Whose sinning grew gorier and gorier
By confession and prayer,
And some savoir-faire
He now lives at the Waldorf-Astoria."

Dr. Buchman does not look like the traditional evangelist "who always has a strong personality, gifted of tongue and capable of moving vast crowds to emotional fervor." He believes that religion should not be solemn but hilarious, filled with jokes and laughter. His "mien of scrupulously shampooed and almost medical cleanliness so characteristic of the hygienic American" is accompanied by "the ingratiating and beamingly confident manner of a well-trained salesman for one of the better class business firms. He claims to be on intimate terms with his employer. 'I know that He is a personal God,' he has said. 'Look what He has done for me.'" The "soul surgeon" is a bachelor. A receiver of divine messages for his every action, he has been asked why he didn't marry: "Just because I have never been guided to marry."

About 75 books have been written on the subject of the Oxford Group, Moral Rearmament and Dr. Buchman. Rose Macaulay used the movement in a satiric manner in *Going Abroad*. Rachel Crothers wrote *Susan and God*, in which Gertrude Lawrence (see sketch this issue) in 1935 and for some time on scored a hit as a silly rich woman whose life was transformed by a religion which might well be Buchmanism. In 1940 Joan Crawford and Fredric March appeared in a highly successful film made from the play.

Great numbers of people all over the world confess that after "quiet times" and "testifying" to their sinful pasts in public they experience a miraculous change in their lives. Employers such as Louis B. Mayer, movie magnate, George Eastman, Kodak manufacturer; and labor leaders such as David Dubinsky, head of the International Ladies Garment Workers, and Dan J. Tobin,

BUCHMAN, FRANK—*Continued*

head of the International Brotherhood of Teamsters, speak of the wonderful results to capital and labor. Both in England and the United States the movement is credited with settling strikes. William Rowell, executive of the Trades Union Congress of Great Britain and a leading Buchmanite, declared that "labor and capital should lie down together in one of Dr. Buchman's 'quiet times.'" He hoped that the labor leader would abandon his union demands and the employer "agree to stop trying to triple his profits."

Applied to international relations in the shocking year of 1940 Buchman's plan of sitting down quietly waiting for "God's dictation" does not appear to have notable success. It would be quite difficult, even for Dr. Buchman, with his spectacular success in appeasement in Europe's former international crises, to induce Hitler, Mussolini, Pétain (see sketch this issue) and Churchill (see sketch this issue) to solve their difficulties in a "quiet time."

Who's Who in America

BUDD, RALPH Aug 20, 1879- Railroad president; member of the National Defense Commission

Address: b. War Department, Washington, D.C.; h. 936 Lake Shore Drive, Chicago, Illinois

Ralph Budd, president of the Chicago, Burlington and Quincy Railroad, was appointed on May 29, 1940 by President Roosevelt to the National Defense Commission, to direct transportation. It will be Mr. Budd's job to see to it that no railroad congestion develops such as happened in the First World War, to see that goods move promptly. With a lifetime of railroading experience behind him, Ralph Budd is one of those Commission members with "expert knowledge of the fields to which they are assigned and the backing of the industries in which they are leaders."

Since 1932 Mr. Budd has headed the Chicago, Burlington and Quincy Railroad. Half his time he spends out on the road, either traveling between business engagements, seeing people who live along the line, inspecting jobs and tracks (often in a small auto rail car), or just getting the feel of the trains and sounding out rider opinion. He says, "I'm much happier outside," but he also likes to spend time compiling sta-

tistics on his railroad's operations and handling the finances of the Burlington, the budget of which is a staggering sum.

During the years he has been with the Burlington, Mr. Budd's most spectacular achievement has been the development of streamlined Diesel-engined trains. His railroad, which has a large number of comparatively short branch lines over the section west of Chicago, needed an economical way of providing service. Heavy steam trains were too costly to operate. First Budd tried out gasoline-motored one and two car trains, but the "puddle jumpers," as they were called, were not popular. Budd experimented on various kinds of trains and finally evolved the streamlined, Diesel-motored, stainless-steel Zephyr trains, created, he insists, not "to startle the public into riding in something new and different," but by a need "for economy consistent with public fancy and demand."

All his adult life Ralph Budd has been working for and with railroads. He was born on August 20, 1879 in Waterloo, Iowa, in the heart of the fertile farm county his railroad now serves. He was brought up in Iowa and went to school in Iowa—to Highland Park College at Des Moines, from which he was graduated with a degree in civil engineering in 1899.

Budd started his railroad work in the engineering department of the Chicago Great Western Railway and by 1902 had acquired a wife—Georgiana Marshall, whom he married in 1901—and the position of assistant engineer. From 1902 to 1906 he was successively roadmaster, general superintendent of construction and divisional engineer with the Rock Island Railroad. It was at this point that he began to do more interesting and important things. In 1906 he went to Panama where he served for three years as chief engineer of the Panama Railroad. During those three years the old railroad was rehabilitated and the new Panama Railway laid out and nearly completed. "That job," says Budd now, "was an engineer's paradise."

Back in the United States in 1909, he became chief engineer with the Oregon Trunk Railway, the Spokane, Portland and Seattle Railway and the Spokane and Inland Empire Railroad. Then came what Mr. Budd considers the most important phase of his life—the 19 years he spent with the Great Northern Railway. He started in 1913 as assistant to the president and chief engineer, and in 1919 became president, a position he held until 1932. It was here, working under James J. Hill, famed pioneer builder of the Great Northern, that he got much of his knowledge, skill and experience. It was here, too, that his engineering skill found a new outlet.

The Great Northern, winding over the mountains of the Northwest between Chicago and the Pacific, had more than \$150,000,000 in property improvement put into it during Budd's term as head and paid divi-

RALPH BUDD

dends steadily. The many improvements, feats of engineering skill, include the eight mile Cascade Tunnel, the longest railroad tunnel on the American continent, built at a cost of about \$25,000,000. Working on this and on the general maintenance of the railroad, 10 to 16 hours of work a day were usual for Mr. Budd. Often after inspection trips over the Great Northern, after a day which left his associates gasping and fagged, Budd could be found at midnight poring over statistics, maps and data.

It was Mr. Budd's experiences on this road which attracted the Soviet government, when in 1930 its representatives came here to look for some good American railroad man to advise them about building and operating railroads in Russia. The Great Northern, they saw, traversed just about the same sort of country as the Siberian line in Russia and they saw in Budd just the man they wanted. Budd went to Russia—his first vacation in years, and a busman's vacation at that—and spent three months riding around Russia on its railroads. His report recommended among other things, that the Russians proceed with their program, using heavier and larger cars and heavier ties and rails instead of the standard light capacity equipment commonly in use in Europe.

In 1932 Budd began to manage the affairs of the Burlington Railroad, which is owned by the Great Northern and the Northern Pacific. During the years in which he has been its head he has come to believe that a loyal and efficient personnel is the greatest asset a railroad can have. An employer and capitalist, he still makes no table-pounding attacks on radicals and regimentalists and bureaucratic spendthrifts, though he has, of course, disapproved on occasion of some New Deal policies.

Budd is a "quiet, unassuming, kindly, thoughtful" sort of man who in his own office, it is reported, was once mistaken for a filing clerk. Tall and spare in appearance, he is pleasant to meet, and despite his lack of "good fellowship" traits makes friends easily. He has none of the ordinary businessman's hobbies. He doesn't play golf or visit luncheon clubs, and he hates to waste time in table talk, but likes to attend baseball games and rides horseback whenever the opportunity affords. His hobbies are maps and history reading. He has a large collection of maps and is always on the lookout for more. He likes to study, particularly, the historical background of that part of the United States running from St. Paul to the Pacific Northwest. His knowledge of it is extraordinary and his associates used to say that if all the printed histories of the early Northwest were destroyed, Ralph Budd could probably replace the most important ones from memory.

BULGAKOV, MICHAEL AFANASIEVICH (bool-ga'kōf a'fā-nā'sē-ē-vich) 1891—Mar 10, 1940 Novelist; playwright

The death of Michael Bulgakov, a member of the right wing of contemporary Russian literature, at the age of 49, was reported March 10, 1940. Bulgakov's most famous play was *Days of the Turbins*, which depicts sympathetically a White Russian family. This play was first produced at the Moscow Art Theatre in 1927, but two seasons later was removed because of censorship. The production of several other dramas by the playwright was also forbidden, and it was said that as a result Bulgakov went directly to Josef Stalin, through whose intervention Bulgakov became an official at the First Arts Theatre in Moscow, and the much discussed play was revived in 1933.

Following this experience, Bulgakov presented in his play *Molière* the predicament of the playwright under censorship. His other writings include *Zoe's Lodging*, *The Scarlet Island*, *The Deviliad*, *The Flight* and, in collaboration with Vassily Sachnovsky, a dramatization of Nikolai Gogol's *Dead Souls*.

BULLITT, WILLIAM CHRISTIAN Jan 25, 1891- Former United States Ambassador to France

December 1940 Bulletin: William C. Bullitt came back to the United States in July 1940 to make his personal report on the fall of France to the President. His first comment absolved the Vichy government, headed by his friend Pétain (see sketch this issue), from the charge of Fascism and favored continued diplomatic relations. Not long afterward Joseph Alsop and Robert Kintner revealed that the American Ambassador had stayed in Paris after French authorities had fled in order to instruct the Germans in their occupation of the city, in the face of threatened revolt by the French Communists. Next, in his August speech in Philadelphia's Independence Hall (published as a 29-page pamphlet under the title, *Report to the American People*), Bullitt emphasized the lesson of appeasement and stated that only Great Britain and her navy stood between the United States and the Nazi peril. This, "Bullitt's personal declaration of war on the Reich"—presumably delivered with the approval of the Administration—brought on Bullitt's head the wrath of isolationists in Congress. Thereafter he was kept busy denying his supposed promises to France of war aid by the United States. In a speech in October he quoted from a letter from Daladier (see sketch this issue) to show that he had made our intention to stay out of war clear to the French government. Nevertheless he still sees aid to Great Britain—and China—as our first task. In November 1940 he resigned his Ambassadorship.

From July issue:

In 1914, from the balcony of his aunt's home, William Bullitt saw the air raid on Paris, the first in history. Now a quarter of a century later, he has once more seen the skies of France dark with German planes, has witnessed the occupation of Paris by German troops, has heard the tragic order to surrender—this time from the American Embassy in Paris, where he has represented the United States as Ambassador to France since 1936. Days after the occupation came word from Paris that none of the Embassy staff had been injured.

Our Ambassador to France is credited with a "behind-the-scenes" influence on America's foreign policy which far outweighs that of the ordinary career diplomat. Since the outbreak of the Second World War he has been in almost constant communication with the White House, supplementing long and informal letters and reports with several trans-Atlantic telephone conversations with the President each week. His letters are not always seen even by Secretary of State Hull (see sketch this

issue), and there are those who fear his influence and speak of him as the "Colonel House of the Administration." Even prior to the War examples of his influence were apparent. In the Czechoslovakian crisis, after President Roosevelt had sent a note to Hitler pleading for a peaceful solution and Berlin had rejected the plan, the President wanted to write another note. The State Department objected on the ground that American public opinion would not permit such intervention in foreign affairs. It was Bullitt whom Roosevelt turned to for advice, and it was Bullitt who not only urged the President to send the second note, but offered to take the blame if the public was outraged. Again, after the war started, Bullitt overruled protests of army and navy officials by arranging for a French Air Mission to buy United States built airplanes before the United States had access to them—a fact which was later uncovered accidentally through an airplane crash in California.

His presence at the White House or with the President at Warm Springs, Georgia, has always been regarded in diplomatic circles as "a prelude to possible administrative changes in the Department of State, shifts of Ambassadors and Ministers in the field to other posts, or a sharpening of diplomatic policy toward Central Europe or the Far East at times when aggressive actions of dictator states were causing apprehension." No poker-faced, tight-lipped diplomat, Bullitt is allegedly "the soul of indiscretion," yet by background and education he is certainly well-equipped to be one of President Roosevelt's most trusted informants and advisers on European affairs.

A co-worker once said of William Christian Bullitt: "He rose from the rich." He was born January 25, 1891 into a wealthy and distinguished Philadelphia family which traced kinship with George Washington, Patrick Henry, Pocahontas and with many aristocratic Virginia families. His grandfather, William Christian Bullitt, had come to Philadelphia from Louisville to assist in liquidating a bank, and had decided to remain in the legal center of the country. The Bullitts had been following the profession of law for 300 years; William Christian Bullitt's father was a lawyer; he was himself destined for the law. After an active career at Yale, where he distinguished himself as a student of political science, editor of the *Yale News*, member of Phi Beta Kappa, and where he raised his voice in protest against snobbery, he entered the Harvard Law School. The elder Bullitt's death interrupted his legal schooling, however, and the future ambassador sailed with his mother for a trip to Europe.

They were caught in Russia when the First World War broke out. Young Bullitt saw opposing armies marching off to war, each with the conviction that they were fighting for righteousness, each with the idea that their cause was blessed. It gave him an earnest desire to end wars, to get

behind the scenes and learn just what started them. He decided upon a career as newspaper correspondent, but when he returned to the United States the best he could find was a job on the Philadelphia *Public Ledger* as police reporter at \$10 a week. He took it and in his spare time wrote editorials on the European situation. Encouraged to write more about foreign affairs, in one tremendous leap Bullitt found himself promoted to the position of associate editor.

In 1916 Bullitt married Ernesta Drinker, a Philadelphia girl of great beauty and of fine social background. They spent their honeymoon, in Germany, Austria and Belgium, where they traveled as guests of the German High Command, and Bullitt continued to write articles for the *Ledger* on what he saw. On their return he was put in charge of the Washington Bureau of the paper, and there formed a friendship with Colonel House, President Wilson's right-hand man. In return for information on economic and civic affairs in Europe, House gave the young newspaperman many exclusive beats.

When the United States entered the War Bullitt was put in charge of the State Department Bureau of Central European Information. Here he served until the end of the War, analyzing European speeches and trends, supplying material for the President's papers. Bullitt made an idol of Wilson; he thought of him as the one man who could outlaw war. And he was pleased when he himself was selected to be a member of President Wilson's Peace Mission when it sailed in 1918.

Wilson, in turn, thought highly of young Bullitt and relied on his judgment of European conditions. Thus when the question of Soviet Russia came up in peace discussions Wilson and Lloyd George sent Bullitt, then 27 years old, on a secret mission to find out if Soviet Russia was permanent and stable enough for recognition. After interviews with Soviet officials, he came back with a proposed peace treaty given him by the Russians and his own recommendation that the Allies recognize the Soviet. He made the mistake, however, of reporting to Lloyd George first. Bullitt now believes that to be the reason Wilson cut him, suppressed his report and let the Soviet go unrecognized.

Disillusioned over the neglect of his Soviet report, Bullitt became even more disillusioned when he read the draft of the Versailles Treaty which Colonel House gave him. He told House, "This isn't a treaty of peace; I see at least 11 wars in it." He ended matters by resigning as a member of the Peace Commission, writing to Wilson: "I am sorry you did not fight our fight to the finish and that you had so little faith in the millions who like myself had faith in you."

Bullitt made his letter of resignation public and sailed for home still in a quandary about whether to expose all the horse-

WILLIAM C. BULLITT

trading on the peace terms he had witnessed behind closed doors. This was soon solved for him when he was called before the Senate Committee on Foreign Relations. His testimony covered 139 pages, and gave the opponents of the League of Nations the ammunition they wanted. Soon afterward President Wilson collapsed, and with him American participation in the League. As for Bullitt, he found himself roundly denounced by Wilson partisans for his "disloyalty," and cut politically dead by the party chieftains. His diplomatic career was apparently over.

For 12 years Bullitt lived in retirement from public life. He lived first in New York, then in Ashfield, Massachusetts, where he built a country home. In 1921 he spent a year as managing editor of the Famous Players-Lasky Corporation. In 1923 Mrs. Bullitt obtained a divorce, and shortly afterward Bullitt married Louise Bryant Reed, widow of John Reed, American Communist. The two traveled about Europe, Bullitt examining private papers, diaries, unpublished memoirs and other revealing documents of the World War period. He also wrote a novel, *It's Not Done*, published in 1926, and in the same year obtained a divorce from the second Mrs. Bullitt. He was given custody of their daughter.

Bullitt was finally recalled from his political oblivion when President Roosevelt entered the White House. Bullitt was thoroughly sympathetic with the Roosevelt policies, had long desired to re-enter the diplomatic service, and had known Roosevelt since the time when the two men occupied adjoining offices in the State, War and Navy Building during the First World War. Even before Roosevelt entered the White House, Bullitt had made

BULLITT, WILLIAM—Continued

a hurried trip throughout Europe on a mission for the President-elect. It was Raymond Moley, however, who suggested that he be appointed assistant to Secretary Hull. Moley saw Bullitt as "pleasant, keen-minded, idealistic and widely informed"; but he thought he also detected in him a "deep and somewhat disturbing strain of romanticism." Foreign affairs, according to Moley, were to Bullitt's imaginative mind "full of lights and shadows, plots and counterplots, villains and a few heroes—a state of mind that seemed to me dangerous, if not constantly subjected to the quieting influence of some controlling authority." Bullitt's position as special assistant to the Secretary of State seemed like such a job. In that capacity he served as executive officer for the American delegation at the London Economic Conference and worked over many of President Roosevelt's speeches, but he was not to be long in the State Department. The United States at last recognized Soviet Russia and, naturally enough, it was Bullitt who became its first United States Ambassador, going to his post in Moscow in November 1933.

Bullitt had gone to his post with rejoicing; at last his bargaining for Russia had borne fruit. But again he was to find disillusionment. His rôle in Moscow turned out to be "neither mute nor glorious." "He began by loving his Russians well and not wisely and ended by disliking them neither wisely nor well. The Russians trusted him in neither stage and told him nothing. He lost all of his temper and most of his friends." In 1936, when Bullitt was transferred to France, he welcomed the change with relief. Again those close to him admitted his mistakes, but promised that he had reformed, "that from now on he will be teachable and tactful." Said one commentator: "Bullitt is one of the President's risks. And ours also."

In France Bullitt was tremendously popular. His family connections and his many previous visits to the country gave him a wide circle of friends, and he was on intimate terms with high French officials. From France he carried on a one-man campaign against Nazi aggression, continuing to maintain that the United States must give moral support to the European democracies. After Munich he was temporarily summoned home for consultations with Roosevelt together with Ambassadors Kennedy and Phillips (see sketches this issue), and among them it was agreed that it was time to do "something practical" to stop Germany, Italy and Japan and to assist England and France—time to revise the Neutrality Act. When in January 1939 Bullitt rushed back from a Florida vacation to communicate his secrets of state to a closed session of the House and Senate Military Affairs Committees, he did not succeed in sufficiently alarming them, however.

In the spring of 1940, after the War had been going on for some months, the Germans published a *White Book* which purportedly was compiled from confidential papers of the Polish Ministry of Foreign Affairs containing pre-War conversations with Ambassadors Bullitt and Kennedy, as reported by the Polish Ambassador in Washington to his chief in Warsaw. One of the main German contentions was apparently that Bullitt and Kennedy, "by their indiscreet indications of the probability of American assistance to Poland and the Allies, had strengthened Polish and Allied resistance to the German claims and in effect caused a war which would not otherwise have taken place." Bullitt is supposed to have informed the Polish Ambassador that "America is ready to place its entire resources in the way of finances and raw materials at their (the Allies') disposal," to have stated that we would "undoubtedly" participate in a war to force the capitulation of Germany, though "only after England and France had stirred themselves," and to have claimed that the United States was already (in November 1938) "in a psychosis similar to that existing before America's declaration of war on Germany in 1917." His reported opinion on the reason for the United States' willingness to participate was that President Roosevelt "wanted to distract the attention of the American public from difficult and complicated domestic problems, especially between capital and labor." Bullitt is also supposed to have made disparaging remarks about Russia and Italy and to have tried to encourage a conflict between Russia and Germany.

Upon publication of the German *White Book* isolationist Senator Reynolds (see sketch this issue) made a Congressional move to question Bullitt on these alleged conversations. But Bullitt's denial of them was accepted by the Executive Department without question, and most of those who found the authenticity of the *White Book* not unlikely still found nothing more dangerous in the remarks attributed to Bullitt than in many other expressions of American opinion not spoken in any official capacity. No action was therefore taken which would delay the Ambassador's sailing for Paris, and on April 6, 1940 he once more left the United States.

The second Mrs. Bullitt having died in 1936, Bullitt has been particularly close to his motherless daughter, who visits him during vacations from school in Virginia. Blue-eyed, bald, pink-skinned, an active sportsman, the Ambassador looks like a twin of his younger brother, Orville, a Philadelphia banker. But Orville is a conservative Democrat, and Ambassador Bullitt can hardly be called a conservative. The story goes that Felix Frankfurter asked him many years ago: "Well, Bill, have you learned to keep your shirt on yet?" "Absolutely," replied Bullitt. "It's nailed down this time." But Bullitt has been a dissenter most of his life, and it's not probable that he has

changed very much, nor that he intends to.

BURKE, EDWARD RAYMOND Nov 28, 1880- United States Senator from Nebraska

Address: b. First National Bank Bldg, Omaha, Nebraska; h. 4907 Davenport St, Omaha

As one of the authors and proponents of the Burke-Wadsworth conscription bill (passed September 16, 1940) the name of Senator Edward R. Burke has been much in the news. In April 1940 he was defeated in the Nebraska Democratic primaries. On July 18 he bolted the Democratic ticket, predicting an organized Willkie (see sketch this issue) drive by anti-third-term Democrats. Nebraska's Democratic National Committeeman Quigley announced that he was "glad to hand him over to Willkie"; that "Burke is finally getting into the political party he has been supporting for the last six years." Said the President: "Senator Burke did not bolt the Party, the Party bolted Burke."

Edward Raymond Burke was born in Running Water, South Dakota on November 28, 1880, the son of Patrick Dorsey and Mary (Nolan) Burke. After attending the public schools he went on to Beloit College in Wisconsin, where his senior year found him star left tackle and captain of the football team. He acquired his B. A. in 1906 and then continued his education at Harvard Law School. The year 1911 brought him an LL. B., a wife (Henrietta Flinn of De Kalb, Illinois) and admission to the Nebraska Bar. He has been in practice in Omaha ever since, except for two years during the World War when he served as second lieutenant in the Air Service (1917-19).

In 1932 he was a "successful, but largely unknown, corporation lawyer." The only public office he had held had been the presidency of Omaha's school board (1927-31), although he had also been president of Omaha's Bar Association from 1926 to 1927 and a member of the general council of the American Bar Association from 1928 to 1932. Nevertheless, with the backing

EDWARD R. BURKE

of Arthur Mullen, Roosevelt floor-leader at the Chicago convention, Roosevelt's triumph carried him to Washington in 1933 as a member of the 73rd Congress from the 2nd Nebraska District. He merely sat and listened during the Hundred Days Congress, after which his speeches began to attract attention. By 1934 Roosevelt and Farley were both plumping for him in the Senatorial race, Roosevelt mentioning Burke's definition of the New Deal—which Mullen called the best ever written—in one of his own speeches: "The New Deal is an old deal—as old as the earliest aspirations of humanity for liberty and justice and good life . . ."

He was elected Senator from Nebraska for the term beginning January 3, 1935, after having defeated Nebraska's Governor, a brother of William Jennings Bryan, for the Democratic nomination—thus "smashing the 40-year reign of the Bryans."

Although known at the time of his election as "a New Dealer through and through," once in the Senate Burke became increasingly critical of the New Deal. He voted for the World Court, for the President's veto of the soldiers' bonus and for the \$4,800,000 Work Relief Bill, but found other New Deal measures less agreeable. He voted against the tax bills of 1935 and of 1936, in which year he resigned as Democratic National Committeeman for Nebraska; he fought the Guffey Coal Act, the Utility Holding Company Act; and as a member of the Senate Committee on the Judiciary he was one of the leaders in the fight against Roosevelt's plan to enlarge the Supreme Court, warning against the centralization of authority in Washington which, if continued, he said, meant "one-man rule." The Wagner Labor Relations Act he found "fatally defective" from its inception and he is still fighting to amend it; the National

Labor Relations Board is to him Public Enemy No. 1. Only the Administration's foreign policy went uncriticized. Shortly after World War II opened he spoke for the repeal of the arms embargo as "a step toward peace," and he has long advocated compulsory military training.

A third term for President Roosevelt Senator Burke found "an attempt at self-perpetuation in the office of the Presidency." He had supported Vice-President Garner, whose close friend he is, earlier in the race, and after Roosevelt's nomination threw his support to Wendell Willkie. He later headed a Senate Judiciary Subcommittee which considered two Constitutional amendments: (1) limiting the tenure of the President to one six-year term and (2) outlawing re-election to a third term.

Thin-lipped, thin-haired, conservatively dressed, Senator Burke is no longer a football star, but his compact build shows that he still keeps fit by golfing and bowling (and taking on political opponents). He is a Congregationalist. There are two Burke daughters, Beatrice and Barbara.

BURLIUK, DAVID (bûrl-yōōk) 1892-Artist

Address: 321 E 10th St, New York City

The work of a distinguished Russian painter, who has lived in the United States since 1922 and who has contributed to many exhibitions in this country was shown in a one-man exhibition of oils and water colors at the Boyer Galleries, New York City, from March 25 through April 13, 1940. David Burliuk belongs to no one country

(though he has lived in many), but to international culture. The richness and variety of his work owe much to the fact that he has had the opportunity to participate in three historic periods of art development in three different countries.

Burliuk was born at Kharkov in the Ukraine in 1882, and at the early age of seven or eight began to paint. In 1902 he was called to military service; a year later he studied in Odessa, then in Paris under the landscape and historical painter, Fernand Cormon. He soon came under the influence of Van Gogh, and started painting in the modern manner. In 1907 he exhibited with modern French and Russian painters in Moscow. He helped found the Bubnovy Valyet (the Jack of Diamonds) group of Russian painters.

Young Burliuk became in 1911 one of the daring band of German painters called *Der Blaue Reiter*, a modern art movement launched by Kandinsky and Marc. They made Munich famous with their colors and credo of expressionism in the days before the War. Before the Russian Revolution he became one of the leaders of the Russian revolutionary painters. In Russia today Burliuk is remembered not only as a painter, but as a poet and teacher of Mayakovsky, whose heroic poems were acclaimed by Russian youth during the days of the consolidation of Bolshevik power. After painting in the Urals (1918-20), he lived for two years in Japan.

In 1922, at the close of the epoch of futurism in the U. S. S. R., Burliuk came to America. Though he quickly absorbed the American scene and the fascination of industrial life, he never lost his love for two things: the old feudal Russian village life with its roots deep in the soil; and the tumultuous days that brought social revolution to Russia in 1917. Though Burliuk saw the destruction of that ancient pre-industrial village life, he affirmed the revolution as good and necessary. While in the United States, he continued, however, to paint from memory pictures containing the symbols of the village, his landscapes marked with the slow rich movement of the seasons. Of this aspect of his work, Charmion von Weigand has written:

"Burliuk knows and understands the age-old drama of the soil and of man's labor with it. He paints dreams of it, like clouds hovering over summer fields. He revives in memory the primitive collective of the village, where people banded together against the terrors of nature and war, organically bound to the soil and strong as Anteus from contact with the earth." She states further that, at the same time, "Burliuk has no fear of the future, but knows a robust acceptance of life and a tender sensuousness towards its smallest and most insignificant objects. There are no shadows in his canvases; no ghosts in his universe. The future is a part of the past. Creation and destruction are both

DAVID BURLIUK

necessary parts of a process; there is no beginning and no end to life; only being and becoming. There is nothing lost in destruction, merely a changing of the original elements into new forms."

In 1923 Burliuk was represented by 44 canvases in the Russian art exhibition at the Brooklyn Museum, and contributed to exhibitions in Philadelphia and Pittsburgh. He exhibited at the Whitney Museum of American Art, New York, in 1932. Between 1933 and 1939 several one-man shows of his work were held in San Francisco, Philadelphia and Portland, Oregon; exhibitions in 1939 and 1940 in the San Francisco Museum of Art, the Tacoma Art Association Gallery, the Duncan Phillips Memorial Gallery, Washington, D. C. and the Boyer Galleries, New York.

Paintings exhibited at the last-named, in 1939, included *Lover of Books*, showing a victim of too much reading gone mad with the printed page; *Halibut Point, Massachusetts*, a staccato of brush drawings held together by simplified black line drawings; a portrait, *Mrs. Burliuk*, executed in Burliuk's new departure—complete relief in brilliant tones applied directly from the tube; and several floral pieces of magnificently executed details, set off by iridescent blue and violet backgrounds.

His work is permanently represented in the Whitney Museum of American Art, the Phillips Memorial Gallery, the Solomon R. Guggenheim Foundation and the Société Anonyme-Museum of Modern Art and numerous private collections here and abroad.

Burliuk's painting, even his earliest, has always been cyclonic. He has been successively influenced by the broken style of the Impressionists, by the Byzantine ikon and the Japanese print. Concerning his own theory of art, Burliuk wrote:

BURLIUK, DAVID—*Continued*

"A painting is the result of a movement. To be dead is to be immobile in the meadows of eternity. Drawings or paintings are seismographic recordings. They express psychological cataclysms; eruptions of emotions, different passions, because only souls of academicians are mournful and sleepy as swamps. Then again, real life and real creations are symbolically so near to the revolving convulsions of tigers . . . this man-eating jumper is the highest note on the claviary key-board, representing greatest energy, vitality. To create means to jump; a creator is a jumper—to beat and to bite everybody who prefers the tranquility of a cemetery."

Powerful land paintings of Ukrainian peasants and horses, overloaded with explosive color and thick impasto, are representative of Burliuk's greatest work. It seems that the longer and farther he is removed from his native land and from the primitive life of his childhood, the more dynamic grow his solid, retrospective memories of the Russian steppe. He has often suffered the appellations "wild" and "fantastic" for the eccentric and original strength of his work.

The 1940 exhibition at the Boyer Galleries contained 22 oil paintings and 12 water colors. Critics maintained that it represented the painter at the full powers of his maturity. Four of the pictures are outstanding in size of conception as well as of dimension. *Coming Home from the Steppe* is characteristic of his work that recalls scenes from the past: the figures in the painting are seen as though foreshortened through the telescopic lens of his memory. *Tea Party* solves a problem of faces under artificial light (an oil lamp). It represents the interior of a Russian peasant's home, with a big stove in the corner. A man is telling a tale to a group around the tea table, one of whom is amazed, one ready to disagree and one sitting quietly. *Watering Horse by Moonlight* is another study of figures in artificial light. *Shore of Hospitality* is a Pacific Ocean memory of a tropical island, showing female nudes with parasols waiting for company from a sail ship anchored nearby. The majority of the paintings and water colors, however, are views in and around New York, indicating how successfully Burliuk has adapted the American scene.

BUSH, VANNEVAR (văn-ē-var) Mar 11, 1890- Scientist

Address: b. Carnegie Institution of Washington, Washington, D. C.

Dr. Vannevar Bush, "a small, keen-eyed, fast-thinking, tireless, eloquent Yankee," who became president of the Carnegie Institution of Washington in 1939, taking over the highest administrative position in one of the world's largest scientific foundations, was appointed in June 1940 to head the President's National Defense Research Committee.

When Andrew Carnegie set up the Institution in 1902 he presented it with a total endowment of \$22,000,000 which has since grown to \$34,000,000. Today its budget runs about \$1,500,000 a year; its expeditions study magnetism in Peru, anthropology in Java; research bodies delve into the mysteries of plant biology, embryology, genetics, terrestrial magnetism, nutrition; Mount Wilson Laboratory and a division of historical research are under its wing. And Dr. Bush, famed scientist in his own right, administers and guides all the vast workings of the Institution.

The son of the Rev. Richard Perry Bush and Emma Linwood (Paine) Bush, and grandson of a whaling sea captain, Vannevar Bush was born in Everett, Massachusetts on March 11, 1890. He went to school near home and then to Tufts College, from which he received his B. S. and M. S. degrees in 1913. He got a position right after college with the test department of the General Electric Company, but left after a year to work with the inspection department of the United States Navy. In the academic year of 1914 to 1915 he was back at Tufts, teaching mathematics. The following year he was promoted to assistant professor of electrical engineering. On September 5, 1916 he married Phoebe Davis of Chelsea, Massachusetts, and they have two children, Richard Davis and John Hathaway.

During the War he served the government by doing research on submarine detection devices and after the War was over returned both to private industry and to teaching. He was with the American Radio and Research Corporation from 1917 to 1922 as consulting engineer and at the same time was associate professor of electrical power transmission at the Massachusetts Institute of Technology, from which he had received his Doctor of Engineering degree in 1916. In 1923 he was appointed full professor and in 1932 vice-president and dean of engineering.

As professor of electrical power transmission, Dr. Bush made a comprehensive study of the undergraduate curriculum in electrical engineering in order to develop the most efficient methods of teaching in this field. At M. I. T., too, Dr. Bush built the famous differential analyzer, a mathematical robot which solves complex differential equations in a short time. It was in recognition of his work with mathematical analyzing instruments that he was awarded the Levy Medal of the Franklin Institute in 1928 and the Lamme Medal

Harris & Ewing

VANNEVAR BUSH

of the American Institute of Electrical Engineers in 1935.

When Dr. Bush was made head of the Carnegie Institution, President Karl T. Compton of M. I. T. said: "Dr. Bush is so eminently qualified for his new position and the post is of such great influence and opportunity in the field of science and human welfare that his colleagues at Technology are unanimous in their approval of his selection." Dr. Compton went on to point out the "good judgment and analytical power" Dr. Bush had shown in his administrative work as vice-president of M. I. T.

Dr. Bush, whose "rustic grin and cracker barrel drawl about engineering conceal an unorthodox scientific mind of whiplash speed," is, besides, president of the Carnegie Institution and head of President Roosevelt's new research defense committee, chairman of the National Advisory Committee for Aeronautics and of the National Academy of Science's division of engineering. He is also member or fellow of most of this country's scientific societies. His interests, outside of science, include raising turkeys on his farm in New Hampshire and playing the flute.

BUTLER, NICHOLAS MURRAY Apr 2, 1862- President of Columbia University

Address: b. Columbia University, New York City; h. 60 Morningside Dr, New York City

A speech made by Dr. Nicholas Murray Butler to the assembled faculties of Columbia University on October 3, 1940 made the issue of academic freedom and its meaning once more a subject of heated debate. Dr. Butler defined the present war as between "beasts and human beings," and suggested that faculty members should resign if their convictions brought them into open conflict with the "university's freedom to go its way toward its lofty aim." Academic freedom, he said, was only for "accomplished scholars," having no meaning for students, and in any case should be subordinate to "university freedom."

Although Dr. Butler's plea for wholehearted university cooperation with the government in its national defense program brought him little but praise, a number of people began to wonder audibly if his conception of academic freedom was or was not similar to that of the totalitarian states. John Dewey, H. G. Wells, John Haynes Holmes, Charles Beard, a group of prominent Columbia professors, the American Student Union, the editors of the *Columbia Spectator* and the executive council of the New York College Teachers Union were among those who announced themselves either very much opposed or very much puzzled. Others said that Dr. Butler could not be construed as advocating limitation of freedom of discussion in the classroom—only outside—and some came out staunchly in support of his attitude, among them Dean Virginia Gildersleeve (see sketch this issue) of Barnard College. She challenged Dr. Butler's critics to point to any other college that has enjoyed more academic freedom than has Barnard College under Dr. Butler's presidency, and said that while she agreed with him, her interpretations of his meaning were not theirs. "My interpretations," she said, "are based on many years of association with him. I have always found him enlightened, progressive, open-minded and dedicated to the protection of academic freedom."

On October 10 two letters from Dr. Butler clarifying his speech were made public. He expressed surprise that it had been "misinterpreted," and asserted that "academic freedom is and has long been so firmly established at Columbia that no one should have the least fear that our university opinion would permit its abandonment or qualification." Students were entitled to "student freedom," faculty members were "certainly at full liberty to think and to talk as they please upon any subject which interests them, whether it be popular or unpopular."

However its president's words have been interpreted, not everyone is agreed that there have been invasions of academic liberty at Columbia in the past. It is true

that many incidents have been so labeled. In 1911 a professor was dismissed after he had been threatened with a breach of promise suit; a professor who protested was also dismissed. In 1916 a professor was dropped after referring to Plattsburg in a derogatory way; the next year another was discharged after his pacifism had been attacked by the press as "treason" and "sedition"; still another was dropped after activities in the People's Council for Peace. Three weeks later Dr. Charles A. Beard resigned, saying the "status of a professor at Columbia was lower than that of a hired laborer." His economic interpretation of the Constitution had caused Columbia's trustees to catechize him as to his own 100 per cent Americanism.

As recently as 1932 the editor of the *Columbia Spectator* was expelled after charging that the dining halls were mismanaged and the football administration commercial, and that same year a meeting hall for students wishing to discuss the problems of chain gang labor was refused. In 1933 a member of the department of economics active in Communist groups was dropped; not long afterward an anti-Fascist member of the Italian department was transferred to the French department; and in 1936 an American Student Union leader was expelled after having taken part in a demonstration against Columbia's sending of an official representative to Nazi Germany's Heidelberg anniversary celebration.

But it was the former Dean Kirchwey who said: "There are only two classes perfectly free to say what they think—tramps and Columbia University professors," and Alva Johnston maintained in 1930 that under Dr. Butler's rule "Columbia has become a hotbed of liberalisms, including those varieties which he personally abhors." The President himself has stated that "no member of Columbia University is ever questioned as to either his political or religious beliefs," that genuine cases of the invasion of academic freedom are "non-existent and wholly imaginary." "It is a misnomer," he once said, "to apply the high and splendid term 'academic freedom' to exhibitions of bad taste and bad manners"; actually dismissals have taken place only because of "conduct or failure in satisfactory academic performance."

Nicknamed "Nicholas Miraculous" by Theodore Roosevelt, Dr. Butler is said to be "the only university president who has made an impression on this generation." H. G. Wells once called him "the champion international visitor and retriever of foreign orders and degrees"; he is "the most comprehensively decorated individual extant," the "semiofficial boss of American letters"; "no international pie is free from his ambitious finger"; and if he also thinks of himself as "Minister of Education" for the United States, it is with some reason. Once he signed a series of articles—most suitably—by the pen name "Cosmos."

He was born in Elizabeth, New Jersey on April 2, 1862, the son of Henry Leny and Mary Jones (Murray) Butler. According to Dr. Butler "at least three of the grandparental strains were exceptional by reason of their intellectual character, their religious ardor and their influence upon their fellow men." When young Nicholas was a few days old his grandmother carried him up to the cupola of the house with an American flag, a \$10 gold piece and a *Bible*, and there "dedicated his life to patriotism, wealth and piety."

In 1864 the Butler family moved to Paterson, New Jersey, and in its public schools Nicholas was lucky enough to be educated at a time when, he tells us, "the present-day notion that an infant must be permitted and encouraged to explore the universe for himself as if everything were at its beginning and there had been no human experience whatever, had, fortunately, not yet raised its preposterous head." He was a prodigy. He finished high school at 13 and in 1878 became a freshman at Columbia College, then an unpretentious institution whose five buildings centered around Madison Avenue and 49th Street.

After playing cricket, editing the *Acta Columbiana* and the junior yearbook, young Butler was graduated in 1882 with \$1,000 already in the bank—he had earned his way ever since his freshman year by teaching and by journalistic work. His career was already chosen. Although he had at first planned to become a lawyer, Columbia's president had persuaded him that the almost unexplored field of educational theory—"pedagogics"—was his field. Butler, with the Fellowship in Letters, took his M. A. in 1883 and his Ph. D. a year later, still finding time to do more journalistic work and to take on a couple of political ap-

BUTLER, NICHOLAS MURRAY—Cont.

pointments (his father was important in New Jersey politics). By the time he was 22 he was studying education in Berlin and Paris and already "talking with the wise and dining with the rich." Letters of introduction enabled him to collect conversations with everyone from Pope Leo XIII to Bismarck and Gladstone. As someone once said: "From his earliest youth he was a lion-hunter, and to this day appears to have associated with nothing but lions." In maintaining his associations he has since crossed the Atlantic more than fivescore times.

Butler returned from Europe in 1885 to become a mere tutor in Columbia's philosophy department. But he was obviously slated for big things. His first accomplishment was winning support for his idea that education was a subject worthy of study and overcoming the opposition of the board of trustees to his proposals for establishing a course in "pedagogics." In 1889 New York College for the Training of Teachers was established (renamed Teachers College in 1892). Butler had no sooner been promoted from an instructorship to an adjunct professorship of philosophy when he was offered a job as Stanford University's first president. It was the first of many such offers which he was to have the privilege of refusing. Soon afterward he found himself dean of Columbia's philosophy department.

In 1891 Butler founded the *Educational Review*, which he edited for 30 years; he started the *Great Educators Series* and the *Teachers Professional Library*; and it was he who was chiefly responsible for the formation of the National Education Council and the College Entrance Examination Board. He also began working at putting his own plan for the reorganization of Columbia into operation. In 1899 Columbia's summer school was founded. And five years after Nicholas Murray Butler was inaugurated president of Columbia College (on April 19, 1902, at the age of 40), the college had actually been turned into a university. Under his guidance—and talents for collecting endowments—it was to grow to be one of the largest universities in the world, with 68 buildings and more than 30,000 students.

A "lifelong active participant in the work of political organization and political education," Dr. Butler has been a delegate at 14 consecutive national Republican conventions—all of them before 1936, when he found himself thoroughly disillusioned. He has known all the Presidents from Hayes on, seven of them "more or less intimately." He was particularly familiar with Theodore Roosevelt, but in 1912 turned against him when he proposed judicial recall and himself campaigned against him as Vice-Presidential candidate on Taft's ticket. Although the Vice-Presidential nomination was the only one which Dr. Butler ever accepted,

in 1926 he claimed that he had had the "offer of every nomination worth having at home and abroad." Among the offers have been: New Jersey legislator; United States Representative, Senator, Commissioner of Education, Ambassador to London or Berlin, Secretary of State; Mayor of New York City; Governor of New York. In 1920, however, Dr. Butler's only aspiration toward political office was unfulfilled when he campaigned for the Republican nomination for President of the United States under the slogan "Pick Nick for President and Pic-Nic in November."

Dr. Butler has been on more or less intimate terms with "almost every man of light and learning who has lived in the world during the past half century." His correspondence is "a grain elevator of international confidences." Besides an extensive acquaintance with men of science and letters he has known every British Prime Minister except two since Gladstone; he was holding conversations with Lenin in 1908, though certainly never afterward; he knew and admired Kaiser Wilhelm II, Dr. Stresemann, Von Hindenburg; he has debated the merits of Fascism with Mussolini in a friendly way; he was extremely close to Briand; he is a warm friend of Kerensky. Of all the countries which he knows he has a particularly friendly feeling for the British Commonwealth, which, he said in 1926, "now carries its beneficent rule into every continent and every clime." Once, it is said, he himself steered England through a House of Lords crisis.

One of Dr. Butler's favorite phrases is "the international mind." He has it. During the Spanish-American War he had announced that the United States entered it "in the most unselfish spirit and from the loftiest motives." In 1910, however, he persuaded Andrew Carnegie to establish the Carnegie Endowment for International Peace, to the presidency of which he was re-elected in May 1940. In 1913 he was praising the German Kaiser as a great pacifist, in 1914 opposing preparedness, but shortly grew so enthusiastic about the First World War that he was calling La Follette a "traitor" and becoming impatient with Wilson's dilatoriness in entering it. By the fall of 1918 he was demanding universal military training.

Dr. Butler never approved of either Wilson's manners or theories, and in 1920 he endorsed Harding's stand toward Wilson's League of Nations, but he afterward found the United States' failure to participate in the League a "tragedy." In 1921 he was embarrassed at being called America's Unofficial Ambassador while visiting Europe in the interests of post-War reconstruction. Throughout the '20s and early '30s he worked for disarmament; he almost singlehandedly sold the 1928 Pact of Paris (the "Kellogg Pact") first to Briand and then to the world; in 1931 he shared the Nobel Peace Prize with Jane Addams; in

1932 he was fairly sure that our last war had been fought. Yet he could never have been accurately described as a pacifist. He has spoken continually about "uprooting the causes of war," but has also said that there is a point at which the rule of force may be needed. To him that point was not in September 1938, when, he thought, a World War between the "Despotisms and Democracies" could have "but one end . . . the destruction of our civilization," but in 1940 some have accused him of declaring war before the United States has made it official.

To Dr. Butler's way of thinking "the true liberal is a conservative." He is also unalterably opposed to government "interference" with the individual, in whatever form it may appear. Upton Sinclair has called him the "intellectual leader of the American plutocracy," but Dr. Butler has indirectly called Upton Sinclair far worse names. As early as 1912 he described socialism as "a sort of glorified lynching," and he hasn't changed his mind much. In 1915 he thought youth should be protected from professors who propagandized for socialism—and woman suffrage, too. In 1917 he warned against the menace of the "academic Bolsheviks." He fought the income tax, the excess profits tax of 1920, condemned high inheritance taxes, found laws ending child labor as dangerous as the Eighteenth Amendment to American liberties, and met the depression by urging the wealthy to devote part of their fortunes "to public service through public benefaction," like the Rockefeller, Carnegie and Harkness families. The charge of "non-distribution of wealth" was "sheer invention." New Deal tax measures were a "steal-the-wealth" program. Most unions were led by racketeers who forced the workingman to do what he didn't want to do—strike and pay dues. Advocates of the closed shop were "Fascist-minded." Administration boards and commissions were a dangerous form of bureaucracy. Government restriction of the laborer's hours of work invaded his freedom and also helped breed the false doctrine that such things as classes and a class struggle existed. If the latter did exist it was "a revolt of the unfit, due to an inferiority complex," and anyway it didn't. The economic interpretation of history was "important," but very much "subordinate."

Nevertheless there have been many who have thought of Dr. Butler as a liberal. He "made the wet cause respectable" and consistently fought the Eighteenth Amendment, which offended his "intelligence," his "moral sense" and his "political principles." Back in the '80s he campaigned for higher education for women (although he thought an "educated proletariat" dangerous) and he has always wanted women admitted to the Columbia law school. He has also spoken disapprovingly of the greed of munitions makers. Professor E. R. A. Seligman once commended his "unfailing ability to take the broad rather than the narrow view of the case."

In 1887 Dr. Butler married Susanna Edwards Schuyler, who died in 1903. His second wife is the former Kate La Montagne, whom he married in 1907. There is one daughter, Sara Schuyler Lawrence. A "stout figure, garbed in impeccable business suits," complete with derby, cane and "cold-weather spats," there is little of the absent-minded professor or dreamy scholar about Dr. Butler. In spite of the pressure of his many activities he seems always "calm and composed and cheerful" and is noted for "a grand and nearly imperturbable complacency." His schedule is fairly regular. At 11:30 a. m. he is in the habit of mounting the steps to the library at Columbia; he takes a private elevator and works for two hours. In the afternoon there are meetings—"he probably belongs to more committees and boards than any other American." Then back to his palatial home on Morningside Drive, called "The Social Register House" by Columbia students because of the calibre of its guests; a two-hour nap; a shower; and, usually, out for dinner.

According to the Columbia charter its president must be an Episcopalian, and Dr. Butler was confirmed in the Protestant Episcopal Church in 1897. His wife is a Catholic. Dr. Butler has been "increasingly vocal" in praise of religion and the church, and once even suggested that the public schools be closed one afternoon each week for the purpose of religious instruction. He has edited any number of publications, especially on the subject of education, and is the author of an almost terrifying number of books. In 1940 *Why War?* and the second volume of his autobiography, *Across the Busy Years*, were published. Besides these, his personal correspondence is collected in a dozen unpublished volumes, and somewhere he keeps 40 huge scrapbooks devoted to articles and clippings about himself. His public addresses have been called "those interminable miasmas of guff" by Dorothy Dunbar Bromley, but Alva Johnston finds that they display the respective strengths and weaknesses of a "pundit since infancy," and are distinguished by "robust energy, sagacity, imagination, and, occasionally, a certain rugged grace."

The Paris *Figaro* once summed up Dr. Butler, if it is possible to sum up a public institution so easily: "A gentleman of distinguished exterior."

CAIRNS, HUNTINGTON (kârnz) Sept 1, 1904— Lawyer; author

Address: b. United States Treasury Department, Washington, D. C.; h. 2219 California St, N W, Washington, D. C.

Huntington Cairns, author, lawyer and member of CBS's *Invitation to Learning* program along with Mark Van Doren and Allen Tate (see sketches this issue), is the assistant general counsel of the United States Treasury Department. He is, besides, official guardian of American morals against all possible contamination by imported works of art and literature from foreign countries.

All books or objects of art of which our customs officials are suspicious are temporarily detained at the port of entry and sent to Mr. Cairns for his approval. If he decides that the confiscated object is immoral and not redeemed by esthetic standards it is burned in the presence of witnesses; but if he gives it his approval it is returned to its importer. This is all in accordance with the statute which governs these materials. None of Mr. Cairns' rulings on such books—which extend over a period of six years—has been reversed by the courts. Passing upon material of this kind, however, is only a minor part of his work in the Treasury.

Mr. Cairns was born in Baltimore, Maryland, the son of James Duncanson and Helen Huntington (Heath) Cairns. Before he was 10 years old he began to collect his library, which today covers the walls, from floor to ceiling, of three large rooms. He claims that he needs 25,000 books and won't be happy until he has them. His art collection is still small, but choice, and is securely protected under individual glass covers.

He attended the Washington County Maryland High School from 1918 to 1920 and then transferred to Baltimore City College, and was graduated in 1922. He received his LL. B. in 1925 from the University of Maryland School of Law. He was admitted to the Maryland Bar that same year and in 1926 became an associate in the law firm of Piper, Carey and Hall. Four years later he was married to Florence Faison Butler of Washington, D. C., and three years after that, in 1933, he became a partner in the law firm. After he had been a special legal adviser to the United States Treasury Department and a lecturer on taxation at the law school of the University of Maryland, Mr. Cairns became

HUNTINGTON CAIRNS

assistant general counsel to the Treasury in 1937.

It was in the '20s that Mr. Cairns began to review books for the Norfolk *Virginian-Pilot*. For nine years he reviewed books weekly for the Baltimore *Evening Sun* and since he came to Washington in 1937 he has been a regular contributor to the *Washington Post*.

Mr. Cairns' first book, *Law and the Social Sciences*, was published simultaneously in London and New York in 1935. His second book, *Tax Laws of Maryland*, appeared in 1937 and he has continued to edit revised editions of the work biennially. Because of his work in taxation, he is a member of the Maryland Tax Revision Commission appointed by the Governor to modernize the Maryland tax laws. His third book, *The Theory of Legal Science*, will be published in January 1941 by the University of North Carolina Press. Mr. Cairns is also a contributor to the *Columbia*, *Yale*, *Harvard* and other law reviews and has published articles in the *Atlantic Monthly*, in the *Annals of the American Academy of Political and Social Science*, and in the *Philosophy of Science Journal*. He has contributed numerous biographies to the *Dictionary of American Biography* and is represented in eight symposia and anthologies, two of them in the Modern Library.

Mr. Cairns abhors all kinds of sports and any kind of physical exertion, but he is an ardent chess player and an enthusiastic devotee of the Chinese military game of Go, which is the oldest board game of which there is any record. It is a more complicated and more subtle game than chess and is said to have been invented by a Chinese emperor to teach his son to think. Mr. Cairns is vice-president of the American Go Association and Go players

from far places call on him in his library in Washington for a quiet game, which they play sitting cross-legged on the floor.

When Mr. Cairns was graduated from law school he was awarded the first prize for his thesis on the law of charitable trusts. In 1935 he was awarded the Civic Medallion for the most significant contribution to the progress of Baltimore in that year.

America's Young Men
Who's Who in America
Who's Who in Law

CALDWELL, ERSKINE Dec 17, 1903-
Author

Address: Point O' Woods Rd, Darien, Connecticut

Jackpot, published in August 1940, is "a full-dress parade" of Erskine Caldwell as a short-story writer. In it are all the stories contained in four earlier volumes together with nine new ones, each narrative prefixed by the author's own comment. In it are "gusty tales of sub-human folk of the type set forth in *Tobacco Road*"; in it are tragic episodes of the black and white life of the South.

It is this black and white life of the South which forms the theme of his latest novel, *Trouble in July* (March 1940). Its story is the story of a lynching; of Sonny Clark, 18-year-old Negro accused of raping a white sharecropper's daughter of Sheriff Jeff McCurtain who finds himself in a tough spot, of the farmers who are out to "get" Sonny. What happens when the whites take things into their own hands, when Sheriff McCurtain tries to avoid all the trouble by going fishing, when the sharecropper's daughter reveals that she has been lying—winds into a story termed "one of the most dramatic and intensely human Caldwell has ever created." There are critics, however, Clifton Fadiman among them, who believe that this book, good as it is, shows that Caldwell "is beginning to repeat himself."

Erskine Preston Caldwell was born in the village of White Oak, Coweta County, Georgia. His father, the Reverend Ira Sylvester Caldwell, is a Presbyterian minister in Georgia (Caroline Preston Bell is his mother) who continuously moved from town to town, carrying his family along with him. This was no doubt largely responsible for the younger Caldwell's wanderlust. The fact, too, that Southern ministers are about the poorest paid in the profession contributed to Caldwell's early reliance upon himself.

He left home at the tender age of 14. For two years he roamed about, taking in his stride the deep South, Mexico and Central America. Upon his return, he managed

Margaret Bourke-White

ERSKINE CALDWELL

to complete his high school education (actually, he spent but one year in public school and one year in high school).

While attending the University of Virginia in 1925 (on a \$25-a-month allowance from home), Caldwell was married to Helen Lannigan of Charlottesville, Virginia—and at the same time decided to write for a living. Until then he had knocked about, working in a cottonseed oil mill, picking cotton, driving cabs in Tennessee, playing professional football in Pennsylvania, reporting for an Atlanta newspaper—all in order to go to college. But he quit school to write. He moved to Maine and wrote for seven years before any of his work was published.

Caldwell first received fame with the publication, in 1932, of the now almost legendary *Tobacco Road*. First written as a novel, it was soon after dramatized by Jack Kirkland and produced on Broadway the following year. In *Tobacco Road* Caldwell delved into "Cracker depravity" and revealed its source in the decadent agricultural system of the South. Although greeted on the Great White Way with roars of laughter and interpreted as a comedy, the play was not meant to be funny. It is reported that every time Caldwell went into the theatre the laughter "sent him wandering the streets in tight-lipped rage." In 1940, seven years after it opened, *Tobacco Road* is still on Broadway, having broken all records for long run performances.

The attacks on *Tobacco Road* came mostly from Southern critics, who quite naturally resented so vivid a portrayal of their home territory. One reviewer in defending the book said: "Erskine Caldwell digs around in Southern muck, flings the muck into the literary sky. . . With no

pretense of being a prophet or reformer. . . The characters in *Tobacco Road* are an integral part of what someone has called that 'miserable panorama of unpainted shacks, rain-gullied fields, straggling fences, rattletrap Fords, dirt, poverty, disease, drudgery and monotony that stretches for a thousand miles across the cotton belt.'"

God's Little Acre (1933) was followed in 1935 by *Journeyman*, a story "concerned with the adventures of a fabulous traveling preacher who descends upon a remote Georgia community to drink whisky, seduce its women, arouse it to orgy in a revival meeting and then disappear one morning in an automobile acquired by the aid of a beneficent Providence working through the instrumentality of a crap game." The play version of *Journeyman* was scathingly denounced by Broadway reviewers—it was attacked as being lewd, filthy, immoral and along with the books *Tobacco Road* and *God's Little Acre* was banned from many public libraries and was brought before the courts as immoral.

When such charges are leveled against his work, Caldwell doesn't fight back. All he says is simply: "I try to hold up a mirror to nature in the South and to my own nature, to human nature. I don't say that lynching is evil or that cruelty is bad. But by showing people as they are, cruel, and by showing their victims, by showing people oppressed to hopelessness and impoverished to hopelessness—perhaps in that way I'll have some effect on many lives."

In 1936, together with Margaret Bourke-White (see sketch this issue), whom he married in 1939 after obtaining a divorce from his first wife, he wrote *You Have Seen Their Faces*. This was one of the first books of the reportorial-photographic school. Traveling through the heart of the deep South, Caldwell and Margaret Bourke-White took pictures of the people and the land, and re-created what they had heard and seen into a "tremendously vital and gripping document." Caldwell here not only points out the problem, but he also brings forth his approach to a possible solution of it. He proposes that a Federal commission be created to study the problem—then to seek the solution in order to plan for immediate action.

The immediate public reception of *You Have Seen Their Faces* encouraged Caldwell and Miss Bourke-White to do another book along similar lines. In 1938, just before the Munich crisis, they again made a trip, this time through what once was Czechoslovakia, and wrote *North of the Danube*. The book is full of the drama which filled the air in those early autumn days of 1938.

Besides these novels, a documentary study of regional America called *Some American People* (1935), and numerous articles for magazines and newspapers, Caldwell has published four books of short stories—*American Earth* (1931); *We Are the Living* (1933); *Kneel to the Rising Sun* (1935); *Southways* (1938); and *Jackpot* (1940).

Erskine Caldwell is a tall, quiet man with an unobtrusive sense of humor. He enjoys being alone, and in order to do this lives in the country where he is sure he won't have to be bothered by the social graces. He seldom reads novels; prefers timely magazines and newspapers. He has read widely and variously, and in his youth soaked up a lot of history and economics which he now finds extremely valuable in understanding and interpreting current social and economic problems.

Caldwell's three children by his first marriage live with their mother in Maine. His eldest son, aged 14, whom he fondly calls "Pixie," earns his own money by raising rabbits and vegetables—Caldwell wants his children to develop initiative and self-reliance with which to meet their future problems.

 Who's Who in America

CALDWELL, MRS. ERSKINE See White, M. B.

CALDWELL, TAYLOR Sept 7, 1900-
 Author

Address: h. 703 W Ferry St, Buffalo, New York

Janet Taylor Caldwell (she does not use her first name) was born in Manchester, England, on September 7, 1900. Both her father, Arthur Francis Caldwell, a commercial artist who died nine years ago, and her mother, Anna (Marks) Caldwell, who now lives in Buffalo, were born in Glasgow. She comes from a long line of Scotch Presbyterian teachers, artists, landed gentry, shipbuilders, publishers and distillers. At a very early age she was sent to a private school in the little suburb of Reddish, where she readily acquired a strong dislike for the snobbishness of the decayed-gentlewoman teacher.

Her father had a strange antipathy for almost everyone but Scotsmen, Presbyterians and Caldwells, and because in England his profession was full of Germans he brought his family to America in 1907—where, though he little suspected it, conditions were virtually the same. It was during that crossing that Taylor Caldwell got her "first lesson in undemocracy": she found herself in a kind of second-class quarantine, snubbed by the first-

TAYLOR CALDWELL

class youngsters and forbidden to play with the third-class children. She remembers the porpoises, however, with a good deal of pleasure, as well as the icebergs, porridge with treacle, ice cream and the first electric fans she had ever seen. On a soggy day in March they entered New York harbor, and during a violent argument with the customs inspectors got a wholly unpleasant impression of the "bloody Yankees."

At the age of nine she began to write and illustrate books. The first appears to have been a tale of a lurid seduction in the days of Nero—with copious realistically anatomical drawings. She wrote at least 10 huge books a year, by hand, at the kitchen window and succeeded in working up a thoroughgoing contempt for children. "Father frequently disappeared furnaceward with armfuls," she says, "for I lost interest in the books when they were done." She also turned out a lot of poetry about this time, pages and pages that never mentioned love but were ridden with mysticism, religion and Life. She was quite sure that she had a Message. (When she sometimes catches herself believing that even now, she becomes very severe with herself.) And before she reached her teens she had also written some music and executed some fair portraits and sculpture. She came to the conclusion that she would get nowhere if she scattered her energies, and so threw everything but writing overboard.

Her father disapproved of higher education for women, so she set out at the age of 15 to earn some money; and after a long siege at Buffalo University evening sessions she received her B. A. in 1931.

By her first marriage, to William Fairfax Coombes in 1918, she had a daughter, Mary Margaret; and by her second, to Marcus Reback in 1931, another daughter, Judith

CALDWELL, TAYLOR—*Continued*

Ann. Her husband, a gifted linguist, was in the Intelligence Service during the World War, afterward became adviser to President Hoover, and is now a government official.

Taylor Caldwell has been writing madly ever since her early juvenile enterprises, and conservatively estimates that she has destroyed two or three forests. But nothing reached publication until *Dynasty of Death*, in September 1938. It was a huge, somewhat theatrically contrived novel about the intrigues of the Barbours and Bouchards, munition-makers. Reviews of this best seller were mixed, indeed, but the author had the pleasure of seeing several far-from-naïve critics take it for the work of a somewhat seasoned literary gentleman. A motion picture version of the book is planned for release in 1941.

In early 1940 she published a further projection of the armaments theme, *The Eagles Gather*, a later glance at the war-fomenting activities of a dynasty established in her earlier novel. *The Earth Is the Lord's* was published in the fall of 1940—a novel about the life and times of Genghis Khan.

Taylor Caldwell laments the fact that she is always trying to "get somewhere," which, says she, is the curse of the British. She is a passionate believer in trade unions but confesses to being skeptical of the intelligence of the masses. The professions and politics, she insists, are already overstocked with women, and she has a mean opinion of the average female wit and intelligence: education for women has become too universal—it makes them go about "'clear-eyed' and gallant, and inquisitive and snobbish and generally imbecilic." She was brought up in a violently conservative British home, with "books, arguments, boiled beef and cabbage"; has been called a conservative and a Fascist, but considers herself as probably "just a Democrat."

CAMACHO, MANUEL AVILA (kā-mă' chō mā-nuēl ä'vil-ä) Apr 24, 1897- President of Mexico

Until General Camacho was inaugurated President of Mexico on December 1, it was impossible to say how much was settled in the Mexican Presidential election of July 7, 1940, for both candidates claimed their own elections. On July 16 the Mexican ministry advised all Mexican diplomats that General Camacho, the government candidate, had been chosen by an overwhelming vote of the people, and the Mexican Congress on September 23 officially announced a 16 to 1 majority for him. General Almazán (see sketch this issue), his outstanding rival, complained of fraud and the use of force to prevent the Almazánistas from voting, however (there had been bloodshed on both sides throughout the campaign), and repeatedly announced he would himself take the oath of office on December 1. Having left the country not long after the elections, he was reported biding his time and attempting to gain more support abroad while waiting for the signal to set up his own government. Whether this would be a signal for revolution no one knew, but Almazán's hopes were considerably dashed in November 1940 when President Roosevelt appointed Vice-President-Elect Wallace as his representative to Camacho's inauguration. And on November 27 Almazán officially renounced his claim to the Presidency.

According to a New York Times correspondent General Camacho is "a big man as Mexicans go, with heavy shoulders and thick neck. His hair and bushy eyebrows are black, as are also his eyes, and he has a small, thin-lipped mouth set in an elongated, rather plump face. He gives the impression of being fundamentally earnest and serious-minded; his occasional smiles are engaging and he possesses considerable charm of manner and ability to make friends." One of his brothers is Governor

of a native state, another brother Mayor of Puebla. He is a three-goal polo player whose team won third in the 1936 Olympics, and owns a string of ponies which has traveled as far as Long Island; he is also said to be more student and thinker than man of action. He looks no more like a people's President than his rival.

Born in Teziutlán in the State of Puebla on April 24, 1897, Camacho started life as the son of an obscure farmer: Manuel Avila Castilla. His mother was Euprosia Camacho de Avila. Young Manuel was trained to be a bookkeeper, but after completing his course in accounting rode away in 1914 to join the forces revolting against Huerta. The revolt was successful, and for the next 15 years Camacho continued to "guess right on every upheaval." In 1923 he was fighting beside Cárdenas and Calles with United States' aid against rebellion. In 1924 he was specially cited for his defense of Moralia. But his main talents were as an arbitrator; he won so many battles with his tongue alone that the Mexicans sometimes jokingly call him "The Unknown Soldier" or "The Virgin Sword." In the Cristero rebellion of 1927 he is remembered for having walked unarmed into a saloon to meet the chief of the enemy forces and for having walked out an hour later with the rebel's promise to lay down his arms. In Michoacan in 1929 he talked 12 enemy generals into surrender.

He had begun army life as a second lieutenant; he rose to the rank of captain, major, colonel, brigadier general. Under President Rodriguez he served as chief of staff of the Ministry of War and the Navy, and the reforms he instituted at that time brought him an appointment as Secretary of National Defense in the Cabinet of President Cárdenas. In that office he advocated the purchase of United States airplanes, equipped the Mexican Army with tanks, trucks and anti-aircraft guns, and in 1938 achieved the highest rank in the army—division general—by his suppression of the bandit Cedillo.

Devoted to his wife, polo, history, biography and social studies, General Camacho became known as "a mild, pleasant moderate who hates excesses or extremes in any form," also as a loyal Cárdenas man. When he resigned from the Cabinet early in 1939 to campaign for nomination for President by the PRM (Party of the Mexican Revolution, the government party which has won the elections in Mexico since 1910), it was with the blessing of some of the more conservative elements in Mexico. Soon, however, his candidacy was also endorsed by Lombardo Toledano (see sketch this issue), radical head of the CTM (Confederation of Mexican Workers, a powerful and militant labor organization 1,000,000 strong), who believed that he would carry on the progressive program of President Cárdenas. The endorsement of the National Farm Confederation and of other labor and agricultural organizations followed, as well as that of

MANUEL CAMACHO

Cárdenas and his junta, and on November 3, 1939 Camacho won the nomination of the government party.

His most dangerous rival was General Almazán, who, backed by the great part of both Mexican and foreign business, American and British oil interests and those who were persuaded that the country was being run by a "corrupt labor bureaucracy" shot through by agents of the Comintern, promised to wipe out much of Cárdenas' program and pledged himself to cooperation with the United States. According to the correspondent of the *Christian Science Monitor* many of the men backing Almazán were ardent supporters of General Franco during the Spanish Civil War. His promises to give the land outright to the peasants and to revive the now-forbidden Catholic Church schools brought him some adherents from the people, however; the press and the middle classes were largely won to his side; and the loyalty of the Mexican Army generals is even now doubtless divided between the two camps.

Camacho's speeches, however, began to grow somewhat more conservative as the campaign went on. He pledged himself to "consolidate but not experiment," also favored transferring the title of land to the peasants who till it, the slackening of restrictions on the Church, the encouragement and protection of foreign capital if it does not hinder the welfare of the Mexican people. And, he announced: "Under present world conditions, we must find very close cooperation with Washington." Nevertheless, although his personal liking for the radical Lombardo Toledano is not at all certain, he never went so far as to break with the CTM. The greater part of labor continued to support him, and when, after his election, Congress met in August to ratify credentials of newly-elected Senators and

CAMACHO, MANUEL AVILA—*Continued*
Deputies, strong contingents of Camacho's peasant supporters were on hand to prevent a possible military *coup* by the opposition.

Both Camacho and Almazán are generals, both wealthy; they do not look unlike; their programs do not even sound as dissimilar as they might. And since his election Camacho has advanced a program that differs less and less from Almazán's. He has professed himself a good Catholic and promised to dedicate as much care to the spiritual as to the economic needs of the Mexican people. What is more, he has denied that he is a Socialist, has stated that neither Lombardo Toledano nor the Communists would have any part in his government and has said that he intends to defend American interests in Mexico. As a result, a number of Almazánistas have come over to his side and, revolution or no revolution, may stay there. On the other hand, many progressives have expressed the fear that the social gains of the past years will come to an abrupt halt under his conservative leadership.

CARMODY, JOHN MICHAEL Administrator of the Federal Works Agency

Address: b. Federal Works Agency, Washington, D. C.; h. 2101 Connecticut Ave, N W, Washington, D. C.

When President Roosevelt advised Congress on April 25, 1939 that "I find it necessary and desirable to group and consolidate under a Federal Works Agency those agencies of the Federal government dealing with public works," he transferred five agencies to the new agency. On June 23 he nominated John Michael Carmody to be administrator of the Federal Works Agency. Mr. Carmody was quickly confirmed by the Senate and assumed the duties of his new post on July 1.

The new Federal Works Agency combines under one administrator those agencies of the Federal government dealing with public works and administering Federal grants or loans to state and local governments for the purposes of construction. Their main functions are: 1. The *Work Projects Administration*, which provides work for needy persons on useful public projects; 2. The *Public Works Administration*, which finances, through loans and grants, public works having an estimated total cost of approximately four billion dollars; 3. The *United States Housing Authority*, which has as its major purpose the administering of loans and grants-in-aid to local public housing authorities for construction of low-cost housing; 4. The *Public Roads Administration*, which manages the Federal roads program in cooperation with state and local governments; 5. The *Public Building Administration*, which handles the allocation of space to Federal agencies and the construction of Federal buildings.

For six years before his appointment as administrator Mr. Carmody had served in various government administrative posts and prior to that had spent more than 20 years of equally varied responsibilities in the private industrial field.

Mr. Carmody was born in Towanda, Pennsylvania, the son of Michael John and Catherine (Collins) Carmody. In 1899 he was graduated from the Elmira (New York) Free Academy and the following year was graduated from the Elmira Business College. Subsequent education included work at Lewis Institute in Chicago in 1908 and at Columbia University in 1926.

Mr. Carmody began work in 1900 as a clerk and bookkeeper, and worked with various structural steel manufacturing concerns until 1914. In that year he left the steel field to become production and merchandising manager in the garment industry, which he did not leave until 1923. In

JOHN MICHAEL CARMODY

1922, however, he identified himself with his third major industrial field when he made a special study of labor relations in the bituminous coal industry for the United States Coal Commission.

In 1923 Mr. Carmody joined the coal industry as vice-president in charge of industrial relations for the Davis Coal and Coke Company, and was vice-president and general manager of its merchandising subsidiaries from 1923 to 1926. In 1927 he became editor of *Coal Age* and of *Factory and Industrial Management* for the McGraw-Hill Publishing Company of New York and remained with McGraw-Hill until he came into the Federal government service in 1933. In 1931 he made a survey of industrial developments in Russia for the McGraw-Hill Company.

Mr. Carmody came to the Federal government as mediator for the Wagner Labor Board which was set up in connection with the NRA. Shortly thereafter he became chairman of the Bituminous Coal Labor Board. From November 1933 to September 1935 he served as chief engineer for the Civil Works Administration and the Federal Emergency Relief Administration, which initiated the Federal work relief program during the depths of the depression, and he was also a member of the National Mediation Board. He served on the National Labor Relations Board and in 1937 was appointed administrator for the Rural Electrification Administration. He relinquished this post to become Federal Works administrator.

When Carmody took over his new position he stated that he did not intend to have a large over-all staff in the Federal Works Agency but preferred a small coordinating unit, "working through the existing machinery of the FWA agencies."

It was the combined FWA agencies which presented a series of displays at the New York World's Fair (1940). Here the dramatic story of these agencies was graphically presented through exhibits, through photo-murals (one of which was the largest at the Fair), through actual demonstrations of spinning, weaving, serum making, highway research, model making and other nationwide projects which furnish useful employment. Here also was told the story of America's new schools, its pack horse libraries, its new hospitals and clinics, its public housing projects. In the theatre such famous movies as *The Plough That Broke the Plains* and *The River* (see sketch this issue under Pare Lorentz) were shown, as well as Technicolor movies and puppet plays.

Mr. Carmody was married in 1913 to Margaret Cross. They have one daughter, Catherine Cross Carmody.

Who's Who in America

CAROL II Oct 16, 1893- Former King of Romania

December 1940 Bulletin: In November 1940 Carol was merely another one of Europe's former crowned heads—and in more unfortunate circumstances than some. Under house arrest in Spain with his companion-in-exile, Magda Lupescu, he was begging President Roosevelt to exert his diplomatic influence in his behalf. Events had moved fast. After a large strip of Southern Dobruja had been surrendered to Bulgaria and more than half of Transylvania to Hungary, largely through the intervention of the Axis powers, and after German armored divisions had begun moving into Romania, civil war there had been forestalled only by Carol's surrender of supreme authority to Iron Guard sympathizer General Ion Antonescu (see sketch this issue). A day later, on September 6, Carol was forced to abdicate in favor of his son, and early the next morning he was nearly assassinated by the Iron Guard as his train sped toward the Yugoslav frontier, Magda Lupescu on board. The famous couple and their retinue reached Spain on their way to Portugal, where they had permission to stay, but after intervention on the part of Antonescu's government they were placed under house arrest by the Spanish authorities. It was asked that Lupescu be brought back to Romania for trial. As for Carol, one of the main accusations against him was that he had squandered public funds. Although his financial holdings in Romania itself were frozen by order of Antonescu's government, it

was well-known that the greater part of his wealth (and it is considerable) had already been transferred to other countries.

From August issue:

In July 1940 two planes at the palace airfield in Bucharest stand ready for the instant flight of King Carol from Romania "in case of emergency." There is no longer room in Europe for a man who would be both a king and a dictator. The fate of Carol II is now under the control of two powers: Nazi Germany and Soviet Russia. Since September 1939 the hot kettle of the Balkans has sizzled at high pressure; trying to hold down the lid, Carol has been anything but happy. The fall of France in June 1940 forced him precipitously into the Nazi totalitarian camp: this meant the release of his old enemies, the Iron Guardists. Within a week came Russia's long-predicted taking of Bessarabia from Romania which Carol, minus the intervention of his Axis partners, was helpless to prevent. Broken in spirit, sleepless, forgetting to shave, endlessly smoking cigarettes, Carol paces the floor of his suite, nervously considering abdication in favor of the 18-year-old Crown Prince Michael.

The "playboy of the Balkans," who became head of a country whose riches are greatly coveted, was born in 1893, son of the late King Ferdinand and Queen Marie, born Princess of Great Britain and Ireland, Duchess of Saxony. Like a modern Prince Hal, Carol grew up a roistering escapist who later turned out to be a serious ruler. His father, having romantically eloped with a commoner and renounced his throne, had been persuaded to marry Queen Victoria's 17-year-old granddaughter. Marie soon took the reins in her own hands, intrigued with the house of Bratianu, and brought Romania to the Allied side in the World War. At Versailles she succeeded in doubling Romania's territory at the expense of Russia and Hungary. She married off her daughters advantageously, but she couldn't do anything with Carol, who was developing a mind of his own. A match with the daughter of Czar Nicholas failed to come off. The young prince defiantly left his regiment during the War, married the daughter of a Romanian officer, and renounced his rights to the throne. The marriage was annulled, the girl paid off, and Carol sent on a trip. When he got back his family forced him to marry Helen, sister of the present King of Greece, in March 1921. A son, Mihai (Michael), was born in October 1922.

But Carol had no intention of remaining a faithful husband—even in public. Soon favored among his mistresses was the divorced half-Jewish wife of an army lieutenant, titian-haired Magda Lupescu (see sketch this issue). In 1925 Carol ran away with "Bibi," as he always called her, penned a letter renouncing the throne from the same hotel as his father had before him. Little Mihai was declared successor.

CAROL II

But the Bratianu court was not holding its own. The opposition planned to bring Carol back in June 1930—on condition that Magda was dropped. Carol, however, brought Magda with him to Bucharest. Helen departed. Sentiment, particularly anti-Semitic, was strong against "that witch Magda." She was accused of being responsible for every evil in the country, and was particularly hated by the Fascist Iron Guard, which also sought to draw Carol away from his ties with the Balkan Entente, France and Czechoslovakia (through them with Britain) and to hitch Romania to Hitler's chariot. They assassinated one Premier, Duca, and Carol took sporadic measures of reprisal against them, but in 1937, temporarily appeased them with his appointment of violently anti-Semitic Premier Goga. Finally, in February 1938, agitation was so extreme that Carol assumed dictatorial power, formed a one-party state and discreetly retired Magda to a country villa, where her hobby was raising white turkeys. Calinescu was made Premier.

Things went on like that for awhile. Britain and France, who owned part of Romania's oil wells, competed against the German trade agreement. Intrigue was rife in brilliant Bucharest, "Paris of the East," swarming with resplendent officers and smartly-dressed women—many of them spies. The stock market soared, business and building boomed, the King's palace at Cotresceni got two new wings.

The wily Carol, later in 1939, visited England; he also dropped in on Hitler. He signed a new trade treaty with Germany, but when he got home shot or put into concentration camps most of the pro-Nazi Iron Guardists, whose leader, Codreanu, had been murdered by the government the year before. In September 1939 they retaliated

CAROL II—Continued

by assassinating Calinescu and attempting a coup in Bucharest.

When war began in September, Carol at once formally declared Romania's neutrality. And, while Italy and Turkey bickered over the subject of a Balkan federation, King Carol sat tight. After Russia took Finland, however, he saw the writing on the wall and rushed defense fortifications in Bessarabia. Feeling assured of the backing of England and France, he dared Stalin to cross the border. "Romania will fight as one living wall if we are invaded," he said. "Bessarabia will always remain Romanian." But the Soviet calmly started maneuvers off the Bulgarian coast, and Moscow signed a trade treaty with Bulgaria. Italy and Hungary began conferences.

To continue a vast war, Germany was highly in need of Romania's oil and grain. In March 1940 Hitler offered King Carol a pledge of "security" in return for a virtual monopoly on Romania's produce. Carol was most indignant at the suggestion that he also give amnesty to the imprisoned Iron Guard. But on April 25 he was forced to do this. With the pressure of Italy's entrance into the War, he was also forced to confer with Iron Guardist leaders on forming a dictatorship favoring the Axis powers. Although pro-Ally, his Premier Tătărescu remained in office. But on June 21, as soon as France fell, Carol had to cast his lot ostensibly with Germany. He formed a new "Party of the Nation," in which the anti-Semitic Iron Guard played a big part. Over the radio he ordered the people to reverse their entire mental attitude and asked the younger generation "to work also in this beehive of the national resurrection." His new "friend," Iron Guard leader Horia Sima, said: "The King's new party will enable us to face the future."

The "future" was just around the corner. Russian planes made flights over Bessarabia—border clashes were reported. The Axis powers failed to promise aid to Carol, and on June 28 the Red Army's motorized units marched into Bessarabia. On the heels of the Soviet ultimatum Hungary sent a time limit communication to Carol's government on its claims in Transylvania, and moved up troops. Italy and Germany did exert restraining pressure on Hungary. But Carol's new government pleased neither Berlin nor the Iron Guard extremists, who held Carol responsible for the loss of Bessarabia. There was much uncertainty about the position of Carol himself who, in Hitler's opinion, jumped too late on the band wagon and who, for all they knew, was still privately intriguing with Britain. Privately irked that the Russian grab of Bessarabia brought the Soviet Union within reach of Romania's oil fields, the Nazis felt that a strong government in Romania was imperative. On July 4 Tătărescu was replaced by Prime Minister Ion Gigurtu, and Horia Sima became Minister of Culture, with other Iron Guardists given key posts. Within four days the Iron Guardists

tendered their resignations, prompted by the realization that cessions of territory to Hungary and Bulgaria are probably inevitable: Sima himself comes from Transylvania. Carol tried to reinstate the Iron Guardists, and meantime entertained the young Soviet ambassador and gave him assurances of Romania's desire to be friendly.

King Carol's present difficult position is to please the Nazis and at the same time not to displease Russia. And always around him are his old enemies the Iron Guardists, who have not forgotten that he once put them in a concentration camp. King Carol looks nervously out the window toward the waiting plane—but it is not definitely reported what country will welcome him when "the emergency" comes.

CARREL, ALEXIS (ká'rĕl à-lĕk'sĭs) June 28, 1873- Scientist

Address: Rockefeller Institute, 66th St and York Ave, New York City

Dr. Alexis Carrel was born at Sainte-Foy-lès-Lyon, France, June 28, 1873, the son of a silk merchant. He took his M. D. at the University of Lyon in 1900. While a medical student, he acquired surgical dexterity not only by extended anatomical studies and dissection, but by carpentry and sewing. For instance, he trained himself to take stitches with a very fine needle and very fine thread in ordinary paper so that the stitches did not show on either side of the paper. The line of research he wished to pursue after graduation was so far off the beaten track that none of the professors at Lyon was interested. He thought of going into cattle raising and went to Canada in 1904. Once there he was set back on the track of science again and went to work in the Hull Physiological Laboratory in Chicago. His professional reputation was established by his discovery of a new way of sewing together the ends of an artery, and by his success in removing a dog's thyroid

and putting it back upside down for thyroid functioning. It was Simon Flexner who asked Carrel to come to his newly-organized Rockefeller Institute for Medical Research in New York in 1906. He was made a member in 1912.

Dr. Carrel married Anne de la Motte, handsome widow of the Marquis de la Mairie, in 1913. Having long wanted to be a soldier, he rushed into the French Army at the outbreak of the War, won the Légion d'Honneur, and soon became a major. Mrs. Carrel served as a head nurse of the French Red Cross and directed a mobile surgical ambulance at the front. With chemist Henry D. Dakin, Carrel perfected the famed Carrel-Dakin antiseptic solution for the treatment of infected wounds. Following his honorable discharge from the French Army Medical Corps in 1919, he returned to the Rockefeller Institute, where he developed new techniques for the cultivation of tissues and, in later years, for the cultivation of organs outside of the animal body.

Dr. Carrel won the Nobel Prize in 1912 for success in suturing blood vessels and the transplantation of organs. He won the Nordhoff-Jung Cancer Prize in 1931; the Newman Foundation Award at the University of Illinois in 1937. It was January 1912, at the Rockefeller Institute, when Dr. Carrel began the cultivation in the juice of chick embryos of a few fragments of embryonic chick heart. From the sub-cultures obtained from these fragments was derived the strain of connective tissue, or fibroblasts, which has grown actively ever since. It is now under cultivation in a private laboratory. It was recently rumored that this heart was dead, but as New York's *World-Telegram* headlined it: Cancel that obituary on the chicken heart. The report, it seems, was exaggerated.

In 1935 the name of Carrel whirled up to fresh fame because Charles Lindbergh, aviator and bio-mechanic, designed for him a perfusion pump, or artificial heart, with which to pump life into organs *in vitro* such as the heart, kidneys and ovaries, and such glands as the thyroid. The new technique of tissue culture perfected by Carrel leaves classical anatomical dissection far behind; and it was to make known the use of Lindbergh's perfusion pump that Carrel and Lindbergh published in collaboration in 1938 their *Culture of Organs*.

The function of this germ-proof pump is not only to keep separate vital organs alive in fluid, but, by changing the contents of the fluids, to make them develop abnormalities which may be readily studied. Carrel hopes that in the future organs removed from the body, during operations or soon after death, may be revived in the pump and made to function again; and that larger human organs such as the pancreas can be made to manufacture substances *in vitro* now supplied to patients only by animals. Also, diseased organs might be transferred to the pump for treatment, cured, then replanted in the patient. The cultivation of organs in the

ALEXIS CARREL

pump would allow the discovery of the nature of the specific chemicals demanded by these organs for growth and normal function. It would then be possible to feed such chemicals to the body instead of supplying the hormone by injection, such as is done in the case of diabetes. Thus, after 123 years, through the perfusion pump for keeping alive organs isolated from the body, the conception of the physiologist Le Gallois has been realized.

The pump, like the human body, is a "closed system"—its orifices protected by cotton-wool filter bulbs and cement sealed so that no air gets into the pump after it is connected to the rest of the apparatus. The temperature of the pump is maintained at the level of the organism by keeping it in an incubator. A "rhythmic pulse" is supplied by a pressure of gas driven forward at regular intervals by compressed air escaping through a rotating valve.

Dr. Carrel retired from the Rockefeller Institute in June 1939, with the title of Member Emeritus. Shortly thereafter he went to France, and in September 1939 was given a special mission by the French government. In May 1940 he returned to New York, where he is pursuing extensive studies on man and environment and where he designed a mobile hospital for war work.

Dr. Carrel is a stocky, trim, broad-faced, broad-browed and pink-complexioned Frenchman, with piercing but kindly eyes. Of him Lindbergh has said: "Dr. Carrel has one of the most brilliant, penetrating and versatile minds I have ever met. His every action is filled with character and the record of his life could not fail to interest anyone who cares about human personality."

Dr. Carrel is also the author of *Man, the Unknown*, published in 1935. Into this book he put the essence of his experiences, philoso-

phy and intuition as a doctor and as a man. Its theme is that science has itemized most of the facts of mankind but never added them up to the total of man's potentialities. Dr. Carrel proposes a High Council to rule the world for its own good, at a "thinking center" where political leaders would come for advice. The council members would dedicate their lives to the economic, psychological, physiological and other phenomena manifested by the nations and their individuals. "An institute of this sort," says Dr. Carrel, "would acquire enough knowledge to prevent the organic and mental deterioration of civilized nations." He also maintains that high councilors would correct errors concerning democratic equality. Individuals, he thinks, are not equal: the feeble-minded and the man of genius should not be equal before the law. The stupid and unintelligent have no right to a higher education, nor to the same voting power as intelligent beings. Unless certain changes are made, Dr. Carrel says, "men cannot follow civilization along its present course because they are degenerating."

CARTON DE WIART, ADRIAN (wě'är)
1880- Major General in command of British forces in Norway

In April 1940 when the battle front of the War between Germany and the Allies had shifted to Norway, Major General Adrian Carton de Wiart, in command of the British forces in central Norway, came in for a good deal of attention. This 60-year-old veteran, minus one eye and one arm, wears the decorations of three wars, surmounted by the—Victoria Cross, England's highest award for valor.

General Carton de Wiart, who was born in 1880 in Brussels, received his education at Balliol College, Oxford. In 1899 he enlisted as a private in the Imperial Yeomanry for the Boer War. He later won a commission and was promoted to captain in the Fourth Dragoon Guards in 1910. In the World War he first saw service in South Africa with the Somaliland camel corps, where he was twice wounded and lost an eye. He was mentioned in dispatches and awarded the Distinguished Service Order.

From 1915 to 1918 General Carton de Wiart served in France, where he was lieutenant colonel and, before the War ended,

commander of a Gloucestershire regiment. He was wounded nine times and lost his left hand at Zonnebeke. One of his most legendary exploits was at La Boisselle, where he rallied three battalions which had lost their commanding officers. The wavering British line began to reform and advance, when Carton de Wiart strolled casually toward the German trenches. Inspired by his nonchalance, the battalions drove forward. Carton de Wiart received the Victoria Cross for this exploit.

In 1923, when he was attached to the British mission to Poland, Carton de Wiart participated in the final battles between Russian and Polish troops outside Warsaw. In that year he retired from the army.

For years General Carton de Wiart lived quietly in Poland on a 300,000-acre estate lent him by the family of Prince Radziwill. The estate was only eight miles from the old Russian border and once was part of the shooting grounds of Czar Nicholas. The General's wife is the Countess Frederica, daughter of Prince Fugger Babenhausen and Nora, Princess Hohenlohe.

General Carton de Wiart left his retirement in September 1939 to become a member of the British military mission to Poland.

A six-footer, Carton de Wiart wears a patch over his lost eye and his armless sleeve is fastened at his side. "He is no D'Artagnan type, but rather a typical old-style British fighting man with a handsome, heavy, gray mustache." In the clubland of Pall Mall and St. James's Street, where oldtime British fighting men assemble after dinner to recall war exploits, no veteran is more surrounded with legend and fame than General Adrian Carton de Wiart.

ADRIAN CARTON DE WIART

 Who's Who 1940

CARVER, GEORGE WASHINGTON
 1864- Agricultural chemist; director of the Research and Experiment Station, Tuskegee Institute, Alabama

Address: Tuskegee Institute, Alabama

One of the three recipients of the Roosevelt Medal in 1939 was George Washington Carver, who was given the award for "distinguished service in the field of science," the citation reading "to a scientist humbly seeking the guidance of God and a liberator to men of the white race as well as the black." For his "brilliant achievements" he was awarded in June 1940 a bronze plaque by the International Federation of Architects, Engineers, Chemists and Technicians, a CIO affiliate. These are only two of the many honors that have come to Carver during his more than forty years as a scientist. Born a slave toward the end of the Civil War, near Diamond Grove, Missouri, today he is internationally known as an agricultural chemist, holds B. S., M. S. and Ph. D. degrees and is a fellow in the Royal Society of Arts of London.

Carver's contributions to the field of agricultural chemistry have gained for him such names as the "Wizard of Tuskegee," the "Negro Burbank", "Goober Wizard", "Columbus of the Soil," and have greatly expanded the agricultural economy of the entire South. Salad oil; an oil remedy for infantile paralysis, dyes of 19 different shades from peanuts; stains and face powder from clays; flour and shoe blacking from sweet potatoes; paving blocks from cotton; dyes from dandelions, tomato vines and trees—these are among the "brilliant achievements" that have made Carver known throughout the world.

But all of this was almost lost to the world, for when the future scientist was a slave baby only a few weeks old he and his mother Mary (his father was Moses Carver) were stolen by night raiders from the plantation of their German-born master, whose name was Carver. The master sent a messenger in pursuit, who ransomed the child with a race horse valued at \$300. Ill with whooping cough, which almost proved fatal, he remained sickly and frail throughout childhood.

As the child, whom the Carvers called "George Washington," grew older he helped Mrs. Carver with household tasks. She encouraged him to study and gave him a blue-backed speller, from which he got his earliest education. Later she gave him a *Bible*, large portions of which he committed to memory.

Though the Carvers were interested in George's getting an education, they could not afford to help him. So at the age of ten he left their home and found a school eight miles away which he attended two years, supporting himself by doing odd jobs. When he learned all that this school had to teach him he moved on to Minneapolis, Kansas, where he completed high school. He then began to earn money for college, doing fine laundry work, knitting, tatting, embroidery and odd jobs. For three years he attended Simpson College, earning his tuition by working in the college laundry. After he was graduated he entered Iowa State College of Agricultural and Mechanical Arts. At the end of five years he held two degrees from Iowa State College—a Bachelor of Science degree and a Master of Science degree.

He was invited to remain at Iowa State College as a member of the staff in charge of the work on systematic botany, the bacteriological laboratories and the greenhouses. It was there that two years later (1898) Booker T. Washington discovered him and asked him to join the staff of Tuskegee Institute, Alabama, where he has been since.

One of Carver's first interests after he arrived in the South was the study of crop rotation. After experimentation he suggested peanuts, pecans and sweet potatoes, as satisfactory money crops in place of cotton. How he drove around the countryside showing the farmers what they could raise was dramatically portrayed in a recent movie, *The Story of Dr. Carver* (a Pete Smith short released in June 1938). He was not always listened to, but he kept on until he had convinced the Alabama farmers that they could grow something besides cotton. Today the peanut, which in 1898 had scarcely any commercial value, ranks next to cotton as a money crop in Alabama, and in the whole South there are more than a million and a half acres of peanuts in cultivation bringing more than \$60,000,000 a year in income.

When the Alabama farmers took his advice about growing peanuts, Carver began to find ways of using this once unimportant plant. He has found almost 300 ways. In 1921, when Congress was considering the Hawley-Smoot tariff bill, the Southern farmers asked for a tariff on peanuts. Carver was among those called before the Ways and Means Committee for advice. When he had talked his allotted 10 minutes he was prepared to stop; but other men clamored for him to go on. They listened, fascinated, for an hour and three-quarters, during which time Carver enumerated 145 products which he had made from the peanut, as well as 100 from the sweet potato and 60 from the pecan—milk, condiments, axle grease, plastics, ink, flour, insulating board, coffee, starch, mock coconut, preserved ginger, library paste and many more—both edible and non-edible.

From the red clay soil of Alabama Dr. Carver has extracted valuable pigments—blue, purple and red; he is said to have rediscovered a secret of lasting colors that was known to the ancient Egyptians. From cottonstalks he has made starch, gums, dextrins; from the palmetto root, veneers; from palmetto and green wood shavings, a synthetic marble; from cornstalk fiber, rope.

Though Dr. Carver spends most of his time in his laboratory, his fame has spread far beyond Tuskegee and far beyond the United States. Thomas Edison once offered him \$50,000 a year for five years to do research for him, but he refused. A synthetic marble company of Mississippi asked him to join its firm, at any figure he named; when he declined, the company moved to Tuskegee, where they could have the benefit of his advice—advice that is given free. In 1928 the Crown Prince of Sweden spent several weeks with him to obtain information about using agricultural waste substances for industrial raw materials. The Duke of Windsor, when he visited the United States as Prince of Wales, spent several hours in Dr. Carver's laboratory, fascinated.

Whatever service Dr. Carver can give he gives freely. He has sought no patent on the peanut oil that has proved effective in many paralysis cases, and it is available at any drugstore for 65 cents a gallon. His peanut oil therapy has turned over to the medical profession. When peanut growers sent him a check for eradicating a disease of the plant he returned it.

Recognition of Dr. Carver's services has been given in other ways: in 1916 he was made a fellow in the Royal Society of Arts of London, an honor conferred upon few Americans; in 1923 he received the Spingarn Medal for the most distinguished contribution by a Negro to science; in 1935 he was appointed collaborator in the Bureau of Plant Industry, United States Department of Agriculture. During a series of anniversary celebrations held at Tuskegee Institute between November 1936 and April 1937, called the "Carver Fortieth Anniversary," one of the highlights was the presentation to the Institute of a life-size bronze bust of the great scientist done by the distinguished Atlanta sculptor, Steffen Thomas, and paid for by Carver's admirers of both races, mostly by dollar subscriptions.

The George Washington Carver Foundation, to perpetuate research in agricultural chemistry, was established at Tuskegee in February 1940 through the donation by Dr. Carver of \$30,000, his life savings, much depleted by a bank failure. The Foundation will study problems of soil fertility, new uses for the native plants and creation of useful products from otherwise wasted material. It will include a unit, already established, for the study of infantile paralysis; and it will house the Carver Museum, where are found hundreds of products discovered by the scientist and about a

GEORGE WASHINGTON CARVER

hundred of his paintings, one, *The Rose*, promised to the Luxembourg Galleries upon his death.

A documentary film made on location by the Bryant Production Company, with Dr. Carver taking the lead, was released in April 1940. It was designed to show not only the story of Carver but also something of the history of the Negro in America.

Dr. Carver explains the amount of work he is able to do by saying: "I have made it a rule to get up every morning at four. I go into the woods and there I gather specimens and study the great lessons that Nature is eager to teach us. Alone in the woods each morning I best hear and understand God's plan for me."

Who's Who in America

Who's Who in Colored America

CASEY, EDWARD PEARCE June 18, 1864—Jan 2, 1940 Architect

After 50 years spent as a leading architect, Edward Pearce Casey died in New York at the age of 75. He was born in Portland, Maine, the son of General Thomas Lincoln and Emma (Weir) Casey, the grandson of Major General Silas Casey. After graduation from Columbia University School of Mines, in 1886, he studied for three years at L'Ecole des Beaux Arts, Paris.

In the New York City Hall architects' competition of 1893 in which 134 architects competed, he was one of the six equal prize winners. In 1900 he was a co-winner of the first prize for the design of the memorial bridge over the Potomac River at Washington, and he won first prize in 1902, again in competition, for the design of the Grant Monument, Washington. Plans for the Library of Congress were altered by Mr. Casey, who was in charge of plans for the building from 1892 to 1897. Among his other Washington designs were Memorial Continental Hall, the Commodore Barry Monument, New York State monuments for the Civil War battlefield at Antietam, Maryland and Gettysburg, Pennsylvania and the American College at Beirut, Syria. He was married in New York City to Lilian Berry, June 20, 1929.

CASEY, RICHARD GARDINER Aug 29, 1890- First Australian Minister to the United States, appointed January 1940

Address: Australian Legation, Woodland Dr, Washington, D. C.

With the appointment of the Right Honorable Richard Gardiner Casey as the first Minister to the United States from Australia, New Zealand is the only member of the British Commonwealth of Nations left without representation in the United States. The outbreak of the Second European War in 1939 has made Australia, heretofore represented in Washington only by the British Ambassador, anxious to establish direct diplomatic contacts with this country which also has active interests in the Pacific.

Richard Gardiner Casey, handsome, lean-faced and mustached, born in Brisbane, Australia, famed throughout his country as an airplane pilot, was Minister of Supply and

Development during the year 1939. He was educated at the University of Melbourne and at Cambridge and saw active service during the First World War, being mentioned in dispatches from France and Gallipoli and receiving the D. S. O. and the M. C. Since 1931 he has been a member of the House of Representatives from Corio. He was married in 1926 and has a son Conn and daughter Jane.

The President of the United States in turn nominated an American Minister to Canberra, capital of Australia. He is Clarence E. Gauss, veteran American Consul General at Shanghai.

Who's Who in Australia

CATT, CARRIE CHAPMAN Jan 9, 1859- Women's leader

Address: 120 Paine Ave, New Rochelle, New York

In November 1940 women leaders from all over the country met in New York City to celebrate the Woman's Centennial Congress in honor of twenty years of woman suffrage and to celebrate the hundredth anniversary of the beginning of the suffrage movement. They charted a course for women to follow for the century to come, for their leader, Mrs. Carrie Chapman Catt, believes that it takes "a hundred years to change the public's mind on an important question." She called the meeting and prepared a *Declaration of Intentions* similar to the *Declaration of Sentiments* which set the pace for the first woman's rights convention a hundred years ago.

Mrs. Catt began to champion her sex and struck her first blow for it back in the Sixties, when she was six and in the first grade in school. In Ripon, Wisconsin it was, when every boy laughed at one of her classmates losing her hoop skirt. Carrie "firmly, deliberately and with righteous conviction" marched up to the most boisterous and slapped him in the face. When she was seven her parents, Lucius and Maria (Clinton) Lane, moved to Iowa and brought her up on a farm near Charles City. There she struck her second blow. Her brother Charles chased her with a snake. She was afraid of snakes, but she caught one and chased her brother. Although he was three years her senior, he recognized a grim purpose in her blue eyes and ran. At the age of 13 her purpose gained a point when she realized that her father could vote, that her mother could not; that her mother could hold no property in her own name and that if she worked could not collect her earnings.

Robert Ingersoll was her favorite author in high school.

After teaching for a year she went to the Iowa State College at Ames. When her savings from her \$20-a-month teaching job proved insufficient to pay her way through three years at college, she supplemented them with dish washing at nine cents an hour and library work at ten cents an hour. She made a further step in her fight for the rights for women in college when she secured physical education instruction for girls after noticing that the boys were given free military training.

After receiving a B. S. in 1880 she showed her independence by entering a lawyer's office to read law. But apparently the citizens did not object too strenuously, because the next year they made her principal of the Mason City High School and two years later appointed her the first woman superintendent of schools.

In 1884 Carrie Lane married Leo Chapman, editor and owner of the *Mason City Republican*. In the first year of her married life she independently organized a small group of friends to canvass Mason City with petitions for the passage of a bill in the State Legislature for municipal suffrage for the women of Iowa. The appearance of this petition from a town where there was no suffrage club led the state suffrage association to invite her as a delegate to their state convention.

Two years after their marriage, Mr. Chapman sold his newspaper and went to San Francisco. There he became ill and died of typhoid before his wife could reach him. His widow became a newspaper reporter, but stayed in San Francisco only long enough to learn that women, especially pretty women, had a hard time competing with men in the business world, and to meet some of the pioneers in the woman suffrage movement—Susan B. Anthony, Julia Ward Howe, Lucy Stone.

Mrs. Chapman returned to Iowa in 1887 with the twofold purpose of earning a living and beginning to work to "change people's minds about woman's function in society." She started out as an organizer for the Iowa Woman Suffrage Association and in 12 years rose to a position of national leadership. From 1900 to 1904 she was president of the National American Woman Suffrage Association. In 1909, known as "the brains of the woman suffrage movement," she organized the suffrage forces on the lines of political parties, without belonging to any party.

Her work was not interrupted by her marriage to George William Catt, a civil engineer, in Seattle, Washington in 1890. She was able to return to South Dakota to campaign, and there made the first outdoor speech ever made by a woman for suffrage. Arriving in a small town with another worker and finding that no meeting place had been arranged, they hired a democrat wagon and drove to the center of the town,

CARRIE CHAPMAN CATT

alternately ringing a dinner bell and introducing each other to attract a public. Mrs. Catt spoke so eloquently that the words of Secretary George (Chairman of the Senatorial Committee on Woman Suffrage) were most apt: "There isn't a man in Christendom that can answer that woman's arguments, but I'd rather see my wife in her coffin than going to vote."

Mrs. Catt retired from the presidency of the National American Woman Suffrage Association in 1904 due to her own failing health and the illness, followed by death, of her husband. She returned to a home she had established in New York. In 1915 she directed the state suffrage campaign and was drafted again as president of the organization to lead the drive for the passage of the Nineteenth Amendment. The first legislative victory had been made in Wyoming in 1869, the next in Colorado in 1893. The three years from 1917 to 1920 were "the climactic ones of her work." She conducted the drive on Congress to submit the Amendment, then the drive on the state legislatures to ratify it—living on trains, in hotels, in conferences. She was able to carry on the struggle with a million dollars which Mrs. Frank Leslie bequeathed to the cause. Mrs. Catt campaigned through nearly all the states in the Union, and in 1920 Tennessee was the thirty-sixth state to ratify the Amendment and make it a part of the Federal Constitution. The inner story of the suffrage movement with an analysis of its opposition—*Woman Suffrage and Politics*—was published in collaboration with Nettie R. Shuler in 1923. A chapter, *Wyoming: the First Surrender*, from this volume, was adapted for publication in *Victory; How Women Won It*, issued in the fall of 1940.

In 1919 Mrs. Catt founded the National League of Women Voters to help women

CATT, CARRIE CHAPMAN—*Continued*
 vote intelligently, and she has been honorary president of the organization since then. An International Woman Suffrage Alliance was organized at her instigation in 1904. She was president of that organization until 1923, and since then honorary chairman. She made tours of Europe, went around the world to bring women of the oriental races into the Alliance, helped sponsor the first suffrage conference of Pan-American women in Baltimore in 1922 and finished her suffrage labors with a tour of South America in 1923. The Turkish government issued a postage stamp bearing her portrait in honor of the founding of the Alliance in 1935. In 1930 she won the \$5,000 *Pictorial Review* Award for outstanding achievement and was selected as one of the 10 outstanding women of 1937 by *American Women*. Mrs. Catt also won an award for bringing about better understanding between Christians and Jews in 1933. Other awards include a medal from the National Institute of Social Science, in May 1940, and honorary LL.D.'s from the University of Wyoming, Iowa State College and Smith College.

When the suffrage battle was won Mrs. Catt plunged into another—the cause of peace. First she was a member of the woman's committee of the Council of National Defense. Then she founded and was chairman (1925-32, honorary chairman since) of the National Committee on the Cause and Cure of War; in 1925 she called a Washington conference; in 1935 she published an essay *Because If We Do Not Destroy War Now, War Will Destroy Us* in the collection *Why Wars Must Cease*. She is still fighting for peace. The theme of the meeting of women celebrating the Woman's Centennial Congress at the New York World's Fair August 26, 1940 was that "all women must be alert in defense of democracy and to save this country from war."

Mrs. Catt has many hobbies. She loves her garden. Flowers bloom their earliest and brightest for her. She is a thorough housekeeper and knows how to prepare delicious food. She specializes in jellies and pickles, made the old-fashioned way. There is nothing in her home that reflects the real Mrs. Catt so much as her library, and her desire to share it with useful results. In 1937 she gave her Peace library to Iowa State College and in 1939 presented her Feminist library to the Library of Congress, where it is now placed in the room with Benjamin Franklin's Library.

A friend writes: "Throughout the years of Mrs. Catt's advancement of rights for women she has revealed the mind of a statesman. Her statesmanship has been the fundamental kind—broad vision, a scholarly background, an enormous sense of fair play, unswerving honesty, patient tolerance, a love for her fellow men, ready tact and the genius to appeal to an opponent's in-

telligence rather than to his prejudice. These are the qualities that have made Mrs. Catt the greatest leader of women of her time."

CHAMBERLAIN, JOHN RENSSELAER,
Oct 28, 1903- Author; critic
Address: Cheshire, Connecticut

As a book reviewer and critic on the New York Times and other publications, more recently as an editor of *Fortune*, John Chamberlain became known, in spite of his youth, for his mature consideration of social and economic matters. Published in March 1940, his second book, *The American Stakes*, commanded the respect of critics for its calm evaluation of the current political and economic scene in the United States. Chamberlain belongs to that generation under 40 which did not get "lost," but which has become the product of an "enlightened disillusionment." In some respects he might be called its liberal spokesman.

Chamberlain preceded the present volume with *Farewell to Reform*, published in 1932. It was a presentation of the rise and course of liberal thought in America, in politics and in literature, during the last 30 years. In it he considered the muckrakers, the progressivism of the Roosevelt and Wilson eras, and the theories of planned economy as proposed by such men as Chase, Soule and Beard. Chamberlain's conclusion was that reform methods had failed to advance the welfare of democracy. He says that if he were writing it again, he would come to some different conclusions. He no longer sees history as a lesson in the failure of reform. How he does see it, today, he attempts to tell us in *The American Stakes*.

Economic factors are the prime determinants in history and in our world, John Chamberlain believes. In a democracy political rights have no reality except as a function of economic rights. We should not overthrow, but modify, the capitalist system in order to obtain these rights—and it is in the interest of capitalists to take part in this process of modification. In 1932 Chamberlain had only scorn for such a "planned capitalism," saying that the situation could make one "either a cynic or a revolutionist." In 1940 he leans toward social democracy, or political pluralism, in which he adopts the "gradualist" approach to reform. He tends to reverse his previous sympathy for Marxism by saying that "no clear cut victory of any class over any other class is immediately at hand." All that he finds left to admire in the Soviet Union is the New Economic Policy. He analyzes the products of New Deal reformism, and indicates that they point the way toward participation in the benefits of a "limited racket" government. Mayor La Guardia (see sketch this issue) appeals more to him than does President Roosevelt.

Other topics discussed by Mr. Chamberlain are consumers' cooperatives, monopolies, foreign trade, and isolationism. He would have us produce and consume cooperatively at home, stay out of Europe's War, and extend our economic aid when a unified Europe was willing to lower trade barriers everywhere. He does not attempt to answer all the questions he brings up,

JOHN CHAMBERLAIN

preferring to look forward to their answers through possible gradual change and accomplishment.

John Chamberlain was born in New Haven, Connecticut October 28, 1903, the son of Robert Rensselaer and Emily (Davis) Chamberlain. He attended the Loomis Institute at Windsor, Connecticut; and then, as a matter of geographical convenience, went to Yale. There he was a good, but not brilliant student, having done little serious reading. He wrote a little poetry, was on the board of the *Yale Literary Magazine*, ran a column à la F. P. A. in the *Daily News*, and was chairman of the *Yale Record*. He specialized in history; but his roommate, William Troy (now also a critic) drew his attention to contemporary literature.

After receiving a Bachelor of Philosophy degree at Yale in 1925, he got a job, which lasted four months, with the Thomas F. Logan Advertising Agency. Then he became a reporter on the *New York Times* from 1926 to 1928. He preferred covering Washington, since his interests tended more and more toward national politics and economics. He got a good practical grounding in the contemporary American scene that was to serve him well when he became a reviewer of books on socio-economic problems. He became assistant editor of the *New York Times Book Review* in 1928; and in 1932 published his *Farewell to Reform*. He wrote no other books until *The American Stakes*, but subsequently became a contributor to symposia such as *The Critique of Humanism* (1932); *Challenge to the New Deal* (1934); and *After the Genteel Tradition* (1937).

He served for a few months in 1933 as an associate editor of the *Saturday Review of Literature*; and in that year became daily

book columnist for the *New York Times*. His work as a daily book reviewer—and a good one—for three years, moved his friend Clifton Fadiman to admiration. Mr. Fadiman said of it: "His stuff has been analytic, more like monthly periodical journalism than like the hurried product of the daily grind. How did he do it? For one thing, he has that peculiarly journalistic gift of being able to write—and write well—under pressure. And he writes quickly, straight on to the typewriter, without much revision, 1,200 words in an hour and a half (which makes him a good typist too.)" Fadiman says further that Chamberlain has a phenomenal memory for facts. But he had to give up book reviewing because he felt that his "universe of ideas became fragmented."

He was book editor of *Scribner's Magazine* in 1936, and the same year became an editor of *Fortune*. The latter job he likes because of the opportunity it offers for various contacts and associations. "One month they will be with business men," he says, "the next month with New Dealers, the month after that with specialists in foreign exchange, and the month following—who knows?" It all depends on the type of assignment." He has been a lecturer at the Columbia School of Journalism and the New School for Social Research; and at present does book reviewing for *Harper's Magazine*.

He married Margaret Sterling of New Haven, Connecticut, April 16, 1926. They live in Cheshire, Connecticut.

John Chamberlain, as his friend Clifton Fadiman describes him, looks even younger than he is. "He owns a shy, deprecating smile (complete with dimple) and a tentative manner of speaking, both tending to obscure the fact that his mind has a sharpness and an unbluffability quite remote from that of the conventional college graduate. He is the kind that will never try to out-argue anyone, but on the other hand will rarely permit himself to be fooled."

Of the books he has read which have radically impressed him, Chamberlain names *This Side of Paradise*, by F. Scott Fitzgerald, Randolph Bourne's *Untimely Papers* and the works of Thorstein Veblen and William Graham Sumner. He thinks Edmund Wilson and Van Wyck Brooks the best living American critics, and prefers Archibald MacLeish (see sketch this issue) to any other contemporary American poet. Among reviewers he admires Malcolm Cowley and Robert Cantwell. He believes that Heywood Brown was the best all-around journalist in America.

Chamberlain thinks that his generation, compared with its predecessor, knows more but has less personality. It tends to think more about the world than of itself. This objectivity marks the difference between men of Hemingway's War generation and those who were too young for the War. Fadiman believes that in Chamberlain's case it is not only a matter of seriousness of temperament, but of genuine modesty. "He

is the only literary man I know who blushes when you praise him."

But it is the opinion of many that Chamberlain's ability tops his modesty. Good things are expected of him, beyond his present accomplishment, because he keeps an open, skeptical mind, is willing to admit errors in judgment and to change his opinions and tries to be an objective observer, even though he describes himself as "a free-lance radical who refuses to be bound."

CHAPIN, JAMES (chā-pīn) July 9, 1887—
Artist

Address: b. 182 W 4th St, New York City;
h. R. F. D. 1, Annandale, New Jersey

A retrospective exhibition of James Chapin's paintings selected from work done between 1924 and 1940, and held at the Associated American Artists' Galleries in New York City in March 1940, attracted considerable public interest and critical attention. Fellow artists such as Grant Wood (see sketch this issue) put him in the front rank of American painters. The New York

Times art critic says that this show "establishes his position as second to none in our contemporary roster. It contains some of the finest paintings of our time."

James Chapin was born in West Orange, New Jersey in 1887, the son of James A. and Delia S. (Ryder) Chapin. He left school at the age of 16 and worked as a bank runner in New York while studying at Cooper Union at night. Later he entered the Art Students League and went abroad to study at the Royal Academy of Art at Antwerp, Belgium, where he received the first award and gold medal for drawing. On his return to New York after two years, he earned a meager living as illustrator of books such as his friend Robert Frost's *North of Boston* and of magazines.

In 1924 he left New York to go back to live in the farm lands of lower New Jersey. There he turned from post-impressionism to the painting of the American scene. He rented a log cabin near Newton, for \$4 a month, from a primitive farm family named Marvin. The Marvins don't know it, but portraits of them, as symbols of Americana, now hang in the Duncan Phillips Memorial Gallery in Washington, D. C., in the John Herron Art Museum in Indianapolis, in the Pennsylvania Academy of Fine Arts and in the Art Institute of Chicago. Four of these Marvin family portraits are among the high spots in the 1940 exhibit. One of the series received the Temple Gold Medal for the best painting by an American at the Pennsylvania Academy of Fine Arts in 1928.

In addition to the Marvins, the 56 oils in the show depict almost all phases of the American scene. There are other portraits, including those of Robert Frost and Katharine Hepburn. There are the rolling New Jersey farm lands, first memorably painted by George Inness. *Bank of a Stream* (1924) still shows an affinity for the impressionism of Cézanne; but *Planting Potatoes* has the very smell of the soil in it; and *Barn in Snow* (1931) is essentially a near-abstract design. Critics say that his *Grindstone* is a "felicitous example of his successful merging of penetrating characterization achieved through a realistic approach, with rhythmic, plastically animated composition."

The exhibition contains also the painting, *Pork Chops*, a scene of butcher and customer in a city meat-market; a fine *Old Man in a Railway Coach*; a young High Bridge, New Jersey, *Ball Player*; and an Ethel Waters *Blues Concert* in Carnegie Hall—a concert which the artist attended in 1939 with his 20-year-old son, a swing enthusiast. His work in the late '30s is represented by *Railroad Workers*, *Lime Kilns* and *Quarry and Strawstacks in Utah*.

Chapin's works are owned in the permanent collections of several art institutes and colleges and by private collectors and he was one of the artists commissioned to do a painting for Walter Wanger's *The Long Voyage Home*. He maintains a Greenwich Village studio in New York, but for the past eight years has rented a modest farm near

JAMES CHAPIN

High Bridge, New Jersey. He lives there with his second wife, Louise Vermont, whom he married in 1925. The shy, grizzled painter teaches one day a week at the Pennsylvania Academy of Fine Arts in Philadelphia, explaining that he used to be a seven-day-a-week artist but is now a six-day painter. "Art," he says, "is just about my whole life."

 Who's Who in American Art

CHAPLIN, CHARLIE Apr 16, 1889-
 Comedian; moving picture actor and producer

Address: Charles Chaplin Studio, 1416 La Brea Ave, Los Angeles, California

Few pictures in the history of filmdom have been awaited as eagerly as Charlie Chaplin's *The Great Dictator*, in which he plays a double rôle: that of the lovable little tramp with a soup-strainer mustache and baggy pants, who, as the late Will Rogers had said, is better known in Zululand than Greta Garbo is in Arkansas; and the ranting, roaring Führer with an identical mustache and a mania of grandeur. His "satire on monomaniacs" was in preparation for two years; little information was given out about it, and the work going on at the Charles Chaplin Studio was veiled in secrecy. When *Life* tried to print some of the pictures before Chaplin deemed it suitable, that publication was threatened with a suit and had to withdraw the pictures. There were vague stories of threatening letters from representatives of "interested powers," of sabotage—according to Chaplin himself, these rumors were mostly exaggerations. But they served to build up an atmosphere of anticipation that culminated in mobbing the theatres in which the picture was finally shown.

The reviews ran the gamut from unqualified praise to regrets that Chaplin left the realm of pure comedy to descend to propaganda. Everybody loved the part where Charlie, as the little barber, shaved a startled customer to the tune of Brahms' *Hungarian Dance*; or his dance as Führer Hynkel with the balloon on which the world is painted—a delicate and barbed piece of satire. Most repeated was the objection to the impassioned speech with which Chaplin, stepping completely out of character, ends his picture. One critic wrote: "This is not a great Chaplin picture. . . . No time for comedy. Yes, time for Chaplin comedy. No time ever for Chaplin to preach. . . . no matter how deeply he may feel what he wrote and says." Perhaps the most searching comment was: "He wants to be more than the great clown. He wants to play Hamlet and be a political thinker and cry out in the wilderness. He's the boss, so he

G. Maillard Kessler

CHARLIE CHAPLIN

does." Chaplin himself said simply: "I had to do it. . . . All my life I've hated oppression and stupidity and now I have a chance to do something about it when it needs doing worst."

Every big picture produced by Chaplin in the last decade was reputedly his last one, and the next one was invariably hailed as a comeback. The fact is Chaplin simply produces pictures at his leisure; he is one of the millionaires in the industry (he had something like \$6,000,000 before he started making *The Great Dictator*, into which he put \$2,000,000 and he can afford to take his time, all the more so since he is the producer and the chief actor; being, besides, a rabid perfectionist, he does take his time. He keeps his staff on a payroll during all the idle months, "storing up energy," so that they are ready to start at a minute's notice.

Charlie Chaplin was born in a poor district of London—oddly enough, four days before Adolf Hitler was born. His father, Charles Chaplin, was a vocalist on the variety stage, his mother, whose stage name was Lily Harley (her real name was Hannah—the name of the girl in *The Great Dictator*), was a singer. Charlie's boyhood was an unhappy one and affected his later character considerably. His parents had separated and he and his brother Sydney, also a well-known comedian in his time, lived with their mother. His mother had a profound influence on his life. Chaplin was always proud of the strain of gypsy blood that came from his mother's side and that, he claims, was responsible for his ability as an actor. She had a gift for story-telling and mimicry that used to delight him when he was a child.

The Chaplins lived in abject poverty—Charlie's mother died in the poorhouse and

CHAPLIN, CHARLIE—*Continued*

the boys had to work for a living when barely out of school. When Charlie was 14 he took a job with a printing press establishment. But he had a tremendous passion for the stage and he and his brother Sydney used to hang around backstage looking for a chance to show their talents. Their parents' connections made it easy for them. In 1899 he was touring music halls as one of the dancing team called the *Lancashire Lads*. His first significant debut in the theatre was in 1905 as page boy Billy in *Painful Predicament of Sherlock Holmes*, with William Gillette.

Later he joined Fred Karno's company in music hall sketches. Little by little he built up his originally small part (he had been pinch-hitting for his brother Sydney, who at that time was the better known of the two) until he became the mainstay of the act, which broke up when he left it. The troupe came to the United States in 1910. Chaplin was a success here. People came away remembering the wistful little man who leaned against the proscenium and commented on the antics of the other actors in eloquent dumb show. He was hired to make films for the Keystone Company under Mack Sennett. There he was paid \$150 a week and produced pictures the way a Roman candle throws off sparks. During the time he worked for Sennett he made 50 films. His first picture was called *Tillie's Punctured Romance*, with the late Marie Dressler. It was when he was shooting the second picture that he evolved his present immortal costume. He cut down his comical walrus mustache to an even more comical little brush. The rest of the costume with the jaunty cane and derby was based on the attire of the shabby but genteel little London clerks. Chaplin has used the same costume since, keeping the huge cracked boots in ether between productions.

The pace was terrific. One of the things that contributes to the present leisurely pace of Charlie's pictures is the memory of the Sennett days when he shot pictures "off the cuff" at the rate of one a week. In 1915 he changed over to the Essanay Company and then to Mutual Film Corporation. By that time he was beginning to be very well-known: the two studios were fighting for his services. His threat to resign threw the Mutual producers into panic and got him a million-a-year contract which enabled him in 1918 to set up his own studios. Chaplin was the first to become a millionaire in pictures. In 1920, together with Mary Pickford, the late Douglas Fairbanks (see sketch this issue), and D. W. Griffith, he founded the United Artists Corporation of which he is still a major stockholder.

Meanwhile the world was deluged with Chaplin pictures: small chronicles of lamentable adventures of the little tramp who is constantly sideswiped by life and who every time comes up slightly dazed but jaunty

and goes on his duck-footed way twirling the indomitable cane. He was a lovable mass of crazy contradictions: utterly ragged, he cultivated princely airs; an arrant coward, he was driven to unbelievable lengths by gallantry and a wish to impress his love; and small and pitiful as he was, he yet managed to protect those even smaller than he. He combined a gamin's mischief with a sense of genuine tragedy, and as often as not your heart broke while you were laughing at his predicaments.

At first he produced only two-reelers, including the inevitable chase by mustachioed Sennett cops and pie-throwing. Later, when he got on his own, he began also to produce six-reelers. In 1918 he made *Shoulder Arms*, a satire on militarism. Then followed *The Kid* (1920), with Jackie Coogan, whom Chaplin discovered, and *The Pilgrim* (1922). In 1925 came *The Gold Rush*. Most of Chaplin's big pictures are based on some real event: *Gold Rush* was suggested by the Brenner Expedition tragedy. It will long be remembered for the marvelous scene in which starving Chaplin, for want of anything better, cooks his boots, eats shoelaces as if they were spaghetti and with consummate grace picks nails out and sucks them with relish. As independent producer Chaplin made *The Woman of Paris* (1920), the only picture in which he himself does not appear. In spite of baleful predictions it turned out to be an artistic success. After *The Gold Rush* the pace of his productions fell off. The next film was *The Circus* in 1928; it did not come up to the level of his other pictures, reputedly for personal reasons: the shooting of *The Circus* coincided with the breaking-up of his marriage to Lita Grey, his second wife (the first was Mildred Harris, also an actress), and the prolonged suit about the custody of his two children.

Meanwhile the talkies had come in without Chaplin's paying any attention to them at all. He could say what he wanted to without uttering a word and he was understood the world over. His *City Lights* (1932) began with what amounted to a "Bronx cheer" directed at the talkies: a speaker addressing a crowd in confused, indistinct, blurry utterance that was characteristic of the talkies when they first began. In *Modern Times* (1936) he broke into sound with his wordless little song—a sort of Katzenjammer French—that delighted the audience hugely. In *The Great Dictator*, he speaks—in the fervent gibberish that is a travesty on Hitler's speeches ("Demokratien shtoonk! Libertad shtoonk! Frei Sprecken shtoonk!") and in the gentle, diffident voice of the little barber with its somewhat British accent.

Chaplin has been living in Hollywood since he was 24 and has become one of its legends. There are all kinds of picturesque rumors about him—about the strange influence he has exercised on the characters and lives of all who came in contact with him. All

his leading ladies were supposed to have failed in pictures—Mildred Harris, Lita Grey, Virginia Davis. That jinx has been broken by his present wife, Paulette Goddard, who has played with him in *Modern Times* and *The Great Dictator* and is a well-known actress in her own right. But "Hollywood is full of workers who carry on after they have left him bearing the stamp he gave them—Menjou is a celebrated instance." Many of the people who work with him have been with him since the beginning of his career—Al Reeves, whom he took on from the old Fred Karno act, Henry Bergman, and Rollic Tothoroh, who has not missed shooting a Chaplin picture in those 25 years. His brother Sydney is now his manager.

Chaplin is a small man with baby-pink complexion, a pompadour of gray hair and dark, tragic eyes. Someone said: "No one who sees the eyes of Chaplin can feel like laughing." His hands and feet are tiny. He is a superb gymnast—is a good enough tennis player to give Fred Perry a good game, is an agile acrobat, is a fine swimmer and an excellent dancer, with a sound ballet training. His little dances are a delightful and important part of his pictures. He is also a good musician, excelling particularly in pipe organ and, besides directing his pictures, writes most of the music.

His temperament is volatile; he has moods of dark depression and of extreme elation when he convulses his companions by his marvelous mimicry. He is a mass of contradictions: he is one of the best businessmen in Hollywood, in spite of that unworldly look. All his pictures have made money, yet he hates to have anything to do with money, does not like to pay checks (this has given him his reputation of a penny pincher), preferring to have everything charged. He used to have a mania about being poor. Long after he had become well-known and had made a lot of money, he was living in a modest room at a club. His brother Sydney had to bully him into getting a car and a house, after which he got more or less into the swing of spending money. He went through a period when he sought acquaintance with celebrities: was visited by Harold Laski, Aldous Huxley, John Steinbeck (see sketch this issue) and others. Yet he has always remained somewhat of a hermit, shunning Hollywood's social functions. He likes low comedy and burlesque shows and goes down to Los Angeles' toughest quarters to see them. Without any formal schooling, he has a sort of instinct about things that saves him from making blunders. "He knows what he knows in his bones." He is a merciless disciplinarian when on the job, yet hates any sort of routine. He is considered a radical in Hollywood; yet when Upton Sinclair was running for office he refused to support him, in spite of having approved of his EPIC plan.

His popularity has remained unimpaired. He is loved as Charlot in France, as Carlitos in Spain, as Carlino in Italy (perhaps not so much now after his lampoon of Mussolini). His pictures are shown on Africa's Gold Coast and in Timbuctoo and the natives love them. He is an idol with the Japanese, who yearly celebrate his birthday with a parade. His latest picture, though, is for purely domestic consumption.

CHARLEY CHASE

CHASE, EDNA WOOLMAN Mar 14, 1877- Editor in chief of *Vogue*

Address: b. 420 Lexington Ave, New York City; h. 333 E 68th St, New York City

In August 1940 an event of great significance took place in the world of fashion—one presaging great changes. At about this time every year Edna Woolman Chase, the editor in chief of *Vogue*, broadcasts news of the French collections from Paris to the American audiences. This year, however, she addressed them over NBC in New York and her subject was American collections and fashion trends. The blackout of Paris has turned the eyes of the world to New York, which is taking this opportunity to make a bid for becoming the world fashion center—with the approval of no less a personage than Mayor La Guardia (see sketch this issue), who has been promoting this trend with his usual energy.

Mrs. Chase, as one of the high priestesses of fashion, holds in her hands the sartorial destiny of New York. For many thousands of women she is the final authority in all matters of fashion. Her pronouncements in that field are held in respect not only in New York but in Paris and London, where independent editions of *Vogue* are published under her guidance. She holds high hopes for the progress of American design and has no qualms about the future, when the American designers will have emerged from the tutelage of the French *haute couture* and blossomed out on their own. "Many American designers," she says, "learned and were inspired through the authority of Paris. Yet many others who never went to Paris have designed very wearable, much-sold models." As one who has been responsible to a great degree

for the fostering of French design in the United States, she is anxious to keep here some of its better features; for example, the cooperation between designers and fabric makers which has made the French *ateliers* famous for the high quality of their products.

Edna Woolman Chase was born in Asbury Park, New Jersey, the daughter of Franklyn and Laura (Woolman) Alloway. On her mother's side she is a descendant of a Quaker divine, John Woolman. Her Quaker ancestry, however, does not seem to get in the way of her rather worldly profession—on the contrary, she claims that it has endowed her with a sense of proportion which she finds invaluable. She passed through the usual gamut of private schools and tutors that is the lot of well-to-do young ladies. Then, when she was 22 years old, she joined the staff of *Vogue*, at that time a small weekly written "by society for society."

Mrs. Chase's 35 years of successful publishing are closely connected with the fortunes of *Vogue*: she has never been associated with any other publication. Her excellent business sense and unerring good taste have contributed to a large extent to transforming what was originally an amateur society chitchat sheet into the enormously successful fashion magazine. When Condé Nast acquired *Vogue* in 1909 he was so impressed by what he described as "her steel-trap mind . . . combined with all the intuitive qualities of a woman," that he made her managing editor. That he has shown superlative judgment in this is borne out by the fact that under Mrs. Chase's stewardship *Vogue's* revenue is far in advance of the other Condé Nast publications. In 1914 Mrs. Chase became *Vogue's* editor in chief, and later Paris and London editions also came under her control. She has continued in this position until now at a salary reputedly between \$50,000 and \$75,000.

Mrs. Chase has left a significant mark on the fashion publishing world. She has been an assiduous importer of new things from abroad—particularly from France, thereby meriting the gratitude of the French Republic in the guise of the tiny red ribbon of the Légion d'Honneur bestowed upon her in 1935. Under her, *Vogue* has kept abreast of the newest trends in decorative arts—in photography, decoration and illustration as well as designing. She was the first to introduce the application of modern art into the fields of illustration and advertising, by contracting shortly after the War for the services of modern artists like Lepape, Martin, Marty, Brissaud, Guy Arnoux and Benito. This was a dish that at first was strange to the palates of the American public. Now, of course, the application of the canons of modern art is general throughout the publishing and advertising world.

The appearance of Mrs. Chase is extremely deceptive. Far from being an

Baker

EDNA WOOLMAN CHASE

aggressive executive type, she is a tiny and very feminine person, with a fluffy aureole of snow-white hair and lively brown eyes. In fact she is something of a pocket edition of her actress-daughter, Ilka Chase, her only child by a first marriage (to Francis Drake Chase). Ilka has taken a page from her mother's book and, besides being a successful actress, has been getting considerable attention as a fashion and gossip commentator on the radio.

Mrs. Chase can best be described as an ardent perfectionist. She ascribes her success as editor to the fact that she is extremely hard to please. "My waste basket is my strongest ally," she says. "I discarded what was bad, also anything that was merely 'good enough.' . . . Many a photograph, many a fashion was brought to me that could have been published without the public seeing anything wrong. . . . But over a period of time such a policy would have had its deadly effect." She possesses "the ruthlessness of an expert taste and the courage to insist upon it"—in no uncertain terms, either. Characteristic was her address to the Shoe Guild in 1939, the year when the heel-less shoe campaign got into full swing. She said: "Gentlemen, I want to plead with you to stop this promotion of the open-toed, open-backed shoe for street wear. . . . Today you see millions of women all over America slop-slopping along the streets with not only their toes out, but their heels out too. . . . All this makes me very sad."

People who work for Mrs. Chase find her exacting and difficult to please. She herself dresses beautifully—usually in simply cut clothes, but always with a feminine touch of a soft jabot or a rich pin. She expects the same unerring good taste in clothes

from her staff. College-girl job seekers distress her: the fine minds inside their heads are too often entirely eclipsed by the "unspeakable hats on top of them." She also feels uncompromisingly that "sex is definitely out as a business asset."

In private life Mrs. Chase is the wife of Richard Newton. She herself has planned their country home at Oyster Bay, Long Island, a charming, long, low house with the poetic name of "Four Winds," surrounded by apple trees and facing a small lake. She likes to work in the garden and play golf.

 Who's Who in America

CHASE, MARY ELLEN Feb 24, 1887-
 Educator; author

Address: b. Smith College, Northampton, Massachusetts; h. 16 Paradise Rd, Northampton, Massachusetts

Mary Ellen Chase is known in literary circles as the author of some good novels with a Maine background; but her life work has been in education, and she prefers to think of herself as a pedagogue. She loves to write, but loves even more to teach. In 1940 a professor at Smith College, she looks back on 30 years of teaching experience; it is of this she writes in her latest book, *A Goodly Fellowship*, published in December 1939.

A modest but salty chronicle, it is full of delightful reminiscence and comment, keen and witty, a continuation, autobiographically, of the story of that Maine childhood which Miss Chase wrote of in *A Goodly Heritage* (1932). She begins with the teaching she herself received, particularly at home from her parents. At her father's request she began teaching in a Maine district school before she finished college. If you had anything in you, he said, teaching in a country school would bring it out. Her first real job was with the Hillside Home School in Wisconsin, a fine school that would probably be called "progressive" today. Following work at a fashionable girls' school in Chicago, and a brief period of study in Germany, she returned to teach in Montana—and also to write.

Miss Chase concludes with her happy experiences at Smith College, and pays a warm tribute to William Allen Neilson, until recently its president. Two things she objects to in the educational field: courses in education and its theories, not supported by experience; and the general quality of teaching found in graduate schools. Miss Chase writes also of some of her experiences as an itinerant lecturer.

MARY ELLEN CHASE

Mary Ellen Chase was born in Blue Hill, Maine, February 24, 1887. Her parents were Edward Everett and Edith (Lord) Chase. She has written much about her New England childhood in the two books mentioned above. She started in early trying to depict the scene and its people. But her first short story, published when she was 21, wasn't about Maine at all—it was a football story sold to the *American Boy* for \$17. Miss Chase sold more stories to help pay her way through college. She also taught school—and has written fervently and most amusingly of that first country-school job in the village of South Brookfield, Maine. In such a small backwoods village a teacher was an object of high suspicion, and had a great deal to live down if she came from college. And during this spring term there were several big boys of 16 and over who might otherwise have been at sea. Miss Chase had only one defense: her father had presented her, as a parting gift, with a stout razor strop. She stormed up and down the aisles madly flourishing this, though her knees were quaking; but she had no trouble with discipline after that.

She took degrees at the Universities of Maine and Minnesota, and taught in Western boarding schools until 1918. She was instructor and professor of English at Minnesota from 1918 to 1926; and since 1926 has been a professor of English literature at Smith College. There she devotes three days a week to teaching (nineteenth century prose writers being her specialty); the rest of her time she spends writing and filling her lecture engagements. She has spent many of her summers in England, exploring small country villages and towns in the Southern part of the country. Her humorous essays on English weather, trees, manners,

food, railway travel, etc., have appeared in a collection, *This England* (1936).

Besides textbooks and the above-mentioned works, Miss Chase has written numerous short stories, two adventure tales for girls and novels. Of these latter the best known are *Mary Peters* (1934), a story of a girl who passed her childhood on board her father's sailing ship, her later youth in a Maine village—a novel striking for the vigor and beauty of its prose; *Silas Crockett* (1935), a story of four generations of a New England seafaring family that is also a rounded history of Maine culture; and *Dawn in Lyonesse*, a retelling of the Tristram legend.

An artist as a writer, Miss Chase regards good teaching also as a fine art. Her students throng eagerly into her classroom, not only because of her enthusiasm for and thorough knowledge of English literature, but because she genuinely likes and understands young people. She approves the consuming interest of the younger generation in matters of national and international importance. She admires their capacity for ignoring the barriers of age and position, their honesty and their abhorrence of fraud and sentimentality.

CHASE, STUART Mar 8, 1888- Author; economist

Address: h. Georgetown, Connecticut

For many years the tragedy of waste—waste in man power, natural resources, money—and what to do about it, has been the lively concern of economist Stuart Chase. To the lay reader his books on our economic and industrial system, compared to others on the subject, are made refreshingly understandable by the use of simple terminology and concrete illustration. But Mr. Chase felt that he and many other writers failed in communicating their exact ideas and meanings to readers because of a slack or meaningless use of words, particularly abstract words, leading to false or diverse concepts. Accordingly, Mr. Chase examined word-waste in *The Tyranny of Words* (1938), taking up the science of semantics. A few serious students of se-

mantics pooh-poohed Mr. Chase's theories. But other critics found useful his attempt to clear away the confused use of abstractions in popular writing and oratory; and Sinclair Lewis called it the most important book published in 1938.

In *Idle Men, Idle Money* (August 1940) Stuart Chase confronts again the old problem, the tyranny of waste, with some initial acid remarks—via semantics—on the loose use of the terms "government" and "business." Waste of money is not so great an evil as waste of man power, Mr. Chase says. But how shall we keep prosperous on butter rather than guns? He points out that since the German Blitzkrieg our unbalanced national budget has ceased to be a moral issue. Our money is built on debt. The way in which income is divided among various groups, however, lies at the root of our difficulties.

Mr. Chase denounces over-saving, and is all for a system of taxation which encourages rapid spending. He approves the kind of government spending that has built, for instance, the Grand Coulee Dam. From the testimony given by industrial heads he further notes that today the money for plant and equipment upkeep comes from the firms' own "depreciation" funds: hence the investment banker is going out of business. Following an amusing divagation in a chapter called "Design for 1960" Mr. Chase sets before our current President six practical proposals for a solution of the idle money-idle men situation:

(1) Set up a permanent PWA for housing, dams, soil conservation, schools, highways, etc. (2) Put the Federal budget on a business basis, meaning the separation of capital expenditures from running expenses. (3) Amend the social security law to give every citizen unemployed after 65 a monthly old-age pension. (4) Increase personal income and inheritance taxes and corporate income taxes. (5) Provide a flexible WPA program for the remaining unemployed. (6) Create a new bank for long-term capital loans.

He ends his book with the statement that unless we are to go against a massive world trend, we must put men first and money second.

The Yankee-minded economist who denounces waste, and likewise over-saving, has nine generations of New Englanders behind him. He was born in Somersworth, New Hampshire, March 8, 1888, son of Harvey Stuart and Aaronette (Rowe) Chase. He attended the Massachusetts Institute of Technology for two years, then specialized in economics and statistics at Harvard, receiving his B. S. *cum laude* in 1910. Stuart Chase wanted to be an architect but instead practiced public accounting in his father's office until 1917. He disliked it but was good at it. His first wife was Margaret Hatfield, whom he married on July 5, 1914. They spent their honeymoon representing themselves as an out-of-work couple and became acquainted at firsthand with the un-

STUART CHASE

employment problem. They published their experiences on job-finding, factory conditions, etc., in a book, *A Honeymoon Experiment* (1916). Two children, Robert and Sonia Hatfield, were born of the marriage.

During the War Mr. Chase was in charge of the control of packers' profits under the Food Administration Department. After the War he was with the Federal Trade Commission investigating the meat industry; later he took charge of the accounting features of a milk investigation. In 1921 he joined the Technical Alliance in New York and became interested in the problem of waste from the wider engineering viewpoint. He has been with the Labor Bureau, Incorporated, since 1922 and has made studies for various labor and cooperative organizations on costs and on the general problem of waste in competitively organized society. He was one of the founders of Consumers' Research.

In 1924 Stuart Chase won *Life's* contest prize for his recipe for bigger and better wars; and a little later the Boni & Liveright prize of \$500 for the best review of Gillette's *The People's Corporation*. His first important work in his own field was *The Tragedy of Waste*, published in 1925. The book was praised by forward-looking economists for its sound suggestions for the prevention of waste of man power and of natural resources; but *Your Money's Worth* (1927) written in collaboration with F. J. Schlink, had a more popular appeal. A book of facts for the consumer about buying and selling, it discussed the real value of things bought compared with their cost.

Mexico; A Study of Two Americas (1931) compared the civilization of the two Americas, one based on handicraft, the other on the machine, and deplored the Yankee invasion of Mexico to destroy its vigorous

CHASE, STUART—*Continued*

craft culture. Mr. Chase's second wife, Marian Tyler, whom he married in 1930 after a divorce, collaborated with him on the book, learning Spanish in order to help him with the research. *A New Deal* (1932) described the growth of our economic and industrial systems and proposed ways to revise the economic structure without breaking entirely with the past. The title furnished the Democratic Party with its 1933 political slogan. *Rich Land, Poor Land* (1936) was a survey of waste in natural resources and of what the government was trying to do in the way of reclamation. He and Marian Tyler collaborated further in *The New Western Front* (1939), a brief, popular exposition of reasons why the United States should keep out of European and Far Eastern conflicts.

Mr. Chase doesn't like cities and prefers to do most of his work in the country. The Chase home in Connecticut is a rebuilt barn furnished with Mexican rugs and handicraft, and has a workroom where Mr. Chase tries his hand at furniture-making. He also likes to swim, play tennis, take hikes and chop wood to get into good writing condition. Before writing a book he does a tremendous amount of research, jotting down notes on cards. He writes rapidly in longhand and is a bad speller. Energetically interested in a good many things besides economics, Mr. Chase knows what he likes and doesn't like. "I like good conversation, white wine, Mexican Indians, high mountains, Fire Island, mighty bridges, pine forests, clean-cut thinking, Russian folk songs, Charlie Chaplin (see sketch this issue). . . I do not like billboards, hot dogs, high-pressure selling, radios, chambers of commerce, the stock exchange or Radio City." He is an avowed sun worshiper, spending as much time in the sun all year round as possible, and wishes the American public would learn to "go native." His own skin is nearly as brown as a Mexican's and he has a lean, lithe body and an inquisitive snub nose to go with it. "His hair is a sandy kind of gray that doesn't add anything to his years or his dignity. . . He is friendly, intelligent, alert, unpretentious and eager."

CHERNE, LEO M. (chŭrn) 1912- Editor; executive of the Research Institute of America; author

Address: b. 292 Madison Ave, New York City; h. 910 Grand Concourse, The Bronx, New York City

It can be stated without fear of exaggeration that Leo M. Cherne, "America's Outstanding Civilian Authority" on M-Day," and the answer to a baffled businessman's prayer, is one of America's most brilliant young men. Still in his 20's, he is called upon to interpret the New Deal regulations to business, to testify before the Senate as to the advisability of such projects as Senator Vandenberg's (see sketch this issue) proposal on incentive tax and profit sharing (December 7, 1939), and to lecture before the United States War College. His latest emergence into the public eye was Simon & Schuster's publication of his *M-Day and What It Means to You*, a concise and dispassionate analysis of America in wartime. This is a lavish pamphlet written in the question and answer method beloved by Simon & Schuster, a popular adaptation of material previously used in *Adjusting Your Business to War* (1939).

Cherne's career presents a satisfying spectacle of a Bronx boy making good. He was born somewhere near Willis Ave-

nue in 1912, a son of a Romanian composer, Max Cherne, and his wife Dora (Ballin) Cherne, who owned a printing and stationery store. He went to public school and was pretty good in chorus practice, having a fine voice of which he is still rather proud. At the age of 12 he joined the chorus of the Metropolitan Opera Company. He sang there for four years and got enough money to enable him to go to New York University. While going to college he did some journalistic work on the side: for the *Daily Mirror* and "a short-lived competitor" of *The Bronx Home News*. In 1931 he entered the New York Law School and was graduated from it in 1934. He was admitted to the Bar in 1936, after working for a year with the law firm of Blau, Perlman and Polakoff. Then he got a job with a publishing house called Whitgard Services by answering an advertisement in the *New York Law Journal*.

He was put to work editing a loose-leaf volume called *The Payroll Tax-Saving Service* which provided information on social security legislation. It immediately became clear that the young lawyer had found his berth. His colleagues, Edward Whittlesey and Carl Hovgard, regarded him as the "editorial brains of the business." It was his suggestion to turn the rather cumbersome compilation of the material into a publication giving specific information on concrete cases. The result was the *Social Security Coordinator*. At about that time Cherne acquired an interest in the business, Whittlesey having sold out his share. Whitgard Services eventually became the Research Institute.

The first *Coordinator* proved a success and Cherne put out another—*Federal Tax Coordinator*—and began work on his *Business and Legislative Report* in 1936. It came out in 1937, a rich-looking volume designed to appeal to the esthetic sensibilities of businessmen and abounding in political and economic chitchat. Among the books put out by the Institute were: *Guide to Tax Economy* (1937); *Adjusting Your Business to the New Legislation* (1939); and *Chart of Illegal Business Practices*, a pamphlet put out in the beginning of 1940.

The Research Institute, of which Leo Cherne is executive secretary, is a boon to harassed businessmen swamped in the flood of New Deal legislation, much of which is conflicting. The *Business and Legislative Reports* which Cherne edits is a fortnightly newsletter and its value lies in the extensive information which it supplies to its clients and in its uncompromising objectivity. The latter policy is pursued at the risk of offending the clients who often don't like some of Cherne's predictions.

But so far the policy of telling the clients what is so rather than what they wish to hear has been a profitable one. It has enabled the *Reports* to keep a fairly high score on accurate predictions: thus they have been uniformly successful in predicting

LEO M. CHERNE

Supreme Court decisions. It is the fairly prompt fulfillment of their prophecies that keeps them going. Cherne claims that if the CIO-General Motors settlement which he had predicted had been delayed for a few more weeks, the newsletter would have been ruined. As it is, the firm will probably make something like \$1,000,000 this year. Admittedly Cherne does not publish everything that comes his way, and Ferdinand Lundberg has pointed out that, for example, like other big "constructive and pro-business" newsletters in the United States, his *Reports* "are reticent about the activities of business lobbies and the corporation lawyers in Washington." At any rate they say more than is approved in higher government circles and have on occasion drawn oblique reproof from the Administration.

Cherne's first book on M-Day was written with the same ruthless objectivity and cold-blooded disregard for his reader's feelings. In March 1939 he went to Washington to find out more about it, and, after six weeks of research with full cooperation of the War Department, wrote *Adjusting Your Business to War*, a straightforward, unemotional account of what will happen to business on the M-Day, "that day without date when the United States goes to war." The book created considerable sensation in Washington, was used as a basis for a neutrality discussion in the Senate. The *Annals of the American Academy of Political and Social Science* in a scathing review called it "a blueprint for Fascism" which neglects to tell how "this Leviathan, once established, could ever be immobilized." On the other hand the *Springfield Republican* said of his *M-Day: What It Means to You* (1940), which was a popularized rehash of the first book: "Cherne has really written what, in another

CHERNE, LEO M.—*Continued*

time, might be regarded as anti-war propaganda." Cherne is neither for nor against M-Day. His job is to prepare his clients against its coming by giving information about it. He used the material he collected for another loose-leaf book called *War Coordinator*.

Now Cherne has added to his reputation as a student of government interference that of an expert on M-Day. He has been writing articles and giving lectures about it. His presentation of the subject—written or spoken—is lucid and orderly. The theme of his presentation is that: "Control by priorities will be the keystone of any control over industries exercised by the government in a war period. . . It will then become necessary to divert labor, capital and raw materials from industrial operations of a character non-essential to the purposes of the war to activities which are essential." Another element which he emphasizes is fixed prices.

Cherne may be found in his rather ornate office in the Research Institute Building. Against its impressive Gothic background he "looks like Ronald Colman in Technicolor." He is dark, slender and very handsome, a high-powered young executive with a dashing presence. In 1936 he married Julia Lopez, a girl whom he knew from his high school days, and is now the proud father of a daughter called Gail Stephanie, whose birth he hailed in a newsletter parody jocosely entitled *Labor and Procreation Report*.

His favorite hobby besides M-Day is music. He does some amateur composing on the side and enjoys singing his compositions, upon request, to whatever friends visit his palatial penthouse on the Grand Concourse (his roots are still in The Bronx). His wife accompanies him on the piano. A song of his entitled *I'll Never Forget* will be published in the fall.

CHIANG KAI-SHEK (chī-äng' kī-shĕk)
Oct 31, 1888- Chinese military and political leader

Address: c/o The Generalissimo's Headquarters, Chungking, China

CHIANG KAI-SHEK

Slim, poker-faced Generalissimo Chiang Kai-shek controls the destinies of China today more absolutely perhaps than any other living dictator controls his country. For Chiang is the symbol of Chinese unity and resistance against Japan. What war lords have been unable to do in thousands of years of Japanese history, Chiang Kai-shek has done. He has united China from a mass of provinces into a nation, fighting to the last ditch to stem the Japanese invasion.

The question as to what manner of man is Chiang Kai-shek, and how did he reach his position, is not easily answered. Chiang Kai-shek is full of contradictions, full of riddles. Even to the Chinese the self-contained, ruthless Generalissimo is not well-known. Unlike other strong men such as Mussolini, Hitler or Stalin, he shuns speech-making and publicity. He is first of all a soldier, hard-headed and practical. Statesmanship and diplomacy are to him merely the by-products of his successful soldiering.

Chiang Kai-shek's father, a wine merchant in Chikow, Chekiang Province, died when the future Generalissimo was nine years old. Soon afterward young Chiang Kai-shek was sent to relatives in Fenghu, where he was to go to school and to be apprenticed to a trade. But Chiang ran away and joined the provincial army. Since at that time the culture-loving Chinese considered soldiering the lowest form of occupation, his relatives prophesied that Chiang would come to no good. Chiang, however, surprised his relatives by taking first place in tests for entrance to the newly established military school at Paoting, the West Point of China, and went north to learn soldiering in scientific fashion.

In the meantime, according to Chinese tradition, he had been married off to a Miss Mao of Fenghu, a young lady whom he had never seen until the wedding. He was said to be about 15 at the time of his marriage, and was already the father of a son, Ching-kuo, when he went off to school at Paoting.

His mother, with whom his bride and child lived, approved of young Chiang's education. After a year at Paoting he was sent to the Military College at Tokio and it was his mother who sent him his living expenses and took care of his wife and child.

Chiang Kai-shek remained in Japan for four years. Japan in those days was the center of liberal and radical movements, and revolutionary Chinese were plotting with the Japanese for establishment of republican principles. Dr. Sun Yat-sen, future founder of the Chinese Republic, was an active figure in the organization of Chinese youth in the schools and colleges of Japan. Chiang heard Dr. Sun Yat-sen, became imbued with his revolutionary doctrines, returned to China and joined Dr. Sun Yat-sen's fight for the overthrow of the monarchy. He commanded a regiment in the first revolution.

In the next few years Chiang Kai-shek's fortunes rose and fell with the success and failure of the Nationalist cause. At one period he was a poverty-stricken clerk in Shanghai, at another a successful young officer. But he was still unknown to the great Dr. Sun Yat-sen, leader of the Nationalist movement. Chiang, with characteristic ambition and industry, succeeded in finding himself a patron, however, a wealthy revolutionist-financier who became interested in him.

Caught short in the stock market after a fling at business, Chiang was sent south by his patron with a letter of introduction to Dr. Sun Yat-sen. It meant the beginning of a close association with the Nationalist leader and a permanent identification with the revolutionary Nationalist cause.

Dr. Sun had formed an entente with the Russian Communists, and Chiang Kai-shek was sent to study Soviet military methods and political institutions. When Chiang returned a year later he organized the Whampoa Military Academy, later to become the nucleus of Nationalist China's Army. Chiang realized that if the Nationalist cause was to be successful, it must have a trained patriotic army to fight the ever-recurring revolts against Dr. Sun's newly established government in Canton. He became principal of the Academy, which attracted a high type of Chinese youth with revolutionary ideals, and under his training these youths won the day for the Nationalists when Dr. Sun's Canton government stood close to defeat. Dr. Sun looked upon Chiang with new approval, and Chiang became commander in chief of the Koumintang (Nationalist) Army.

When Dr. Sun Yat-sen died in 1925, Wang Ching-wei and Hu Han-min were regarded as his rightful heirs, destined to carry on his political ideals and philosophy. Chiang had also been close to Dr. Sun Yat-sen, but he was a soldier rather than a politician. It took a hard headed, practical soldier to command the loyalty of the Koumintang after Dr. Sun Yat-sen's death, however, and Chiang's political influence increased with his military victories against the feudal war lords whom the Koumintang had set out to conquer.

His sympathies at this time were turning to the side of the Chinese against the Russian Communists. But he did not yet break with the Communists. He used them on his march north. Michael Borodin, Russian Communist organizer, went ahead of the army, organizing workers, stirring up revolt and creating converts to the Koumintang flag. And Chiang and his army followed, using bribery or bullets, as the situation demanded, to conquer the feudal war lords.

From Canton to Hankow, Chiang marched victoriously: Southern China was uniting under one banner. But Borodin's work had been too thorough. The peasants demanded more than lip service: they wanted abolition of excessive taxes, dispossession of the gentry. Chiang was alarmed. Even if he had at one time been a believer in the revolutionist ideology he was not going to have a social revolt interfere with his military plans for a united China. At any rate, he made an about-face. He turned to the Shanghai bankers for aid. They were to support Chiang and his establishment of new governments at Nanking and Shanghai and Chiang in turn was to rout the Communists. There followed a wholesale murder of Reds, as Chiang began his long attempt to bleed the Koumintang Army white.

A tremendous howl went up within his own party. In the split that followed Chiang Kai-shek resigned. But he had followed the old maxim: "never resign until you are indispensable." The Nationalist leaders decided a united China was worth all differences of opinion and recalled him. He resumed his post January 4, 1928, and on February 1 the National Executive Committee elected him chairman of the National Military Council. He was back stronger than ever.

In the few weeks while still plain Mr. Chiang, the Generalissimo took care of a matter of the heart. He married Soong Mei-ling (see sketch this issue under Chiang Mei-ling), daughter of a wealthy merchant and banker, an American-educated Chinese girl, who was to become China's most beloved first lady. The marriage took place in December 1927, after Chiang won another victory by overcoming the objections of his wife's family to his suit. He declared his first wife had been divorced by him, although there appeared to be some question as to the validity of the divorce.

CHIANG KAI-SHEK—*Continued*

Chiang's new wife was to have a tremendous influence on him. She interpreted the Western world to him, made him conscious of the social changes China needed and influenced him to become converted to Christianity. Intelligent and energetic Mei-ling could be entrusted, too, with political offices that could be trusted to no one else.

The first few years after his marriage Chiang Kai-shek was busy with civil wars in China, as he attempted to wipe out the Reds. After the Japanese invasion and the Manchurian incident his troubles increased. The Chinese, particularly the Communist element, were crying for war against Japan rather than his own people. Chiang thought his army was not yet ready. He continued a policy of appeasement.

The climax came when Chiang Kai-shek was kidnapped at Sian December 1936 by the forces of young Marshal Chang Hsueh-liang, his ally. The young Marshal's soldiers were calling for action against Japan and declared they were uniting with the Reds to fight Nippon. For two weeks Chiang's fate hung in the balance. Hsueh-liang finally freed Chiang, however, and offered himself as a prisoner to be punished. The whole incident was shrouded in mystery; writers give various explanations of it. All that is certain is that after the kidnapping Chiang stopped his war on the Reds and began fighting the Japanese.

Chiang has fought his war with Japan with a united China, Reds and all. It has been a fight of guerilla warfare and retreat for Chiang, but entrenched in the mountain fastness of Chungking, he is still confident of ultimate victory, still leads the Chinese people in a war to the death "still buoyant, dynamic and more optimistic than ever before." The "scorched earth" he has left behind to the enemy. He is still China's "strong man" and more than ever China's destiny depends on his success or failure.

Chiang has been called a dictator. He denies this, declaring that after a period of tutelage the people will have a voice in the government. His ambition to see a united, independent China is certainly unquestioned. He is utterly patriotic, ready to die for China. He has been called cruel and ruthless, and yet he has been generous, too. Chiang is in truth a Chinese enigma—an enigma that stands for the China of today and one that only future historians can solve.

CHIANG MEI-LING [MME. CHIANG KAI-SHEK] (chī-äng' kī-shěk') 1898-Director of the New Life Movement in China

Address: c/o The Generalissimo's Headquarters, Chungking, China

Madame Chiang Kai-shek has been called variously "the brains of China", "Madame Dictator" and "the first lady of China." The Chinese-born, American-educated wife of Generalissimo Chiang Kai-shek (see sketch this issue) has certainly had her hand in the destinies of her country since she married the commander in chief of the Chinese Armies, December 1, 1927.

Much of what she has known and learned about China during the years of its war with Japan is told in her book, *This Is Our China*, published in May 1940. It is a book that is "eloquent and stingingly outspoken"—no book to read "if you are planning to write an essay on Japanese culture." In it are travel sketches, stories, tales of old dynasties; in it is expressed her firm belief that China must fight on.

After having studied at Wellesley College from 1914 to 1917 the petite sweet-faced Miss Soong returned to her native land, and there in 1922 met the Generalissimo, at that time one of the most trusted disciples of her brother-in-law, Sun Yat-sen, founder of the Chinese Republic. Chiang Kai-shek was several years Mei-ling's senior, and a direct contrast to her in every way. He was cold, silent, practical, ruthless. Mei-ling

was vivacious, sensitive. Chiang Kai-shek had never been in any foreign countries except Japan and Russia and was thoroughly Chinese in thought and background. Mei-ling had been educated in America and was, as she once told an intimate friend, "Chinese only in looks." Nevertheless the two fell in love.

But the rich and powerful Soong family objected to the romance of its youngest daughter, Mei-ling, with the hard, ambitious young general. In the first place the Soongs were all Christians, and Chiang, as a Buddhist, was not only not a Christian, but not even a monogamist. He had been married before, and it was rumored that he had had concubines.

Mei-ling's family was rather remarkable. Her father had come to the United States in 1880, a poor hammock peddler from the Hainan Island, off the coast of South China. At the Fifth Street Methodist Episcopal Church of Wilmington, North Carolina, he became a Christian; at baptism he added the name Charles Jones to his family name of Soong, in honor of the man who was his religious sponsor, the captain of the ship in which he came to the United States.

Charles Jones Soong was an ambitious youth. An American became interested in him and sent him to school. Charles Jones completed his education, got an English theological certificate and returned to China to become a teacher and a Southern Methodist Episcopal missionary. He subsequently married a Miss Ni, member of a cultured Chinese family and a pillar of the church in Shanghai, and with her help founded the Chinese Y. M. C. A.

The shrewd Charles Jones also saw his opportunity in the demand for *Bibles* that the missionaries were creating in China. He printed Chinese *Bibles*, invested his earnings at the exorbitant Chinese interest rates, and became a merchant prince. All his children were American educated. The eldest daughter married H. H. Kung, a merchant banker and a lineal descendant of Confucius; the second daughter married Dr. Sun Yat-sen. His sons were China's richest bankers; T. V. Soong became an international figure.

Charles Jones Soong did not live to see the marriage of his youngest daughter, Mei-ling, but at the Soong summer home in Japan in 1927 General Chiang Kai-shek finally won Mother Soong's consent to the marriage. Madame Soong at first said that he could marry Mei-ling only on the condition that he became a Christian. Chiang replied that he could not swallow Christianity like a pill, for it was a philosophy that must be absorbed. He promised to study it, however. This pleased Mother Soong, and the marriage was solemnized with a Christian ceremony in Shanghai.

Proof of the influence of Mei-ling on her husband is the fact that he became a Christian three years after their marriage, and was baptized at the home of his mother-in-

MME. CHIANG KAI-SHEK

law by the Chinese pastor of the All-American Church.

Whether Madame Chiang Kai-shek is the real ruler of China and the dictator of Chiang Kai-shek's policies is open to debate. Yet even though Chiang Kai-shek is not a man who needed a woman's prodding, undoubtedly his wife has had a hand in shaping his policies. When Chiang inherited the mantle of Sun Yat-sen and became China's leader, he was more the ambitious war lord than the inheritor of the ideology of Sun Yat-sen. He might have remained a hard-headed, ruthless, though patriotic war lord, had it not been for Mei-ling.

Under Mei-ling's influence his war lord ambitions were curbed and redirected. Mei-ling, educated in the ideals of Christianity and democracy, brought some of those ideas back to China with her. China's New Life Movement, for instance, which is such an important factor in the social awakening of China, is Madame Chiang Kai-shek's idea. Although she gives her husband credit for it, the New Life Movement, according to American correspondents in China, originated in the minds of some Christian missionaries who thought the great masses of Chinese peasants were getting little out of the revolution. They approached Madame Chiang Kai-shek, who in turn approached her husband. Thus the New Life Movement, based on four old Chinese virtues—courtesy, service, honesty and honor—was born, with Madame Chiang Kai-shek its director and one of its most ardent propagandists.

The New Life Movement, although it was given a Chinese background, might have been lifted from the American credo: "Don't spit; safety first; good roads; watch your step; keep to the right; fresh air and sun-

CHIANG MEI-LING—*Continued*

shine; swat the fly; brush your teeth; stop, look and listen; better babies; clean up and paint up." Sewer systems have been built; people have been taught to boil and wash vegetables. The Chinese masses are slowly being made conscious of sanitation, of solving social problems and of the necessity for overcoming their centuries of superstition and lethargy.

Madame Chiang Kai-shek has had a tremendous influence in arousing sympathy for her country in its fight against Japan. She has written many articles for American magazines, attempting to show that China's cause is the cause of the democracies of the world and interpreting her country to Americans. In 1940 she published two books—*China in Peace and War* and *This Is Our China*—which again stated her country's cause, and incidentally aroused more admiration for the indefatigable Mei-ling.

Help from American women in the form of shipments of dressings and first-aid kits for China has been sent through Madame Chiang Kai-shek's influence. She herself is an ardent war worker, and her efforts have made many Chinese society women, who, despite the New Life Movement, still regard a coolie as just a coolie and unworthy of notice, take part in war work. Madame Chiang Kai-shek does not ask Chinese women to do what she herself will not do. She has dressed soldiers' wounds, has done sewing and active relief work.

War orphans and women in industry are her two chief concerns. In her relief work she travels from village to village, and her sound judgment and energy have resulted in accomplishments which high Chinese officials have not been able to effect. She has influenced factory owners to move factories out of war zones; obtained hand looms for refugees so they can weave simple cotton stuff to circumvent the Japanese blockade; and has been everywhere to arouse Chinese women to their new tasks.

But no matter how hard she works, and no matter how hot or sticky the weather, Madame Chiang Kai-shek is always immaculately groomed, always the picture of elegance in her simply cut Chinese clothes. She has charm, graciousness and beauty.

In addition to her position as director-general of the New Life Movement, Madame Chiang Kai-shek has served in an official capacity as secretary general of the Chinese Commission on Aeronautical Affairs. In 1936 the Generalissimo appointed his wife to the post in order to effect a radical reorganization. Chinese politics were so shot through with graft that Chiang, faced with buying airplanes quickly and cheaply, could trust no one but his wife to dicker with foreign salesmen and get the best bargains for China.

Madame Chiang Kai-shek also played an important rôle in getting the release of her husband when he was kidnapped in the Sian mutiny in his party in 1936. It was Madame

Chiang Kai-shek who kept her husband's followers from firing on Sian and thus perhaps endangering his life and throwing China into a civil war, and it was she who courageously went into the Sian camp to complete negotiations for his release.

War worker, patriot, founder of the Association of Chinese Women to Support the National Defense, director of the New Life Movement, it can be truthfully said that Madame Chiang Kai-shek converted her husband's desire for a united China from a mere political task to a crusade.

In their book, *China Fights for Her Life* (1938), H. R. Ekins and Theon Wright say of Madame Chiang Kai-shek: "It is quite true that if Chiang dies, the rule will pass into the slim hands of Mei-ling. She has not only been the supreme influence of his life since 1927, but she has obviated the need for understudies.

"More men probably would stand ready to act on the word of Madame Chiang than on the word of the Generalissimo. She has fewer enemies. Her husband has been ruthless, and held his subordinates by fear of his wrath and power; Madame Chiang has held them through admiration and almost nationalized love for this sweet-faced woman."

CHOTZINOFF, SAMUEL (shōts'ĩ-nōf)
July 4, 1889- Music critic; pianist

Address: b. c/o New York Post, 75 West St, New York City; h. 29 W. 85th St, New York City

Samuel Chotzinoff's life is like a Horatio Alger yarn in its triumphant struggle against poverty and adversity. Born in

Russia, he came to New York City with his parents at the age of six, and lived in what is now chic Sutton Place but was then a shabby, overcrowded haven for poverty-stricken immigrants. When his father died, the responsibility of supporting the family fell on young Samuel's shoulders. He was the family breadwinner at the age of 13.

"We went in strongly for culture," Chotzinoff recalls, "because it was cheaper than any other form of entertainment." Chotzinoff learned to play the piano largely through his own methods, and soon was teaching others in his neighborhood for 25 cents a lesson. It took a great deal of courage and hard work to get through high school. College seemed almost impossible, but a sympathetic friend helped him, and possibly influenced the entire course of his life.

"He was a dentist," Chotzinoff recounts, "and therefore, in my estimation, an extremely wealthy man." The dentist paid a year's tuition in advance for his son and daughter, to whom Chotzinoff was then teaching music, and the ambitious young musician was able to pay his tuition at Columbia University.

Chotzinoff kept at his music, and three years later when Efrem Zimbalist, the famous violinist, offered him the post of accompanist, he left Columbia. After several tours with Zimbalist, he played for Alma Gluck, Jascha Heifetz and many others.

In 1925 Chotzinoff made his debut as a newspaper music critic. Deems Taylor (see sketch this issue), becoming known as a composer, resigned his post as critic of the *New York World* and Chotzinoff asked for and got the job. He remained on the paper until its demise in 1930. He went to the *New York Post* as music critic in 1934.

To thousands of music lovers Chotzinoff became known chiefly through his rôle of commentator for the National Broadcasting Company's Saturday night broadcasts of Arturo Toscanini's symphony programs. It was Chotzinoff whom David Sarnoff (see sketch this issue), president of the Radio Corporation of America, sent to Milan, Italy, early in 1937, to broach the subject of radio broadcasts to the great Toscanini.

When Toscanini accepted the radio proposition which his friend, Chotzinoff, had been commissioned to present, National Broadcasting officials began considering the whole problem of serious music in radio. They reasoned that it would be a good idea to have someone with a double background of active musician and critic to supervise NBC music presentations in order to make sure that the musical art offered was of the highest type obtainable. Chotzinoff was sounded out on the idea, and became NBC's director of serious music.

SAMUEL CHOTZINOFF

To his job at NBC Chotzinoff adds the duties of music critic on the *Post*, with a full quota of concerts to be covered each week; he commutes to Philadelphia one day a week to teach a course in music criticism at the Curtis Institute of Music; directs activities at the Chatham Square Music School; contributes articles on music to various magazines and lectures occasionally.

Chotzinoff in 1939 was an important figure in a promotion stunt which his paper, the *New York Post*, arranged and which other papers have copied, so successful has the venture been. The *Post* arranged to have the Victor Recording Studio make a special series of recordings by important symphony orchestras playing anonymously and to sell music albums at cost to its readers. Chotzinoff chose the music and acted as key man in the scheme because he was close to Sarnoff, RCA's president. The *Washington Star*, taking over the scheme, formed a national music appreciation committee, and began distributing the symphonic records at \$1.39 a set. The idea has spread nationally.

Dark, velvet-eyed, stoop-shouldered, sensitive, Chotzinoff is familiarly known as "Chotzi." He was married in 1925 to Pauline Heifetz, sister of the violinist. They have two children, Blair and Anne.

CHRISTIE, AGATHA Author

Address: h. 58 Sheffield Terrace, London, W. 8, England; Ashfield, Torquay, England

Known for years to every detective and mystery story fan in England and America, Agatha Mary Clarissa Christie tops the good and growing list of feminine crime-careerists in the "whodunit" field. Next to the immortal Sherlock, Mrs. Christie's eccentric, rapier-keen little Hercule Poirot has attained the widest international reputation among fictional detectives.

The queen of sleuth-puzzlers does not depend solely, however, upon Poirot's Gallic talents: she has used other detectives, both professional and amateur. But with or without Hercule, no mystery addict would miss a Christie thriller. Possibly no rival in the whole detective-story camp has been able to turn out so many books with as consistently high a degree of merit as Agatha Christie has done for the past two decades. Since 1921, when her first was published, she has produced nearly 35 full-length novels and a considerable number of short stories as well. Her novels make the best-seller lists; her work has often been serialized in popular magazines before publication in book form. *And Then There Were None* (1940) appeared serially in 1939; *The Patriotic Murders*, which ran serially (August-September 1940) in *Collier's*, will appear in book form (February 1941) in this country.

The countryside of Devon, England has been the setting for a good many of Agatha Christie's stories. She was born there at Torquay. Her father, Frederick Alvah Miller of New York City, died while she was a child and she was educated at home by her mother. "An intelligent woman of great charm and character," the mother encouraged her highly imaginative daughter to write poems and stories. "As a youngster, it never occurred to me to be a writer," Mrs. Christie has said. "I was an atrocious speller and had a terrible mortification, when at school in Paris later, of having 42 faults in my *dictée*. No other girl had more than five, so I felt completely humiliated!" It was when she had a bad cold and couldn't go outdoors that her mother told her to write a story. The first one didn't come easily, but later she wrote others. "For some years I enjoyed myself very much writing stories of unrelieved gloom where most of the characters died. Also a good deal of poetry and a novel with an impossible number of characters in it."

Her great interest, however, was music; and when she was 16 she went to Paris to study piano and singing. But she did not take it up professionally because she was too nervous to play in public and her voice was not big enough for opera, which she cared about most. She went with her mother to Cairo for a winter and there wrote her first novel. She showed it to Eden Phillpotts, their friend and neighbor in Torquay;

AGATHA CHRISTIE

it was his encouragement that made her decide to go on writing.

A few months after the outbreak of the War in 1914 she married Colonel Archibald Christie of the Royal Flying Corps. They had one daughter, Rosalind, born in 1919. While her husband was in France, Mrs. Christie worked in a Red Cross hospital in Torquay and had little time for writing. She did, however, plan a detective story. It was at the challenge of her sister, who said almost no detective story was written in which one didn't know right away who had committed the crime, that she wrote *The Mysterious Affair at Styles*. It was rejected by several publishers before it finally came out in 1921.

In 1928 she received a decree of divorce from her husband and spent the next few years traveling, mostly in the East, while her daughter was at school. She visited Ur in 1930, where she met Max Mallowan, an archeologist then assisting Sir Leonard Woolley with archeological excavations there. In September of that year she and Mr. Mallowan were married. Since then she has spent part of each year in Syria or Iraq, helping with the photography on her husband's expeditions. She likes the desert and finds it a good place to write. An archeological expedition is the background for her mystery, *Murder in Mesopotamia* (1936).

Like most mystery story writers, Mrs. Christie lives quietly, avoiding publicity. She has, indeed, been called the Greta Garbo among them: she won't be interviewed, and even her publishers know little about her. But in 1927, briefly, she herself was headline news. Her car was found deserted in the Sussex downs. Mrs. Christie had disappeared: posses were sent in search, airplanes flying over the downs could find no trace of her. Then the police received a clue letter—the handwriting said to be strangely

like Mrs. Christie's own. Eleven days later she was found at a Harrogate hotel registered under the name of the woman her husband later married. Specialists said she was suffering from amnesia; others were skeptical as to this. Nevertheless the whole affair enormously increased the sale of Christie books.

Most of Agatha Christie's mysteries have been written in the Conan Doyle tradition, in which the egotistic, mustached, passionately neat little Belgian Poirot uses his brain cells—and his intuition—and gets results as surely as the thorough, scientifically analytical Mr. Holmes. For its deviation from pattern, and for the skill of its "trick" ending, her best-known novel is *The Murder of Roger Ackroyd* (1926). Many other detective story writers have questioned the legitimacy of the device she uses in it; but others—among them Dorothy Sayers—have rushed to her defense. The story undoubtedly stands among the classics in the modern detective field. Among her numerous books may be named *The Murder on the Links* (1923); *The Big Four* (1927); *Mystery of the Blue Train* (1928); *Partners in Crime* (1929); *The Murder at the Vicarage* (1930); *Peril at End House* (1932); *Thirteen at Dinner* (1933); *Death in the Air* (1935); *Dead Man's Mirror* (1937); *Murder for Christmas* (1939); *Murder Is Easy* (1940); and *Sad Cypress* (1940).

And Then There Were None (1940) represents Mrs. Christie at her slickest, rule-breaking best. It is a hair-raising thriller full of murders, past and present. Eight guests and two servants gather in a luxurious mansion on Indian Island off the coast of Devon: the hosts are missing. The guests suddenly find themselves doomed to die for crimes which they are alleged to have committed. As a warning of what is to come, a copy of the nursery rhyme, "Ten little, nine little, eight little Indian boys," etc., hangs in each bedroom. A terrific storm isolates these guests on the island, and one by one they depart from the land of the living. There is no Hercule Poirot present in this book, to stay the hand of the killer.

Agatha Christie says that the three severest critics of her books are her sister, her young daughter—whose judgments are very severe—and her archeological husband, whose comments are usually different from everyone else's. "As for my tastes, I enjoy my food, hate the taste of any kind of alcohol, have tried and tried to like smoking but can't manage it. I adore flowers, am crazy about the sea, love the theatre, but am bored to death by the talkies, and am very stupid at following them, loathe wireless and all loud noises, dislike living in cities. I do a lot of traveling, mostly in the Near East and have a great love of the desert."

**CHURCHILL, WINSTON LEONARD
SPENCER** Nov 30, 1874- Prime Minister
of Great Britain; author

Address: b. 10 Downing St, S. W. 1, London,
England; h. Chartwell, Westerham, Kent,
England

There are several schools of thought in
Great Britain about Britain's Prime Min-
ister, and not even his own party is united
in its estimate of his abilities. Among
Right-wingers there are some who think
him one of the cleverest men of his age;
"brilliant" is the adjective they most com-
monly use. Others of the same group think
him much too clever and mistrust him, not
because they doubt his integrity, but be-
cause they belong to that British upper-
class stratum which, as a matter of princi-
ple, looks askance at high intelligence.

Left-wingers in general dislike him, be-
cause to them he typifies an old England
of "the squire and his relations," a class-
conscious, possessive, grind-the-faces-of-the-
poor England which they want to see trans-
formed. In all groups there are large
numbers who consistently bring up three
dreadful words—Antwerp, Gallipoli and the
Murman Coast—words which in their time
meant blood, bereavement, muddle, horror
and disgrace. Churchill was responsible for
all three of these fearful misadventures in
the last War. That is enough for some
people.

Winston Churchill is a vivid, colorful per-
sonality, who may be detested, perhaps, but
never ignored. "He is impulsive, impatient,
quick-tempered, hasty at times in making
up his mind, intemperate in putting and
defending his conclusions." Nevertheless
he stands out among English public men
as a man of "character, of initiative, of in-
dependence and of tenacity."

Churchill's blood is very blue English
and very red American. According to Philip
Guedalla some key to Winston Churchill's
life can be found in his combination of
English and American traits. He is the
eldest son of Lord Randolph Churchill, third
son of the seventh Duke of Marlborough and
descendant of the original Duke, the victor
of Blenheim. His mother was an American,
the former Jennie Jerome of New York. Her
father, Leonard Jerome, cleaned up \$6,000,-
000 in the panic of 1857, led a dashing
existence and had Jerome Park and Jerome
Avenue in The Bronx, New York named
after him. It was in 1867, when he took
his wife and their three daughters to Paris,
that his daughter Jennie met and married
Lord Randolph Churchill, even though his
father, the Duke of Marlborough, was
"slightly shocked" at the thought of a trans-
atlantic marriage.

Churchill went to school at Harrow, one
of the two most famous English "public
schools," noted for the number of statesmen

it has turned out. From there he went to Sandhurst (the British West Point) and afterward served as an officer in several campaigns. He was with the Spanish forces in Cuba, the Malakand Field Force, the Tirah Expeditionary Force and the Nile Expeditionary Force. During the South African War he went out as war correspondent for the *Morning Post*. He contrived to get himself captured by the Boers (or rather by an individual Boer, who was none other than Louis Botha), and owed his life to the fact that he had lost his revolver. Later he escaped under the very noses of the sentries and scrambled aboard a train, eventually rejoining the British.

In 1900 Churchill began his Parliamentary career as a Conservative member. A reproach that is often brought against him is that he has changed about from party to party according to which happened to be in power at the moment. The year 1906 brought the big landslide to Liberalism, and surely enough Churchill appeared that year as a Liberal, being returned for North-West Manchester. His first job, beginning that same year, was that of Under-Secretary for the Colonies, and he held it for two years. In 1908 he was married to Clementine Hozier (their son Randolph was elected to Parliament in October 1940), after having been beaten in a by-election at North-West Manchester on promotion to the presidency of the Board of Trade. He was returned for Dundee (for which he continued to sit until 1922) and passed from the Colonial Office to the post of president of the Board of Trade, which he held until 1910. In that year and the next he acted as Home Secretary.

In 1911 Churchill became First Lord of the Admiralty. He is now generally recognized to have been a success there, and to deserve much of the credit for the Fleet's preparedness in August 1914. The disasters of Antwerp and Gallipoli at the time did his reputation no good, however. In 1915 he first sank to the minor office of Chancellor of the Duchy of Lancaster, and then went out to France as an officer. He had yet another narrow escape from death while there, moving from one dugout to another just a few moments before the first one was utterly obliterated by a shell.

In 1917 Churchill made a political comeback as Minister of Munitions, and between 1919 and 1921 was Secretary for War and Air. It was in 1919 that he conceived the extraordinary idea of sending an expeditionary force to northern Russia to assist the anti-Bolshevik projects of Wrangel and Denikin. There was no mandate from the British public for this, and the expedition came back with its tail between its legs; but this much can be said: the men who went out were volunteers. Churchill next went to the Colonial office again in 1921, but in the following year he lost his seat in Parliament. During the next couple of years he made several attempts to re-enter

WINSTON CHURCHILL

the House at by-elections, but his stock was very low and no constituency would have him. In 1924 he was returned for Epping, a country district northeast of London, and has sat for this division ever since. He was returned as an Independent, but voted with the Conservatives and was made Chancellor of the Exchequer. This office ended with the advent of the Labor Government in 1929.

According to John Gunther, for years Churchill seemed to stand on the wrong side of great social issues. He had been against the suffragists, against a liberal constitution for India, against "every shade and aspect of even the very mild brand of socialism advocated by the British Labor Party", "against the working classes"; and "during the General Strike, when he edited the official government newspaper," he had "behaved like a schoolboy." But this did not mean that he was in good standing with the Tories.

In recent years Churchill has always been in the background, but not very far back in it; and there has invariably been a strong body of opinion that favored the use of his talents in the government of the country. He was kept out of office by his lack of party orthodoxy on several important points. He disagreed with the official Conservative policy on India, for example; he was strongly against Mr. Neville Chamberlain's policy of "appeasement," and as a result he has been classed by Herr Hitler with Anthony Eden and Duff Cooper (see sketches this issue), as a "warmonger."

But the strong body of opinion prevailed. To the great satisfaction of most of England, Chamberlain appointed Churchill First Lord of the Admiralty seven hours after the War broke out in September 1939. There was satisfaction, too, when in April 1940 he was

CHURCHILL, WINSTON—*Continued*

made Chairman of the Armed Services Committee, which meant, actually, head of all the war forces as well as head of the admiralty. In May 1940 he became Prime Minister, and his appointment brought hope to many. To them his vigor, toughness and forcefulness were in sharp contrast to the apparent ineptness of his predecessor. Sir Archibald Sinclair (see sketch this issue), leader of the Liberal Opposition, stated in the House that six months of Winston Churchill before the War would have been six nails in Hitler's coffin. In October 1940 he was unanimously elected leader of the Conservative Party.

When Churchill describes the strength of the R. A. F. or the fighting spirit of the British people, his bold speeches also distinguish him from Chamberlain. "He has brought back the arrogance and splendor of Elizabethan language. Like Shakespeare Churchill detests the enemies of England and says so in words that carry across the seven seas." The English people love his snarling, scornful pronunciation of invective upon the "nahzies," and they find encouragement in such phrases as "In the end we'll break their hearts."

At the times when Churchill has not been in politics, he has been very prolific as an author and journalist. One of the highest paid journalists in England, it is said that he can command as much as \$500 for a thousand-word newspaper article. His historical and biographical works are marked by a brilliant power of exposition, a masterly handling of sources, a breathlessly interesting narrative and an elegant and polished style. His large book, *The World Crisis* (1923-29), is one of the most important works produced by the last War, and his recent *Marlborough* (1933-38) is acknowledged to be one of the best biographies of modern times. In fact, a commentator on *Marlborough* stated that, if Churchill hadn't made politics his career he might have been one of the most popular writers of his generation. His latest book is *Blood, Sweat and Tears* (November 1940).

Some years ago Churchill learned the craft of bricklaying, and whenever there is a building job at Chartwell Manor, his country home in Kent, he goes right out with his trowel. His other spare time hobby is painting, at which he spends a good deal of time and in which he is reputed to have acquired a good deal of skill. Some of his closest personal friends are artists like Sir William Nicholson and connoisseurs like Sir Edward Marsh.

In his appearance there is little which suggests the man's latent power. He is elderly, stodgy, fat, with a countenance that has been called both "puckish" and "cherubic." His figure, his black bow tie and the long cigar perpetually clenched between his teeth make him a pleasure to caricature. To much of England he looks and acts the perfect personification

of "John Bull." Actions like his entrance into the Admiralty seem typical. He, with other officials, received a pass to admit him, but, an eternal enemy of red tape, he tore it up the first day, explaining to the doorman: "My face is my fortune." Another story tells of him walking in the slums of the Midlands. "Fancy," he said, "living in one of these streets—never seeing anything beautiful—never eating anything savory—never saying anything clever!"

CIANO, GALEAZZO, CONTE (chä'nō
gä'lä-ät'tsō) Mar 18, 1903- Italian For-
eign Minister

When Italy joined Germany in the present war her Foreign Minister, Count Galeazzo Ciano, was in command of a bomber squadron. The man who together with Mussolini did his best to bring about the

Rome-Berlin axis, fought for that axis, undoubtedly with all the "reckless bravery" he demonstrated in the Ethiopian War. Now that the War is progressing from county to country, from battlefield to battlefield, Count Ciano has been found successfully conferring with Spain, urging Romania to yield to the Axis' demands, pushing Italy's demands upon Greece. He has been in conference with Hitler and Von Ribbentrop over the whole Balkan situation.

Mussolini is proud of his Foreign Minister and son-in-law—proud of him as a fighter and as a diplomat; and because of his success in carrying out Il Duce's commands, Ciano is the man whom "Mussolini has chosen to succeed himself as dictator of the Italian Empire." Although from time to time Mussolini snorts: "My successor has yet to be born," and although he probably believes that MUSSOLINI can have no successor, he has groomed the husband of his favorite daughter Edda with great care for the post.

Ciano has responded. Ideologically and practically he has followed Mussolini's lead closely. What Mussolini thinks, so does Ciano. He lives the motto: "Mussolini is always right." He even tries to look like Mussolini. "Daily he acquires more of the jaw-thrusting mannerisms of his father-in-law"; he stares with the same frown; he holds his arms akimbo in the same way.

Ciano was a Fascist zealot before he was out of his teens. He was born in 1903 in Livorno, which the English call Leghorn. He was the son of S. E. Constanzo Ciano, an Admiral who in the last War defeated the Austrians on the Adriatic and the seamen's unions on the Tyrrhenian waterfront, and was rewarded with a longtime post of Minister of Communications. In Fascism's early days Father Ciano was the first Italian of national prominence to join the struggling editor, Benito Mussolini, and to become a Fascist. Mussolini made him a count.

After Galeazzo Ciano took his law degree at the University of Rome, he became a theatre and book reviewer on *Nuovo Paese*, the first Fascist newspaper in Rome. He also wrote two plays on which all comment has now been forbidden. In 1925, three years after the March on Rome, Ciano took examinations for the diplomatic service, "which he barely passed," and immediately was appointed to routine duty in South America. From South America he went to Peiping as diplomatic representative.

During this time Admiral Ciano discovered that Mussolini was about to solve the "Roman Question" by making a treaty with Pope Pius XI. He had his son released from China just in time to squeeze him into the Italian Embassy to the Holy See as First Secretary. Ciano did a good job there and was soon on the upgrade. His marriage to Mussolini's daughter Edda in 1930 didn't hurt his career either. According to some sources the marriage was the result of a "passionate courtship";

CONTE CIANO

according to others it was arranged by old Count Constanzo Ciano.

It is impossible to consider Ciano's career without considering his wife Edda. "Of all the yes-men around the Duce," they say in Rome, "Edda is the only one who sometimes says no." She has her father's jaw, and she has her father's ability and intelligence. There's a rumor that she isn't the daughter of the present Mrs. Mussolini but is really the result of a *grande passion* between Benito and a Russian woman socialist, in the days when Mussolini was a powerless, ranting radical.

"Gaunt, pale-faced," chicly-dressed, Edda is supposed to be "the only intimate of a man now lonely in his greatness," loved and admired by her father for her wit, her spunk, her daring, for her successful intriguing and string-pulling. Since the Fascist State rules that woman's place is in the home and that woman has no place in politics, Edda has had to play her rôle in the recent realignments of Europe through her husband, Ciano, but there is little doubt in many minds that it is her political perspicacity that guides him. Nor is there doubt that it is her great ambition for Ciano to become Dictator of Italy—an ambition which her father seems willing to satisfy—in the future.

Soon after Edda and Ciano were married, they sailed for Shanghai, where Edda's first son (they now have three children) was born. Edda nicknamed him Fabrizio, which means "Little Chink," and still calls him that. As Italian Consul General in Shanghai, Ciano became president of the League of Nations Commission which enquired into Japan's bombardment of Shanghai. Soon he was promoted to Minister to China, and as such was sent to the London Economic Conference, at which he secured an adjust-

CIANO, GALEAZZO—*Continued*

ment of Italy's Boxer Rebellion indemnity claims on China.

Back in Rome in 1933 the Cianos proceeded to cut a great social swath. Their parties were famous. Handsome and swarthy and neat, Count Ciano wore, and still wears, good clothes that fit him well. And he began the practice he still maintains of working late, seeing Mussolini for high pressure contact on world affairs and then joining his friends at Rome's best club or best hotel for recreation. Then and recently, when young ladies ask political questions, he whispers to them what is in the afternoon papers—"only it is a secret strictly between you and me," he tells them.

In 1934 Ciano became head of the government's press office, and in June 1935 was made Minister for Press and Propaganda. As such he never could seem to understand why the foreign correspondents didn't write with the same pro-Fascist zeal which came so naturally to him when he was a reporter. When Italy invaded Ethiopia, Ciano, as an aviator, dropped the first bombs and was the first Italian to alight in Addis Ababa. An indifferent pilot, but recklessly brave, he returned to Rome after the War, a conquering hero.

In June 1936, when he was 33, Ciano became Italy's Foreign Minister, the youngest foreign minister of any great power. As Foreign Minister, his trips to Berlin, Vienna, Budapest and Albania confirmed his rôle of vice-Duce and successor. No one else except Mussolini ever was given so much headline space or had his picture so frequently on the front page. He worked out agreements with Germany, strengthened Italy's position in Central Europe and signed a Mediterranean pact with British Ambassador Sir Eric Drummond. When the Anglo-Italian agreement was signed in April 1938 cries of "Ciano, Ciano," took precedence for the first time over the more usual ones of "Duce, Duce."

As Foreign Minister, Ciano has had his greatest success—if such it can be called now—with Germany. When he first went there as Minister in November 1936, he was rapturously greeted. There were parades, he laid wreaths on the graves of dead storm troopers, pink-cheeked Hitler youths saluted him and pink-cheeked Hitler maidens offered him posies. And it was Ciano who signed the Axis treaty from which came German-Italian cooperation in Spain, Italian support for Germany in the Czechoslovakian crisis, German support for Italy's invasion of Albania, the military alliance signed in the spring of 1939, and finally, Italy's entrance into the European War on Germany's side in June 1940.

There were some who once considered Ciano a playboy because of the parties he attended, because of his habit of speeding in his roaring car over Italy, because he used to take the ambassadors of other coun-

tries out of their swallow-tails and put them into swimming trunks. They are now probably wishing it were true.

CLAPPER, RAYMOND May 30, 1892-
Newspaper correspondent

Address: b. 1013 13th St, N W, Washington, D. C.

Raymond Clapper was born in 1892 in LaCygne, Kansas, the son of John William and Julia (Crow) Clapper. After being graduated from high school in Kansas City, Kansas, he enrolled at the University of Kansas in 1913 and married Olive Ewing the same year. They have two children, Janet and Peter. After three years of college Clapper left and worked for a few months as a reporter on the Kansas City *Star*, then joined the United Press and saw the country—reporting in Chicago, Milwaukee, St. Paul, New York and Washington.

From 1923 to 1928 he was chief political writer for the Washington Bureau of the United Press; special writer on the Washington *Post* for the next year; and since 1936 he has been political commentator for the Scripps-Howard newspapers and the United Feature Syndicate.

From his well-written daily syndicated column many thousands of readers over the country obtain their opinions about what is going on in Washington. Henry Ford once described Clapper in these words: "Mr. Clapper knows this nation. He has constantly traveled its length and breadth, observing its trends, studying its methods, familiarizing himself with the wide variety of mind and motive which marks its citizens and reporting these with the efficiency and high impartiality which characterize our best journalism." *Time* calls him "one of the ablest of United States political commentators." He once was "rated a New Deal sympathizer" even though "his particular passion was Republican progressivism," but about the time of the Supreme Court reorganization bill he became somewhat less sympathetic, and in 1940 he supported Wendell Willkie (see sketch this issue) for President. Before the German invasion of the Low

RAYMOND CLAPPER

Countries he was highly suspicious of Roosevelt's foreign policies, and even afterward grew to advocate a "kind of limited imperialism" for the United States rather than direct intervention.

In 1933 Clapper wrote *Racketeering in Washington*, which he describes as "being an account from authoritative records of the grafting in small and great things by our Senators and members of the House of Representatives and executives in public departments who line their private pockets, living in the lap of luxury at the expense of the taxpayer, and indulging in nepotism, junketing, padded expense accounts and many wastes and extravagances at the very time that millions of our citizens are out of work." From this it can be seen that Mr. Clapper looks at the Washington scene with the slightly-jaundiced, irreverent eye of a newspaperman who sets very few lawmakers up on pedestals. And Quincy Howe (see sketch this issue) says that he differs from his Washington colleagues in that "he does not believe that God has summoned him personally to save the American people."

COCHRAN, CHARLES BLAKE (kōk' rān) Sept 25, 1872- British impresario
Address: 49 Old Bond St, W. 1, London, England

CHARLES B. COCHRAN

When in September 1940 the British Broadcasting Corporation gave C. B. Cochran a *Cochran Hour* every Saturday evening from eight to nine, a good many Britishers thought: "And high time, too." More than once it has been suggested that Cochran would be an ideal choice for director general of British broadcasting. Certainly, if entertainment is considered the major function of radio, it would be hard to think of anyone with qualifications for that position as impressive as his.

In the last 40 years Cochran has produced some of the most spectacular and successful shows the British stage has ever seen. And his activities have by no means been limited to the stage. Any kind of entertainment that might be popular and profitable has appealed to him—he was chiefly responsible for the craze for roller skating just before the last War; he has organized circuses and rodeos; he has acted as manager to Suzanne Lenglen; he has promoted big boxing and wrestling matches; his "young ladies" (as the chorus is always known) are always famous for their beauty and charm; and he has made and lost several fortunes.

Though Cochran's name and origins are Irish, he was born in the English village of Lindfield in Sussex, the son of James Elphinstone and Matilda (Walton) Cochran. He was one of a family of 10 children. The

first play he ever saw was the pantomime, *Sinbad the Sailor*, with Arthur Roberts as the chief comedian. Immediately young Cochran decided that he, too, would be a comedian. Of course he had to go to school first. From his first school, at Eastbourne, he was expelled because of disorderly behavior. His second was Brighton Grammar School, where he shared a study with the later famous Aubrey Beardsley.

Cochran left school when he was 16 and went into a surveyor's office. But he still wanted to get on the stage, and kept trying. In August 1890 he succeeded. He was supposed to sing comic songs, but the whole venture, as he says in his book *Secrets of a Showman* (1925), "was a complete failure. My turn finished with the first song and the manager refused to pay me."

The end of that same year he arrived in the United States as a steerage passenger and for two years beat up and down the country with touring companies, making little money and scoring no success at all. One small-town critic in Pennsylvania wrote of him: "A more ridiculous chump has never been seen on the local stage." Richard Mansfield, whom he met in America, quite agreed that Cochran was no actor, but he liked him, thought he had business sense and made him his secretary. The two men quarreled in 1895 and Cochran went to New York, where he set up an academy of acting with E. J. Henly. That same year he put on Ibsen's *John Gabriel Borkman*, his first try at production. Two years later he returned to London.

Cochran's acquaintance with the Beardsley family procured him introductions to prominent people in the *Yellow Book* group such as Sir William Rothenstein, Sir Max Beerbohm and Ernest Dowson, but his ambitions never turned to literature. Despite poverty and failure, Cochran was determined on the theatre for his career. In Paris he saw a performance of *Cyrano de Bergerac*. Immediately he cabled Mansfield and, their quarrel settled, Mansfield put on the play in New York with Cochran once more his secretary. The play was a tremendous success; people lined up hours in advance to get seats; there were fights among them and one man was shot, another stabbed.

Back in England again, Cochran set up in business as a theatrical agent and in time represented most of the world's famous players—Eleanora Duse, Houdini, Elisabeth Bergner, Mistinguett. The light play he put on in 1902, *Sporting Simpson*, failed, but that failure was more than compensated for by the success of his management of the famous wrestler, Georges Hackenschmidt, with whom he arranged a bout with Madrali, known as "the Terrible Turk." He then

started a "Fun City" with sideshows, and before the First World War put on his biggest project, *The Miracle*, which was produced on Christmas Eve, 1911 with a chorus of 500, an orchestra of 200 and in the Madonna's part the celebrated beauty, Lady Diana Manners. Cochran ran a big circus in 1912 and in June 1914 turned his attention to boxing.

During the First World War the public craved light entertainment and Cochran had his chance to introduce the French idea of the *revue*. His first one, *Odds and Ends*, ran for 500 performances and was followed by Irving Berlin's *Watch Your Step* and many others. Then, after "going serious" with the two Brioux plays, *Damaged Goods* and *The Three Daughters*, in 1917 Cochran produced *The Better 'Ole*, a comedy which at first looked like a flop but in the end ran to 817 performances. The next year Cochran had another enormous success with *As You Were*.

In 1919 Cochran took over the Garrick and Aldwych Theatres and promoted many important boxing matches at the Holborn Stadium, including Billy Wells versus Joe Beckett and Joe Beckett versus Georges Carpentier. But his career was halted by illness and a long period of recuperation in Spain. When Cochran returned to London he brought a band of Russian entertainers known as *Chauve-Souris*, run by Nikita Balieff. Then he did a season for Lucien Guitry, staged a return for the 63-year-old Duse and proceeded to burn his fingers financially over a rodeo which he put on at Wembley. An accident the first night and a good deal of journalistic censure persuaded the British public that the animals were being cruelly treated, and the rodeo fell flat. It was in that same year (1924) that everything seemed to go flat and Cochran was forced into bankruptcy.

He emerged from it with a Pirandello season in 1925. In 1927 he acted as manager for the singer Chaliapin; in 1929 he produced Sean O'Casey's *The Silver Tassie*; and in 1931 he shared Noel Coward's great success in *Cavalcade*. Before then and afterwards Noel Coward wrote much for him, and the collaboration was fruitful for both. In 1932 Cochran's second book, *I Had Almost Forgotten*, was published.

To follow through all the productions of Cochran, who at one time has had as many as seven plays running simultaneously, would be to present a history of the lighter stage in England during his time. In Cochran's history there have been ups and downs but the general impression is one of sheer business ability, plus a grand sense of scale, a feeling for the spectacular and a great deal of real taste. A genial, friendly man, Cochran is well-liked by his employees and all who do business with him. He is

married to Evelyn Alice Dade and has no children.

COCHRAN, JACQUELINE (kōk'răn)

Aviatrix; cosmetician

Address: b. 630 Fifth Ave, New York City; h. Stamford, Connecticut

Jacqueline Cochran has been piling up aviation honors steadily since 1937 and now holds 17 official national, international and cross-country records. She added the two latest records to her list in April 1940 when she won a new national speed record for 100 kilometers with an official mark of 292.6 miles an hour, and set a new speed mark for the 2,000 kilometer distance by flying 331 miles an hour.

To win she had to fly these distances faster than any man or woman alive. In endurance, in stamina, in flying ability she is the match of male aviators and she has wrested many aviation trophies from men. She won the Bendix Transcontinental Race, crack event of the National Air Races, in 1938 over nine male contestants.

But she is extremely feminine in one respect—she won't tell her age. To interviewers she talks frankly of everything else but her personal life. She is voluble on the subject of flying, on her cosmetic business, on everything but dates and ages. Except for the date of her marriage to Floyd B. Odlum on May 10, 1936, biographical sketches of her are vague as to dates.

Jacqueline Cochran's life sounds like a story book. "That's why I don't like to talk about it," she says. "People think I'm plagiarizing on the story books." Born in Pensacola, Florida, she was orphaned at four and reared by a family in Columbus, Georgia. She started helping to earn her way when she was 11 years old by making \$1.50 a week and her room and board running errands for a beauty parlor. She made herself so useful that at 13 she was doing the work of a full-fledged operator. From that time on she has stood on her own feet. She had a beauty shop of her own at 19.

JACQUELINE COCHRAN

She was working in a beauty salon on Fifth Avenue in New York when she became seriously interested in flying. "I loved flying," she says, "but I thought of it primarily as a sport." She soon realized, however, that it was rather an expensive sport and looked about for some way to combine it with business. She conceived the idea of approaching several cosmetic companies, which had urged her to go on the road to sell their products, with a plan for using an airplane. By using a plane, the bright young beauty operator reasoned, she could cover more territory, sell more cosmetics and get added publicity.

Being a woman of determination, Jacqueline Cochran put her plan into action. In August 1932 she presented herself at Roosevelt Field, Long Island and announced, "I'm starting on a six weeks' vacation and I want to spend it learning to fly. Do you think I can learn enough in those six weeks to get my pilot's license?" She learned enough in two and one-half weeks to pass the Department of Commerce examination.

Although she now had a license to fly, she realized how little she actually knew about it and decided to make herself a competent pilot. She took her savings and went to California for a year's intensive training. There Lieutenant Theodore C. Marshall gave her the equivalent of the regular navy course of instruction in groundwork and flying. By the end of that time she had obtained a limited commercial license in San Diego, California, and later a transport license.

Miss Cochran was then a full-fledged pilot. She also took a course in blind flying from Wesley Smith, rated the best in his field. She was the first woman to conquer the problems of blind flying.

Miss Cochran's first important competition was the London to Melbourne Air Race in 1934, which she entered under the sponsorship of Mabel Walker Willebrandt, former assistant attorney general of the United States. She and Wesley Smith took off on the race to Australia with 19 other planes. Their original plane had been damaged in transit and they were using a much smaller plane than they had planned. In Bucharest they were forced down and decided not to continue.

This was the beginning of three years of flying mishaps for Jacqueline Cochran. She was forced out by trouble of one kind or another and failed to place in her next four races. In 1935 she entered the Bendix Transcontinental Race and was forced down at Kingman, Arizona. She explained she was tired and decided to quit before anything happened. The next year, while preparing for another event, her plane caught fire near Indianapolis when she was 12,000 feet up. She brought the plane down in one piece.

Miss Cochran did not make excuses for her failures to place, but men pilots said she was flying planes of experimental design and construction.

The year 1937 marked the beginning of a long string of aviation successes for her. She came in third in the Bendix Transcontinental Air Race that year, placing first in the women's division. The same year she set a new world's record for women over a three kilometer course at Detroit, flying a Seversky pursuit plane an average of 293 miles an hour, 17 miles an hour faster than the former record.

Other records followed in rapid succession. She set a new non-stop record from New York to Miami, covering the distance in four hours and twelve minutes; she set national women's speed records for 100 and 1,000 kilometers.

In 1938 she put herself at the top of the nation's list of aviators when she came in first in the Bendix Air Derby in competition with nine men fliers. The course from Los Angeles to Cleveland was flown in particularly bad weather. Pilots who landed complained bitterly of the "dirty weather." Miss Cochran emerged after her time-clocked trip of eight hours, ten minutes and thirty-one seconds, casually, with no weather complaint. She merely said, "Yes, it was bad weather," in answer to questions. She had been smoking an oxygen pipe all the way across the country, and all she wanted was a cigarette and to talk to her husband when she landed.

After 15 minutes at the field she took off again for Bendix, New Jersey to become the holder of a new transcontinental record for women. She made the cross-country trip in 10 hours and 12 minutes. That evening she flew back to Cleveland in a transport plane for the air race ball. The day's work had netted her \$12,500—\$9,000 for the Bendix race; \$2,500 for being the first

woman to finish and \$1,000 more for continuing to Bendix, New Jersey.

The first lady of the air lanes has received the highest aviation awards given to her sex. She received the Harmon Trophy four years in succession as the outstanding woman flier of 1937, 1938, 1939 and 1940. She was selected by *American Women* as one of the ten outstanding women of 1938. She received the William E. Mitchell Award for achievement in aeronautics, was cited along with Howard Hughes by the International League of Aviators for accomplishment in aviation in the United States. Mayor La Guardia (see sketch this issue) in May 1940 presented her with the William J. McGough Memorial Trophy in behalf of the American Legion Post 501.

Miss Cochran's apartment overlooking the East River in New York is full of mementos of her successful aviation career. But she does not confine her activities to flying. She has several beauty salons and a cosmetic business which she directs. She has a ranch in Indio, California. And she and her husband have a home in Stamford, Connecticut.

Fair-haired, attractive and affable, Miss Cochran is a young woman who does a man's job of flying without looking the least bit masculine. Oddly enough she doesn't think women should pilot transport planes. "It's too big a strain," she says, "and too monotonous day after day." Women, she believes, would make excellent instructors in radio and blind flying, and would be good radio operators because they are patient.

COLLINS, EDWARD DAY Dec 17, 1869—Jan 1, 1940 Former acting president of Middlebury College

Dr. Collins, who died at the age of 71, was the adopted son of I. D. R. and Mary E. (Tenney) Collins. He received his B. A. and his Ph. D. from Yale (1896 and 1899) and taught history at Yale. From 1905 to 1909 he was principal of the State Normal School at Johnson, Vermont; then he became professor of pedagogy at Middlebury College. He has been Middlebury's acting president, provost and controller. He was known chiefly for the creation and administration of the summer session language

COMPTON, ARTHUR HOLLY Sept 10, 1892- Physicist

On May 15, 1940 Dr. Arthur H. Compton received the Franklin Medal awarded to

workers in physical science or technology whose efforts have done most "to advance the knowledge of physical science or its application." This is just one of the many awards Dr. Compton has received. The American Academy of Arts and Sciences gave him the Rumford Gold Medal in 1927; he received the Nobel Prize in physics in that same year; the Radiological Society, the Italian Academy of Sciences and learned societies all over the world have honored him.

Dr. Compton's main work, like that of Robert Millikan (see sketch this issue), has been to discover the secret of cosmic rays. He started this work in 1931 and since then has roamed the world climbing mountains, descending to the sea, tracking the Arctic wastes and the equator, seeking knowledge of the invisible, powerful rain of cosmic radiation that pours upon the earth from space. In 1932, with funds from the Carnegie Corporation of New York, he organized an elaborate world-wide cooperative enterprise for the collection of cosmic ray data. The earth was divided into several regions for this enterprise, and eight associated expeditions within eight zones of cosmic ray research, equipped with a new electroscope that Compton had invented, made findings and reported them to him.

When his conclusions were made public at a meeting of the American Association for the Advancement of Science in 1932, it was found that his conclusions and Millikan's differed. Compton said cosmic rays were mostly electric particles while Millikan held that they were mostly photons (electrically inert bundles of radiation). It wasn't until January 1936 that Compton presented a résumé of his researches which was considered a victory for his conclusions.

Compton's most recent feat in his prolonged attempt to wrest the secret of the cosmic ray from nature was a high altitude flight to photograph the ray. In a big air liner flying above 29,000 feet, Dr. Compton and his assistants took 400 pictures under what were described as "ideal conditions," and Compton believes that these photographs will "materially assist" in unlocking the mystery of cosmic rays and their importance to man.

It was for his work on X rays that Dr. Compton received the Nobel Prize. With an apparatus "so sensitive it measured one ten-millionth of the energy of a mosquito climbing an inch of screen," he brought forth the "Compton Effect," which showed that X rays, through radiation, act like solid particles when scattered by reflection from atoms.

Arthur Compton was born at Wooster, Ohio on September 10, 1892, into a family whose every member has made his mark. His father, Elias Compton, is a Ph. D. and a D. D., a Presbyterian clergyman and long-time professor of philosophy and psychology at the College of Wooster. His mother, Otelia (Augsburger) Compton, received an

Acme

ARTHUR HOLLY COMPTON

LL. D. in 1932 from Western College at Oxford, Ohio "for outstanding achievement as a wife and mother." Arthur's oldest brother Karl has been president of the Massachusetts Institute of Technology since 1930 and is also a famous physicist; his sister, Mary (Compton) Rice, is the wife of the president of a missionary college in India and heads her own missionary school; his brother Wilson is a lawyer, manager of the National Lumber Manufacturers' Association, economics adviser to the Department of Commerce and a professor of economics at George Washington University. All three Compton sons were graduated with Phi Beta Kappa keys from Wooster College, all received Ph. D.'s from Princeton and all are listed in *Who's Who in America*. Mrs. Compton says she trained her children "on the Bible and common sense."

Arthur Compton showed a scientific bent early, and his family encouraged him. There was the time when eight-year-old Arthur showed his mother an essay he had written. "Here is what I think about this elephant question," he declared. "I have gone through a lot of books. They all say that African elephants have three toes and Indian elephants five toes. I believe this wrong. I say African elephants have five toes and Indian elephants have three toes and this," he concluded, pushing the papers in front of her, "is why I think so." Mrs. Compton looked gravely at the essay and congratulated Arthur on having gone into the matter so thoroughly. Thirty years later she asked him whether he remembered it. "Yes," he replied grinning, "and mother, if you had laughed at me then it would have finished my urge for research."

COMPTON, ARTHUR HOLLY—Cont.

In his teens Arthur built a glider that actually flew, published articles on aeronautics, made an astronomical clock for a telescope and took pictures of Halley's Comet. He went to Wooster College in 1909, and while there invented a patented gyroscopic device for airplane control. By then he had decided that he was going to become a mechanical engineer, but Karl, five years older, steered him away from engineering by interesting him in advanced mathematics and physics.

In 1916 Arthur Compton received his Ph. D. in physics from Princeton University, *summa cum laude*, and right after graduation married Betty Charity McCloskey of New Waterford, Ohio. With his wife he went to the University of Minnesota to teach physics, but after only a year there left to enter industry. For two years he worked in the Pittsburgh laboratory of the Westinghouse Electric Company, where he was engaged in the development of electric light lamps. Then he said to his wife: "Betty, I'm going back to university work."

He got a research fellowship in the Cavendish Laboratory at Cambridge under Thomson and Rutherford, and it was this year's research which led him to make fundamental discoveries in the field of light. He returned to America in 1920 to become professor and eventually head of the physics department at Washington University, St. Louis. Since 1923 Dr. Compton has been a professor at the University of Chicago. For the past years he has been teaching one class a day, at 8:00 a. m., after which he works in his office, "which has a black steel desk, cream walls, tan curtains, gray rug, a cosmic-ray counter clicking away in a corner; or in the laboratories just outside where he has \$50,000 worth of equipment for his own researches."

Dr. Compton is a leading spokesman for those who see no conflict between religion and science. In 1935 he expounded his views in *Freedom of Men*, in which he showed how the newer discoveries of atomic physics lend support to the ancient basic ideas of religion. For years he taught Sunday School at the Hyde Park Community Baptist Church of which, though a Presbyterian, he was deacon, and in 1937 he was elected general chairman of the Laymen's Missionary Movement; in 1938 he was made co-chairman of the Conference of Jews and Christians. To Compton "science can have no quarrel with a religion which postulates a God to whom men are as his children." To him "science is the glimpse of God's purpose in nature, and the very existence of the amazing world of the atom and radiation points to a purposeful creation, to the idea that there is a God and an intelligent purpose back of everything."

With his wife and two sons Dr. Compton lives in Chicago in a big brick house filled with souvenirs from all over the world.

He doesn't know the taste of hard liquor and almost never smokes. "A tall, rugged man with deep-set eyes and a heavy chin," he plays a fast game of tennis, swims powerfully and strokes a canoe manfully. Several times a month he puts in an evening of mandolin-playing with three friends. When his graduate students have finished an examination, he likes to take them out to dinner and the theatre.

COOPER, ALFRED DUFF Feb 22, 1890-
British statesman; Minister of Information
Address: 90 Gower St, London, S. W. 1, Eng-
land

When, on a day of glorious May weather in 1940, the British public heard that German mechanized units had forced their way between the French and British Armies to Boulogne and Abbeville, there was not a man or woman in the country who underestimated the gravity of the news; not one but felt that war had come to his very doorstep.

That evening there came a calm, cultivated but not complacent voice on the radio, making no attempt to gloss over the danger, but quoting the familiar *Henry V* lines about St. Crispin's day, deprecating not only panic itself but the very thought of panic. This was not Mr. Churchill (see sketch this issue), with his "blood and toil and sweat and tears." This voice was like a steady hand on the shoulder; no one who heard it could have failed to be heartened by it. It was the voice of Alfred Duff Cooper, on May 12, 1940 appointed to the Ministry of Information. Most of the listeners knew that the speaker was himself a soldier of the last War, with a very gallant record. And many of them

must have felt that here was the man who had all along mistrusted Hitler—and had been proved right.

Alfred Duff Cooper is the complete temperamental Tory, not necessarily because he is the nephew of one duke and married to the daughter of another, but because he sees in Toryism an ideal, a system tending to the preservation of old and tried things that he esteems worthy of survival. The whole of his career (except his incursions into the columns of a popular evening paper) has been on strictly upper-class lines—Eton, Oxford, the Foreign Office, the Brigade of Guards, the War Office, the Admiralty. It would have been strange indeed if a man with such antecedents should have political views other than those he possesses.

At one time the very strength and purity of his convictions almost brought his political career to an end, for Cooper's attitude over the Munich settlement and his consistent opposition to any suggestion of "appeasement" caused him to be bracketed by Hitler with Mr. Churchill and Mr. Eden (see sketch this issue) as one of the principal "warmongers."

Born in 1890, he is the only son of the late Sir Alfred Cooper, Fellow of the Royal College of Surgeons, and Lady Agnes Duff, sister of the first Duke of Fife. He went to Eton, and thence to New College, Oxford, where he took honors in modern history. He then passed into the Foreign Office, but at the outbreak of the last War he transferred to the Grenadier Guards, served with great distinction in France for four years and returned with the Distinguished Service Order Award. In 1919 he married Lady Diana Manners, daughter of the eighth Duke of Rutland, a celebrated beauty and an actress of some distinction, who had played, among other parts, that of the Madonna in *The Miracle* in the United States.

In 1924 Cooper entered Parliament as one of the two Members for Oldham, Lancashire. His maiden speech showed assurance and high competence, and he began to be noticed as a "back-bencher." In 1928 Mr. Baldwin made him financial secretary to the War Office; but this did not last long, for in the following year occurred Labor's first big set of gains, and it was hardly to be expected that a Tory should be able to hold an industrial constituency like Oldham.

Cooper's name was put down as prospective candidate for Winchester, but he was soon to return to the House for a safe London constituency after an election notable for its acrimony. At this time Lords Beaverbrook (see sketch this issue) and Rothermere, who between them control most of the popular Conservative Press, were attacking Mr. Baldwin; and when a by-election occurred in the division of St. George's, Westminster, Lord Beaverbrook decided to run an unofficial Conservative candidate, a certain Sir Ernest Petter.

Baldwin picked on Cooper as official party candidate, and the brickbats began to fly.

Cooper exchanged slang for slang, accused Beaverbrook of not having "the guts of a louse," and eventually topped the poll with a majority of nearly 6,000. This was in 1931; and in the general election of the same year he was returned unopposed. He returned to his financial secretaryship at the War Office, and since the Secretary of State (Lord Hailsham) was in the Lords it fell to him to present the army estimates to Parliament three times. This he did with astonishing aplomb and grasp of minute detail and without consulting any notes.

During the session of 1934 to 1935 Cooper was financial secretary to the Treasury; and in the 1935 election he won his seat by a huge majority against a Labor candidate. From 1935 to 1937 he held his first Ministerial post as Secretary of State for War. Signor Mussolini's Abyssinian adventure was on at the time, and Cooper neither minced words about it nor about the lowering dangers of the European situation in general. He was often denounced as a panic-monger by those who hoped against hope to find some *modus vivendi* with the dictators.

Mr. Chamberlain transferred Cooper to the Admiralty, where he served as First Lord for about 18 months, until the Munich settlement of September 1938 caused his resignation. He placed no faith whatever in any promises from Hitler and felt that the peace then bought at great cost to Czechoslovakia could be no more than a brief respite. His "personal explanation" to the House was telling and dignified, and it was obvious that it pained him to be a prophet of doom at a time of general rejoicing.

It is a curious example of time's revenges that Cooper should then become the weekly political oracle of the London *Evening Standard*, which is the chief evening organ of the Beaverbrook Press (though his lordship's son, Max Aitken, is now in control). Cooper's weekly articles maintained his intransigent attitude toward the dictatorships and keenly emphasized the need for rapid rearmament and preparedness for the test of war.

It was hardly to be expected that Mr. Chamberlain should invite his collaboration; but he was taken into the Ministry of Mr. Churchill early in May to control Information. This Ministry has been severely criticized since the War began, and with good reason, for the paucity and slowness of its news releases and its comparative feebleness in counteracting German propaganda abroad. "It has been seriously supposed in some neutral countries, for instance, that there is a food shortage in Great Britain, whereas the truth is that there is plenty of everything, even of the three or four commodities that are rationed." Cooper's task is to scotch these falsehoods, to put the Allied case plainly and forcibly,

Acme

ALFRED DUFF COOPER

and to see that British journalists get every scrap of news (other than news likely to help the enemy) quickly and easily. It was felt that as a journalist himself and as the brilliant biographer of *Talleyrand* (1932) and *Earl Haig* (1935-36) he should be able to talk to writing men in their own language; while as a former serving officer and Services Minister he should have a precise appreciation of what information it is unsafe to make public.

He started out with a series of pungent radio addresses which were enthusiastically received. It wasn't long, however, before to some he seemed to have slipped up when he organized a "Silent Column" to suppress defeatist talk and hired canvassers to conduct house-to-house interviews asking Britons how they felt about the War. Immediately these interviewers became "Cooper's Snoopers," and there was strong criticism in Parliament of both schemes. Cooper was forced to abandon them and has been concentrating on getting out stories on the War, on British resistance, on British power.

Cooper's record shows that he has always been a fighter and never a man prepared to trim his sails according to the prevailing wind. He speaks with assurance (a shade too much at times), and his style is combative and forthright. Agree with him or not, at least there is no doubt about where he stands. He was in the United States early in 1940 and returned to England in March after lecturing in 60 of the larger American cities.

COPLAND, AARON (cōp'land) Nov 14,
 1900—Composer

Address: c/o Whittlesey House, 330 W 42nd
 St, New York City

Aaron Copland, once considered one of
 the least understandable of American musi-
 cians, is now writing music for the people.
 His *Billy the Kid* and *The Second Hurricane*,
 his scores for *The City*, *Of Mice and Men*,
Our Town and other motion pictures have
 made him almost universally recognized as
 "probably the most generously gifted com-
 poser among living Americans." They
 have made his name known to many.

All his life Aaron Copland has been
 striving to make his own works and those
 of his contemporaries familiar to the gen-
 eral public. The Copland-Sessions Con-
 certs, which functioned from 1928 to 1931,
 presented largely unheard music to the
 public; festivals of American music were
 organized by Copland at Yaddo in Saratoga
 Springs, New York; in 1935 an educational
 campaign for modern American music was
 started, at which the works of the five
 most important younger composers—Roy
 Harris, Virgil Thomson (see sketches this
 issue), Roger Sessions, Walter Piston and
 Aaron Copland—were presented; and in
 May 1940 Copland was elected the first head
 of the American Composers' Alliance, which
 aims to encourage the performance of seri-
 ous American compositions and to provide
 means for obtaining just compensation to the
 composer for performances. As a writer of
 articles for magazines and the author of
What to Listen for in Music (1939), as a
 lecturer at Harvard and the New School for
 Social Research, New York City, he has
 been "a tremendous force in bringing further
 recognition and a maturer understanding to
 the new music of modern composers every-
 where." But it is only now, when he is
 consciously striving for simplicity, that
 Aaron Copland has achieved for his own
 works the broad audience he has come
 to believe modern composers should have.

Aaron Copland was born in Brooklyn
 on November 14, 1900 "on a street which
 can only be described as drab." He was
 the youngest son of Sarah (Mittenthal)
 Copland and Harris Morris Copland, a
 Brooklyn storekeeper who thought his name
 was Kaplan until an immigration official wrote
 it to suit his own ears. "No one had ever con-
 nected music with my family," says Copland.
 "The idea was entirely original with me. And
 unfortunately the idea occurred to me seri-
 ously only at 13 or thereabouts—which is
 rather late for a musician to get started."

The idea of being a composer, he says,
 "seems gradually to have dawned on me
 some time around 1916 when I was about
 15 years old." Before then Aaron had
 taken the usual piano lessons and had tried
 to learn harmony from a correspondence
 course. When he found that these methods
 wouldn't work, he began harmony lessons
 in the fall of 1917 with Rubin Goldmark.
 By the spring of 1918 he had been gradu-

ated from high school and was able to devote all his energies to music.

Rubin Goldmark was a conservative teacher and it wasn't from him, certainly, that Copland learned about modern music. He says that he just "happened upon it in the natural course of my musical explorations." Goldmark disapproved strenuously, and the climax came when Copland brought him a piano composition of his own called *The Cat and the Mouse*.

Copland was becoming a bit discouraged, when he read in a musical journal of a summer school in the Palace at Fontainebleau. He was the first American student enrolled. In 1921 he went there and was taught by Paul Vidal, who "turned out to be a French version of Rubin Goldmark except that he was harder to understand." Then, after he had got over the mental hurdle of being taught by a woman, he began to study with Nadia Boulanger. For three years he stayed in Paris. "It was a fortunate time to be studying music in France," he says. "Paris was an international proving ground for all the newest tendencies in music. . . . It was a rarely stimulating atmosphere in which to carry on one's studies." During these years he composed several *Motets* for unaccompanied voices, a *Passacaglia* for piano, a song for soprano with flute and clarinet accompaniment, a *Rondino* for string quartet and a one-act ballet called *Grohg*, his first essay in the orchestral field.

With these pieces under his arm Copland returned to America in June 1924, without the slightest idea of how composers managed to get their compositions performed or published and without the slightest idea of how he was going to earn his living. The first thing he did in America was to write a symphony for organ and orchestra which Nadia Boulanger had asked him to furnish for her coming performances with the New York Symphony and the Boston Symphony. He wrote it while he was pianist for a hotel trio in Milford, Pennsylvania.

The first American performance of Copland's works was in November 1924 by the League of Composers. In the following January, Damrosch, with Boulanger as soloist, presented the symphony for organ and orchestra. After the performance Dr. Damrosch turned and addressed the audience: "If a young man at the age of twenty-three can write a symphony like that, in five years he will be ready to commit murder." Koussevitzky (see sketch this issue), however, liked the symphony and encouraged Copland.

The young composer's main concern was still how to earn a living. He opened a piano studio in New York, but not one pupil came. Then, in 1925 and 1926, his problem was settled by the grant of two Guggenheim Fellowships. He was free to write. He wanted to write in the American idiom. *Music for the Theatre*—"music of such sparkle, intoxicating freshness and contagious vigor that it clearly proved the fact that a new, significant

AARON COPLAND

voice had now been added to the choir of American composers"—was his first piece in the new idiom. It was followed by a concerto for piano and orchestra which "represents the jazz period in its most dazzling aspect—dissonant, unleashed primitivism—but handled with an unexpected mastery of material for a young composer of 26." For these compositions critics everywhere praised Copland. He had brought a new dignity to jazz and had proved emphatically that jazz has a definite place as a serious musical expression.

In 1929 RCA Victor offered \$25,000 for a symphonic work. Copland started one, but wasn't able to finish it in time and submitted, instead, three movements from his old ballet, *Grohg*. The prize was divided among a number of contestants, and Copland won \$5,000. The *Symphonic Ode* which he had started for the contest was later finished and performed as one of the works celebrating the fiftieth anniversary of the Boston Symphony.

The *Ode* marks the end of a period. The works which follow are "no longer so grand or so fulsome." The *Piano Variations* (1930), the *Short Symphony* (1933), the *Statements* for orchestra (1935) are, according to Copland, "more spare in sonority, more lean in texture. They are difficult to perform and difficult for an audience to comprehend."

It was after this group of compositions that Copland began to feel the importance of being understood, of reaching a wider audience. He became dissatisfied with the relations between the music-loving public and the living composer. "It seemed to me," he said, "that we composers were in danger of working in a vacuum. Moreover, an entirely new public for music had grown up around the radio and the phonograph. It made no sense to ignore them and to continue writing as though they did not exist.

COPLAND, AARON—*Continued*

I felt that it was worth the effort to see if I couldn't say what I had to say in the simplest possible terms." In his recent works he does—in the lively *El Salon Mexico* and *Music for Radio*, written on commission from the Columbia Broadcasting Company; *Billy the Kid*, a "close-knit, percussive, incisive" piece of music based on cowboy songs; *The Second Hurricane*, "a clean-cut, refreshingly unhackneyed, in instances magnificently sonorous little score"; and the music for many motion pictures, including that for *Of Mice and Men* and for *Our Town*, which was given its première before the film was opened to the public.

Copland is still a young man, "tall, energetic, large-nosed, engagingly toothy," full of an electrical energy that seems to course through his body, making his gestures nervous and abrupt.

CORCORAN, THOMAS GARDINER

(cor'co-rân) Dec 29, 1900- Special counsel to Reconstruction Finance Corporation

Address: b. 827 Lafayette Bldg, Washington, D. C.; h. 1610 K St, N W, Washington, D. C.

Ordinarily Washington lawyers meet the President through an arranged conference—Thomas Gardiner Corcoran met him by singing to him in 1933 at an informal White House party. The President applauded Corcoran's sentimental Irish ballads, sea chanteys and mountain laments, then enthusiastically asked for more. Thus he met Corcoran, whom he was later to dub "Tommy the Cork," the man whose brilliant legal talents were the basis for many intricate and weighty New Deal legislative measures. Corcoran, the genial silver-tongued Irishman, clothed always in anony-

mity, consequently became the favorite subject for dinner conversation in the Nation's capital during the ensuing years.

On March 4, 1940, the 39-year-old drafter of New Deal legislation, an avowed bachelor, set the famous town to talking again when he married his secretary, Margaret Dowd. For seven years the pretty red-headed "Peggy" had served him well, causing him to remark again and again: "God bless her, she's a wonder," because she always matched his grinding pace of work.

Together with his working partner, Benjamin V. Cohen, Corcoran has been called by government officials the "little hot dog"; the "Gold Dust Twin" (taken from the advertising slogan, "Let the Gold Dust Twins do your work"). A catalytic agent and a political opportunist, he has been warmly commended and bitterly reviled by various Washington political figures.

Corcoran is labeled "little hot dog" because he was one of former Professor Felix Frankfurter's most brilliant students at Harvard. He has come a long way with the New Deal. Born in Pawtucket, Rhode Island, of a conservative family, young Corcoran amazed his schoolteachers with his mental gifts. At Brown University he carried off prize after prize in debate and English composition and became the intellectual star of the Class of 1921 when he received his B. A. In 1922 he was awarded his M. A. During the summer vacations he worked to help pay his tuition.

Enrolled at Harvard Law School, he came under the influence of Professor Frankfurter, who, since the Administration of Woodrow Wilson, has been supplying brilliant young lawyers to Washington. Corcoran topped his class and after receiving his LL. B. and S. J. D. degrees (1925-26) he was awarded the highest honor possible for a Harvard Law School graduate—a year's job as secretary to the late Supreme Court Justice Oliver Wendell Holmes. He used to read the classics aloud to the beloved Holmes. Dante and Montaigne were the young scholar's favorite writers. Latin and Greek texts presented no difficulties to him. The young man became a walking *Bartlett's Quotations*. From those golden days, he carried away a store of literary sparklers with which he has sprinkled the "ghosted" parts of the speeches of President Roosevelt. For instance, for the first time in history, Dante has broken into an American Presidential acceptance speech.

In 1927 Corcoran joined the law firm of Cotton & Franklin, in New York City. Eugene Mayer, then chairman of the RFC, in 1932 asked Professor Frankfurter to recommend a good lawyer. Remembering the marvelous mental agility of young Corcoran, Frankfurter sent him. So Corcoran went to Washington, really working under the Hoover administration, although many people think that Roosevelt brought him to the capital. While a member of the Cotton & Franklin legal firm Corcoran fought mightily for the big corporation heads who

were clients; for the RFC he went to work energetically against them. This experience on both sides of the fence helped him in drafting legislation for the New Deal.

One cannot speak of the work of Corcoran without mentioning that of his partner, Benjamin V. Cohen. They lived together for years in Washington and frequently work together for 20 hours at a stretch. Cohen does most of the actual bill-drafting while Corcoran goes out to persuade politicians to the President's way of thinking. Called "thinkers of almost legendary existence whose skill at totalitarian induction makes neophytes of the former Regimenters," Corcoran and Cohen are responsible for the Securities Tax of 1933; the Securities Exchange Act of 1934 (called the act that "outsmarted Wall Street"); and the Public Utility Holding Company Act of 1935. In addition they worked on the judiciary reorganization plan; the wages and hours legislation; the TVA; the Electric Farm and Home Authority and the extended RFC.

Besides helping the President with his speeches (they do what they call the "technical information"), they advise Congressmen privately and publicly. They testify before Congressional committees. They report to the President the results of patient investigation in Washington bureaus (their latest report resulted in the shift of alien control from the Department of Labor to the Department of Justice). This investigation is made by the numerous brilliant young lawyers whom Corcoran has brought to Washington. When officials speak of the Corcoran Gallery they do not mean the famous Washington art gallery but the numerous, strategically placed staff of Corcoran.

"Tommy the Cork" likes to boast of two tricks in his method of drawing up proposed bills. He likes to make them complicated so that the average lawyer will fail to spot some of the far-reaching implications. Moreover, he words bills more strongly than he desires, so that any chopping down on the part of Congress will not destroy the intentions he wanted realized. Called the "greatest legislative drafting team in American history," Cohen and Corcoran make their bills models of legal brilliance.

The early days of the New Deal found the statesmen of Capitol Hill rudely jolted by Corcoran's energy and ingenuity in carrying out the President's ideas. It was not without good reason that he came to be known as the foremost legislative architect of the New Deal. When he slipped into the White House, usually through a side door, the President would say: "Tommy, here's a 400-page report. Will you make a digest of it?" or "Tommy, there's a row in a House committee over a bill. Will you find out what it's all about?"

And "Tommy the Cork" would be seen whisking through the Capitol corridors, busily conferring with Senators and Congressmen, arguing, pleading, cajoling and

THOMAS CORCORAN

threatening in order to line up support behind New Deal measures.

He is a glutton for work—keeping a 10 a. m. to midnight schedule. Once or twice a week he has managed to dine out, but more often he spends the evening and sometimes the night working. His marriage may change it—but in the past he always surrounded himself with bachelors because he said they never objected to the irregular hours and tremendous amount of office work.

Corcoran has been assistant to the Secretary of the Treasury in 1933, and special assistant to the attorney general of the United States from 1932 to 1935. He retired from the RFC—"temporarily at least"—in September 1940 to campaign for Roosevelt without accusation of violating the Hatch Act, which he is supposed to have written. He has learned how to handle politicians and he can be gentle or rough about it. Mentally and physically, he is tough. With his own two hands he built a cabin on Mt. Washington. He goes there week ends to chop wood and cook for his guests. Music is his great passion—as a boy he hoped to be a concert pianist. He can play the Gilbert and Sullivan operettas from end to end with scarcely a glance at the notes. He has an encyclopedic knowledge of Irish ballads and old American folk tunes.

"Stocky but buoyant, with the shoulders of a halfback, Corcoran presents a picture of affability on all occasions. His black wavy hair is streaked with gray." His amazing mental qualities and charm combined with "an almost unparalleled industry" have made him a favorite of the President's. Eventually he wants to establish the law firm of Corcoran and Cohen in New York City. Thus far, he has stayed in the political background, letting President Roosevelt

CORCORAN, THOMAS—*Continued*

take all the credit for the New Deal measures he drew up.

COREY, PAUL July 8, 1903- Author

Address: b. c/o Bobbs-Merrill Co, 468 4th Ave, New York City; h. Cold Spring, New York

"Move over, big boys, to make room for Iowa's Paul Corey." So reads the heading of the review of Mr. Corey's new novel, *The Road Returns* (October 1940) in the *Des Moines Register*. The reviewer continues: "That name is going to mean something in American literature and we might as well get used to saying it." Iowa is proud of its statesmen, artists and writers. And its pride in Iowa-born and Iowa-raised Paul Corey is justified by the opinion of nationally known critics. Of *Three Miles Square* (1939), the first in a series of three novels on the Iowa scene, Lewis Mumford (see sketch this issue) wrote: "One of the best novels of agricultural America that anyone has produced in our generation. . . I recommend it to all those who wish to read more intimately the living face of America." Louis Bromfield found it "full of truth and understanding and beautifully done," and Iowa's Grant Wood (see sketch this issue), an artist also concerned with interpreting Midwestern life, found in *Three Miles Square* "realism of the best sort."

Its economic and social background an Iowa farm community in the years just before the World War, *Three Miles Square* begins the story of the Mantz family when, on the father's death in 1910, the mother is left with four children and the responsibility of a farm at a time when agricultural problems are acute. Supported by the energy and courage of her eldest boy, 14-year-old Andrew, she decides to keep the farm. The foreground of the novel is built upon the

intensely human drama of the struggles, fortunes and misfortunes of the Mantz family, collectively and individually, their personal conflict forming one pattern set against the larger pattern of the whole neighborhood, pictured with a remarkable "clarity and perfection of detail."

The Road Returns, starting with America's entrance into the World War, tells about those years of feverish prosperity for Iowa farmers, when the land boom made some greedy for increased acreage, others sell out for enough to retire on in California or in nearby towns. The draft takes young Andrew Mantz, blasting his hopes of becoming an architect after he got the farm on its feet; the Widow Mantz sells the home place and moves to Elm, the county seat town. She figures that now the second son, who has hated the farm, will have his chance to be a mechanic, and her youngest son Otto will go to high school and college. But Mrs. Mantz soon discovers that her seeming security was only a dream: the War market falls; Andrew, home from France, marries and can't get a job; Wolmar, also married, and facing bankruptcy, bleeds his mother of what little she has banked to start his own garage; the married daughter with her children descends on them; Otto's hopes of a college education seem shattered. The farmer to whom the home place has been sold defaults on his payments, and the only thing left for the Mantzes is to take the farm back: the road returns. Interwoven with all this are the experiences of their farm neighbors and their new neighbors in town. "Mr. Corey tells a full, rich story, sweeping in its scope, and leaves the possible implications to the reader. *The Road Returns* is an honest and admirable novel which deals with living people juxtaposed against a community. . . It recreates superbly an era of the first importance," comments Edith Walton in the *New York Times Book Review*.

Paul Corey was born July 8, 1903 on a farm in Shelby County, Iowa, son of Edwin Olney and Margaret Morgan (Brown) Corey, the youngest in a family of five boys and two girls. His paternal grandfather was a Mexican War veteran and an adventurer in the gold rush of '49 who did not, however, find gold. He was a descendant of Giles Corey, famed as the only man to be tortured to death for witchcraft in this country: stout-minded Giles met death by having planks laid across his chest and stones heaped upon them. When young Paul was not yet two his father died, and the struggles of his mother to keep her family together on the farm were similar to those he told concerning the Mantz family in *Three Miles Square*. When she moved to Atlantic, Iowa in 1918 Paul went to high school there. In 1921 he entered the University of Iowa, where he worked his way chiefly as geology librarian. During the summer of 1923 he also worked in a California redwood lumber mill. His mother lived to see her youngest son get

a college education and died in the year of his graduation, 1925.

Leaving for Chicago in the summer of 1925, Corey worked first in Krock's bookstore there, then on *The Economist*, a trade paper. Having already written a novel and several short stories (which came back regularly with rejection slips), like many other Midwestern young people with literary ambitions, he came to New York. He wrote nights and held jobs variously with the Retail Credit Company, the Brooklyn Directory of the New York Telephone Company and the *Encyclopaedia Britannica*.

In February 1928 he married Ruth Lechlitner, poet, and poetry critic for the New York *Herald Tribune* Books. Before she came to New York from Michigan they had met at the University of Iowa while she was working on the *Midland*, a national literary magazine edited by John T. Frederick. The Coreys combined their savings to go to Europe for a honeymoon in the fall of 1928; they spent several months traveling and writing in France, Spain and England. On their return to New York they took office jobs again; but long hours of work all day and trying to write at night seemed to them a futile and hopeless struggle. They decided to get away from the city and bought a few acres of land in the Highlands of the Hudson near Cold Spring. In the spring of 1931 they left their jobs and went to the country to live.

William Seabrook (see sketch this issue) in an article, *Pioneer Spirit*, '39 (*Reader's Digest* September 1939), writes of this venture: "They lived for a while in a one-room shack, clearing, planting, starting baby chicks. Mrs. Corey said, 'The first night was bad. We had a cot, two chairs and a box for washstand and table. We wished we hadn't come. But soon it got to be fun.'" They had no money to have a house built, so Corey, though he had never studied carpentry, decided to build his own. After all, his grandfather and his father before him had built their own houses. "Stones were our main crop," the Corey's said, "so why not put them into walls for a house?" Having terraced a rocky hillside into level beds, as they had seen the French farmers do, they raised their own vegetables.

"By winter Corey had built a small cottage. He spent about \$500 on the materials and built it so well that after they had lived in it for a few years he sold it at a profit. Meanwhile he had started a bigger stone house on his hilltop, and they slept in one partly-finished room. While they were building the new house they had done well with their chickens. . . Their garden yielded vegetables. They were still writing and selling. In those years it cost them 'nearly \$300 to live.' They are prospering now; on less than \$1,000 a year cash income they live in absolute independence." They both spend their mornings writing; in the afternoons they work on the house, or in the garden or with the chickens. Corey keeps

PAUL COREY

seeing places to add on a new room or two to the house, and his wife is alarmed: she is afraid that after this house is finished he may want to start all over again on another one.

Paul Corey is very blond, with hair that is beginning, he says, a forehead "pincer-movement," blue-eyed, and hard-muscled from having mixed, according to his estimation, "a hundred thousand pounds of sand and cement" to say nothing of handling "a thousand tons of stone" at his housebuilding. He likes good food, railway engines and cats; his special dislike is the one billboard visible on the Post Road across the fields from the Corey front yard. He is busy at work on his third Iowa novel, tentatively called *County Seat Town*, to be published in 1941, and has also planned one on lumber-milling. The manuscript of his first novel, *Three Miles Square*, has been presented to the University of Iowa, where, according to Wilbur Schramm, professor of English, it will form the nucleus of Iowa's projected collection of original manuscripts to be kept in the rare book room of the University library.

CORWIN, NORMAN May 3, 1910- Radio dramatist

Address: c/o Columbia Broadcasting System, 485 Madison Ave, New York City

Six-foot tall, brown-eyed Norman Lewis Corwin (he does not use his middle name) is an important figure in the radio world. He has written radio dramas—the best-known is probably *They Fly Through the Air with the Greatest of Ease*—he has directed dramas and produced them. Though he says "worrying" is one of his hobbies, people who should know think it a pretty silly one for a man of his achievements and abilities.

He was born in Boston, Massachusetts on May 3, 1910, the third son of Samuel H. and Rose (Ober) Corwin, and spent his childhood in Boston. He attended the East Boston High School for two years, then switched to the Winthrop (Massachusetts) High School when his family moved to Winthrop. He was an undistinguished stu-

dent, Mr. Corwin remembers, barely scraping through mathematics and flunking Latin in his first year, but he was always near or at the top in English and literary studies, and he led the class in chemistry. Mathematics and foreign languages mystified him.

He decided before being graduated from high school that he wanted to be a newspaperman. He canvassed, by letter, 80 daily newspapers in Massachusetts. Through the letters he obtained a job on the Greenfield *Daily Recorder*, the editor John W. Haigis, who later became state treasurer and ran unsuccessfully for Governor.

Corwin fibbed his age, which was 17, and was accepted as 24. In a month he became sports editor of the paper, and continued for about three years to combine sports writing with feature work, court reporting and film reviewing. His picture-review column was entitled *Seeing Things in the Dark*, and got him in trouble with theatre managers. They finally banned him from their theatres.

At 19 he joined the staff of the famed Springfield *Republican*, having been recommended for the job by his eldest brother, Emil, who was leaving that paper to join the *Providence Journal*. Before Norman left the *Recorder*, however, he recommended another brother, Alfred, as a successor to himself. As a result, for about a year all three brothers were editing on different New England newspapers.

For seven years, during the depression, Norman worked on the Springfield *Republican*. He was regarded as the best "color" writer on the staff, and sometimes got good assignments on that account, but never in all that time did he get a by-line—that was against the policy of the paper. Finally in 1932 the *Republican* entered an agreement with radio stations WBZ-WBZA, operating in Springfield and Boston, to furnish a nightly news commentary of 15 minutes. At that time such newspaper-radio relationships were rare, and the leased news wires for radio were unheard of. But because Corwin's voice was "baritonish" and he read well, he got the job, name credit on the air and eventually a sizable following in New England.

In 1931 Corwin got a leave of absence and took the few hundred dollars he had been saving for five years and went to Europe. He had nothing but bad luck in his travels—got colitis in Italy, broke his portable typewriter and glasses, sprayed fountain pen ink over his only suit, etc. After three months of this he returned to the *Republican*.

In 1935 he became radio editor of the paper, and worked hard trying to create a new kind of service to listeners. His reforms in program listing were permanently adopted by the paper and are still carried on. Then his brother Emil again recommended him for a job. It was that of radio director for Twentieth Century-Fox Films in New York, and the chief responsibility was writ-

ing a weekly script which film-fare commentators around the country could read readily to their listeners. It plugged Fox products in a nice way. For such services the *Film Daily* cited him editorially.

While working for Fox, Corwin yearned for the exhibitionism of broadcasting personally—something which had begun years ago with newscasts and continued with a couple of unnoticed sustaining programs over WBZ and WMAS—one called *Rhymes and Cadences*, the other *Norman Corwin's Journal*. (The latter was notable for the fact that the total mail for a period of twenty weeks was three letters.)

Corwin at length wrote a letter to Elliott Sanger, program chief of New York's "quality" independent station, WQXR. The letter outlined an idea for making poetry—the forgotten art—palatable to the ear. Sanger took a chance, and for 40 weeks Corwin did a broadcast every Wednesday night, discussing and "saying" verse, and later experimenting with dramatizations.

Luckily for him one of the best broadcasts of his *Poetic License* series on WQXR was favorably reviewed by the trade magazine *Variety* and led indirectly to a guest appearance on NBC's then-popular variety program, *The Magic Key of RCA*. W. B. Lewis, vice-president in charge of the Columbia Broadcasting System, heard of Corwin's work at WQXR and, liking it, engaged him in April 1938 as a director-performer. Corwin was to fit into a new educational program, his function being to make general literature as easy to swallow as he was apparently making poetry. But before Columbia's educational advisory committee could agree on the shape of such a program he was set to work directing shows. It was another lucky break, because he then turned his entire efforts to the absorption of new techniques and the acquisition of a new type of creative effort: production. The experience was invaluable. For six months he directed *Americans at Work* and *Living History*, working closely with Gilbert Seldes on both programs.

For months at CBS Corwin declined to have his name go out on the air in connection with the programs he directed: he didn't feel he was good enough to be credited. He attempted one *Workshop* script, a satire, but tore it up halfway through. Late in 1938 he conceived the idea for *Words Without Music*, asked Mr. Lewis for an audition budget, and proceeded to make a record of a show which incorporated his new ideas on augmentation and orchestration. The performance was hailed by executives and by the CBS writing chief, Max Wylie (see sketch this issue). Wylie pushed hard for a series based on the audition, and it was finally arranged. Corwin then entered upon a very active period. For 25 weeks he wrote, adapted, cast and produced *Words Without Music*, doing all his own research and sometimes composing music for it. After nearly six months of this he came close

NORMAN CORWIN

to physical collapse, and CBS packed him off on a vacation.

Corwin's first general recognition came from *The Plot to Overthrow Christmas*, an original rhymed fantasy, done on Christmas Day 1938, and it was followed a few weeks later in the *Words Without Music* series by a verse drama entitled *They Fly Through the Air with the Greatest of Ease*. This, based on the Fascist conception of the beauty of war, and having to do with the bombing of a Spanish city by a lone Italian bomber, drew a number of blessings from unexpected quarters, and later that year was awarded first prize by the Institute of Education by Radio (Ohio State University) as the best dramatic program of the year. Other highlights in *Words Without Music* (which got top award as the 1938 series "best demonstrating the cultural, artistic and social uses of radio") were his adaptations of Carl Sandburg's (see sketch this issue) *The People, Yes*, Whitman's *Leaves of Grass* and Masters' *Spoon River Anthology*.

At the request of Douglas Coulter of the CBS executive staff Corwin later wrote a dramatic essay called *Seems Radio is Here to Stay*. This made quite a stir within the industry, and was privately published by CBS for distribution among agencies, clients and the press. Another Coulter suggestion was that Corwin write a radio play based on Lucille Fletcher Herrmann's story, *My Client Curley*. It made a hit and had to be repeated within a month.

In October 1939 Corwin was asked to direct *The Pursuit of Happiness*, and this led to his first extensive contact with people of stage and screen. Not long after the program was started, composer Earl Robinson, whom Corwin had never met, approached him to discuss ideas he (Robinson) had for an opera based on *The People, Yes*. Robinson casually

CORWIN, NORMAN—*Continued*

mentioned his *Ballad of Uncle Sam*, which a year back had died, struggling, in a Federal Theatre revue named *Sing for Your Supper*. The basic idea seemed to Corwin unworthy of early death, and he asked Robinson to play it for him. Corwin immediately interested CBS executives, and all three in turn got Paul Robeson interested. Then Corwin shortened the score, changed the name to *Ballad for Americans*, brought together Robinson and Robeson, and directed its first performance on *The Pursuit of Happiness*, November 5, 1939. It created a national sensation and was repeated on the Christmas broadcast a few weeks later. The broadcast marked the start of Earl Robinson as a widely recognized American composer, and also gave wide prominence to the librettist of the *Ballad*, John LaTouche (see sketch this issue).

The Pursuit of Happiness tried hard to keep a high standard, though it sometimes ran into terrible streaks of bad luck—stars were forced to drop out at the last minute or suffered untimely illnesses. But before the program went off the air for lack of a sponsor it had presented the first performance of Bernard Schoenfeld's great *Johnny Appleseed*, the première of Maxwell Anderson's and Kurt Weill's *Magna Charta*, and Corwin's own adaptations of writings by John Steinbeck (see sketch this issue), Thomas Wolfe and Stephen Vincent Benét. In the latter two he directed Charles Laughton and Elsa Lanchester, and began an association which continued later in Hollywood. He afterward wrote *To Tim at Twenty* expressly for the Laughtons.

Soon after the termination of *Pursuit of Happiness* Corwin was offered a long-term writer-producer-director contract by RKO Pictures, but turned this down in favor of a one-picture writing commitment, which he fulfilled in the summer of 1940.

During the summer of 1939 he lectured at the University of Colorado. Previously he had lectured at Columbia University, New York University and Amherst College.

COUGHLIN, CHARLES EDWARD, FATHER (kõg'ln) Oct 25, 1891- Priest of the Shrine of the Little Flower

Address: h. Woodward & Twelve Mile Rd, Royal Oak, Michigan

December 1940 Bulletin: On September 20, 1940 Father Coughlin announced that he had abandoned his plan for a new series of weekly radio talks, scheduled to open on October 20. According to Father Coughlin, "men powerful in the field of radio and other activities" had "forced the decision upon me."

From September issue:

The famous "radio priest," Father Charles E. Coughlin of the Shrine of the Little Flower, owns a 47-station network, once headed a political organization, the National Union for Social Justice, publishes the magazine *Social Justice*, now heads the Social Justice Poor Society, Incorporated. Recently his popularity has declined because of his violent anti-Roosevelt and anti-Semitic stand. But in June and July 1940, he became headline news again on two counts. The July 1 issue of *Social Justice* came out with Father Coughlin's candidates for President and Vice-President: Wendell Willkie (see sketch this issue) and Charles A. Lindbergh. He has since said (after Willkie repudiated his support) that he "could not in good conscience support either candidate." His political announcement closely followed his statement on June 24 on the acquittal of 17 members of the Christian Front, an anti-Semitic, pro-Fascist organization with which he was connected: "The Christian Front movement will emerge more vigorous and potent than ever." When the Christian Fronters were first charged with conspiracy to overthrow the government with force of arms the radio priest disavowed knowing them, called them "fakers." But evidence that *Social Justice* had long encouraged the Christian Front included a speech by Father Coughlin in July 1939 in which he counseled them to follow the "peaceful way" until "there is left no other but . . . the Franco way." In face of such evidence Father Coughlin reversed his position: "I take my stand beside the Christian Fronters. . . My place is by their side."

Commonweal, a Catholic publication, accused the radio priest of being directly responsible for the plight of the arrested men. So many complaints against Father Coughlin came in to the Dies Committee that Representative Voorhis of the committee urged an investigation of his activities. But such an investigation on the part of Martin Dies (see sketch this issue) has not yet been forthcoming.

The priest of a small parish at Royal Oak, Michigan, whose radio expenses are, according to his own estimate, some \$10,000 a week, and whose assets are said to have reached nearly half a million in 1938, once wrote in the foreword of a book on his work: "If I threw away and denounced my

faith, I would surround myself with the most adroit highjackers, learn every trick of the highest banking and stock manipulations, avail myself of the laws under which to hide my own crimes, create a smoke screen to throw into the eyes of men and—believe me—I would become the world's champion crook. If I didn't believe in religion and in a happy beyond I would get everything for myself I could lay my hands on in the world."

Father Coughlin was born of pure Irish stock in Hamilton, Ontario, Canada on October 25, 1891, the son of Thomas J. and Amelia (Mahoney) Coughlin. His father was a stoker on the Great Lakes who later became sexton in a Catholic Cathedral; his mother was a seamstress. From the parochial schools young Coughlin entered St. Michael's College, Toronto. After his graduation he considered politics as a career, but was persuaded to enter the Church. He was incardinated at the Diocese of Detroit in 1923 and sent to be pastor of the Shrine of the Little Flower, Royal Oak, Michigan in 1926. For four years he broadcasted sermons and talks to children over WJR of the Detroit *Free Press* without gaining recognition. But in 1930, when he injected economics and politics into his sermons and got results, Father Coughlin organized the Radio League of the Little Flower and branched out.

His "rhetorical, florid tirades," larded by the philosophy of the encyclicals of Pope Pius XI and Leo XIII, brought him letters by the thousand, many with contributions. He rented time on a 16-station Columbia hookup. He devoted a series of talks to Communism in which he charged that Russia was fomenting revolution in America. He attacked prohibition. When he talked on the "menace of Hoover" his mail brought him nearly a million congratulatory letters. When the Detroit banks closed in 1933 Father Coughlin became a spokesman for the New Deal: at the White House he conferred with Raymond Moley, he employed his own brain trust and hired priests to take care of his parish work. But his income in 1934 fell to a low figure, and by the end of 1935 he was anti-New Deal—as was big industry and finance. With his anti-Roosevelt stand, money began to flow back into his coffers—enough to help him launch his National Union for Social Justice.

Meanwhile complaints against the radio priest caused the Columbia network to ease him out, and he created his own network. The National Union for Social Justice campaigned in 1936 for William Lempke. During the campaign Father Coughlin was forced by the Pope to apologize for calling President Roosevelt "a liar," which apology he later retracted in a speech. His "lobby" (he did not call it a political party) had headquarters at the Shrine of the Little Flower, exempt from taxation because it is church property. According to statistics gathered by John L. Spivak in his investigation of Father Coughlin's ventures, the

Bachrach

FATHER COUGHLIN

Union for Social Justice was formed on money borrowed from his parish funds, from the Radio League of the Little Flower—which, according to sworn statement, is a non-political organization to raise funds for the Shrine—and from the magazine, *Social Justice*.

"I am neither Republican, Democrat nor Socialist," he has declared. "I glory in the fact that I am a simple Catholic priest endeavoring to inject Christianity into the fabric of an economic system woven upon the loom of greed." His party lifted certain planks from the Farmer-Labor platform, but there was no word in its policy of democratic government or the right of free speech.

Lempke defeated, Father Coughlin gave up active political campaigning and continued his extracurricular activities through his Social Justice, Incorporated. *Social Justice* magazine is not an organ of the church but a privately owned publication. It became this when Archbishop Mooney of Detroit tried to censure its pronouncements. In 1937 the Social Justice Publishing Company asked tax exemption because it was owned by a "non-profit-making corporation named the Radio League of the Little Flower." The sole stockholder of Social Justice, Incorporated is Father Coughlin, and his board of directors consists of himself and two secretaries. The directors of the Radio League of the Little Flower are the same. The president of Aircasters, Incorporated, an agency handling Father Coughlin's radio time, is also general manager of *Social Justice*. The Social Justice Poor Society, which, as a charitable organization is not required to publish any statements, is actually (according to *Look*, April 4, 1940) a holding company for the cor-

COUGHLIN, CHARLES EDWARD

Continued

poration Social Justice, Incorporated, organized for profit.

Social Justice is the mouthpiece for Father Coughlin's anti-Communist and anti-Semitic campaigns. John McCarten (*American Mercury*, June 1939) says that much of the material used in Father Coughlin's anti-Semitic campaign has been culled directly from *World Service*, a Nazi propaganda organ. He attacks the Jews for having introduced "Communist international banking," and lists Bernard Baruch and Eddie Cantor as America's two most dangerous Jews. He once told his listeners that there are three kinds of communism today: "the industrial communism of Russia, the military communism of Japan and the financial communism of Wall Street." When several radio stations refused to allow him the air for his 1938 anti-Semitic campaign, among those quick to defend him were Wilhelm Kunze, press-agent of the German American Bund, Edward Smythe, one of the organizers of the Christian Front, and Allen Zoll, arrested for trying to extort money from station WMCA in return for calling off a Christian Front picket line he had thrown around the station. Zoll was bailed out by Seward Collins, editor of the *American Review*.

With regard to the Detroit priest's stand on labor, Raymond Gram Swing (in his book, *Forerunners of American Fascism*) says that Father Coughlin "believes in government-organized unions such as Germany and Russia have. . . . He denounces at the same time capitalism and communism. After reading and hearing many of his speeches I am struck by their technical similarity to those of Hitler." Father Coughlin refused to employ union labor in building his shrine. According to R. J. Thomas, president of the United Auto Workers, Father Coughlin, who had always lashed out against the CIO, in 1937 helped Henry Ford to split union ranks by offering his support to Homer Martin, then head of the UAW, to start a "new union" at the Ford Motor Company—provided Martin left the CIO.

In 1935 the Detroit *Free Press* brought to light that, while the flexible Father was denouncing Wall Street, he was at the same time using the services of a Wall Street broker to handle his 500 shares of Kelsey Hayes stock. He orated vociferously against the silver market, but when the government published the list of all holders of silver the largest in Michigan proved to be the secretary of Father Coughlin's own organization. It is believed that the Detroit priest "tipped the scales against the World Court" when, backed by William Randolph Hearst, he fought with Huey Long against it.

The Catholic Church authorities say that Father Coughlin is given "permission to speak—not approval." He speaks as an American citizen, not for the Church. If he says anything

"that affects our moral doctrine, it's the duty of the Church to take it up. If it is politics, economics and social conditions, then it does not come within the scope of the Church."

He is the author of three books—*Christ or the Red Serpent* (1930); *By the Sweat of Thy Brow* (1931); and *The New Deal in Money* (1933).

His own Church, the Shrine of the Little Flower, has become the mecca of many tourists. It is an architectural miscellany with a cruciform tower 150 feet high that has frequently been compared to a silo, and its builder irreverently called "silo Charlie." Powerful lights play upon it at night. On the corner of the property is the Shrine Supper-Service Station and hot dog stand. Outside and inside the Shrine itself all kinds of souvenirs are for sale.

Father Coughlin's business offices (he has a staff of more than 100 clerks and stenographers) are in the Shrine tower. He is, according to Mr. Swing's (see sketch this issue) description, a likeable enough person. "Once a caller reaches him—and he can make himself as inaccessible as a bank president—he finds him quite the human being. He is quick, intelligent, friendly, unpretentious in his dealings, leaps up and paces the floor, talks in a flood of language. He smokes cigarettes endlessly. He dots his conversation with manly sounding 'damns' and 'hells.' Furthermore he is sincere, if sincerity means the aim of his enterprise is not to line his own pockets. But ambition preys on his soul."

What form that ambition may take remains debatable. Because of his Church ties, Father Coughlin can look to no future as an independent political leader, and he has cut off all chance for advancement in the Church itself. It is said that his *Social Justice* has been operating on a large deficit for some years, yet at the same time he has been adding to his radio stations even though his broadcasts cost some \$500,000 a year. The question has been raised by more than one observer as to who is meeting the radio priest's deficits. His recent acknowledged connections with the pro-Fascist Christian Front has added to the suspicions of many concerning Father Coughlin's trend and influence. A. B. Magil in the *New Republic* (June 24, 1936) has said: "The American Hitler may have died with Huey Long, but the Paul Joseph Goebbels of Royal Oak believes his successor will come."

COVARRUBIAS, MIGUEL (kō-vār-rōō'vē-ās) 1902- Artist

Address: c/o Museum of Modern Art, 11 W 53rd St, New York City

Miguel Covarrubias is going to use the Guggenheim Fellowship which he was awarded in April 1940 to prepare a book on the culture of the Isthmus of Tehuantepec. A Mexican himself and long a student of the types, customs and cultures of the world's people, he is extraordinarily well-equipped for the job.

Covarrubias is best known, perhaps, for his caricatures, but his *Island of Bali* (1937) established him as an ethnologist and anthropologist, as well as a superb reporter and artist. He and his wife, Rose, went to Bali for the first time in 1932 and brought back pictures that "reflect the beauty that belongs to the women of this enchanted island, showing them in characteristic poses and parades." They went back in 1936, and *Island of Bali* was the fruit of their two long stays there. It deals with the art and culture, the background and everyday life of the Balinese as seen through the sympathetic and understanding eyes of an artist. *The Nation* says that the book "is a sound piece of scientific work, a real contribution to knowledge, and will probably be the standard English work on Balinese culture for years to come." It is also a lively book and a handsome one, profusely illustrated by Covarrubias' drawings and his wife's photographs.

In his six mural maps of the cultural and economic contribution of the peoples of the Pacific areas for the interior of Pacific House at the San Francisco World's Fair (1939-40), Covarrubias again shows his firm grasp on ethnology, sociology and economic geography. The freshness and beauty of these maps are equalled by their value as visual educators. For them he consulted thousands of sources, and with researchers at the University of California studied flora and fauna, racial stocks, costumes, specific products and industries.

When Miguel Covarrubias arrived in New York in 1923 with a limited scholarship from the Mexican government, he was without friends, influence or means. But in his first four years in New York he published two books, illustrated a third, did scenery and costumes for Shaw's *Androcles and the Lion*, designed three ballets, drew hundreds of caricatures, published a remarkable suite of Negro drawings, contributed regularly to *Vanity Fair* (sometimes as many as eight drawings in a single issue), made weekly sketches for the *New Yorker*, and went once to France and twice to Mexico.

Covarrubias was born in Mexico City in 1902. As a child he used to draw and make caricatures, but he received no formal art education (or any other kind of education, for that matter). He never finished what he called his "sentence at preparatory school," and he never was in an atelier in Paris or an academy in New York or London. What he learned he learned through personal observation, through constant hard work.

Covarrubias' first New York exhibition was held at the Whitney Club shortly after he arrived there. It was a tremendous success, and he suddenly found himself "in

COVARRUBIAS, MIGUEL—*Continued*

the position of one of the most indulged youths of that great city." *Vanity Fair* asked him to contribute, and he continued as a contributor until the magazine was suspended in 1936. His first book, *The Prince of Wales, and Other Famous Americans* (1925), with caricatures of the great and the spectacular, "definitely opened the doors of fame to him."

As a caricaturist "he has caught Harold Lloyd in his shark-like laugh and Chaplin in the convulsive contraction of a mouth that no longer knows how to laugh. The comical part of a caricature lies in the contrast between the changing mobility of a person and a paradoxical impression of the same person fixed in a movement that condemns it to perpetual immobility." In a sharp line or a shadowed curve, in the placing of an eyebrow or the drawing of a series of criss-cross lines the essence of the person drawn—whether it is Greta Garbo or John D. Rockefeller—is caught and transmitted. And yet, as Diego Rivera says: "In Covarrubias' art there is no malice; a humor that is young and clear; a precise and well-defined plasticity."

In his painting of types and aspects of Negro, Mexican, American and European life, Covarrubias has gone further than caricature. These are plastic interpretations achieved through his own original modes of expression and personal technique. In 1925 Covarrubias became known as the discoverer of the Negroes in Harlem, and his *Negro Drawings* (1927) made him the first artist in America to bestow on the Negro anything like the attention Gauguin gave to the South Sea natives. In these drawings of blues singers, sheiks along Lenox Avenue, "higher-yaller" flappers, revivalist preachers, are humor, truth, aliveness and "a feeling of actuality." After looking at them the *London Times* said: "As an artist Mr. Covarrubias deserves all that his introducers say about him—even if their references to Giotto, El Greco, Picasso are unnecessary. He has an extraordinary control of plastic form, his colour is rich and haunting, and, above all, his work is full of vitality."

Covarrubias has done lithographs and oil paintings. He has illustrated many books; he has painted scenery; he has written about the popular Mexican theatre; he has published a book on life in Bali; in May 1940 he selected material for the modern painting section of the New York Museum of Modern Art's "Twenty Centuries of Mexican Art" show. And now he is going to work on his book on Tehuantepec. If his previous work is any indication, again we will have a book which will be "as superb a piece of reporting, of anthropological and artistic understanding as you will find in a dozen campusfuls of pompously scientific works."

CRAWFORD, PHYLLIS Feb 8, 1899-
Author

Address: 11, 57 Charles St, New York City

Rated one of the best writers of books for children in their early teens, Phyllis Crawford, who in 1938 won the Julia Ellsworth Ford Foundation Award for *Hello,*

the Boat!, recently published (October 1940) *Walking on Gold*. The characters in this new book for boys and girls are from Arkansas, where Miss Crawford was born and grew up. It is the story of a company of fortune-seekers, the Arkansas Travelers, who followed the trail in the spring of 1849 to the California gold mines. In particular it is the story of this exciting trek as experienced by a red-headed boy, Peckerwood.

The account of this journey by covered wagon across rough pioneer country and wide deserts full of the hazards of wild life and Indians is one that any boy (or girl, for that matter) should follow with the most lively interest.

The narrative moves swiftly; at the same time the details are exceptionally vivid and realistic. The characters are real people with genuine Arkansas folk speech. Particularly good is Miss Crawford's handling of Indians. They are not stereotyped blood-curdling redskins, but have humanly varying characteristics, as tribes and as individuals. It is expected that *Walking on Gold* will top the appeal which *Hello, the Boat!* had for young readers. The latter, a story of river-boating on the Ohio, was called "that rare thing, a pioneer story which is original and unhackneyed both in setting and plot."

Phyllis Crawford was born February 8, 1899 in Little Rock, Arkansas, daughter of Thomas Dwight and Elizabeth Daviess (Williams) Crawford. "As a little girl," she says, "I was so terribly shy that I would walk down the opposite side of the street rather than pass the home of someone I knew, so I didn't have many friends." She played games with her brother John and their boy cousin, who were always doing Wild West plays in which they condescendingly created minor female parts for Phyllis to act. She didn't become interested in reading until she was about eight, when she found a copy of a particularly lush romance for adults, *Lady Betty Across the Water*. Only one thing in the book puzzled her: the "cocktails" the people were always having; she had never heard of a cocktail. But from then on she avidly read everything she could find. She hated *Elsie Dinsmore*, but her great passion was *Little Women*, which she read over and over.

She went through the Little Rock High School in three years, because her brother had done so, and was class artist and class poet. Although at 10 her modest ambition was "to be the world's greatest violinist, or the greatest artist, or the greatest writer," she now settled upon writing. "I decided it was a good means of communication when the cat got your tongue and there wasn't a safe place for your hands and feet," she says, "and the equipment was both cheap and handy." She went to Randolph Macon Woman's College, where she edited the monthly literary magazine staff and helped establish a writing club called the Quill Drivers. After her graduation in 1920 she taught English for a year at Fairfax Hall in Virginia, a girls' school, but didn't like having to chaperone the girls. Then she decided to

CRAWFORD, PHYLLIS—*Continued*

be a librarian and went to the University of Illinois Library School, where she received her B. L. S. degree.

In 1924 she was employed by the H. W. Wilson Company in New York as editorial assistant on the *Standard Catalog*. She was co-editor of the *Song Index* published in 1926. In 1928 she married Cyril Kay Scott, artist and novelist, and went to Santa Fe, New Mexico to live. After her divorce in 1931 she returned to work again at the Wilson Company, editing the *Vertical File Service* catalog as well as the current supplements to the *Children's Catalog* and *Song Index*. Her first two books were published in 1930: *Elsie Dinsmore on the Loose*, a satire for grownups, under the pseudonym Josie Turner; and *The Blot: Little City Cat*, for children, under her own name. She left the Wilson Company in 1935 to work on the *Index of American Design* of the Federal Arts Project. She resigned in 1937. Deciding to devote her time wholly to writing, she went to work on *Hello, the Boat!* which won, the following year, the \$3,000 Ford Foundation Prize.

Miss Crawford is small, charming, dark-haired, with an engaging twinkle in alert, wide-set hazel eyes. She talks as well as she writes and is interested in any number of things, "especially cats—and more cats." She is also fond of antiques, American primitives in particular. She lives in New York City and is at work on a new book for young people, *The Secret Brother*, announced for 1941 publication.

CRIPPS, SIR STAFFORD Apr 24, 1889
British Ambassador to Soviet Russia

On June 12, 1940, Sir Richard Stafford Cripps (he does not use Richard), Britain's newly-appointed Ambassador to Russia, arrived in Moscow on the same plane with the new French Ambassador Erik Labonne. The appointment of a Left-wing member of the British Labor Party as Ambassador to the Soviet at this time marked a new phase in British diplomatic policy, especially since former Ambassador Sir William Seeds had been "on leave" from Moscow since January, and since Cripps was expelled from the executive council of his party early in 1939 for advocating a united front of British Laborites, Liberals and Communists against the Chamberlain National Government.

Member of Parliament since 1931, Sir Stafford Cripps is known professionally as a brilliant radical lawyer, privately as "Red Squire" of the Cotswolds, politically as the

enfant terrible of the British Labor Party. The youngest son of Sir Charles Alfred Parmoor (Lord President of the Council in the last Labor government) and Theresa (Potter) Cripps and nephew of the Webbs, he was born April 24, 1889. He was educated at Winchester and at University College, London, and in 1913 set himself up as barrister-at-law in Middle Temple. In 1914 he was with the Red Cross in France, in 1915 he was assistant superintendent of His Majesty's factory at Queen's Ferry, Cheshire, and after the War Cripps began to make his reputation as the greatest authority on company law in Great Britain, one whose fees as a King's Counsel have been estimated at \$150,000 a year.

In 1930 he entered politics as Solicitor-General in Ramsay MacDonald's second Labor government (a regime that has since been labeled "anti-democratic, anti-Socialist and therefore pro-war"), was knighted, and with the formation of a National Government in 1931 went into opposition. Since the by-election of 1931 he has been Labor Member of Parliament for Bristol East, and during the past decade has created a great stir in the British political arena. Founder and chairman of the Socialist League within the parliamentary Labor Party, "one of the half-dozen figures in the movement with a national appeal," often called the party's best mouthpiece, he has made himself feared almost as much by the conservative British trade unions as by the Tories, has found himself described as "inconsistent", "indiscreet", "a dangerous character," a "heretic," and also as England's most courageous fighter against entrenched privilege.

Sir Stafford Cripps once told a political audience that as a lawyer he met the people of the ruling classes. "They pay me fabulous and fantastic sums to get them out of their difficulties," he said. "I have no hesitation in saying that the working class of this country are more capable of ruling than they are." This was his sincere belief. And he was a Socialist who, mindful of the history of MacDonald's government, had become convinced "that half-measures and compromises, timidly concurred in by a labor government on taking office, doom that government to sterility and ultimate defeat."

According to Sir Stafford the policies of Chamberlain's National Government showed Great Britain's rapid and dangerous trend toward Fascism, the first definite and conscious step having been the Trade Disputes Act of 1927. The 1931 elections themselves had been "essentially Fascist in nature": the "forces of capitalism had such a triumph at the polls that there was no need for any formal personal dictatorship." "The worker is being, and has been, disciplined not viciously and ruthlessly as in Germany and Italy, but gently and firmly as one would expect from a country-gentleman-Fascism in Britain. Colored shirts are not necessary and are embarrassingly obvious; a special

SIR STAFFORD CRIPPS

constable is much cheaper and attracts less attention."

In 1934 he had become a member of the national executive council of the Labor Party. "But because he argued that the new tasks which confront democracy call for a new technique and a swifter procedure, it suited the Tory and Liberal press to pretend that he was advocating some species of dictatorship. It called on the Labor Party to clear its good name by repudiating him." Always known for his "brutal frankness," during one speech listing the opposition which a government intent on a rapid socialization of the country must face, Sir Stafford mentioned Buckingham Palace, thereby committing another blasphemy which neither the press nor his stunned audience soon forgot.

In 1935 he fell out with his party over a question of foreign policy, finally resigned from the executive council, and was not re-elected until 1937. By then he was gathering wide support among the intellectuals of his party in his campaign against Fascism both abroad and in his own country. Within the Labor Party there were divisions on many issues. Sir Stafford's main quarrel with accepted policy was Labor's support of rearmament by the Chamberlain government; he insisted that "if Fascism chose to gamble on war, only a Labor government would wage that war for working-class ends." What is more, while Sir Walter Citrine and the trade unions seemed willing to make terms with Winston Churchill (see sketch this issue) in return for a firm policy toward Germany, Sir Stafford Cripps and the Socialist League signed an agreement for joint action with the Communists and the Independent Labor Party on the main issues of the day, continued to talk "Marxism with an English accent," to fight for a united

CRIPPS, SIR STAFFORD—*Continued*

front, for an alliance with Russia, for a really Socialist national policy. Already there had been talk of expelling him and his followers. Said Harold Laski, one of the tour members of the executive council then known as Left-wingers: "Comfortable trade union officials, liberals who have joined the party without ever changing their views, pushing middle-class intellectuals who want to be in the Cabinet as quickly as possible, these may demand Sir Stafford's head on a charger. But the day they get it will mark the end of the hope of most of us that this generation may still see in England a great forward move toward socialism."

On January 13, 1939 Sir Stafford presented a memorandum to the executive council, asked for a special meeting to consider certain proposals. Their substance was that unless Chamberlain and his National Government could be defeated in the next election "British democracy was threatened with destruction by both internal and external enemies." Acting alone, the Labor Party was not powerful enough to elect its own candidates, and could only divide and weaken the power of the groups opposed to the Tory government. He therefore proposed that the Labor, Liberal and Communist Parties should for the term of a single Parliament agree to concerted action on a previously agreed-upon program of social progress at home and opposition to Fascism abroad.

After discussion, the memorandum was defeated. The next day, however, leading members of the Party and its constituent organizations received the same memorandum in the mail, and a request for support. This being considered a grave breach of discipline, Sir Stafford was shortly afterward requested to withdraw his memorandum; he refused, was expelled from the executive council. This did not stop the controversy, however. The *London Daily Express* announced that by the expulsion the Socialist Party was "blowing its brains out." Sir Stafford continued to ask support for his program, to form Petition Committees; everyone connected with the Labor Party was taking sides; the efforts of four of Sir Stafford's allies ended in their own expulsion. After a speech before the Southport Congress in which he found himself blackballed, Sir Stafford asked for reinstatement, at last promised "to abide by the decisions of the conference on a Popular Front," but was refused.

After World War II began Sir Stafford Cripps was still contending that a British alliance with Russia would have prevented the conflict. Late in April 1940 he arrived in London. He had just made a leisurely tour of the world, including visits to Japan, India, the Philippines and the United States as well as a flight from Chungking to Moscow and back, during which he had presumably talked to Molotov (see sketch this

issue). In the United States he had expressed it as his opinion that the German-Soviet pact could be broken if the Western countries, including the United States, were to resume economic relations with Russia, and it is supposed that he went to Chamberlain with whatever information he had gathered on this score. It was not until Winston Churchill replaced Chamberlain, however, that Sir Stafford was listened to. First sent to Moscow as the head of a small British trade mission, he was given en route the rank of Ambassador when Great Britain was informed that Russia would be unable to accept a special envoy to discuss trade matters which could be dealt with by Ambassador Seeds or anyone appointed to replace him. Before reaching Moscow on June 12 Sir Stafford had made stops in Athens, Sofia and Bucharest in order to study the Balkan situation, and after his interview with Premier Molotov on June 14 it was said that concrete discussions on the possibility of a commercial agreement between Russia and Great Britain were to be started immediately. In October 1940 Sir Stafford was still sufficiently optimistic about a Soviet-British agreement to send for his wife and two of their daughters, although to most observers there seemed to be few tangible reasons for optimism, and British Left-wingers were claiming he was being used as a "front" for the policies of Lord Halifax (see sketch this issue), who had always been anti-Soviet.

Sir Stafford Cripps is "a thin, grave man who drinks no spirits, eats no meat," young-looking, "meticulously dressed, with a serious, scholarly face." In 1911 he married Isobel, second daughter of the late Commander Harold Swinbank, and the couple have three daughters and a son who has already been a Parliamentary candidate. Sir Stafford has fathered two books as well as legal works; *Why This Socialism?* (1934) and *The Struggle for Peace* (1936). He recently remarked to a fellow-diplomat: "Of all the various occupations I thought I might follow, that of Ambassador never was among them. When any one here addresses me as 'Your Excellency' I involuntarily glance over my shoulder to see whether some excellency is standing behind me."

CROMWELL, JAMES H. R. 1897- Ex-United States Minister to Canada, 1940; candidate for United States Senator from New Jersey

Address: Somerville, New Jersey

Long known as an amateur in sports, social philosophy, economics and politics, James Henry Roberts Cromwell became a professional diplomat upon his appointment at the age of 43 as United States Minister to Canada by President Franklin D. Roosevelt early in January 1940. On April 19, 1940 he formally announced his candidacy for the Democratic nomination for United States Senator from New Jersey in a statement in which he described himself as a "liberal" and on May 23 he resigned his Ministerial post to devote himself to his campaign. He received the nomination, Mayor Hague calling him the "ideal" candidate, but was defeated after a campaign in which his opponents called him "Mayor Hague's

puppet" and he insisted that he wore "no man's collar." In November 1940 his rival's campaign expenditures were being investigated.

Mr. Cromwell was born in New York City, the son of Oliver Eaton and Eva (Roberts) Cromwell. When he was 15 years old, his mother, after the death of Oliver E. Cromwell, married the late Edward T. Stotesbury, senior partner of J. P. Morgan & Company and head of the Philadelphia banking house of Drexel & Company, for whom his stepson had great affection and admiration. Young James grew up in Philadelphia. Mrs. Stotesbury is known as a leader in society and as dowager queen of the Palm Beach winter colony.

James H. R. Cromwell attended Central High School in Philadelphia as well as private schools (Fay and Lawrenceville) and the University of Pennsylvania. He left the university during the World War to enlist in the Navy. Later he transferred to the Marines, where he attained the rank of captain.

On June 17, 1920 he married Delphine Dodge, daughter of automobile manufacturer Horace E. Dodge. They had one child, Christine. This marriage ended January 1928 in an "amicable separation" followed by a Reno divorce later the same year. On February 13, 1935 Mr. Cromwell was front-page news because of his marriage to 22-year-old Doris Duke (daughter of tobacco magnate James Buchanan Duke), who is known as "the richest girl in the world." She is said to be the heiress to a fortune of between \$30,000,000 and \$53,000,000. In 1936 the Senate Committee on Campaign Expenditures reported that she had contributed \$50,000 to the Democratic campaign that year. After the 1940 Senatorial campaign she separated from her husband, however.

The Cromwells lived on a 2,500-acre estate at Somerville, New Jersey and also maintained a home in Palm Beach and estates in Newport, Rhode Island, North Carolina, Antibes and a \$1,000,000 "guest-proof" mansion in Honolulu which was designed, at Mrs. Cromwell's request, without spare bedrooms. In Ottawa they occupied the spacious Ministerial residence in Rockcliffe, overlooking the Ottawa River.

"Jimmy" Cromwell is an accomplished amateur sportsman, with special skill in golf, tennis, horsemanship, swimming, boat-racing. As an amateur boxer, he stood up for three rounds in a bout at Palm Beach with Tommy Loughran, then light-heavyweight champion of the world. For years he was a playboy. His parties were famous, and he once said: "For a long time in my life I thought the world was just a nice big pie, and I cut myself a slice."

But Cromwell, who is now said to scorn the "idle rich" and who on his arrival in Canada urged newspapermen to "forget all this richest girl in the world stuff," settled down to a serious study of economics after the collapse of the Florida land boom in

JAMES CROMWELL

the middle 1920's and the stock market crash of 1929. He had returned from the War to be introduced to the mysteries of banking as a clerk in the house of Drexel & Company. He then turned to the automobile financing business and later was vice-president of the Peerless Motor Company of Cleveland, and a partner in the New York advertising firm of H. R. Doughty and Associates. He is said to have been personally responsible for the sale of Dodge Brothers Company, after the death of his father-in-law, for the prodigious sum of \$160,000,000. In 1925 Cromwell became president of the British-American Improvement Company of West Palm Beach. With Stotesbury and Dodge backing, he and his associates (among them the former King of Greece and the Countess of Lauderdale) created the town of Floranada, midway between Palm Beach and Miami, which was to be the center of the "American Riviera." The collapse of the land boom ruined the enterprise.

Cromwell was bitter over the law suits which followed this unfortunate venture. He turned with enthusiasm to economics, politics, social criticism, statistics, theories of constitutional law and lecturing. As a youth he was orthodox in his economic beliefs, and once he resigned from a Wharton School course because an instructor made disparaging remarks about a utility company of which Mr. Stotesbury was chairman, citing it as an example of "predatory plutocracy."

Nearly 20 years later, however, Cromwell went in somewhat the same direction. Although he still maintained reservations on behalf of his stepfather, in *The Voice of Young America*, published in February 1933, a month before the first inauguration of President Roosevelt and while the author

was still vice-president of the Peerless Motor Company, Cromwell severely lectured the parasitic rich and called for government ownership of transportation and public utilities. He also advocated that the issuance of any additional tax-exempt securities be prohibited; that United States tariffs be gradually reduced; that a blanket moratorium be declared on all international debts; that the government of Soviet Russia be recognized by this country. Although the book pointed out that men who have built their own fortunes by satisfying a need should not be confused "with those multimillionaires who have gained their wealth through the unconscionable exploitation of public monopolies or through the acquisition of special privileges by which they have obtained an unfair advantage over competitors," the author emphasized that his position was that of a capitalist who wanted capitalism to continue but felt that without considerable changes in the structure of our government, capitalism could not continue in this country.

Later Cromwell became one of the founders of the Sound Money League in which he was associated with the Rev. Charles E. Coughlin (see sketch this issue), radio priest, and for which he wrote booklets called *What Is Sound Money?* (1934) and *The Lion's Share* (1935). He so frequently conferred with Father Coughlin regarding the banking situation in November 1934 that the report arose that he had provided the Priest with inside information on bankers. Cromwell denied this, however, and said that the conferences were devoted to interpreting the attitude of bankers toward reforms sought by the Sound Money League and to impress on Father Coughlin that the system was at fault, not the bankers. The league pleaded with young men to unite for the reform of society within the framework of capitalism. With H. E. Czerwonky, Cromwell wrote *In Defense of Capitalism*, which was published in 1937. Written for business men, this work is "an explanation of the functioning of our capitalistic system of today and specific measures which would correct its defects."

Before his appointment to the "comfortable, socially pleasant, politically important" post of Minister to Canada, James H. R. Cromwell had no previous diplomatic experience, though he has long been interested in public affairs and has been a personal friend of President Roosevelt. Although he has been especially friendly toward some of the President's policies, particularly those dealing with foreign affairs, he cannot be termed a New Dealer in the full sense of the word. Some political commentators considered his appointment largely a political move to pave the way for him to run for election to the Senate, and events have proved them right. "Some said," according to *Time*, "it was because an election was coming, as well as drafts on the Democratic war chest; some said the moves were like a shot in pocket pool,

in which the eight ball smacked the six, the six hit the three and James Cromwell dropped into the corner pocket." The Canadian post is considered one of the most important in the diplomatic service because of the economic relations of the two countries as well as their proximity. Mr. Cromwell's appointment to it was very popular in Canada where, headed by Prime Minister Mackenzie King (see sketch this issue) one of the largest crowds Canada ever turned out to greet an arriving American Minister met him and his wife on their arrival at Ottawa, with the thermometer at 15° below zero, on January 22, 1940.

The new Minister's popularity in Canada was considerably increased by his address, on March 19, 1940 at a joint luncheon of the Canadian and Empire clubs of Toronto, in which he praised Anglo-French war aims, blasted Germany and attacked American isolationists. His speech, however, raised a storm of protest in the United States where Senators and House members, believing his statements entirely outside the authority of an official representative of the United States government and likely to involve the nation in the War, demanded his recall. Cromwell settled the problem himself by his resignation, but didn't change his mind. During his Senatorial campaign he ardently defended conscription and all aid to Britain (France now being out of the picture) short of war.

James Cromwell is an enthusiastic person who enjoys life. Friends come easily and he is good company, ready to start anything or to talk business. His increased serious activities have not caused him to withdraw from society, though he has, of course, lessened his play hours. According to Elsa Maxwell, "he is never in doubt about anything and he feels he could cure the ills of this republic if given half a chance." According to others, some of his beliefs have borne a strong resemblance to those of Sir Oswald Mosley (see sketch this issue), British Fascist leader. Strong, tall, slender, he moves and speaks quickly. He has sandy, curly hair and a warm smile. Arthur Krock has written in the *New York Times*: "Mr. Cromwell is an engaging young man of wealthy antecedents and connections who deserves credit for having tried to amount to something in his own right."

Who's Who in America (Addenda)

CROSS, MILTON JOHN Apr 16, 1897-
 Radio announcer of NBC

Address: b. 30 Rockefeller Plaza, New York City; 60½ Riverside Drive, New York City

"The house lights are being dimmed. In a moment the great gold curtain will go up. . . ." To ten million people who have sat enraptured before their radios listening, the "cultured, genuflecting" voice of Milton J. Cross, announcer for the Metropolitan Opera broadcasts, is more widely known than that of any other American with the possible exceptions of President Roosevelt and Charlie McCarthy.

In 1940, with 19 years of radio experience behind him, Cross is the second oldest radio announcer in point of service. Born in New York City, he lived as a boy in the tough Hell's Kitchen section and dreamed of a career in music. So "music-struck" was he that on vacation he fought for the privilege of personally delivering butter to Louise Homer, merely to gaze at the great singer. He even paid to carry a spear in a Metropolitan Opera production. After the regulation high school graduation he registered at the Institute of Musical Art under the direction of Dr. Frank Damrosch and received a diploma entitling him to become a music supervisor at a public school. But he never applied for such a position for while he was a student he became interested in radio. "Today," he says, "I look back with amazement to my own start in radio. As a profession it was practically non-existent. It held no attractions for an ambitious young man. I sang tenor and had engagements as second tenor in several excellent church choirs."

One evening in 1921 he met an electrically-minded young man who had picked up broadcasts from the Westinghouse studios (WJZ) outside of Newark. Cross was fascinated and rushed to compose a letter asking if they needed a singer. They did, and without pay on September 15 he sang in a partitioned-off corner of the women's rest room. He was asked if he would like to become a second announcer. "The offer was made," explains Cross, "due to the fact that I was familiar with foreign names and musical terms and had a natural respect for good diction. My first inclination was to refuse, with thanks. My future interest, I felt, lay in the field of music." He was naturally hesitant "about accepting any closer connection with this interesting but distressingly noncommercial enterprise." He did accept, however, with a small salary which did not cover his tuition at the music school, supplementing these slim earnings by singing in a Presbyterian Church (his own faith), Jewish Synagogues and Catholic Churches. Soon he was earning \$40 a

MILTON CROSS

week for singing, announcing, impersonating, "enthusing" over household supplies, operating the Ampico player piano, reading the Sunday funnies and reciting Uncle Wiggily.

Cross concentrated upon his work as an announcer after WJZ joined the National Broadcasting Company. Nowadays his resonant "bass-viol" tones soothe the hearer into a reverent mood. In 1929 his superb diction won for him a gold medal from the American Academy of Arts and Letters. People have wondered where he learned his pronunciation of foreign words. No easy achievement, Cross has spent a year in study of Italian at the Institute of Musical Art, studied French with teachers at NBC, and had four years of German study in high school. In 1939, anxious to improve his diction further, he joined a course at Columbia University.

Although Cross has not had an experience so painful as that of the St. Louis announcer who was told to fill in pauses with "plugs" for his sponsor's product during a papal broadcast and said: "The next words you will hear will be those of Pope Pius XI,"—a pause—then, the plug: "Ajax is the beer for me"—Cross' tongue double-crossed him on an *A & P Gypsies* hour when, after a great burst of introductory music, he announced: "The A & G Pypsies!"

Ordinarily his diction is fine, however—rolling *r*'s with Italian, and beautiful Wagnerian *ich*'s and *ach*'s. "The announcer's job," says Cross, "is most highly specialized. The best way for a young man with a good voice and good ideas to prepare to enter the radio field is first to perfect his diction, his acquaintance with foreign names—musical names and terms, geographical names, proper names, political terms—and to increase his ability to *ad lib*

or fill in extra minutes of time with spontaneous comments of his own."

Ad libbing brings up to Cross' mind the most wretched experience of his life. This occurred in Chicago, where NBC some years ago was broadcasting a single act of Verdi's *Trovatore*. It was subscribers' night at the Chicago Civic Opera Company. Just as Cross was ready to announce the rising of the curtain, word was brought that Samuel Insull would read an annual report which was not to go over the air. Cross had no script for the emergency, only a brief account of the action of *Trovatore*. First, he told the story of the plot. Then, in other words, he retold it. Then he described how the scenery would probably look. From there he went to other scenery he had seen for the opera. Then he recounted the cast. . . He reviewed other casts that came to his mind. . . He slowly recounted the whole of Verdi's life. "Mr. Insull is still speaking," whispered an aide. Cross started on the history of opera—the history of the Chicago Civic Opera—the auditorium in which the opera was housed—launched into an exciting description of the underground passage between the auditorium and a hotel. Mercifully someone handed him a list of the railroad cars to be used by the opera company on tour.

With passionate earnestness he went on: "Rosa Raisa will travel in car 244, Tito Schipa in car 241, etc." After 35 minutes of horror Mr. Insull stopped and the orchestra started. Insull came to him and said: "I know you will be grateful to me for leaving out the last 15 minutes of my speech."

Since Christmas Day 1931, when Milton Cross announced *Hänsel and Gretel*, he has never missed a Metropolitan Opera broadcast. Millions of listeners have enriched their knowledge of opera through his painstaking descriptions of the plot, costumes, scenery. He sits in at rehearsals on new or rarely played operas. When no opera is going on he announces station identification every 15 minutes. For these services he receives about \$80 a week. This is a very small salary, and even with additional commercial announcing he does not average the salary of announcers whose voices are more adaptable to commercial products. For the half-hour *Information, Please*, he receives \$100 a week. Here he is at home, his voice suitable to accompany that of Clifton Fadiman, master of ceremonies and reputed to have one of the finest radio voices on the air. Other programs Cross announces are the *Radio City Music Hall*, the *Town Hall* program, a children's Sunday morning hour and a program for the Sherwin Williams Company called *Metropolitan Opera Auditions*. This last, with *Information, Please*, are the only two commercial programs for which separate salaries are paid.

Cross is a portly man, six-feet-two, with wavy hair, horn-rimmed glasses and a double chin. "I really love exercise," he says, "but I just don't have much time for

it." Horseback riding is his favorite sport, although he likes swimming and handball, too. He was married to Lillian Ellegood, who is now dead, and has one daughter, Lillian G. Cross.

One would imagine that after all these years *ad libbing* would hold no terrors for him. Yet he admits that the moment before the conductor raises his baton, when the concluding remarks must be timed to the split second, is his zero hour.

CULBERTSON, ELY July 22, 1893-
Bridge authority

Address: 16A E 62nd St, New York City

The man who founded an empire on a pack of cards, who made 10 million American homes contract-dizzy, who revolutionized life with the Forcing Two-Bid—this is the fabulous celebrity, the publicized world-renowned bridge authority, Ely Culbertson. According to his own reckoning, Culbertson's annual income amounts to half a million dollars. It accrues from various sources: his best-selling books on bridge, (*The Contract Bridge Blue Book* 1930; *Contract Bridge for Auction Players* 1932; *The Gold Book* 1936, etc.) on which he is said to receive the largest royalties in the publishing business; syndicate of his bridge column in some 200 daily newspapers; film shorts based on bridge problems; radio shorts; magazine articles on problems of bidding and playing; commercial endorsements; lectures, conventions, and teachers' fees; technical advice to bridge concerns; of many bridge gadgets, including score pads and playing cards.

But the Bridge Master, the celebrity whom the public sees, is actually only one of seven Ely Culbertsons, he tells us in his long autobiography, *The Strange Lives of One Man*, published in April 1940. Early in the book he names the other Elys, or "control-facets" of his personality: the epicurean, the idealist, the child, the philosopher, the family man, the businessman. The last-named, latest to develop, created the celebrity; the family

man seems to have been the most dubiously successful of the Ely personalities.

Only the last part of the book is the story of the bridge expert's career, already fairly well known to bridge enthusiasts. But the public will doubtless be amazed to learn of the strange dual heritage, the unorthodox growing up, the uncommonly interesting and diverse trend of events and adventures that made up the early life of Ely Culbertson.

His father's people were American, his mother's Russian. She was the daughter of a Cossack ataman or chief. His paternal grandfather, of Scotch descent, lived in Pennsylvania. News of the discovery of oil in the Caucasus brought his father, Almon, to the home of the Rogoznys. From the time that Almon drank, heroically, two great horns of Russian liquor as a challenge of strength, he determined to find out all he could about Cossack life. He learned to speak Russian, began to woo Xenia Rogozny and eloped with her. Their first-born was Eugene, who was later to become a soldier, then a monk. Two daughters died in childhood. Illya (Ely) was born July 22, 1893 at Poyana de Verbilao, Romania; his family had moved there on hearing of the discovery of new oil fields in the region. Another brother, Sasha, was born two years later; he was to become a famous violinist.

His family having returned to the Caucasus, Ely played with the Cossack village boys until he was six, when his father moved to America. A short stay brought his father to the conclusion that he was no longer at home in America, so they returned to settle definitely in Russia. A home was built—an American-styled house—at Grozny, near the oil fields. New oil fields were discovered, and the father gradually became rich.

Ely was sent to the Gymnasium at Vladikavkaz in 1904: he and his brother Eugene, as "Amerikantzi," were the school's oddities. Ely didn't get along very well with his schoolmates, and in many ways his life was made miserable until success in sports helped him win a place for himself. At 15 he developed strong religious interests, resolved to retire to a monastery and become "the greatest saint on earth," just as later he hoped to become the "greatest bridge player on earth." Sex awakening came to him as the temptation of the Devil; he suffered a severe nervous illness, and finally gained a saner viewpoint on the healthy advice of his doctor. He decided to be a rebel, and to sow a few wild oats; a brawl over women landed him in jail. Then his violinist-brother Sasha entered the Rostov Conservatory, so Ely transferred to the Gymnasium there. He began to read voraciously, admiring especially the works of Tolstoy, Dostoevsky and Edgar Allan Poe. He resolved to be a writer. His first story was about a man who was sane in all respects but one: he believed his *derrière* was not flesh and bone, but composed of fine, precious crystal.

ELY CULBERTSON

The story was not accepted for publication; later, for a schoolboy trick, Ely was expelled from the Gymnasium.

In common with many wealthy youths, Ely felt that his life was that of a wastrel, and he became interested in the problems of the peasants and workers. He took part in a socialist demonstration that was brutally broken up by the Cossacks. When he fell in love with Nadya, a beautiful student-revolutionist, he joined the party. In a riot Nadya was killed by the Black Hundred; seeking to avenge her death, Ely was arrested, and in prison met a number of Russian revolutionists. His mother's influence, however, secured his release.

Culbertson's father persuaded him to go on with his education, and sent him to America to go to Yale. But he soon left Yale to spend his time around the Bowery in New York. He went to Canada and worked as a timekeeper at a labor camp during the building of the Grand Trunk Pacific. He lost his job when he tried to organize the men. He hoboed around for awhile, then went to Mexico, where he didn't have much luck trying to "join the revolution." An abortive adventure in Spain preceded a decision to study in Paris and Geneva. It was in Geneva that he first learned to play auction bridge. Known as Geneva's "worst player," he resolved to be soon the world's best. He also adopted the young daughter of a French prostitute.

The Russian Revolution of 1917 wiped out the fortunes of Culbertson's parents. He came with his father and brother Sasha to America, all of them broke. Ely's father had always wanted him to give up card playing, which he abhorred. Destitute, however, he consented to Ely's earning money for them in the only way he knew. Through a friend, young Culbertson gained

access to the Knickerbocker Whist Club; and, using a system which he announced as his own, found his winnings increasing. He began a scientific diagnosis and classification of his errors and successes.

At the club, the queen of the inner circle was Josephine Murphy Dillon, an attractive young widow with a reputation as America's greatest woman bridge player. Culbertson credited her with having a man's mind—and charm as well. He soon converted her to his System, but it took him much longer to win her heart. Finally, on June 11, 1923, they were married. For awhile bad luck and severe illness pursued the Culbertsons, then the tide turned. He began teaching his Culbertson System, and they resolved to become the best bridge players in the country, organizing tournaments and challenging experts. Two children were born to them: Joyce Nadya and Bruce Ely (nicknamed Jump Bid).

Culbertson went on with his plan to build himself up as a great public figure via contract bridge. This personality was to be "tough, cocky, comically conceited, not unwitty, perhaps kind, and certainly eccentric." To his Adam, Mrs. Culbertson was to be the publicity Eve. Unable to get backers for his promotion plans, he went ahead, on his own, shaping an organization from which issued his magazine, *The Bridge World*. The editor-owner had to play his hardest in clubs in order to make enough to meet his first payrolls. In order to raise money to arrange a bridge match between England and America, he inaugurated a beautiful scheme of taking orders for a special autographed edition of his forthcoming *Contract Bridge Blue Book*, which was completed in two frantic weeks. They went abroad to meet the British team, and they won the match. A cablegram from New York said that the *Blue Book* was an enormous success, going into several editions. (A later *Summary*, prepared entirely by Mrs. Culbertson, sold even better).

Thus, early in 1931, the Culbertsons returned triumphantly to America, rich and famous. They went to revisit Russia during the summer, but Culbertson, super-salesman, failed to get anywhere when he approached the Russian Card Trust on the promotion of contract: the Bolsheviks were all for outlawing playing cards, since their kings and queens represented "the remnants of a feudalistic régime."

Back again in America, the Culbertson expansion went on. But the 12 other bridge authorities in the country united in a war against him. Culbertson's reply was a challenge to a match: he and his wife against the opposition's team of Lenz and Jacoby. It was played off during December 1931. The story of the match was given considerable space on the front pages of newspapers; there were breathless telegraphic dispatches on the playing and winning of each hand. During Christmas, Theodor Lightner replaced Mrs. Culbertson in the tournament; the arena was shifted to the

Waldorf-Astoria to accomodate the mobs. At last, after 33 days, the Culbertson team won its final bid, and the match.

The Culbertsons became world-famous. Ely established elaborate headquarters at Rockefeller Plaza for a tremendous organization promoting such super-activities as the annual World Bridge Olympic, in which thousands of people take part, each contestant paying a dollar fee. A bridge network supported by 4,000 licensed Two-Demand instructors was set up. An enterprise to manufacture Kim (chemical plastic) playing cards sent him deeply into debt; but after some months of hair-raising and nerve-straining holding out for higher bids from buyers, he sold it at a tremendous profit. With the money he built a magnificent house on East Sixty-Second Street, New York, and moved his Crockford's Club, a most exclusive bridge-playing organization, into the adjoining building.

By 1937 Ely, the Business Manager, felt that he had everything, materially, that one could desire. But, as an industrial and social robot, he wasn't happy. He became nervous and depressed, even indifferently lost a bridge match. He began to quarrel with Jo, and this kept up. Finally they decided to get a divorce, but to continue their public life in bridge, sharing its profits. And they decided to keep the same house, he living on one floor, she on another, and both meeting in the apartment of the children, which was "neutral territory."

Culbertson's chief interest, besides bridge, is psychology and its application. He proudly admits to psychological methods in selling bridge. It is said that the Bridge Master has an impressive and theatrical personality. He is "tall and lean, sandy-haired, with piercing gray eyes, a lofty forehead and slightly vulpine teeth. In manner he is fastidious, surrounding himself with all kinds of continental fripperies, and expending a tidy fortune upon his personal tastes. He maintains a suite in New York and a million-dollar estate in Ridgefield, Connecticut. He has a pretty flair for caviar, goose liver and vintage wines. He is the sort of man who always mixes his own salad dressing at the table. . . . He speaks six languages, all of them with a crisp and crackling Russian accent which is not displeasing. In brief, he has adopted the Grand Manner."

Culbertson hopes to do something besides bridge, to continue with his writing. In addition to a projected work on "mass psychology," he is now working on a play, and has a mystery novel on the fire.

CULVER, ESSAE MARTHA President of the American Library Association
Address: State Library Commission, Baton Rouge, Louisiana

Complete and adequate library service for all the people in the United States and Canada was the keynote of President Essae Martha Culver's address to the members of the American Library Association meeting at the Taft Auditorium in Cincinnati, May 31, 1940. After she received the four-leaf clovers, horseshoes and rabbit's-foot from retiring President Ralph Munn, President Culver outlined a four-point program for the 15,000 members of the association in her *Call to Action*.

President Culver has fought hard and worked long for the extension of library service to the many millions of people who are not served by libraries. Born in Emporia,

ESSAE M. CULVER

Kansas, the daughter of Joseph Franklin and Mary (Murphy) Culver, Miss Culver attended college in Claremont, California and received a Bachelor of Letters degree from Pomona College in 1905. After working as assistant librarian in the Pomona College Library she determined to supplement her practical experience with library school training and went to the New York State Library School in Albany, New York in 1907 and 1908. Then she returned to the West coast, going to the Salem (Oregon) Public Library, where she was librarian from 1909 to 1914.

Miss Culver entered county library service in the romantic days when "a librarian on horseback with a pack mule and Indian guide might go over steep trails, through unfrequented country, taking with her mental food to the remotest dwellers" and where counties are larger than many states. She was successively librarian of Glenn, Butte and Merced Counties in California from 1914 to 1925. Her county library administration was interrupted from 1921 to 1923 when she served as a library visitor for the California State Library. In the county service she experienced "the joy of work which comes from the satisfaction of being able to meet the great need of the rural people."

Going to Louisiana as executive secretary to the State Library Commission (1925), Miss Culver again had an opportunity to develop her interest and experience in an all-embracing library service. There she conducted the first state-supported regional library experiment. In this experiment, made up of three political units—five libraries and 11,600 books served a population of 32,000 white persons, 11,916 of whom became library borrowers. In less than a year the circulation approximated 220,000. Books were distributed through 24 branch libraries and 37

bookmobile stops at a total cost of \$25,000. So great was the success of the experiment—started to see if the whole state of Louisiana could be served through rural libraries—that an appropriation of \$100,000 was granted in 1938 for future demonstrations.

Miss Culver has written many articles for library periodicals describing her crusade for the extension of library service. She has taught (summer sessions 1935, 1936, 1938) classes in extension work at the School of Library Service at Columbia University. She has been active in library groups: League of Library Commissions (president 1931 to 1933), Southwestern Library Association (president 1936 to 1938) and the American Library Association (second vice-president and member of the executive board 1936 to 1938, first vice-president and president elect 1939 to 1940); active in professional groups: Louisiana Federation of Women's Clubs, Louisiana Business and Professional Women; active in social groups: The Orleans, Petit Salon.

A calm, self-possessed person, Miss Culver has dark eyes and smooth brown hair. She speaks with a sense of humor, but never loses sight of her belief that "talkers are not doers" and that deeds and not words will provide an opportunity for librarians "to work together toward the goal of freedom and opportunity to read for all the people."

CURIE, EVE (kü'rē') Dec 6, 1904- French writer; lecturer

Address: c/o W. Colston Leigh, Inc, 521 Fifth Ave, New York City

Eve Curie came to New York on her first visit in 1921. She was a young girl of 16, and her own fledgling charm was eclipsed by the fame of her scientist mother, Marie Curie. Marie Curie had come to the United States to receive as a gift from the women of America a \$250,000 gram of radium—the precious radium she had discovered, but was too poor to buy. It was a triumphal tour, climaxed by an impressive ceremony at the White House at which President Harding made the presentation. Madame Curie was accompanied by her two daughters, Irène and Eve, and when the work-worn, exhausted scientist could not attend all the receptions and dinners which an adoring public wished to shower on her, the two girls substituted for her—but they were merely "Madame Curie's daughters," not yet famous in their own right.

But when Eve Curie made her second visit to the United States to lecture early in 1940, she was already well-known to Americans. Her biography of her mother, translated into English by Vincent Sheean,

was a popular best seller, and acclaimed by critics as a great human document. Her third trip was made in the fall of 1940 after she had fled from France.

Tall, slender, with deep blue eyes, fair skin and dark hair, Eve Curie looked like something that had stepped out of a French fashion magazine. She had beauty, brains, charm, and she won the hearts of her audiences. American journalists waxed lyrical describing her chic and her wit. She was described as "the woman who has everything."

If Eve Curie "has everything," she has developed her own talents in a field foreign to that in which she had been brought up. Her parents, Marie and Pierre Curie, were absorbed in their scientific researches. They had scarcely any interest outside of science. Eve Curie's sister, Irène, was to follow in her mother's footsteps, and become completely absorbed in scientific research. For Irène, like her mother, has received the Nobel Prize in collaboration with her husband, Frederic Joliot (see sketch Irène Joliot-Curie this issue).

But Eve showed no interest in science. She must have amazed her puritanical, unworldly mother. She loved fine clothes, loved fun and had the French flair for life. Born in Paris, she was graduated from the Sévigné College as Bachelor of Science, and later as Bachelor of Philosophy, in both cases with honors. She became interested in music and devoted several years to the study of the piano.

Her debut as a concert pianist was made in Paris in 1925. She followed it with many concerts in Paris, in the French provinces and in Belgium. Not wishing to trade on her family name, she began writing music criticism under a pen name and won some renown as a critic, acting for several years as the music critic of the weekly journal *Candide*. She wrote regularly for the Parisian journals and periodicals, mainly on music, the theatre and motion pictures. In 1932 she translated and adapted for the French theatre the American play, *Spread Eagle*, by George S. Brooks and Walter B. Lister. It was produced at the Théâtre du Gymnase under the title *145 Wall Street*, and had a long run.

When United States publishers approached her with the idea of writing a biography of her mother, Mlle. Curie was willing to undertake the job, but was terrified by the task. She kept putting it off and had to be badgered constantly to finish it. The biography, *Madame Curie*, is a heart-warming, poignantly-moving tribute to her mother. Although it is written with a daughter's sentimentality and is tinged with hero-worship, it gives a picture of the Curies as none but one intimately acquainted with them could give. The modest, retiring Curies had hidden themselves from the public. The story of the little Polish girl, Marie Skłodowska, who became Marie Curie, and who overcame sickness and poverty to give the great gift of radium to the world, needed

EVE CURIE

to be told. Although Eve Curie's book met with reviews ranging from lukewarm to rave pieces, no reviewer could altogether overlook it as a human document of a noble character. One reviewer wrote: "It is difficult to characterize this exquisite story of Madame Curie's life without using superlatives which seem out of place in describing an account of a life so simple and at the same time so sublime, and which is reproduced in lines equally simple, accurate and appropriate. The writer has put her soul into a work which only she could have done." Another wrote: "It would be easy to point out faults in this book, considered only as a biography. . . But to stress such limitations would be churlish. This is a great book because its subject is a great subject." Still another said of the book on Marie Curie: "Her daughter's presentation has obvious defects. She is richer in sentiment than in science, and her style is exuberantly adjectival. But when all has been said, there emerges from the book a charming and impressive picture of one who might be termed a Saint of Science."

Madame Curie was the December 1937 choice of the Literary Guild; it was chosen by the American Library Association as "the best non-fiction book of the year." And it won for Eve Curie the Clement Cleveland Medal awarded annually by the New York Cancer Committee to one who has achieved distinction in the fight against cancer. It was also the prelude for the lecture tour of the United States which brought Eve Curie to the attention of Americans as a unique figure in her own right.

When the time came for her first United States lecture tour, Mlle. Curie was working 10 hours a day in the Paris Giraudoux Office of Censorship and Propaganda as direc-

CURIE, EVE—*Continued*

tor of women's activities. But she took time to lecture in cities all over the United States on the cause of France during her tour, beginning in January and ending in April, 1940. And somehow she managed to get together a Schiaparelli (see sketch this issue) wardrobe about which fashion reporters wrote columns and which gave both Schiaparelli and Mlle. Curie added reams of publicity, just as it had been designed to do. One fashion reporter wrote of Mlle. Curie: "In any place in the world a beautiful young woman who makes an entrance in a Schiaparelli original is allowed to rest on her laurels a bit. She may even titter and make very little sense, and people are inclined to be lenient, but when beauty arrayed by Schiaparelli can discuss music, painting, skiing, writing and international affairs in any language you choose, the plot thickens."

After France fell, Mlle. Curie fled to England and thence to the United States, where in the fall of 1940 she continued to lecture on the War and the importance of British victory. Her sympathies are with the "free French" forces of General De Gaulle (see sketch this issue).

Louis Bromfield, one of her writer friends, had written of her: "When I think of her, she is somehow associated with the freshness and beauty and soft glittering quality of snow. . . She is like Diana. . . I realize that what I have written may sound rhapsodical, yet I only feel that my effort has been inadequate. She is a woman—in the common, vivid speech of our times—who has everything." This appeared in the conservative New York *Herald Tribune*.

Between Eve Curie, chic, worldly, and her mother, so different in her tastes, there existed a close companionship. During her childhood, Eve had been brought up by governesses, generally Polish, and her mother's early background in Poland was vivid and real to her. In her biography of her mother, Eve Curie wrote in a foreword: "My mother was 37 years old when I was born. When I was big enough to know her, she was already an aging woman who had reached the summit of renown. And yet it is the 'celebrated scientist' who is strangest to me—probably because the idea that she was a 'celebrated scientist' did not occupy the mind of Marie Curie. It seems to me rather, that I have always lived near the poor student, haunted by dreams, who was Marie Skłodowska long before I came into the world."

Eve Curie lived with her mother after her sister's marriage and made many trips with her in France, and to Italy, Belgium, Switzerland and Spain. Marie Curie was a fine sportswoman, and she taught her children to like sports. Eve Curie swims particularly well, skis and skates.

It was Eve who was with her mother in her final illness, who nursed her and who accompanied her to the sanatorium in Savoy and was with her until the end, July 4, 1934.

DALADIER, EDOUARD (dä-läd-yä' ä'dwär) June 18, 1884- French statesman

Five men who ruled the destinies of France have in 1940 been formally indicted by the Supreme Court at Riom in the "war blame" investigation. Among them was Edouard Daladier, who had fled to Casablanca on June 20, when France's fate became apparent. He was brought back to the Château Chazeron to await his trial, and then transferred to Riom in November 1940. The charges were that as Premier he declared war without consulting Parliament and as Minister of War for many years failed to equip the army with necessary material.

Since 1919 Edouard Daladier has been a figure in French politics. He has held posts in twelve Cabinets, has three times been Premier of France. He has been granted powers greater than those accorded to any French Premier before him, and much of the responsibility for France's present situation lies on his shoulders.

Edouard Daladier comes of peasant, artisan stock. He was born in 1884 in the village of Carpentras, the department of Vaucluse, in Southern France—a rugged, mountainous country. His father was a baker. His two grandfathers were bakers. His sister worked in a bakery all through her childhood; his brother still carries on the family tradition. His own entrance into politics was something of an accident, for it was while attending the Lycée Duparc at Lyon that he first met the man who was to direct his first political footsteps, Edouard Herriot, then a teacher. Herriot took an unusual interest in his young pupil, made him his protégé. In 1909 Daladier himself was teaching history, first at the University of Nîmes, then at Grenoble, Marseille, Lyon, and finally at the Lycée Condorcet, Paris. While still teaching at Grenoble he was elected Mayor of Carpentras, and at Lyon he again came under the influence of Herriot, leader of the Radical-Socialist Party.

But it was 1914. For four years Edouard Daladier was in the trenches—as common soldier, as sergeant, as captain. He received the Légion d'Honneur, the Croix de Guerre and three citations for bravery. In 1919 he returned to teaching at the Lycée Condorcet, but this time for only two weeks. Herriot persuaded him to run for Parliament as Radical-Socialist deputy for Vaucluse, and he was elected. For 21 years he

was to be returned to Parliament as deputy for that department.

Daladier did not immediately distinguish himself as a parliamentarian. He was not a lawyer, he was a teacher. And for a long time he remained in the shadow of Herriot. It was true that during the years 1921 to 1924 he was condemning the French occupation of the German Ruhr, advocating friendship with the post-War Weimar Republic, and speaking vaguely of the economic reorganization of Europe, but it was mainly by his knowledge of army affairs that he made himself recognized. He had traveled some in the Soviet Union, in Great Britain and in Germany, always with an eye to things military, and by 1923 he was acknowledged as his party's best spokesman on army matters.

In 1924, at the age of 40, Daladier held his first Cabinet post, as Minister for the Colonies under Herriot. That same year he married Mlle. Laffont. She was the daughter of a country doctor, and during the War had been his "Marianne"—the unknown girl whose letters he received while in the trenches.

By 1927 Daladier had become leader of the Left-wing Radical-Socialists (neither radical, Socialist, nor very far Left), and in 1928 he was elected president of his party. Herriot's protégé had stepped permanently out from under that somewhat massive wing.

During the next three years Daladier held the post of Minister of Public Works in three Cabinets, the post of Minister of War in another, and early in 1933 he became Premier of France for the first time—on the day after Hitler became Chancellor of Germany. In the Cabinet which he formed the Right was pleased to find no Socialists represented, and it was also in this Cabinet that Georges Bonnet received his first job of major rank in the French government—that of Daladier's Minister of Finance. Daladier himself took the post of Minister of War, and the French generals found him "suitable and compliant." At this time his hope was to reach some kind of an understanding with Germany, and it was during his term in office that the Four Power Pact between France, Great Britain, Italy and Germany was signed, in June 1933. Four months later he was out of power.

Upon the resignation of Chautemps, January 27, 1934, Daladier again became Premier—for 11 hectic days. Encouraged by the Rightists and Fascists, riots in protest against the Stavisky scandal of Chautemps' administration were breaking out all over Paris. Daladier's transfer of Police Chief Jean Chiappe to another post was hardly a satisfactory answer. On February 6 an angry mob of 30,000 demonstrators was moving over the bridge across the Seine on its way to storm the Chamber of Deputies. Daladier ordered out his Garde Mobile. Suddenly, unbelieving cries were heard from the crowd: "They are shooting, they are really shooting!" In the resulting rout at least seventeen were killed,

EDOUARD DALADIER

hundreds wounded. Daladier, fearing a "Fascist coup," had ordered his Guards to fire, and they had done their job efficiently.

Forced to resign the next day, branded a murderer by the Rightists, nicknamed "Le Fusilleur," it seemed that Daladier's public career must be over. But the Rightists were losing ground; the movement toward the Popular Front was gaining momentum in France. For 18 months Daladier remained in comparative retirement—then, on July 14, 1935, Bastille Day, the leader of the Radical-Socialists made a spectacular public appearance. With Léon Blum (see sketch this issue), the Socialist leader, and Maurice Thorez, the leader of the Communists in France, he marched in the Popular Front demonstration. In the shadow of the Bastille he gave the clenched-fist Communist salute, swore fidelity to the Popular Front. In the elections of the next year it was the Front Populaire which won heavily, and when Blum became Premier on June 15, 1936, Daladier was appointed his Minister of War.

Some of the statements from speeches made by Daladier during this period are interesting in view of his sharp swing to the right two years later. He had joined the Popular Front because "I represent the *petite bourgeoisie* and I declare that the middle class and the working class are natural allies." "France is now in the hands of a financial oligarchy, from whom power must be wrested and given back to the people." "It is our aim to reconcile the spirits which stormed the Bastille and defended Verdun." "What is to be desired is a blend of nationalism and democracy."

Under Blum's Popular Front government the power of the financial oligarchy of France's 200 families and of the Bank of France was reduced, aviation nationalized, the railways coordinated; the 40-hour week

DALADIER, EDOUARD—*Continued*

and other social legislation long fought for by Labor was introduced; but France's very shaky financial condition did not improve. Wobbling from Left to Right on its political legs and finding that neither would support it, Blum's Cabinet fell at last. On April 4, 1938, the day Hitler was holding a plebiscite in Austria, Edouard Daladier for the third time "took over."

Almost immediately he performed a swing to the Right which would provoke the admiration of any acrobat. In the interests of armament production, one of his first announcements was that it was time to abolish the 40-hour week. Although, while Blum was Premier he had complained that he was prevented from helping Republican Spain, now he himself sealed the Spanish border, and with it, some say, the fate of Spain. In the interests of national unity against the growing threat of war, he soon asked Parliament for full powers, and was three times granted temporary power to rule by decree. His Foreign Minister was Georges Bonnet, whose notoriously pro-German policy paved the pathway to Munich. After Munich, when Daladier was given new plenary powers and his Cabinet reshuffled, his new Minister of Finance, Paul Reynaud (see sketch this issue), instituted drastic financial and economic legislation that brought about the famous November strikes.

In May 1939, Daladier did not bother to go through the formality of tendering his resignation after the Presidential election; the work of the Chamber itself was by this time almost entirely limited to discussion of the new electoral system. People who mumbled of dictators could be answered with his comment: "Am I no longer a Republican because I insist on respect for Republican law and order?" And it was also true that the sentiment of a great number of French people, as well as of the army, was behind Daladier; although he had followed Chamberlain's policy as far as Munich, under his régime presumably France was at last seriously preparing for war.

When the War came in September it brought with it a further curtailment of parliamentary government: strict censorship, further harsh decrees. The 1940 general elections were postponed until 1942. Communist deputies in the Chamber were arrested, the party suppressed. The War itself developed into a "Sitzkrieg." But, although Daladier proclaimed that he was growing tired of "this sleepy war," Bonnet remained in his Cabinet, though finally transferred to the Ministry of Justice. At that time Daladier added the portfolio of Foreign Minister to his own. With the development of the Russo-Finnish War he sent arms and ammunition to the Finns, wished to declare war on Russia and to override the objections of the Scandinavian countries. Parliament was growing even more restive. When the Russo-Finnish peace was made the growing discontent with the French government

came to a head. Criticisms had been made of Daladier's Cabinet; it was assumed that a new Cabinet would be formed before the meeting of the Chamber of Deputies on March 19.

On that afternoon Daladier appeared in the Chamber with his old Cabinet. In the stormy secret session that followed a vote of confidence in his government's effective prosecution of the War was introduced; the vote was 239 affirmative, 1 negative, 300 abstaining. Among the abstainers were Rightists and a number of Radical-Socialists as well as 155 Socialists. Since in France it is an unwritten rule that one does not vote against a government in time of war, Daladier took this as a "moral defeat," refused to form a new Cabinet, on March 20 offered his resignation. On March 21 Paul Reynaud accepted the office of Premier, and Daladier was appointed to the post of Minister of National Defense which he had held all during the time of his own Premiership. On May 19, with the German forces threatening Amiens, Reynaud took over the Defense Ministry, and Daladier was appointed to the post of Minister of Foreign Affairs. He was not removed from the Cabinet until June 5.

Edouard Daladier is described by John Gunther as "short and stocky, with big shoulders and heavy hands. His eyes are a bright blue, below uncombed eyebrows that dart upward. The forehead is broad, the hair sparse. He smiles almost continually when he talks: a quick, perceptive smile, punctuated by short bursts of rather hard laughter. His conversation is quick and to the point. He likes badinage, but doesn't waste much time on it. He can lose his temper easily."

He is not a sociable man. Since his wife's death in 1932 he has lived with his sister and his two sons, students in a Paris school, in an unpretentious apartment on the Rue Anatole de la Joige. Seldom seen at fashionable receptions, he liked walking, riding, swimming, reading. Before the dignities which came to him in the past few years he would often be seen on his bicycle, earnestly pedaling away from the Chamber of Deputies.

He seems to have little regard for money, and has never been mixed up in any financial scandal. He does enjoy good food, and in quantities; he is a heavy drinker and smoker. His great interests are the history of the Middle Ages and the Renaissance and military affairs, and his one book, published in 1939, was titled *In Defense of France*.

Daladier has been called a "strong man" of France. Critics, however, have pointed to his vacillation at times of crisis and to his domination by Georges Bonnet and by the Marquise de Crussols, with whom he became very friendly shortly after the death of his wife and at whose salon he is supposed to have made his peace with Big Business. Essentially he is a stubborn rather than a strong man, his strength "lavished on parlia-

mentary jousts and ministerial tilts" and vanishing "in the face of momentous historic events." Many have been impressed by his frankness and genuineness—John Gunther admired his ability to speak "the language of the average Frenchman," found in his taciturnity and natural suspiciousness a proof of his closeness to the peasant; others, for the same reasons, have called him "mediocre", "a machine politician *par excellence*." Daladier has described himself as "the last Jacobin." It was probably an overestimation.

DALI, SALVADOR (dä'lē sāl-vā-dor')
 Mar 11, 1904- Surrealist painter
Address: c/o Julien Levy Gallery, 15 E 57th
 St, New York City

When Salvador Dali's very real surrealist rage caused him to crash through a swank Fifth Avenue shop's plate-glass window way back in 1939, he was arrested, but an official suspended his sentence with the announcement: "These are some of the privileges that an artist with temperament seems to enjoy." In July 1940 it was reported that the Master of the Limp Watches had been arrested in Spain on charges of opposing Franco's Fascist régime; he had made irreverent noises during a demonstration of Falangist youth. He has now fled back to the United States, claiming to be "a reformed and much more conservative man." He plans to paint surrealist Biblical pictures in Virginia, to have an exhibition in the near future and to publish an autobiography.

Although this can't quite classify as a publicity stunt Dali does have a genius for landing in the newspapers. Perhaps this is why he is the only surrealist that the public

knows much about. Born in Figueras near Barcelona in 1904, the son of a notary who wanted another notary in the family, young Salvador refused him that satisfaction and at 14 began to attend the Academy of Fine Arts in Madrid. There he puzzled his teachers both by his facility at copying the works of the masters with a touch of quite personal satire and his love of what has since become known as "doodling."

Nobody then had discovered the immense Freudian and artistic significance of the simple "doodle," and Dali was finally expelled for insubordination. By the time he arrived in Paris in 1927, however, surrealism was the talk of the cafés. With already well-developed neuroses, he took to it with no effort at all. When he first exhibited his subconscious in the form of small canvases, he sold every picture, and in his enthusiasm went on to write surrealist poems and to help produce the first two surrealist films: *Le Chien Andalou* (with emphasis on pianos filled with the carcasses of dead donkeys) and *L'Age d'Or*.

By 1934 art dealer Julien Levy decided the United States was ready to receive Dali's message. Both the artist and his exhibition here created an immediate sensation, particularly the picture containing the well-known drooping timepieces, *The Persistence of Memory* (now owned by the Museum of Modern Art). He had recently married Gala Eluard, former muse of all Parisian surrealists, and newspapermen all over the land were made happy by such statements as: "I used to balance two broiled chops on my wife's shoulders, and then by observing the movement of tiny shadows produced by the accident of the meat on the flesh of the woman I love while the sun was setting, I was finally able to attain images sufficiently lucid and appetizing for exhibition in New York." Promptly taken up by New York socialites, a Dali Ball, in which the artist himself wore on his chest a glass case containing a brassiere, put the subconscious of the Social Register into costume, décor and history.

Perhaps Dali's vogue in the United States reached its peak, however, after the surrealist exhibition at the Museum of Modern Art in December 1936. The previous summer he had made his impression on London during a lecture in which he appeared wearing a deep-sea diving suit with a jeweled dagger at its belt, carrying a billiard cue and leading a pair of Russian wolfhounds. Nearly suffocated before his helmet could be unscrewed, he had explained: "I just wanted to show that I was plunging deeply into the human mind." At another lecture in Barcelona during the Spanish War he balanced on top of his head a loaf of bread whose significance is still unexplained. In America, all New York came to the Museum, looked, scratched its collective head and went out discussing such titles as *Three Young Surrealist Women Holding in Their Arms the*

SALVADOR DALI

Skins of an Orchestra or Suburbs of the Paranoiac-Critical Afternoon (on the Outskirts of European History). Magazine covers and department store windows began to take on a familiar nightmarish look.

The Dali vogue has had remarkable persistence, too. It was in March 1939, two years after the exhibition, that the famous Bonwit Teller department store episode took place in which changes made in a display Dali created for them caused such indignation in the artist's breast that an attempt to destroy the fur-lined bathtub in their window caused him to smash the plate glass and topple into the street. It was at the New York World's Fair in 1939 that the Dali-created *Dream of Venus*, a "reconstruction of a very Freudian subconscious in the medium that Broadway calls a 'girl show'" startled the public. And meanwhile there have been Dali ballets—notably one about a red-wigged Tristan's love for Isolde, music by Wagner and Cole Porter (see sketch this issue); more Dali lectures; Dali articles on surrealism; even a Dali attempt at a scenario for Harpo Marx, whose portrait he painted in Hollywood along with Mae West's. (The artist is among those who classify the Marx Brothers' pictures as surrealism applied to films.)

A little proud of the very remunerative persecution complex which supposedly inspires his canvases, Dali says: "The only difference between me and a madman is that I am not a madman. I am able to distinguish between the dream and the real world." Although he claims to paint "for the masses, for the great common man, for the people," he finds it perfectly natural for the public not to understand his pictures. "I do not understand them at first myself. Then I begin to grasp the symbols, though there are often some symbols which I can never explain." Most people find his titles any-

thing but explanatory of the symbols, however, and ask questions. The mystery of *Debris of an Automobile Giving Birth to a Blind Horse Biting a Telephone* he once cleared up by explaining the telephone as representing "the blackened bones of my father passing between the male and female figures in Millet's *Angelus*." (The telephone appears and reappears in his pictures, as do other symbols said to represent "the horrors that have beset him from infancy to the present," among them nearly all "man-made devices.")

Dali says his two greatest influences have been Leonardo and Vermeer—"the former by his spirituality, the latter by his objectivity," and defines painting as "photography, by hand and in colors, of concrete irrationality and the world of the imagination in general." Not long ago he announced that the period of surrealist dream-documentation was about over, the period of "paranoiac painting" just beginning. For a long time he has defined surrealist painting itself as the interpretation of paranoiac dreams, however, and often employs on his canvases such devices as the paranoiac multiple image.

As for what people think of him—there's nothing really unanimous about it. Some say he's crazy, wasting a very real talent on nonsense. Some find him merely an amusing opportunist. Most will admit that his miniaturist style shows "extraordinary technical facility as a draughtsman" and a remarkable feeling for color, even though they may find his paintings more interesting for their illustrational qualities than for their experiments in form, which are few. Fellow surrealists, perhaps resentful at being neglected, admit he can paint, but find his soul "commercial." And then there is Edward Alden Jewell of the *New York Times*, who rhapsodized: "So far as ideology goes, all this is quite beyond debate. It is beyond life and death. It is beyond everything."

Slight, dark, restless, with "a clipped cinemactor's mustache" and the "eyes of a crystal gazer," Dali doesn't look much like an artist except, perhaps, when he wears his favorite knitted Catalan liberty cap. He probably knows more English than he claims to, speaks fluent French in a soft voice with a pronounced Spanish accent, and names Freud as his favorite reading matter. He has no particular work habits. Sometimes he paints eighteen hours a day, sometimes goes weeks without touching a brush; some of his pictures are finished in two weeks, others not for months.

Opinion is divided as to whether he amuses himself mightily with the public or takes himself with almost unprecedented seriousness. It is possible that he does both. Certainly he takes very seriously the right of an artist to create as he pleases. When in August 1939 the World's Fair authorities forbade him to put fishes' heads instead of fishes' tails on his *Dream of Venus* beauties the mermaids remained conventional in that one respect, but he issued an indignant manifesto which ended: "Artists and poets of America! . . . Loose the blinding lightning

of your anger and the avenging thunder of your paranoiac inspiration!"

They have not, as yet.

DANNAY, FREDERIC See Queen, E., pseud.

DAUGHERTY, JAMES HENRY June 1, 1889- Artist; illustrator

Address: c/o Viking Press, Inc, 13 E 48th St, New York City

Writer and illustrator of *Daniel Boone*, a children's life of the famous frontiersman, James Daugherty received the 1939 John Newbery Medal. He is the first man in 10 years to win the award. Mr. Daugherty has illustrated many other books for children, and is also a muralist of note. Since he made the drawings for Stewart Edward White's biography of Boone in 1928, he has been particularly interested in this pioneer whose image is "ever young in the heart and bright dream of America marching on." The lusty, muscularly rhythmic crayon drawings in terra cotta, green and black blend ideally with Mr. Daugherty's text to express physical fortitude, frontier energy and savage action. He writes of Boone's growing up, his expeditions into Kentucky, constant combat with the Indians and adventures with the British; of Boone's love of the wilderness that kept him ever-moving Westward in spite of the honors his countrymen thrust upon him.

Among other books illustrated by Mr. Daugherty are Sandburg's (see sketch this issue) *Abraham Lincoln Grows Up*, Irving's

JAMES DAUGHERTY

Knickerbocker History of New York, Three Comedies by Shakespeare and Benét's *John Brown's Body*. A reviewer of children's books has said of his work in illustration: "Mr. Daugherty's pictures stand out as the richest imaginative contribution to the reading and study of American history which has been made in my time."

James Daugherty was born in Asheville, North Carolina, June 1, 1889. His earliest recollections are of a farm in southern Indiana and a little Ohio town in the corn belt, of neighbors quiet, hospitable, book-loving. Often he listened to his grandfather tell stories of Daniel Boone; his Virginia-born mother told tales of the old South. When he was nine his family moved to Washington, D. C. where his father was employed as an agricultural statistician. His father, a university-educated man, liked to read out loud to the children from Shakespeare, Thackeray, Keats, Poe and Dickens. While the readings were going on young Jimmie would make illustrations of the stories. These drawings admitted him to the Corcoran Art School. His teacher there would conclude his instruction with: "Be like the Irishman at Donnybrook Fair: when you see a head, hit it."

After a year at the Philadelphia Art Academy, the young artist at 17 went abroad with his father. England, France and Italy, filled with art treasures, were ultra-romantic places to him in those pre-War days. In London he studied under Frank Brangwyn, and in London he first read Walt Whitman. This vision of America brought him back home to take a studio in Brooklyn Heights. "Then came the Armory show and Modern Art, now so mellow; and me going cubist with a new wife and baby to support; weary

soliciting of magazine editors for illustration; and drudging at advertising drawing—a waste of precious years too well-known to many American artists." During the War Daugherty had a job camouflaging ships; then he got the opportunity to paint murals in Loew's moving picture palaces.

Studio life, with many newly-formed friendships and serious work, went on. The artist and his family then decided to move to the quiet of the country and took a cabin in Connecticut. About this time May Massee, children's book editor then with Doubleday, Page and Company, became interested in his work and assigned him to illustrate White's *Daniel Boone*. He has illustrated some 50 books since then, and his work has appeared in such magazines as the *New Yorker*, *Forum* and *Golden Book*.

In 1935, under the Federal Arts Project, Daugherty began a number of murals for the Stamford, Connecticut High School, and in six months completed the undertaking. The school, which has 2,500 pupils, lent itself to the project, faculty and students posing as models for the more than 200 figures used. Of the four main panels of this mural on democracy, one is devoted to historical New England, a second to the music of America, a third to the varied activities of the school, and a fourth pictures the complexities of the world outside the school. "Done in subdued blues and terra cotta, swirling with life and small boys, their style resembles that of a somewhat superficial Curry, a gentle Hogarth."

James Daugherty has become one of the best-known illustrators of books for young people. His wife, Sonia V. Daugherty, is an author; and his son Charles is a graduate of the Yale School of Fine Arts. A friend describes "Jimmie" Daugherty in these words: "Tall, muscular, straggling, possessed of arms and legs that defy all dancing school theories of grace but that never appear awkward, alive with a vitality and a rhythm that color and shade his personality, he might have stepped from any one of the number of books he has illustrated."

DAVIES, WILLIAM HENRY Apr 20, 1871—Sept 26, 1940 Noted Welsh "tramp" poet; spent many years roaming in America with hobos; at 34 completed his first book of poems and published it at his own expense with money earned as a peddler; book attracted the attention of George Bernard Shaw and started Davies on a long career as a writer during which he turned out some 50 books including his very popular *Autobiography of a Super-Tramp* (1917)

DAVIS, CHESTER CHARLES Nov 17, 1887- Governor of Federal Reserve System; member of President Roosevelt's National Defense Commission

Address: b. Federal Rescrvc Bldg, Washington, D. C.; h. 5217 Reno Rd, N W, Washington, D. C.

Chester Davis was appointed in May 1940 by President Roosevelt as the member of the new National Defense Commission with the responsibility for agricultural problems. Because he has spent his entire adult life

thinking about farmers, the country agrees with General Hugh Johnson that his appointment was "by all odds the very best selection that could have been made."

Born on a farm in Iowa, the son of a tenant farmer, "Chet" Davis rode "lead horse" to a binder almost before he was old enough to toddle and sweated in wheat field and corn patch all through boyhood. He and his five sisters and brothers worked hard to help their father meet the payments on the land, to win the never ceasing struggle against droughts, pests and mortgages. Schooling was secondary, and what education he had then came in winter, in the farm's slack season, at a little country schoolhouse.

Davis enrolled in Grinnell College, Iowa in the fall of 1906, working at whatever he could get to do to pay expenses, including tuition. The middle of his senior year he dropped out for a year, which he spent running two weekly newspapers in South Dakota, returning to be graduated in 1911. After college he decided to push on to the Pacific Coast, but when he stopped off in Bozeman, Montana he met Helen Smith, whom he married in 1913. He also met Joseph Dixon, a fighting progressive. He stayed in Montana.

In 1917 Davis was offered the editorship of the *Montana Farmer* and in the four years he edited the paper made it "a force not only in agriculture but in the battle for good government, tilting bravely against the rule of the copper companies." In 1921, because of his good work there, he was made commissioner of agriculture and labor for the state of Montana when his friend Dixon became Governor.

After four years as commissioner, the copper kings "booted out the 'reformers.'" By this time, however, Davis knew clearly that farm relief was his life work. He went to Illinois and became associated with George Peek, at that time the foremost apostle of the agrarians. His job was to be director of grain marketing for the Illinois Agricultural Association, and his principal duty was lobbying. Davis was "a lobbyist without money for hotel suites, lordly dinners and Havanas, making up for the lack by demoniac energy."

In his early years he had been nominally a Republican but voted for Cox-Roosevelt in 1920, La Follette-Wheeler in 1924. In 1928 he was associated with George Peek in the management of the agricultural campaign for Alfred E. Smith, and four years later campaigned actively for Roosevelt. When Roosevelt was elected Davis was one of those who helped formulate the Agricultural Adjustment Act, and became director of its production division under Administrator George Peek. When Peek left in December 1933 Davis became administrator.

The manner in which Davis handled the drought which came shortly after the AAA started "explains the high regard in which he is held by the present Administration from the President down." And the manner in which he evolved plans for soil conserva-

International

CHESTER CHARLES DAVIS

tion and helped carry them through won the endorsement of the farmers in referendums conducted in 1934 and 1935. To Davis the AAA was never a fascinating experiment in social revolution or a place to try out theories. His job there was to him a "very definite assignment to bring about a better balance between farm production and market requirements." "The Agricultural Adjustment Act," Davis said, "enables farmers for the first time in the troubled history of agriculture to furnish goods to the world on the same basis as that enjoyed by other industries."

As head of the AAA Davis was successful. Farm income rose from a little over four billions in 1932 to six billions in 1934. As "head and driving force" he launched vast production programs for wheat, cotton, tobacco, sugar, rice, corn, hogs, and helped negotiate innumerable marketing agreements affecting producers of milk and specialty crops. And during all the convulsions that rocked the Department of Agriculture in those years "he kept all his old friendships." Very seldom was he known to get angry. Once, he did, however. He read an advertisement which appeared in a Joplin, Missouri newspaper: "Dandy way to make money; buy this 13 acres for hog-raising. Sign up with the government not to raise, say, 500 hogs. It will pay you \$1,000." Davis is supposed to have hit the ceiling. "Preposterous," said he. "I shall begin an investigation."

Soon after the AAA was declared unconstitutional Davis began to evolve the Soil Conservation Act as a substitute. But "overwork to the brink of collapse" caused President Roosevelt to send him to Europe in "honorable exile." His job in Europe was "to size up in a realistic way just what are

the prospects for American farmers to sell more of their goods." He returned in May 1936 after a six-weeks tour to report: "There is not the slightest hope we can regain for some important commodities the great markets [in Europe] we once enjoyed."

In June 1936 Davis was appointed a governor of the Federal Reserve Board. The unoccupied seat had been earmarked for a farmers' spokesman, and Davis was obviously the best man for it, although he was no banker. When he got the appointment he thought he was "sailing from a storm-tossed sea into a comparatively smooth and protected harbor," but the recession of 1937 dispelled any such ideas. As Federal Reserve Board member he has been mainly concerned with farmers' problems and has dealt with them with the understanding born of long years of experience. In 1939 he was awarded the American Farm Bureau Federation's Medal for Distinguished Service to Agriculture.

Mr. Davis, "slight, gray, silent," has always distinguished himself from other Washington leaders. "Where others in Washington stalk headlines with almost Indian cunning, Mr. Davis is so retiring that newspapermen have to hunt him with mole traps." The real reason for this is that he loves his work and always has: "farming is his passion and farming his infatuation."

DAVIS, ELMER Jan 13, 1890- Radio commentator; author

Address: h. 423 W 120th St, New York City

The reputation of a thorough student of history and politics, a story writer and a novelist who has won popular acclaim stands behind Elmer Holmes Davis, Indiana-born, well-traveled, shrewd and tolerant news analyst. His life interests follow the two traditional Hoosier industries, politics and literature; in his most recent career as radio commentator he achieves a synthesis of both. He was engaged by the Columbia Broadcasting Company August 23, 1939, just as the big war news was breaking, when its ace commentator, H. V. Kaltenborn (see sketch this issue), was in Europe. For some time his essays on a number of things had been appearing in *Harper's*, *Forum*, *Saturday Review of Literature* and other periodicals. In March 1940 about a

dozen of these were collected in one volume, *Not to Mention the War*.

Elmer Holmes Davis was born January 13, 1890 in Aurora, Indiana, the son of a banker, Elam H., and Louise (Severin) Davis. He took his B. A. at Franklin College in 1910, his M. A. was awarded a year after he left, for courses taken while in residence. In 1910 he won a Rhodes Scholarship to Oxford, where he was elected president of the American Club. While studying at Oxford he began cultivating an interest in foreign affairs and politics, and spent his summers traveling abroad. It was in Paris that he met Florence MacMillan of Mt. Vernon, New York. They were married February 5, 1917 and have two children: Robert Lloyd and Caroline Ann. They live at Mystic, Connecticut in the summer, during the winter in New York City.

His first job was teaching at the Franklin, Indiana High School from 1909 to 1910. Then for a year he was on the editorial staff of *Adventure*. As a boy he had been printer's devil on the *Aurora Bulletin*. Ten years later, 1914, he became a cub reporter on the *New York Times*, rising in another ten years to become feature man on American politics, expert correspondent and editorial writer. He acquired a reputation by creating, during the 1920 Democratic Convention in San Francisco, a character named Godfrey Gloom from Amity, Indiana. Godfrey (Davis) was sent for 16 years to conventions, until Davis finally killed him off, and Arthur Krock of the *Times* solemnly wrote his obituary.

Apart from his newspaper career, Elmer Davis found time to do considerable writing, both fiction and non-fiction. His *History of the New York Times* appeared in 1921. In 1923 he published his first novel, *Times Have Changed*, a fantastic fiction spoof. Among the novels which followed were: *The Keys of the City* (1925), an Indiana-locale, Main-Street type of tale; *Friends of Mr. Sweeney* (1925), an excellent newspaper novel; *Strange Woman* (1927), the story of the wife of a college president and *Giant Killer* (1928), an historical novel based on the life of David. Two collections of his short stories have been published: *Morals for Moderns* (1930) and *Love Among the Ruins* (1935).

Davis has won in a short time nationwide repute as an analyst. He felt no little trepidation, he says, at the time he was called to take Kaltenborn's place: it was like being asked to pinch-hit for Joe DiMaggio. But his discourses are clear, calm, well-reasoned, justly tempered; he speaks with a straight-from-the-shoulder manner, a down-home twang. His scholarly background and his broad, liberal viewpoint (although one writer says that "today he would barely qualify as a liberal"), no less than his skeptical mind, enable him to plow through propaganda and rumor in an effort to find the real truth in a report. Even in times of war crises Davis keeps his calm, unhurried manner, sorting conflicting reports, carefully checking all information. When asked recently, however, if he still had "mike

ELMER DAVIS

fright," he said: "I haven't yet lost the fear that some day I will go insane at the mike and begin spouting treason, blasphemy and (worse) libel." But so far his manner has been so quiet and casual that he has been called "a master of understatement."

It is likely that Elmer Davis prefers to be known as a scholar and observer, rather than a public figure or celebrity, since he avoids anything in the way of "showing-off." He dresses inconspicuously in quiet gray tweeds, and always wears a black bow tie. He is tall, well-proportioned, energetic; he has strong features, gray hair and thick, black brows above keen brown eyes. It would not be hard to single him out in a crowd as a man of action and distinguished accomplishments.

A great deal may be learned about the real Elmer Davis from his book of essays, *Not to Mention the War*. Having to talk about the War every day, he found considerable pleasure and release in writing these non-War sketches, and published them with the hope that people may like to read about things not immediately connected with these troubled times. But he discovered that he was unable to avoid the War or Hitler, or other current topics even when writing of quite different matters—about Thucydides, cats, music, the world of 1913 or bridge.

He likes nothing better than to see today in terms of history; he is something of an authority on the decline and fall of the Roman Empire, as his essay, *The Logic of History*, shows. As a student of the classics, he believes that reading Thucydides, for example, will help us understand the times we live in better than all the works by moderns. His knowledge of history and politics breaks out in shrewdly drawn parallels when he writes on such matters, for instance, as cats

DAVIS, ELMER—*Continued*

and music. He is very fond of cats, "the most dignified and independent of living creatures." He has been intimately associated with some 15; at present he owns a silver Persian, but he likes alley cats, too. His essay *On Being Kept by a Cat* is one of the most amusing and brilliant in the collection, whether one likes cats or not. Writing of them, he remains the shrewd social commentator. He observes that independence is most conspicuous in alley cats, who are practitioners of rugged individualism. "This ought to make the alley cat the favorite animal of the conservative rich; yet I suspect that if you took a census of these gentry you would find that most of them prefer the docile dog; their definition of individualism is usually 'individualism for me.'"

In opera he has a decided preference for Wagner's *Ring* cycle. He draws a pithy parallel between the tale of Siegfried and a modern event, recalling that when the sword Siegfried forged was brandished in the air, Wotan's umbrella fell to pieces. The cycle is not yet finished. "All we can be sure of, so far, is that Hitler makes a better Siegfried than Siegfried himself; he knows what to do with the ring."

In *On the Eve: Reminiscences of 1913*, Davis says that this was the year in which, as a person, he sat up, began to take notice. He feels nostalgic about that period, which seems to him now the peak of a Golden Age, an age of innocence and security. He remarks in another essay that it has twice been his fortune to be reported missing in a catastrophe, probably dead. The second time was during the hurricane of 1938. When he returned afterward to New York, he felt he saw a look not unminged with resentment on friends' faces. The next time he is reported dead he is not going to deny the rumor.

His style is both pungent and friendly; he is blunt, candid, witty—a person of broad sympathies and tolerance. Critics are generally delighted with his well-balanced prose, rich with allusion, classical or otherwise, and find he has the indispensable light touch.

It may be no paradox, in this day of paradox, that an analyst of contemporary politics and events should claim Horace and Catullus (read in the original) as his favorite poets and list the *Bible* as the greatest book ever written, without a runner-up. And it is comforting to hear from a student of history:

"With an irrational optimism befitting an alumnus of the absurd age in which I came to the surface, I still believe that higher peaks of human felicity may be ahead; that our race, if it keeps on trying, might make quite a habitable place of the planet on which it resides."

DAVIS, HERBERT JOHN May 24, 1893-
College president

Address: Smith College, Northampton, Massachusetts

Old-world and New-world Northampton were linked when Herbert John Davis, 46-year-old chairman of Cornell's English Department, assumed the presidency of Smith College on October 17, 1940. He succeeded Dr. William Allen Neilson, who had retired early in 1939. Mrs. Dwight W. Morrow was acting president in the interim.

Herbert John Davis was born May 24, 1893, in the heart of England in the town of Northampton, about 30 miles from the Shakespeare country. His father (Carter Davis) was a boot manufacturer, and his mother (Martha Ann Sheldon Davis) descended from a family which for many generations had been farmers in the Midlands. He went to the Council School until he was twelve, and then, after the death of his father, by hard-won scholarships got six years at the Northampton Grammar School.

All the while he was bent on taking orders in the Anglican Church. He stood examinations, "won an exhibition" for St. John's College, Oxford, and received his degree in 1914 at the outbreak of the First World War. Defective vision kept him from the first volunteer ranks, but after a year at Wells Theological College in Somerset he went to France, took charge of a social center and then in 1916 joined the colors as a gunner in the ranks. A year later he was made lieutenant and saw active fighting in the Battle of Arras. He was assigned to the Army of Occupation, following the Armistice, and served there until September 1919.

The War destroyed the pattern of his life, and when he was mustered out his earlier eagerness to take orders for the Church was gone. He returned to Oxford and received his M. A. degree. For the next two-and-a-half years he was a lecturer in English literature at the University of Leeds. In 1922 he accepted a call from University College, Toronto and remained there 16 years except for one year when he was guest professor at the University of Cologne (1924-25): he was

HERBERT DAVIS

associate professor until 1935, when he became full professor of English in University College and was elected chairman of the English Department. In the summer of 1937 he was Frederick Ives Carpenter visiting professor at the University of Chicago. In September 1938 he went to Cornell to succeed Professor William C. De Vane—made Dean of Yale—as head of the English Department, and in 1939 was appointed Goldwin Smith professor of English literature.

Davis first married Gertrud Lucas, daughter of Landrat Lucas, a high official of the Rheinland, Germany; she died in 1928. In 1930 he married Gladys Wookey of Toronto. They have two girls, Elizabeth Ann and Jane Sheldon.

As head of the English Department at Cornell, Davis built up his staff, secured greater appropriations for assistants and for books for collateral reading and reference. Here, as well as at Toronto, Davis encountered women students in large numbers, and he can, therefore, approach Smith girls, 2,000-strong, without any vestige of fear. His accent is pleasantly British, but he has, nevertheless, a thorough mastery of the American idiom.

He hopes—perhaps not too optimistically—that his administrative duties at Smith will not prevent him from continuing his edition of *Swift*, of which five volumes are already completed. He has contributed scholarly articles and reviews to various English, Canadian and American journals and has made studies both of contemporary and seventeenth and eighteenth century English literature.

Davis is tall, thin, and fair-haired, with regular features and a friendly mouth. He plays as hard as he works, and he has a well-established reputation as an all-weather golfer in the British tradition.

DAVIS, NORMAN H. Aug 9, 1878—Chairman of the American Red Cross

Address: b. American Red Cross, Washington D. C.; h. 804 Prince St, Alexandria, Virginia

Norman Hezekiah Davis (he uses only the initial of his middle name) was born in Bedford County, Tennessee in 1878, the son of Maclin H. and Christina Lee (Shoffner) Davis. He attended Vanderbilt and Stanford Universities. Just out of college he ran away to Cuba, where he had a successful business career, becoming head of a trust company at 27. In 1917 he entered public life and has since held many important positions at home and in the capitals of Europe.

During the First World War he visited England, France and Spain as a special adviser on financial affairs. He was chairman of the American Delegation to the Disarmament Conference at Geneva; chairman of the American Delegation to the Naval Conference at London, 1935 and 1936; chief delegate of the United States to the Nine Power Conference at Brussels in 1937. While serving under three Presidential Administrations he has been a spokesman abroad for the United States. As chairman of the financial section of the Supreme Economic Council of the Allies he did notable work. When the War was over he served as Assistant Secretary of the Treasury in President Wilson's Cabinet and later as Under-Secretary of State. With the ending of the Wilson Administration, Mr. Davis returned to private life until 1927, when he was chosen as one of the

Blank-Stoller

NORMAN H. DAVIS

DAVIS, NORMAN H.—*Continued*

American delegates to the International Economic Conference at Geneva. For several years he acted as President Roosevelt's "roving ambassador."

President Roosevelt appointed him chairman of the Red Cross in April 1938. A tireless worker for world peace, he accepted the appointment with the hope that he could continue his peace efforts. "Short, white-haired" Norman Davis feels that the Red Cross faces an ever-increasing burden in helping non-combatants as well as soldiers. "Something must be done," he says, "to restore civilization to a sanity which will at least stop the killing of the helpless and innocent by warring forces!" In November 1940 he was reappointed to his position for a term expiring December 11, 1941.

 Who's Who in America

DAVIS, STUART Dec 7, 1894- Artist
Address: 43 Seventh Ave, New York City

In the 1920's Stuart Davis produced his first *Eggbeater*. *Eggbeater No. 4* was bought in February 1940 by the Phillips Memorial Gallery in Washington, D. C. None of the four looks like an eggbeater, of course, and none is intended to. Davis' purpose, he says, was to recreate the idea of eggbeater into "a real order in three dimensions."

"Unflinching in his allegiance to the abstract," Stuart Davis' pictures have been inspired by other mechanical devices. Some of these he calls simply *Composition* and gives a serial number. He did a series called *Gas Pumps*—these, he found, lent themselves particularly well to abstract treatment. To those who find abstract art a little hard to follow, Davis is quick to explain his method and ideas: "A picture," he says, "must tell a story. This story can have pictorial existence only through the artist's concept of form. There are an infinite number of form concepts available. My own is very simple and is based on the assumption that space is continuous and that matter is discontinuous."

Since Davis' works are in some of the most conspicuous places in this country and admired here, his meaning and purpose must be clear. The men's lounge in Rockefeller Center, New York City, is hung with a

12 by 18-foot abstract mural called *Men Without Women*. This mural collects a group of typical masculine articles—pipes, playing cards, sports equipment—and arranges them in the way Davis has made his own.

At the Communications Building at the New York World's Fair Davis had an enormous mural symbolizing the development of communication. In it he put "a big spiral, meaning the universe, a seashell suggesting the origins of sound. Then you see man rising out of chaos, sign language, writing by letter, the first printing press, the first telephone instrument, semaphore, a human ear, a carrier pigeon, radio towers, light signals, the United States mail and a lot of other things."

New York City's broadcasting station, WNYC, has a mural with a saxophone, radio antennae, an operator's panel, a graph of radio frequencies in it. "The forms," Davis explains, "aren't directly reflective of the things they come from, but rather of their colors, shapes, directions—dissociated from their actual environment."

Davis' abstractions of Paris and of America have been collected by many art lovers, and many museums have Davis' pictures in their permanent collections. These include the Museum of Modern Art and the Whitney Museum in New York, the Newark Museum, the Los Angeles Museum and the Milwaukee Art Institute.

This "most daring and powerful of the Left-wing American moderns" was born in Philadelphia on December 7, 1894, the son of Edward Davis, who was art director of the *Philadelphia Press* in the 1890's. The workers on that paper in Edward Davis' department included John Sloan, George Luks, William Glackens and Everett Shinn. It was easy for Stuart Davis to decide to become an artist.

Most of his art education he got at the Henri School of Art in New York, which he attended from 1910 to 1913. At nineteen he was precociously represented with six water colors in the celebrated Armory Show, "that cataclysm in the course of American art." During the War he continued with his art—drawing maps in the Army Intelligence Department, and with the War over found himself "hard at work" moving toward the abstractionist painting he now does. To him the purpose of "naturalism"—aping nature in paint—no longer existed. The camera did it better. "An abstract painting, on the other hand, became an analogy, a synthesis of the subject in terms the artist chose. The abstract artist was free from the commonplace and took his post in the real where 'pure esthetic experience' reigns and 'enjoyment of line, color and form' is sufficient end in itself."

Davis went to Europe for the first time in 1928 and painted abstractions of Paris, "remarkably evocative of the city and its typical aspects and done with great charm and humor." He discovered that the work

STUART DAVIS

being done in America "was comparable in every way with the best of the work over there by contemporary artists." Since that trip Davis has been working in America, much of the time in Gloucester, Massachusetts, where marine shapes appeal to him.

One of the most articulate of modern artists, Stuart Davis has consistently allied himself with the Left-wing artist groups. In his youth he was a frequent contributor to the radical magazines, the *Masses* and *Spacen*. In 1934 he helped organize the artists' union and urged other artists to join. "The artist does not join the union merely to get a job," he said. "He joins it to fight for his right to economic stability on a decent level and to develop as an artist through development as a social human being." Again and again he has insisted that "the artist participates in the world crisis." In 1936 Davis was a leader of the American Artists' Congress, formed with the main purpose of opposing Nazi racial ideas in the field of culture, but he resigned from the organization in April 1940 because he felt that the "present active membership" of the group was incompetent to carry out the aims of the organization.

DAVIS, WILLIAM ELLSWORTH Dec 30, 1896- Medical missionary to the Belgian Congo

Address: c/o Reynal and Hitchcock, Inc, 386 Fourth Ave, New York City

Four ordinarily unemotional scientists—Arthur H. Compton, Kirtley F. Mather, Harlan T. Stetson and Edward L. Thorndike—writing in the *Scientific Book Club Review*, call Dr. William E. Davis' book, *Ten Years in the Congo* (March 1940), "a truly remarkable book that gives a rather detailed and inclusive picture of that part of the Congo where he and his wife lived, taught, and practiced for ten years." They call Dr. Davis "a true man of science" and recommend his book. It was selected as the April 1940 book by the Scientific Book Club.

Dr. Davis, while thoroughly sympathetic with evangelizing missionaries and their teaching, devotes only one chapter of his book to the church work in the Congo. The greater part of his work has to do with jungle life, travel, diseases, social customs and a record of the changes that have come over the Belgian Congo in recent years. He holds that the natives have gained immeasurably by their contact with civilization and disagrees sharply in this respect with the French writer, André Gide. Some idea of the immense amount of medical assistance Dr. Davis gave the natives can be approximated by the information that in his last year at his medical station he treated 65,000 patients at his hospital dispensary and performed 536 major operations under the most primitive and intolerable conditions.

Dr. Davis tells us that he was born in Morton, Oregon on December 30, 1896, the son of Nona Austin and Maud Mary Davis, a very devout Christian couple. His early life was a period of wandering, with a year's interlude in Mexico and farm life near Lynchburg, Virginia from 1912 to 1917. He attended Lynchburg College, and Whitman College at Walla Walla, Washington, receiving a degree in 1920. His college course was broken up by a year in War service as a pilot in Boston and Miami. Out of college, he worked as a science teacher and athletic coach at Pasco, Washington.

All this time he thought of various careers which would fulfill his love of travel and explains how he finally decided to become a medical missionary. "I had been the janitor of our Church [Christian Disciples'] during my senior year at college," he says, "and I had met a man in the preacher's study one day who had suggested the possibility of missionary work. He had pictured it in such a way as to make it seem an interesting and worthwhile line of endeavor."

In order to fit himself for missionary work he enrolled at the College of Missions, and Butler University at Indianapolis. In 1922 he began the study of medicine and en-

WILLIAM E. DAVIS

tered Northwestern University. Meanwhile he had met and fallen in love with a young missionary, Martha Newell Trimble, whose station was in Africa. "The years in the medical school," says Dr. Davis, "were long years, not without many bitter thoughts upon the circumstances that separated me from Africa and from my fiancée. They were hard to endure but they eventually came to an end and we were married in the Summer of 1927, after her return to America on a furlough from Africa."

"I've traveled considerably," he says, "all over the United States, most of Europe [University of London School of Tropical Medicine, 1927 to 1928; University of Grenoble, Grenoble, France, 1931 to 1932] and a good part of Canada; into Mexico as far as Vera Cruz and right smartly in Africa. I've done a bit of this and that—farming, harvest fields, lumber woods, construction gangs, mule skinning, cowpunching, taxi driving, flying, schoolteaching, bookselling (I didn't sell many books), fruit picking, doing night guard duty for the railroad during a strike, preaching for a Chicago church, doing a couple of turns as a singing evangelist, male nursing, etc. I rang the college bell at Lynchburg, delivered papers, swept and mopped out a ladies' dress shop, janitored a church, washed dishes, etc., while at Whitman College."

With that wealth of experience behind him Dr. Davis and his wife went to Wema in the Belgian Congo in 1928—he as medical missionary and she as a missionary teacher. "If I expected much of it," he says of Africa, "I have never been disappointed. The reality of the Congo has surpassed any dream I ever had. My 10 years in the jungle have been for me a tremendous experience that I would not exchange for any other."

To Dr. Davis one of the amazing things about the Congo is the coming of the machine age. He says: "The discovery of practically all the other considerable sections of the world took place before the arrival of the machine age, but the Congolese are being confronted with a mass of modern developments which are still amazing to us and must be positively overwhelming to them. I know of no other people who have been called upon to make so great and so sudden a shift in ideas and culture. The untutored savage, who has never before seen so much as a wheelbarrow, is put to work on complicated machinery. He comes naked out of the jungle and goes to work in a garage. With no place to go for escape, the forest dwellers are caught and impaled upon the sudden prong of Western iron and steel."

The Davis' two sons were born in Africa, William E. Jr., in 1929 and Thomas Austin, in 1934. The older was the first white child to be born in all the region around Wema, and the natives had quite a time deciding on a name for him, Dr. Davis recalls.

In 1938 the family returned to the United States, and Dr. Davis spent a year studying at Columbia University Post Graduate Hospital in New York City. Then he and his family settled in North Middletown, Kentucky, which has a population of 500. He hopes, he says, to spend the rest of his life there. With true Chamber of Commerce sentiment he says: "I think that the Blue Grass section of Kentucky is the best place in the world to live and my ambition is to have a small farm near North Middletown and vegetate."

DAY-LEWIS, CECIL [NICHOLAS BLAKE, pseud.] Apr 27, 1904- Author

Address: Brimclose, Musbury, Axminster, Devon, England

An able spokesman for that group of Left-wing poets who emerged from Oxford during the first post-War decade is Cecil Day-Lewis, and with the publication of his second novel, *Starting Point* (1938), he remains (despite the nature of his literary vehicle) essentially a poet.

C. Day-Lewis was born in Ballintogher, Ireland in 1904. At the age of three he was taken to England to live, and when he was only six he made a conscious attempt to write. He was sent to Sherborne School and then entered Wadham College, Oxford, where he was a co-editor of *Oxford Poetry*, 1927. For eight years he held successively three positions as schoolmaster, and then withdrew in 1935 in order to apply himself entirely to the art of writing and to Left-wing political activities. In 1928 he married Constance Mary King; they have two children and make their home at Brimclose in Devon.

Day-Lewis is, obviously, identified with a group-poetry and with a group-ideology which holds that "a revolution in literature is now taking place" but that "a revolution in society is incomparably more important, and without it the other would be futile and meaningless. . . Evolution is the dance, revolutions are the steps." But, he continues, it does not follow that any kind of lyric proselytizing is good poetry.

Long accustomed to domestic ease and rural pleasures, he might well have decided to go to court for poetry in the decadent though still acceptable Victorian tradition. But the genuineness and strength of his belief that society was not merely temporarily indisposed but acutely diseased brought him, like Anthony in the closing pages of *Starting Point*, to a conviction that unless intelligent young men would pool their conscious energies there would be no rebuilding of a new social order. This was the "point from which it was impossible to turn back." At least as early as 1933

Day-Lewis had expressed this same belief in somewhat similar phraseology. In his *Letter to a Young Revolutionary*, published in Michael Roberts' *New Country* (1933), he said: "The certainty of new life must be your starting point."

Day-Lewis' work suffers at times from a lack of imaginative intensity; his most gaping weaknesses are, perhaps, an occasional undergraduate exuberance, "Look West, Wystan, lone flyer, birdman, my bully boy"—or a rather obvious derivation, such as "Spoon out the waters of comfort in kilogrammes" from T. S. Eliot's "I have measured out my life in coffee spoons." Although not a technical innovator, he has made skillful use of internal rhymes and feminine endings.

An earlier novel by Day-Lewis was *The Friendly Tree* (1937), a delicate and lyric story of youthful love. He has published six detective stories under the pseudonym of "Nicholas Blake": *Question of Proof* (1935); *Thou Shell of Death* (1936); *There's Trouble Brewing* (1937); *The Beast Must Die* (1938); *The Smiler with the Knife* (1939); and *Summer Camp Mystery*, also known as *Malice in Wonderland* (1940). He has also written some tales for children. Fundamentally, however, he remains a poet.

It is his belief that only poetry and the fairy tale (or parable) will survive: the first, "partly through metaphor but chiefly through rhythm, can penetrate into strata of man's mind that nothing else can touch," and the second because it is "primitive . . . universal . . . can slip past the defences of our intellect and talk to the deep unconscious levels within us. Cinderella, the Tin Soldier, the Prodigal Son can go places where there is no admittance for Herr Goebbels or the Board of Education."

DE CHAPPEDELAINE, LOUIS See
Chappedelaine, L. de**DEFAUW, DESIRE** (dē-fō) Sept 5, 1885—
Belgian violinist and conductor; guest leader
of the NBC Symphony Orchestra in 1939
and 1940*Address:* c/o National Broadcasting Company,
30 Rockefeller Plaza, New York City

The first of the distinguished guest conductors occupying the podium, relinquished until March 1940 by Arturo Toscanini, is the Belgian violinist and conductor, Désiré Defauw, who has had a dashing musical career on the Continent and who is credited with sufficient wit to "tell a good story with a Cockney accent." On December 9, 1940 he again took over Toscanini's baton as guest conductor of the NBC Symphony.

Désiré Defauw was born in Ghent on September 5, 1885, the youngest of five children. At the age of eight he entered the Ghent Conservatory, with a strong plea to

study violin, because, as he himself declared, "I already know the piano." He was a student of Johan Smit. Six years later a visiting impresario heard the lad in recital and offered his parents 35,000 francs for the privilege of taking the youthful virtuoso to America. The proposal was refused: the child was not yet ready for a public career. At 15, however, he became concertmaster of the Concerts d'Hiver in Ghent, and toured as a violinist with great success until the outbreak of the World War in 1914.

Defauw's musical energy was by no means stifled, however, by the War. From 1914 to 1918, with Lionel Tertis, violist, Charles Woodhouse, pianist, and E. Doehard, cellist, Defauw formed the Belgian Quartet and toured England. Ernest La Prade, now NBC's director of musical research, provided a second violin for quintets and also played viola in Tertis' absence.

After the Armistice Defauw conducted the concerts at the Théâtre de la Monnaie in Brussels until his appointment, in 1925, as Director of Concerts in the Royal Conservatory in Brussels. In addition to his conservatory duties Defauw holds the post of musical director of Belgium's Institut National de Radiodiffusion, conducting an 84-piece symphony orchestra formed expressly for radio broadcasting. He is, moreover, president of the Belgium Section of the International Society for Contemporary Music.

Nov 22, 1890- Head of Provisional French
National Committee in London

Once a general of France and at the end of 1940 an exile dismissed from the army and condemned to death by his country, Charles André Joseph Marie de Gaulle, leader of the French forces that will not surrender, is a "gallant and romantic figure." Under him French soldiers, sailors and airmen in Europe and in the colonies are banded together to fight against Germany to the end, determined not to acquiesce in the Pétain (see sketch this issue) capitulation. Daily they raid enemy air objectives with the British; daily they work for the defense of Britain against the enemy; daily they strive to unite all "free Frenchmen."

De Gaulle, who was once a great admirer of Pétain, appealed to the French people immediately after the Compiègne armistice was declared. To them he broadcast: "This capitulation was signed before all means of resistance had been exhausted. . . There is no longer on the soil of France an independent government capable of upholding the interests of France and the

DESIRE DEFAUW

French overseas." He set up his Provisional Committee in London and began organizing his forces and started his daily broadcasts to the French people, in which he urged them not to work in the factories, not to make war against Great Britain, not to become Germans.

In these activities he had been supported by the British government, but it wasn't until August 7, 1940 that a formal agreement was signed. By its terms the volunteer Frenchmen pledged themselves to fight to the end against Germany but never to take up arms against France. By its terms General De Gaulle's forces, even though they retain their French character, will be under nominal British command. The British government also has agreed to finance De Gaulle's efforts to gather together as many men as possible and to grant pensions to the dependents of those men in the service who are killed or injured.

Tall, melancholy, handsome, this man whom Winston Churchill (see sketch this issue) calls "the leader of all free Frenchmen" has long had a reputation as a brilliant army officer, even though promotions have not been swift. He was born in Lille, France on November 22, 1890. In 1911 he was graduated from the military school of Saint-Cyr near the head of his class and immediately became a sub-lieutenant in the 33rd infantry regiment. It was here that he had his first contact with Pétain, then commander of the regiment.

As soon as the First World War was declared De Gaulle was sent to the front and was wounded at Dinant. In September 1915 he was promoted to the rank of captain, took part in the Verdun operations and received three citations for his military valor. The next year he was taken prisoner and spent two years and eight months in a prison camp.

In 1924 De Gaulle was admitted to l'Ecole Supérieure de Guerre and after passing a brilliant examination was placed on the staff of the Army of the Rhine, assistant to Marshal Pétain. Three years later he was placed in command of the 19th infantry battalion and sent to Beirut. After his return to France some years later he was appointed to the secretariat of the Conseil Supérieur de la Défense Nationale where, until 1937, he held a number of important positions. In that year he was made a colonel, after a period at the Centre des Hautes Etudes Militaires.

During these years in the army De Gaulle consistently pleaded for a highly mechanized French Army. As long ago as 1928 he described France's inevitable doom if tanks were not built in a hurry, and foreshadowed the range and mobility of the tanks of the future. In 1935 he urged the Chamber of Deputies to authorize the mechanization of at least 10 army divisions. His articles and books, especially *Vers l'Armée de Métier* (1934), *Le Fil de l'Epee* (1932) and *La France et Son Armée* (1938), were discussed to

CHARLES DE GAULLE

some extent, but the leaders of the French Army and of the French Republic paid too little attention to what he urged; only the Germans took over some of his best tank ideas.

Still, De Gaulle's varied experience and training and grasp of military matters were finally recognized, and 15 days after the War started he was made a brigadier general and later promoted by Pétain to major general. On June 6, 1940 Premier Reynaud (see sketch this issue) made De Gaulle his special assistant in charge of war department matters in his Cabinet. Shortly after, De Gaulle was sent to England, ostensibly to confer on military matters for France. He remained in England, still conferring on military matters—but they were different matters and for a different France.

On August 2, 1940 De Gaulle was condemned to death in absentia by a French military tribunal. His reply to the sentence was that it was made by "a court largely under the influence and possibly even under the direct orders of the common enemy. The enemy will one day be driven from the soil of France. On that day I will submit myself willingly to the judgment of the people."

He continued to rally the "free French" forces and in September approached Dakar in Sénégal with six troop transports. Eight times he tried to land and eight times he was repulsed. After three days of attack De Gaulle called off the expedition, "not wanting to be a party to a fight between Frenchmen." Immediately relations between the French government of Vichy and Britain became even more strained than they had been; French airmen bombed Gibraltar in reprisal and a court was set up to try all De Gaulle partisans. Resentment in Britain was widespread, even though De

DE GAULLE, CHARLES—*Continued*

Gaulle himself assumed full responsibility for the abortive attack.

Yet De Gaulle's headquarters in London maintained that "the moral prestige of General De Gaulle and his troops remains intact. The magnificent efforts of free French forces will not be relaxed merely because of the failure of Dakar." A number of French colonies had already declared their support for him. On September 3, Tahiti had gone over to his side; the New Hebrides and New Caledonia followed later in the same month; all French Equatorial Africa was reported to be with him. And on October 10 General De Gaulle landed in Duala, capital of the Cameroons to carry on the struggle. Meanwhile groups were formed in the United States and other countries "to act in close cooperation with the free French forces."

According to *De Gaulle and the Coming Invasion of Germany* by James Marlow, a pamphlet published in October 1940, De Gaulle believes that a land invasion will be necessary, for the German Army must be destroyed. When the Germans are "war-weary and slack," he says, he hopes to attack them "with tanks and guns, thousands of airplanes, tens of thousands of airplanes."

ROBERT EDWARD DELL

DENNY, GEORGE VERNON JR. Aug 20, 1899- Director of the radio program, *America's Town Meeting of the Air*; president of The Town Hall, Incorporated
 Address: b. The Town Hall, 123 W 43rd St, New York City

George Vernon Denny Jr., is the man who brought the town meeting back to America. His town meeting covers the entire United States, for it is broadcast by the Blue Network of the National Broadcasting Company over stations from coast to coast. When the town crier rings his bell and calls "Town Meetin' Tonight," millions of radio listeners tune in as eagerly to hear questions of national interest discussed as if they were actually attending a town meeting.

A chance remark about a neighbor gave Denny the idea for *America's Town Meeting of the Air*. The neighbor had refused consistently to listen to President Roosevelt's fireside chats. Denny, who was at that time associate director of Town Hall of New York, passionately believed that the Town Hall's work of presenting all sides of political questions was one of the great educational services of the country. And he was shocked by his neighbor's refusal to listen to anyone whose political views differed from his own.

If people shut their minds to all discussion, the great American principle of free speech and free discussion, in a word, the democratic form of government, was endangered, Denny reasoned. The intimacy of early American communal life with its town meetings for discussion of public affairs was gone. In a complex, industrial civilization a man might shut himself up and read only the newspapers he approved, listen only to friends who believed as he did, close his

mind to all opposite thought. Denny pondered on how he could recapture the democratic way of thinking and of solving problems.

The result was *America's Town Meeting of the Air*. The meetings began with a series of six experimental programs, starting May 30, 1935 and ending July 4. After the first broadcast at which four speakers—Lawrence Dennis, A. J. Muste, Norman Thomas and Raymond Moley—discussed: "Which Way America—fascism, communism, socialism or democracy?" 3,000 letters poured into the offices of Town Hall and NBC stations. The response was a surprise because the program had received little publicity, and Americans supposedly were politically indifferent.

The letters were enthusiastic. They showed that Americans were stirred by this new *America's Town Meeting of the Air* with its free discussion of public questions. Apparently the program filled a vital need.

However, the success of *America's Town Meeting of the Air* is due, to a large extent, to Denny's fine sense of showmanship and drama. Denny started life as a teacher of play production and as an actor, and he knew how to give the town meeting discussions a dramatic touch. They were not just dry debates. It was fun to go to a town meeting as the crier sang out, "Town Meetin' Tonight, Town Meetin' Tonight." And Denny as moderator kept the town meeting moving at a quick, dramatic pace.

The moderator of *America's Town Meeting of the Air* was born in Washington, North Carolina, a town of 7,000, on August 29, 1899, the son of George Vernon and Carrie Ricks (Cobb) Denny. He attended the University of North Carolina and received his B. S. in commerce in 1922. During his sophomore year a new college professor, Frederick H. Koch, came to the University to start a department of dramatic arts and formed the now famous student acting troupe, the Carolina Playmakers. Denny joined the Playmakers and became company manager at \$50 a month. He served as instructor in dramatic production at the University from 1924 to 1926.

A leading lady in the Playmakers' first productions was Mary Traill Yellott, who came to the University of North Carolina from Bel Air, Maryland. Denny was cast in the rôle of her lover and he has never stepped out of it. They were married in June 1924. They have three children, Mildred Nelson, George Vernon 3rd and Mary Virginia.

Denny came to New York as an actor in 1926 and did rather well, except that most of the plays he was in closed. So the young actor got himself a job as manager of a lecture bureau. Indirectly this led to his next job with Columbia University, which was then looking for a man with lecture-bureau experience to manage the extension work of its Institute of Arts and Sciences. Here the League for Political Education heard of him.

GEORGE V. DENNY JR.

The League for Political Education had since the 1890's presented distinguished orators of various political creeds and opinions from its platform. Denny became the assistant of Robert Erskine Ely, director of the League, in 1928. In 1937, when Ely retired, he turned his job over to Denny. Denny changed the name of the organization to Town Hall, Incorporated as soon as he came into power.

Denny has followed the spirit and tradition of the League for Political Education, which built the Town Hall of New York in 1920. As president of Town Hall, Incorporated since 1937, he has kept alive its many lectures, discussion groups and short courses. But he has broadened its influence immeasurably as one of the "yeasty" influences in American democracy with his *America's Town Meeting of the Air*.

Denny is convinced that a small but enlightened bloc of independent voters controls the balance of political power, and it is this bloc he hopes to reach and influence to action. It is this bloc that he says must stop the drift toward dictatorships.

But if Denny's job is primarily that of educator, his *Town Meeting of the Air* is so well sugar-coated with showmanship that it does not show. His radio program brings in more than 60,000 letters each season. After five seasons on the air it is still going strong. In 1939 eighty-three stations broadcast the program twenty-six times without pay, and the National Broadcasting Company contracted for its continuance three years in advance.

America's Town Meeting of the Air is good theatre. It has conflict, differing opinions voiced about affairs that concern us all. It avoids the old-fashioned debate technique. The individual who rises in the meeting to ask a question is part of the program. Denny

DENNY, GEORGE VERNON, Jr.—Cont.

has often made the heckler good entertainment. Nobody knows when something exciting is going to happen at *Town Meeting*, and 10,000,000 listeners who tune in Thursday nights feel the dramatic import of stern controversial issues being thrashed out.

The radio audience had some rare treats—the night Mrs. Eugene Meyer went to mat with Mrs. Roosevelt (see sketch this issue) over the New Deal; the night the late Heywood Broun and Julian Mason almost came to blows on the Town Hall platform; the night Ickes and Gannett spoke their minds about the freedom of the press. Wendell Willkie, Dorothy Thompson, Frank Knox, Frances Perkins, Burton K. Wheeler, Carl Sandburg (see sketches this issue), John Gunther, Jan Masaryk, Pearl Buck are some of the persons who have appeared on the program.

But no matter how important the speakers are, Denny is a stern ringmaster. His blue eyes snap behind silver-rimmed glasses, his high forehead is brilliant under the Town Hall stage lights, and no one is allowed to run past his time. In the same stern fashion he deals with those who rise to ask questions. Personalities are barred; issues alone must be considered. And as an added dramatic touch groups in distant places have shot in their questions by radio to New York's *Town Meeting*.

As a result of *America's Town Meeting of the Air*, town meeting listening-discussion groups have sprung up all over the United States. Town Hall has set up an advisory service which supplies hundreds of these groups in all states with complete background materials in advance of each program. From Kobe, Japan, to Alaska and the Argentine, listeners have written of their enjoyment of the program.

DE VALERA, EAMON (dě vâ-lă'râ ā'mûn)
 Oct 14, 1882— Prime Minister of Eire

Address: Bellevue, Cross Ave, Blackrock County, Dublin, Eire

In the Second World War Ireland, like Europe's other neutral countries, is in a ticklish spot. Southern Ireland fears that Hitler may try to use it as a springboard for an attack on Britain or that he may land troops in Northern Ireland, which is belligerent territory. It fears, too, that there is danger that Britain may send in troops to forestall the Germans. It is doing all in its power to maintain the strictest neutrality.

At the beginning of the War Prime Minister Eamon De Valera announced that Ireland was neutral and would stay so. Yet precautions were immediately taken: Ireland's army was brought to war strength; an air raid precaution service was instituted; censorship was clamped down. As De Valera put it, "There is but one danger over this country . . . and there is but one safeguard—to be prepared to defend the liberties we won against anyone who might try to invade them."

For his actions De Valera has been called both pro- and anti-British. The extremists of the Irish Republican Army, determined by any means to bring the six northern counties which are now a part of England under the flag of Eire (the Irish Free State), think he is playing the British game. The British, angrily contrasting Eire's neutrality with the enthusiasm of New Zealand or Canada, balked by De Valera in their desire to have a British armed force strengthen Irish preparations against possible German invasion and in their effort to lease naval bases, aware of the fact that Eire's neutrality makes it possible for a German Minister to be alarmingly close to England, feel that De Valera is far from doing his bit. Others say he would give in to Britain's demands if it were not for his people's passionate desire for neutrality and suspicion of British ambitions.

On the other hand, a great many believe De Valera's only wish is for a peaceful, united Ireland, free of Great Britain. With "rigid self-control, fanatic faith in his duty to Ireland, extreme seriousness of mind, complete unworldliness, stubbornness and humanity" he has spent almost all his life fighting for this goal.

This Prime Minister of Ireland, who says his ambition is the unity and self-determination of all Irish people, actually is only half Irish and is of American birth. Eamon De Valera was born Edward De Valera in New York City; his father, Vivian De Valera, was a Spanish immigrant; his mother, Catherine (Coll) De Valera, was an Irishwoman recently arrived from Lim-

erick. When Edward was two years old his father died and he was sent to Ireland to live in his grandmother's home near Bruree in County Limerick. His mother, who stayed in America, remarried.

In Ireland, Edward, whose name was changed to the Gaelic equivalent, Eamon, lived on a farm and went to the local school. Because of his skill in mathematics he won a scholarship to the Christian Brothers' School near Cork and from there went to Blackrock College near Dublin. At school he read everything, was a star runner and rugby player and a brilliant mathematician. His B. A. degree he got from the National University of Ireland.

After leaving the University, De Valera learned Gaelic. His wife, Jane Flannagan (S. Ni Fhlannagain), whom he married in 1910, was a teacher at the University. Then he got himself a job teaching mathematics, a "tall, long-nosed, serious fellow, dressed in rough homespun and wearing a queer sort of deerstalker cap." It wasn't long before his career as a nationalist and a revolutionary began. Like most Irishmen he resented Britain's domination over Ireland.

On Easter Monday, 1916 a few thousand determined Irish decided that "Britain's extremity is Ireland's opportunity," and rebellion against England's rule was started. As a commandant in the Republican Army the young, gawky professor of mathematics led out fifty partly-armed men to hold two miles of strategic railway line and canal in Dublin. When British troops approached he admonished his men: "You have but one life to live and but one death to die. See that you do both like men." The rebellion was crushed and all its leaders, except De Valera, sentenced to death and shot. Because he was an American citizen De Valera was given penal servitude for life and sent to Dartmoor Prison.

De Valera stayed in prison only a year, for in the general amnesty of 1917 he was freed, to become an Irish hero, his portrait in thousands of Irish homes. Immediately he was elected president of the Sinn Féin ("ourselves") Party and made Sinn Féin Member of Parliament for Clare, though he never took his seat since he refused to take the necessary British oath of allegiance. In 1918 he was back in jail again. After that year's general elections the newly-elected M. P.'s had met at Dublin as the Dáil Eireann (Assembly of Ireland), and at the very same time the British had "discovered" a pro-German plot and carted off to England hundreds of prominent Sinn Féiners among them De Valera.

He escaped from Lincoln Prison (where he mastered Einstein's theory) by having a key made (it is a most romantic story) and went to Manchester, where he hid in the house of a priest. From there he made his way to Liverpool and thence to Ireland, once disguised as a seaman, once hidden in sacks of potatoes. Eventually he

EAMON DE VALERA

went to America disguised as a stoker. His arrival here was stirring—the police were still scouring Ireland and England for him. De Valera spoke all over the United States and raised money for the Irish cause.

Back in Ireland in 1920, De Valera was elected President of the Dáil Eireann, which was made up of the Sinn Féin deputies from Southern Ireland who had refused to take an oath to the King and had proclaimed their independence. Civil War began, in which the Black and Tans and Irish Nationalists slaughtered each other until July 1921, when a truce was declared. Five months later the Irish Treaty was signed, which gave Ireland dominion status but separated the Free State from Ulster. De Valera had been arguing about this treaty with Lloyd George for a long time—Lloyd George said: "Negotiating with that Irishman is like trying to scoop up mercury with a fork"—but when it was finally negotiated and signed by his men, he denounced it. The Dáil Eireann, however, approved it and there was Civil War again. When it began De Valera was arrested while making a speech. Released 10 months later, after the War had stopped, he climbed the same platform and quietly began: "As I was saying when I was interrupted. . ."

Until 1926 De Valera held out in his demand for an all-Ireland Republic. Then he suddenly proposed that his party of Sinn Féiners enter the Dáil if they would not have to swear allegiance to the King. When his proposal was rejected he left the Party, formed his own Fianna Fáil (Soldiers of Destiny), and later took the oath and entered the Dáil himself. Many called him "traitor" (some still do), and it took him six years to fully recover his political influence. Forty-three of his men came into the Dáil in 1928; in the next election there were fifty-seven; in 1932 De Valera's

DE VALERA, EAMON—*Continued*

Party had won a majority by a coalition with the Labor Party and De Valera was the Dáil's President, a position he held until 1937.

In that year De Valera drew up a new constitution for the Irish Free State which was adopted in April, and in 1938 the Irish Free State, having adopted the name of Eire, separated itself from the British Commonwealth, with Douglas Hyde as its first President and De Valera as Prime Minister. As the Constitution put it, Eire "is a sovereign, independent, democratic state" which may choose to associate itself with Great Britain in international affairs but may at any time revoke that association by act of the Irish Parliament. The payment of land purchase annuities was suspended, British ships were forced out, the British Governor was scared away from his vice-regal lodge in Dublin, and Ireland found itself involved in economic warfare with England.

Out of this warfare, under De Valera's "adroit manipulation," came a considerable degree of self-sufficiency for Ireland, aided rather than hampered by a trade treaty with England concluded in 1938. But despite this independence De Valera says he will not be satisfied until Northern Ireland is part of Eire and all Ireland is entirely free of Great Britain. This must come, however, through peaceful means and not by I. R. A. terrorism (since the War started he has jailed some terrorists without trial and told the rest that they may expect no quarter). There have been two hangings.

There is a minority in Eire which believes that by his actions De Valera has made "the union of Ulster and the Free State even more remote"; which describes him as a "vain, egotistical schemer whose real study is Machiavelli rather than mathematics, whose policies are crippling the country, whose life has been a curse to Ireland." Many others say that "the government is no longer aiming at a republic," perhaps because if the thousands of middle-class young men and women who emigrate to parts of the British Empire were forced to find work at home they would challenge the tremendous influence of the clergy in Ireland. And De Valera is deeply religious. According to a writer in *The Nation*, "he lives in a veritable dictator's paradise, a paradise *sans* purges, *sans* martyrs, thanks to the British Empire, which takes to its bosom the more refractory of his fellow-citizens." But most of Eire apparently believes that this deeply religious, this fanatically Irish Irishman has been the deliverer of his country.

All his followers call him "Dey." To them a free Ireland is typified in his spare, rugged frame clothed almost always in rusty black, in his homely face with its long nose and deep lines to the mouth. They listen with wild Irish enthusiasm to his speeches, often plodding and overelaborated. (Someone once said about them: "De Valera is marching on Dublin at the head of 20,000 words.") They support his policies. In return De Valera gives Ireland all he has to give. His life

is simple and frugal—he, his wife and six children live in a small house, and his salary is only £1,500. His hobbies are walking, chess and mathematics but he gives them little time, for each day is a grueling one and he has never taken a holiday. He once told an interviewer, "It's not a question of what I want, but what the people of Ireland want."

DEWEY, THOMAS EDMUND Mar 24, 1902- District Attorney of New York County

Address: b. 137 Centre St, New York City; h. 1148 Fifth Ave, New York City

In 1940 one of the leading contenders for the Republican Presidential nomination was Thomas E. Dewey. The young District Attorney, whose name has been as familiar to Americans during the past few years as that of Clark Gable, Henry Ford, Charles A. Lindbergh, Joe Louis (see sketch this issue) or Joe DiMaggio, was born in Owosso, Michigan, March 24, 1902, the son of George Martin and Annie (Thomas) Dewey. His father, who died in 1927, was for many years Republican county chairman, postmaster of Owosso and publisher of the *Owosso Times*. The Dewey who was hero of Manila Bay was his grandfather's third cousin. Nobody could possibly find anything scandalous in his boyhood, or anything particularly remarkable, either. He was a Boy Scout, sang in a choir, organized a magazine agency and won a bicycle for his services to the *Saturday Evening Post*, made a record for never being late or absent at the local public schools that he attended, occasionally won debating contests—but no one could have predicted his spectacular career from these facts. Even when he went to the University of Michigan in 1919 he made no teams, was never nominated for the presidency of his class, didn't head the debating society, but instead specialized

in winning singing contests. In 1923 he acquired a B. A. and a scholarship for a brief period at a Chicago music school. He continued his singing lessons at another branch of the school in New York. At the same time he began to attend Columbia Law School, however, and hired his voice out to church choirs and synagogues in order to help pay expenses. It took him only two years to finish Columbia's three-year law course. In 1925 he must have at last decided that an LL. B. was more useful than a beautiful baritone, for that year Thomas Dewey entered legal practice in the firm of Larkin Rathbone & Perry, where he was to stay a year before associating himself with McNamara & Seymour.

It was after this that things began to happen. In the first place, the summer of 1925 was the time when Thomas Dewey first grew his famous mustache, during a bicycle tour of France. Frances Hutt approved of it. Since Frances Hutt was to become Frances Dewey in 1928, after a romance that had begun at music school several years before, her opinion must have carried some weight. Dewey kept the mustache. Evidently his clients approved of it, too, for by 1931, when he left McNamara & Seymour for a position as chief assistant to George Medalie, newly-appointed United States Attorney for the Southern District of New York, he was making \$8,000 a year in private practice.

Dewey was chief assistant to Medalie for two years and nine months. Toward the end of this period he was beginning the trial of his first big racketeer, Waxey Gordon, later sentenced to the Federal penitentiary for 10 years as a tax dodger. Two days after the trial had begun Medalie resigned, and for five weeks his assistant was United States Attorney. He worked for himself for the next 18 months until, in July 1935, the New York Grand Jury asked Governor Lehman to appoint somebody to investigate racketeering and vice in New York. Medalie suggested Dewey for the position, and after four other prospects had refused the job, he was offered the office of Special Prosecutor. He accepted, called on the public to come forward with information on racketeering.

In 1936 he began his spectacular assault on the prostitution industry in which Lucky Luciano was crowned "King of Vice" and was convicted with eight others accused of "shaking down" prostitutes. This conviction was said to have cost \$110,000 of the people's money, but the testimony of the ladies concerned brought Dewey so much publicity that later, more prosaic investigations of rackets in the poultry, trucking, restaurant and baking businesses became "a sort of front-page Arabian Nights series about New York, with the same hero for each installment."

In 1937 New York's anti-Tammany faction, headed by Fiorello La Guardia (see sketch this issue), picked Dewey to run on its ticket as candidate for District Attorney.

Underwood & Underwood

THOMAS DEWEY

He accepted the nomination, and after a campaign conducted with his own inimitable "cops-and-robbers technique" (Dewey's "private and public conversation always emphasized the menace of the underworld, omnipresent, almost omnipotent, crouched for a leap"), on December 31, 1937 Thomas Dewey became New York City's District Attorney by a margin of more than 100,000 votes. It was an office not held by a Republican in nearly two generations, and victory meant he had come a long way from the early days when he began his political career by ringing doorbells, canvassing for votes for the Republicans, and getting himself elected chairman of the board of directors of the Young Republican Club. The New York *World-Telegram* announced: "Hoodlums Start Out As Dewey Starts In."

During Dewey's term as District Attorney the crimes and consequent punishments of such figures as Richard Whitney, Jimmy Hines, Fritz Kuhn and Lepke were brought to the attention of newspaper readers all over the country. Not so well publicized was his creation of the Volunteer Defenders, a panel of the best legal talent which handles a certain number of cases every year without fee. When, during the end of his first year in office, Dewey ran against Lehman for Governor of New York, the people of that state showed what they thought of him by giving him so many votes that a switch of 35,000 would have meant his election. And after his defeat he added to his record the prosecution and conviction of such varied public menaces as Judge Manton, Fritz Kuhn, subway employees responsible for the theft of a fortune in nickels, ambulance-chasing lawyers and landlords whose tenants

DEWEY, THOMAS—*Continued*

burned to death in tenements which violated the New York fire laws.

In the fall of 1939 a petition was circulated among leading Republicans beginning: "Convinced that he possesses above all other leaders in the country today the ability, temperament and training which the next President of the United States must have, we have decided to cooperate in the movement to elect Thomas E. Dewey President in 1940." Public sentiment seemed to be trending in the same direction, for by January 1940 the Gallup polls revealed 60 per cent in favor of his candidacy. On December 1, 1939 Thomas Dewey formally announced he would accept the Republican nomination if it were offered.

During the heaviest cross-country campaign ever undertaken by a candidate for the Presidential nomination, Dewey drew enthusiastic bouquets from voters all over the country and also made himself the "top-flight clay pigeon of the political sharpshooters." It was charged by his opponents that he was too young and inexperienced for the Presidential office (Ickes announced: "The District Attorney of New York has finally thrown his diaper into the ring"); he was accused of "bullying hostile witnesses and coddling favorable ones, demanding exorbitant bail, wire-tapping, condoning the use of perjured testimony"; he was called "pompous and conceited"; he was supposed to be "groomed by the moneyed crowd"; and Samuel Grafton (see sketch this issue) said of his social philosophy that "if a young man is as cold as this at 37, he will reach absolute zero by 50." His supporters, in turn, pointed out that some of the experienced people then in office hadn't "polished off the nation's rough spots" too satisfactorily, that he was "the only one of the leading candidates of proved executive ability," that he had proved by his acts that he would not tolerate financial crookedness and that he had sympathy for the poor; that "he came from good, typical American people . . . was taught family life . . . and believes that men and women when they get married, get married for keeps and raise a family." His honesty, morals and good health were never questioned by anyone.

Although the Republican nomination finally went to Wendell Willkie (see sketch this issue), Dewey and Robert Taft (see sketch this issue) ran a fairly close race at the Philadelphia Convention. Afterward, the District Attorney campaigned for Willkie, eloquently condemning the New Deal on the grounds of inefficient rearmament, open war on American business, defeatism, bureaucracy, extravagance, corruption. His book, *The Case Against the New Deal*, was published shortly before the 1940 election.

Even aside from his amazing record as a District Attorney, Thomas Dewey has many political assets. As an orator he "lacks Franklin Roosevelt's charm but he

can deliver the smokiest platitude in such a way that it sounds like a bit of brand-new evidence just mined by a special investigator." He is personally attractive—something over five-feet-eight, with piercing brown eyes which he rotates furiously to "punctuate and emphasize his speech"; "at climactic moments he can pop them, almost audibly." (Photographs seldom show him in the act of popping, though: his favorite study is "to appear close-mouthed, intent, looking into the future.")

The District Attorney lives with his two small sons and his attractive wife, a former prima donna in George White's *Scandals*, in an eight-room apartment in Manhattan, and spends his summers with them on a 300-acre farm near Pawling, New York. Though the Deweys represent the "younger married set," they live rather sedately, are not yet in the Social Register, have few even minor vices. Mr. Dewey, an Episcopalian and a Mason, smokes a pack of cigarettes a day, didn't drink at all during Prohibition and never has more than two highballs at a sitting now, plays penny-ante poker with a nickel limit. He hates speed, hates night clubs, likes sleep, the opera, Sunday concerts, singing duets with his wife, and wishes he could attend church more than once a month. Perhaps the cruelest thing ever said about him, even during the heat of the campaign, was one Democratic hostess' epigram: "You have to know Mr. Dewey very well in order to dislike him."

DE WIART, ADRIAN CARTON See Carton de Wiart, A.

DIES, MARTIN Nov 6, 1901- Congressman; chairman of the House Committee Investigating un-American Activities
Address: b. House of Representatives, Washington, D. C.; h. Orange, Texas

The House Committee Investigating Un-American Activities has received more publicity since its creation in May 1938 than

any other current governmental committee. It has been called "the correct mechanism for defending democracy" and a "disgrace" to this country. It has aroused violent denunciations and has enjoyed "unprecedented popular support."

Much of the argument has centered about its chairman, Martin Dies of Texas, who has been raised by the committee to the position of a national figure, his picture in the newspapers almost every day, his name in headlines, his methods the subject of adulation or attack from Roosevelt down. For his activities as committee head Martin Dies has been called a "Fascist," a "dangerous demagogue," an "enlightened politician," the "one-man Gestapo of Texas," and a "warder-off of ruin."

Martin Dies has spent most of his short life in politics. He was born in Colorado, Texas, the son of Martin and Olive (Cline) Dies. His father was a member of Congress for 10 years and under Woodrow Wilson achieved minor fame for his opposition to the War. With his father Martin spent many of his high school years in Washington and "by the time he had long pants he had soaked up more practical political lore than most men ever possess."

He studied at Wesley College (Greenville) and at the University of Texas, and received his LL. B. from the National University in Washington, D. C. At the age of 19 he was admitted to the Bar and spent nearly two years in law practice in Marshall, Texas. While he was practicing there he married Myrtle Adams in 1920. On January 1, 1922, he moved to Orange, Texas, where he became senior partner of the law firm of Dies, Stephenson and Dies.

When Martin Dies was first elected to Congress in 1931 he was under 30, the baby of the 1931 to 1933 session. When the New Deal began in 1933 Dies was strongly with it, an advocate of monetary inflation and a critic of a conservative Supreme Court. He was chiefly noticed, however, because he was thought to be a protégé of Vice-President Garner. In some quarters his elevation to the powerful House Rules Committee was "attributed to Mr. Garner's benevolence," though others claimed he "campaign'd" for the position, as any good politician would.

This position on the Rules Committee was an important one for Dies mainly because it left him free from service on other committees. He seemed, then, to have "infinite leisure. He would sprawl his six-foot length on the tufted leather couches of the House cloak rooms and deliver himself of roughly-phrased, often very comical observations on his colleagues." About this time the Demagogues Club was founded, the members of which were pledged never to vote for a tax bill or against an appropriations bill. It has been called an "unofficial organization of House members addicted to flamboyant speeches saturated with hokum." Its first president and the

leader of this not quite pro-New Deal organization was Martin Dies.

Early in the New Deal Dies had said that the way to cure unemployment was to deport the six million aliens he estimated were in this country. In February 1937 he was one of those who fought against Supreme Court reorganization, and was one of the first to attack the sit-down strikers in the General Motors strike. It has been whispered "that he did so with Mr. Garner's backing." Overnight he gained prestige and became one of the recognized anti-Roosevelt Democrats in the House. Later in the same session he was a leader in the fight against the Wages and Hours Bill.

From 1936 on, Martin Dies had kept trying to get Congress to instigate investigations of one sort or another. In fact, he suggested seven investigations in three years—on the Administration's restriction of the freedom of the press and radio, on the problem of aliens, on Ickes' charge that 60 families control the United States, etc. "From the first," says a newspaper commentator, "he made no secret of the fact that he was looking for a safe political horse on which to ride to headlines and glory."

He got his chance in 1938 when Representative Dickstein of New York—worried by Fritz Kuhn and the Nazi Bund camps—supported him, and the Committee to Investigate Un-American Activities was set up, with Dies as chairman and with an appropriation of \$25,000. Dies wasn't discouraged by the small sum which, under ordinary conditions, should have allowed him to investigate for about one month. He went ahead without any staff, without counsel and with volunteer help.

The first hearing of the Dies Committee was held in the latter part of July 1938. In his opening statement Dies said: "We shall be fair and impartial at all times and treat every witness with fairness and courtesy. The Committee will not permit any 'character assassination' or any 'smearing' of innocent people." There had been similar hearings before. In 1932 Hamilton Fish had investigated Communist activities, roused some stir and had then been forgotten; in 1934 Representatives McCormack and Dickstein had investigated Nazi and other propaganda and had also been forgotten. But as soon as the Dies hearings began they created excitement and controversy. The first investigations of the Nazis were quiet enough, but when John Frey of the American Federation of Labor accused the Communists of a number of things, there was a stir. Hundreds of people objected and hundreds of people wrote and wired to Dies asking to appear as witnesses and offering to pay their own fares.

Dies next aimed at Hollywood and discovered that a number of Hollywood figures had aided Communism by sending greetings to the Leftist French newspaper *Ce Soir*. Among them was Shirley Temple. Ickes got mad. "They've gone into Hollywood,"

Joseph Stonehill

MARTIN DIES

he said, "and there discovered a great Red plot. They have found dangerous radicals there, led by little Shirley Temple. Imagine the great committee raiding her nursery and seizing her dolls as evidence." There were others, however, who felt just as vehemently that Dies was doing a great service to the United States.

Just before the November 1938 elections there was testimony before the Dies Committee that Frank Murphy (see sketch this issue), then running for Governor of Michigan, was a "Communist or Communist dupe." At a press conference President Roosevelt denounced the committee and its methods, saying: "The Dies Committee made no effort to get at the truth, either by calling for facts to support mere personal opinion or by allowing facts or personal opinion on the other side."

The Department of Labor, the WPA Federal Theatre and Writers' Project, the National Labor Relations Board and the Wages and Hours Board, the American League for Peace and Democracy and the Workers' Alliance were some of the groups that came under surveillance by the Dies Committee and were accused of having Communists or "Communist dupes" among their members. It was said that if Mr. Dies "once puts his mind to it he can find Reds anywhere along the political spectrum." It was also argued that "all who tried to undermine confidence in the existing social system, promoted the idea that it is a governmental duty to support the people, advocated regimentation of industry, agriculture and labor, were equally subjects of inquiry along with Communists." On the other side it was stated that "Congressman Dies and his committee are doing a splendid thing in bringing to the attention of our

people the activities of Communists and all un-American organizations."

Dies' first year's investigation drew much blood from radical and liberal opinion and was, as he himself admitted, "slipshod." Yet its first report that the Communist and Nazi parties were branches of the Soviet and German governments, respectively, and that the Communists held key positions in federal agencies and projects and in the CIO "so caught the imagination of the American public that in January 1939, Dies had no trouble in getting the life of the committee extended with a fourfold appropriation."

The Committee was continued in rather different form. Representatives Voorhis and Casey, both strong New Dealers, were substituted for other committee members, several former FBI agents were employed, Rhea Whitley, with the FBI for 10 years, was taken on as counsel, and J. B. Mathews, a "former Communist fellow traveler," was hired as investigator.

Dies and his Committee got still more publicity when they investigated the American Youth Congress and the consumer groups. During the investigation of the Youth Congress and the American student Union, in the fall of 1939, Mrs. Roosevelt (see sketch this issue) appeared with those about to testify, sat through the proceedings with them and invited them to lunch at the White House. When the Dies Committee came out in December 1939 with the assertion that the Milk Consumers' Protective Committee, the League of Women Shoppers, Consumers' Union, the Consumers' National Federation and other consumer groups were Communist "transmission belts," there was a good deal of hue and cry. Mrs. Roosevelt protested strongly in her syndicated column, while a group of Westchester housewives strongly supported Mr. Dies' contention, put out as the findings of himself and Mr. J. B. Mathews. Hue and cry was stirred up, too, when the mailing lists of the Washington members of the American League for Peace and Democracy were seized. President Roosevelt called this a "sordid procedure."

The full report of the activities of the Dies Committee was made public on January 2, 1940. Boiled down from 7,000 pages of testimony from 205 witnesses, "it was a document that no radical could have expected from the Dies Committee." Its material was evenly divided between Communists and Fascists, and in its 15,000 well-chosen words there was nothing to justify the fuss which preceded it.

It begins: "Every modern democratic nation is confronted by two pressing problems. The first is the preservation of the Constitutional liberties which their people have gained through the years of struggle; the second is the problem of adjusting their economic life to the difficulties of the machine age." It says further that the main problem in combating groups trying to

undermine democracy is to avoid action "which would undermine the fundamental structure of Constitutional liberty itself."

According to a number of commentators, the report is as calm as it is because an initial, original report by Mr. Dies alone was turned down by Voorhis, Casey and Dempsey, the New Deal members of the Committee. They threatened to issue a minority report, if the original report was submitted, which would have made a new Congressional appropriation difficult to obtain.

Before and after the report was submitted there had been a good deal of pressure on Congress both to continue and to end the Dies Committee. Large groups of churchmen, the National Association for the Advancement of Colored People and other groups asked that it be ended, while the New York State Chamber of Commerce and other groups asked that its life be assured for another period. One side put it that "if civil liberties are to be preserved in this country," the Dies Committee must be discontinued; the other, that "if we are to preserve America, if the America of the future is to protect our boys and girls as we have been protected, then this Committee should be authorized to proceed further." On January 23, 1940, the House voted to continue the Committee for one year with an appropriation of \$75,000.

Some of Dies' most publicized acts in 1940 were an investigation of Fifth Column activities along the Mexican border which, the *New Republic* charged, was actually designed to aid Almazán (see sketch this issue); the revelation that Communists had obtained information on a Federal Writers' Project which would enable them to paralyze the City of New York (the local WPA Administrator calmed fears with the statement that none of the information was confidential, anyway); the clearing of 20 movie celebrities of the charge of Communism. He consistently urged that Communist, Nazi and Fascist groups be outlawed, and in August asked for another appropriation to continue his inquiry.

The main controversy about Martin Dies and his Committee has raged, not so much about the information which is being gathered and given out, as about the method by which it is being obtained. According to one critic, "the vital distinction between investigation and persecution has escaped Mr. Dies." Wendell Willkie (see sketch this issue) denounced him "for undermining democratic procedure." Others have criticized him for concentrating on Communists almost to the exclusion of the Nazis, and for his total lack of concern with native Fascist movements such as those led by Father Coughlin (see sketch this issue) and Gerald Winrod.

It has been said in extenuation, however, that "Dies' perpetually scandalized method of listening to everybody, hauling in back-fence radical gossip, old shoes, scandals,

guesses and wild charges was perhaps the best method of building up the picture of the elusive world of United States Communism," and Stanley High says, "Mr. Dies may not be quite the finest bloom of the hothouse of Texas politics, but he certainly is a handy man with a flit gun." Mr. Dies says in defense of his own methods: "America is a free country and I would defend with my life the rights of its citizens, but when they take the oath of allegiance and then seek to undermine our government, I say what amendment in our Constitution protects these spies and agents of foreign governments?"

The findings of Martin Dies' Committee to Investigate un-American Activities were summed up in his book, *The Trojan Horse of America*, published in October 1940. According to one critic, it is "a restrained, informative primer about United States Communists and Fascists, what they are, how they work." His book "should be serviceable to those who do their own thinking and should curl the hair of others." Other critics, however, find fault with the fact that Dies devotes 324 pages to the Communists and only 42 to the Nazis and Fascists, and object to false inferences, which, if taken too seriously by the public, "together with his haunting suspicion of all aliens," will result in "an epidemic of witch-hunting and lynching which will crack our national unity instead of cementing it." In November 1940 the Dies Committee published a *White Paper* concerned with Nazi activities in the United States, raided offices in many cities, and promised further revelations. At the same time Dies criticized the work of the FBI as ineffectual compared to his own.

Away from his committee Martin Dies is a "practical politician of the New South." He talks in a "homespun folksy way" which is not affected. There have been rumors that his hunt to free America from un-American activities may be in some way linked with the Presidential election of 1944. But when he is asked about what he is going to do or where he intends to go in politics, Dies replies: "Not interested." He professes rather to prefer playing pool at home in the evenings with his three young sons and doing a little bird-shooting down in East Texas every summer and fall to "running around the country on any political campaign."

DIETZ, DAVID (dēts) Oct 6, 1897—Science editor, Scripps-Howard newspapers
Address: b. Cleveland Press Building, Cleveland, Ohio; h. 2891 Winthrop Rd, Shaker Heights, Ohio

Lecturer in general science at Cleveland College of Western Reserve University and science editor of the Scripps-Howard newspapers, blond, mustached David Dietz was the recipient of the B. F. Goodrich Award for Distinguished Public Service in the field of science in August 1940. Acknowledging the award in the Goodrich Arena at the

DAVID DIETZ

New York World's Fair, he regretted that "while American science has been working for the good of humanity, the dictators of Europe have plotted and launched a war which threatens to destroy all those things in life which Americans hold dear." He pointed out the development by Dr. Waldo L. Semon (see sketch this issue) of *Ameripol*, a synthetic rubber, for the Goodrich Rubber Company, as an illustration of the way in which the nation is being freed from dependence on foreign sources of supply for essential materials not already produced here.

David Henry Dietz was born in Cleveland, Ohio on October 6, 1897, the son of Henry William and Hannah (Levy) Dietz. His interest in science began as a boy, for his father was an enthusiastic amateur astronomer and young David was looking at the pictures in astronomy books before he was old enough to read. His interest continued to grow, and at Central High School, Cleveland, he was elected president of the Faraday Club, the school's scientific society, and achieved a grade of 99 for the year in his physics class. He began to combine these talents with journalism when he became Central High School correspondent for the Cleveland *Plain Dealer* in 1913 and again when he entered Western Reserve University in 1915, earning his way by working for the Cleveland *Press*. The first scientific article which he wrote was in 1915, an interview with Professor Dayton C. Miller, and he has been writing about science for the Cleveland *Press* ever since.

Leaving school to enlist in the army in October 1918, a few days after his marriage to Dorothy B. Cohen, David Dietz received his honorable discharge barely two months later. His B. A. from Western Reserve he acquired in 1919 and subsequently he carried on graduate studies at both Western Reserve University and the Case School of Applied Science. Since 1921 he has been science editor of the Scripps-Howard newspapers and in that capacity has attended important scientific meetings and visited important scientific institutions in all parts of the United States and in Europe. He was a charter member and first president of the National Association of Science Writers, and in 1926 was appointed lecturer in general science at Cleveland College of Western Reserve University.

His book, *The Story of Science*, in 1940 in its fourth edition, was published in 1931. "With the gifts of a born popularizer," Mr. Dietz dealt with the leading achievements of astronomy, geology, physics, chemistry and biology so successfully that Harry Elmer Barnes decided "there is no longer any reason why a man who owns a radio cannot be mentally nearer its mysteries than he is to the stone hatchet." A second book, *Medical Magic*, came out in 1937. (Its British title is *Builders of Health*.)

In 1933 Mr. Dietz added to his professional duties that of science correspondent for the United Press Association. Journal-

istic distinctions followed. In 1937 he was awarded the Pulitzer Prize in Journalism, in 1938 the New Orleans Trophy of Zeta Beta Tau.

Mr. Dietz shares a love of music with his wife and three children—Doris Jean, Patricia Ann and David Henry II. He himself has played the violin since he was five. Other hobbies are collecting books on the history of science and golf. He is a fellow of the Royal Astronomical Society and the Société Astronomique de France. The City and Professional Clubs in Cleveland and the National Press Club in Washington also claim him as a member. He is a member of the Board of Trustees of the Shaker Heights Public Library.

DISNEY, WALT Dec 5, 1901- Producer of animated cartoons

Address: 2719 Hyperion Ave, Hollywood, California

Walt Disney made his reputation on a mouse—a pathetic little fellow who wormed his way into the hearts of millions of people all over the world by making them laugh. The mouse was called Mickey Mouse, and it was Walt Disney's first important animated cartoon creation.

Since the birth of Mickey Mouse in 1928, many other characters have appeared in the Mickey Mouse series—Donald Duck, Minnie Mouse, Goofy and Pluto, and Walt Disney has made motion picture history with his feature-length animated cartoons, *Snow White and the Seven Dwarfs* and *Pinocchio*. But Mickey Mouse and his friends continue to be the favored short subjects of the Walt Disney studios.

Stories of Mickey Mouse's origin differ. One says that the original Mickey was a little fellow who lived in a wastebasket where Disney worked drawing sketches for a farm journal in Kansas City. The mouse got so tame he ran across the cleat along the top of Disney's drawing board, and the young artist formed quite an attachment for him. He named him Mortimer, then Mickey. Another version is that Walt Disney, returning to Hollywood after he had broken with the distributor of his first animated cartoons, thought up Mickey Mouse during a sleepless night in an upper berth.

Whatever the genesis of Mickey Mouse there is no doubt about his popularity. In Japan, in Russia, in Africa, in Alaska, in every country in the world, Mickey Mouse is beloved by both children and adults. Learned theses have been written on the reason for Mickey Mouse's tremendous popularity. Religious magazines have carried articles on Walt Disney's animated cartoons; artistic criticism have been written on the subject of Mickey Mouse; and the Phi Beta Kappa magazine in July 1939 in an article called "But Is It Art?" mentioned Walt Disney's Mickey Mouse in the same breath with some of history's greatest creations in art.

But Walt Disney himself doesn't bother much about art. The word "art" is never mentioned in his studios. The genius of the animated cartoon field is a slim, unassuming young man (the office boys call him by his first name) who works very hard, tries to make good pictures and lets the savants figure out just what it is that gives his animals and fairy creatures that lovable, emotionally-appealing quality. Nevertheless, his work has won him numerous awards in the motion picture industry and has even

DISNEY, WALT—*Continued*

earned him honorary degrees from Yale University, Harvard University and the University of Southern California.

Walter Elias Disney had little formal instruction in art. A brief period at the Chicago Art Academy and at an art school in Kansas City, each at different stages, constituted his entire instruction. The son of a contractor, he was born December 5, 1901 in Chicago, and spent his boyhood on a farm near Marceline, Missouri and in Kansas City. His family made the move to Marceline when Walt was quite young, and the boy got acquainted with the animals on the farm and took to drawing them along the margins of his schoolbooks, flipping the pages so rapidly the figures seemed to move.

When he was 10 or 11 years old he did his first commercial art work for the town barber shop. The barber gave him a free haircut for a weekly sketch which was displayed on the barber shop wall. Apparently Disney was always an energetic person. After school in Kansas City he delivered newspapers, and during his high school career he worked as a news vendor on trains. At 16 he was in Chicago taking a night course in cartooning at the Academy of Fine Arts.

When the First World War broke out Disney was too young to join the army, but he managed to get overseas as a driver of a Red Cross ambulance. He returned to Kansas City after the War and got a job with an advertising firm sketching illustrations for farm journals. At the same time he was making cartoon slides for a film company in his private studio over his father's garage. He called the cartoons *Laugh-O-Grams*, and had some success with them, as he did with other free-lance cartoons during this period.

Animated cartoons interested the commercial artist, and with a group of local cartoonists Disney spent six months making a series of short features. But the venture failed and Disney decided to try Hollywood. He arrived in Hollywood in 1923 with a print of the cartoon, *Alice in Cartoonland*, and \$40. His brother Roy was already in Hollywood, had a steady job and \$250 in the bank. The two got a loan of \$500 from an uncle and set up a studio in a garage.

After three dismal months Disney succeeded in getting a producer and distributor for his cartoon. The distributor was M. J. Winkler of New York, for whom Disney worked for four years doing a series of cartoons in which Oswald the Rabbit was the central character. Then, when Winkler would not step up the costs of production and expand as Disney wished, Disney left, abandoning the rights to Oswald.

It was then that the necessity of creating a new character presented itself, and Mickey Mouse was born. The first two Mickey Mouse adventures, *Plane Crazy* and *Gallop'n' Gaucho*, were disappointing and

were both shelved. The third, *Steamboat Willie*, the first to employ sound, made its debut in New York in October 1928 and was an instant success.

With the launching of Mickey Mouse, Disney was on his way to fame. He and his brother were besieged by offers from producers and distributors. However, he and his brother Roy and their wives have retained full interest in Walt Disney, Incorporated, although they have had various arrangements with picture companies for the financing and distribution of the films. Walt has charge of all production and Roy supervises the finances.

After Mickey Mouse was established in popularity, Disney launched another series of cartoons called *Silly Symphonies*, each picture based on a musical theme and confined to the realm of the unreal.

Even before he made any feature-length cartoons, Disney had won a reputation for himself as a producer of short subjects. Another producer of animated cartoons said of him, "We're businessmen. Walt Disney is an artist. With us, the idea with shorts is to hit 'em and run. Disney is more of a Rembrandt." The Academy of Motion Picture Arts and Sciences also thought so and gave Disney the accolade of its approval by giving *Trees and Flowers*, the first animated cartoon ever to be made in Technicolor, its award in 1932, when short subjects were first included for recognition by the Academy. *Three Little Pigs*, which sent the whole country chanting *Who's Afraid of the Big Bad Wolf*, was the shorts prize winner in 1933; *The Tortoise and the Hare*, 1934 prize winner; *Three Orphan Kittens* and *The Country Cousin* were the Academy's choices in 1935 and 1936.

The feature-length cartoon was invented of necessity. The double-feature programs were crowding the short subjects completely off the theatre's program, and Disney felt he must change his product to meet the demands of the day. He decided to make a feature-length animated cartoon.

When news leaked out that the Disney studios were planning to produce *Snow White and the Seven Dwarfs* as a full-length feature, Hollywood thought Walt Disney mad. How could a picture without a name, without a star, a mere fairy tale hold audience interest for seven reels, they asked. Although Disney had every honor bestowed on him by the picture industry, he did not have much money. Short subjects did not earn much, and what profits the Disneys did have were always reinvested in their studio. The venture was referred to as Disney's folly. Made on borrowed bank money, it had to gross \$2,500,000 to become a Disney asset.

Snow White and the Seven Dwarfs took three years to make. Some 2,000,000 drawings and sketches had been made, and approximately 250,000 of them photographed. Production costs amounted to \$1,600,000. The film was released December 1937 with

considerable ballyhoo and some misgiving.

But no one was prepared for the sensational success *Snow White and the Seven Dwarfs* turned out to be. It broke all established records by showing an intake of \$8,000,000 shortly after it was released, and the complete total was estimated at \$10,000,000. It was sound-tracked in eight languages and in every place it was shown it left audiences enthralled. The seven dwarfs made their appealing little *Heigh, ho, heigh, ho, it's off to work we go*, practically an international melody. The dwarfs Dopey, Grumpy, Doc, Sneezy, Bashful, Happy and Sleepy caught on commercially in all manner of objects.

Critics began showering serious praise on Disney. The film was called "a combination of Hollywood, the Grimm Brothers and the sad, searching fantasy of universal childhood . . . an authentic masterpiece to be shown in theatres and beloved by new generations long after the current crop of Hollywood stars, writers and directors are sleeping where no Prince's kiss can wake them." Disney was said to have proved that "the pen is mightier than the personality of the greatest star." Then Disney marched on to new fame. *Pinocchio*, his second feature-length animated cartoon, released Christmas 1939, found an eager audience and praise quite as handsome.

It is only a little more than a decade since Disney started his small studio in a Hollywood garage. In 1940 he moved into a new plant at Burbank, California, consisting of about 20 buildings on a 51-acre tract. The studio is a little city in itself and employs more than 1,000 men and women.

It is years since Disney has drawn any of the cartoons for his pictures, but he still supervises every detail of their production, and he is not easily satisfied. He is in on each story conference, still finds time to be the voice of Mickey Mouse, works until six or seven o'clock each night, and in busy times works round the clock. Hollywood hot spots see him seldom. He and his wife (he was married in 1925 to Lillian Bounds of Lewiston, Idaho, one of the first girl assistants who helped him in the Hollywood garage studio) have a charming home with a large garden, and live a quiet, domestic life. They have three small daughters.

Disney still has no formula for making successful pictures. "I've never made pictures for a child audience alone," he says. Pressed for an answer as to why he does the kind of work he does, he says, "We just try to make a good picture." However, the routine of making an animated cartoon is set. First there is a story conference to decide on continuity and action; next come a musical score and rough timing with the sketches showing continuity from beginning to end; then come the animators' drawings.

The artists who are senior animators sketch out the important points of action of the figures, and assistants follow through with the intermediate steps. When an an-

WALT DISNEY

imator and his assistants complete a scene a test camera photographs the sketches, which Disney then approves before they go to the inking and painting department. It is a highly technical and complex process to draw in background and scenery, to synchronize action and sound and to make a complete, living picture.

The latest Disney production is a highly ambitious film, *Fantasia*, combining classical music by the Philadelphia Orchestra conducted by Leopold Stokowski, and cartoon. It was released in November 1940, and was recorded by an entirely new method requiring special projection equipment. Deems Taylor (see sketch this issue) acted as narrator for the film.

Critics decided that Disney had again done something revolutionary—and, on the whole, successfully. Otis Ferguson announced: "The screen itself when the music is playing is the only excuse I have ever seen for having eyes and ears at the same time." *Time* thought "critics may deplore Disney's lapses of taste, but he trips, Mickey-like, into an art form that immortals from Eschylus to Richard Wagner have always dreamed of."

Bambi, Felix Salten's story of a deer, is another new Disney feature in production. He also plans a combination cartoon and acting film in which an actor playing Mark Twain will appear with cartoons of his characters, and *The Reluctant Dragon* with Robert Benchley.

Walt Disney, Incorporated has joined the ranks of Big Business; Disney stock is listed in 1940 with the Securities and Exchange Commission. The SEC statement showed that Disney received the company's highest salary in 1939—\$108,298. But Mickey Mouse is still an old stand-by of the studio, and Walt Disney, Incorporated will go right on

DISNEY, WALT—*Continued*

producing *Mickey Mouse* and *Silly Symphonies* shorts, according to present plans. Says Disney: "We don't even let the word 'art' be used around the studio. If anyone begins to get arty, we knock them down."

DITMARS, RAYMOND LEE (dit'märs)
 June 20, 1876- Curator of the New York Zoological Park

Address: b. Zoological Park, The Bronx, New York City; h. 855 Post Rd, Scarsdale, New York

Raymond Ditmars' exploits with animals usually are of the dignified kind that fill scientific papers or make amusing lecture material. But once when he was 15 years old and a student at the Barnard Military Academy in New York they called for police interference. Young Ditmars used to spend his Saturdays and Sundays collecting garter snakes in the park and along the Hudson River and by saving his lunch money he managed to buy a four-foot water snake to add to his collection. Wishing to give his pet a little air and breathing space, he made a barricade for the snake on the fire escape of his home. The neighbors took one look at the formidable looking reptile and called the police, and Ditmars' water snake, never very popular with his family, had to go.

His snake banned, young Ditmars got his parents' consent for a collection of frogs. But alas, a fine collection of horseflies he had gathered to feed his pets escaped into the Ditmars home, and the frogs also had to go. So Ditmars started a collection of insects, gathering moths and such creatures. Mounted and dead these insects could do no harm, he reasoned.

This hobby led to his first job. One day the boy took his collection to the New York Museum of Natural History to check the name of a moth. The neatly-arranged

specimens showed a knowledge of classification and an aptitude for mounting. The curator offered him a job mounting specimens.

The Ditmars family did not think too highly of this offer, although Raymond was excited about it. The boy was preparing for West Point and was to take his entrance examinations that fall, and his parents looked with disfavor on his bug hunting. But Raymond persuaded his parents to allow him to take the job. It was the beginning of a five-year association with the Museum of Natural History in the department of entomology, where Ditmars became an assistant curator. During these years he made his first insect-hunting expedition to Florida and acquired a scientific interest in snakes that has lasted until the present and has made him an outstanding authority on reptiles.

Ditmars, however, was looking for more lively work than mounting and classifying dead things at the museum, and during his spare time studied shorthand with the intention of becoming a Congressional reporter. With characteristic thoroughness he learned to write shorthand with both right and left hands.

In the meantime he got a position on the New York Times as a reporter, doing court work for the most part. One afternoon the city editor said to Ditmars, "Go up to the Bronx and see what this new highbrow Zoological Society means by saying it's going to have the largest zoo in the world." The surveyors were still staking out the land, and the zoo collection at that time consisted of a bear cub, a wolf pup and a snapping turtle.

Ditmars found Dr. William T. Hornaday, director of the Zoological Society, and the two had a very satisfying interview. Dr. Hornaday found the young reporter's interest and knowledge of reptiles and insects astonishing. "You don't want to work on a newspaper. You want to come out here and help us build up this park," he told Ditmars.

Ditmars did just that. He joined the New York Zoological Park staff that year, 1899, and was put in charge of reptiles. Since 1910 he has been curator of reptiles and mammals.

Ditmars' position has been spiked with adventure, and he has filled a dozen volumes—*Forest of Adventure* (1933); *Book of Zoögraphy* (1934); *Confessions of a Scientist* (1934); *Reptiles of the World* (1934); *Strange Animals I Have Known* (1934); (with Bridges, William) *Snake-hunters' Holiday* (1935); *Book of Prehistoric Animals* (1935); *Reptiles of North America* (1936); *Book of Living Reptiles* (1937); *Making of a Scientist* (1937); *Snakes of the World* (1937); (with Bridges, William) *Wild Animal World* (1937)—with materials drawn from his expeditions and his experiences with animals. Tall, lean and military in bearing, Ditmars is grave and calm in manner, although perceptive and quick. His hands are sensitive and quick,

RAYMOND LEE DITMARS

and his manual dexterity is an outstanding feature of his work. He has handled as many as two hundred snakes in two hours with never an accident from their poisonous venom.

He was one of the pioneers in research work which, through the perfection of serums against snake bites, has saved hundreds of thousands of lives. When Dr. Albert Calmette of the Pasteur Institute at Paris, France had completed early experiments toward producing a serum to neutralize bites of poisonous serpents, he wanted information on American types of snakes.

Ditmars undertook experiments with his reptiles and developed an ingenious method for extracting venom. He worked for a time with Dr. Hideyo Noguchi, the brilliant Japanese scientist.

In addition to animals Ditmars has one hobby—meteorology. He likes to observe hurricanes and enjoys spending vacations in the Caribbean looking for a nice one. One room in his home has been fitted up as a complete weather station. Ditmars lives in a comfortable house in Scarsdale, New York with his wife, who also likes animals and who, with their two daughters, has often accompanied him on expeditions. In the back yard of their home is a "pill box" in which is stored more than 500,000 feet of motion picture film that Ditmars has made of strange animals. Some of the film has been shown in all parts of the world.

Ditmars was born in Newark, New Jersey and came to New York as a boy. His father, a fur merchant, discouraged his career as a curator and laughed at Raymond's interest in bugs and animals. But Ditmars stuck with it with the same persistence with which he stole snakes into his home as a boy. He has helped make the New York Zoological Park

the best known in the country and he has grown with it.

DIX, DOROTHY, pseud. of **ELIZABETH MERIWETHER GILMER** Nov 18, 1870-
Newspaper columnist

Address: h. 6334 Prytania St, New Orleans, Louisiana

Almost every American newspaper reader knows the name of Dorothy Dix and her advice to the lovelorn. Not everyone knows that she is in private life Mrs. Elizabeth Meriwether Gilmer, white-haired, vivacious little old lady who lives quietly in her New Orleans home and who is reputed to earn between \$70,000 and \$80,000 a year from her syndicated writings.

Mrs. Gilmer started her career as a \$5-a-week woman's page writer on the New Orleans *Picayune* in 1896. Her weekly sermonette, written for women readers under the title of *Sunday Salad*, was a success from the first. She disregarded that period's vogue for high-sounding phrases and flowery writing and wrote instead in everyday colloquial style. On occasion she dared to point out that parents were not always infallible, that domestic troubles might be the woman's fault—revolutionary writings for a newspaper columnist in those days.

Her own marriage had been a tragic one. Born in Woodstock, Tennessee November 18, 1870, the daughter of impoverished Southern gentry, she spent a tomboyish girlhood riding her father's horses, climbing trees and getting little formal schooling. "We were sent to school to 'Miss Alice's' or 'Miss Jenny's,'" Mrs. Gilmer recounts, "not because they were either trained or qualified to teach, but because their fathers had been either colonels under Beauregard or had been killed at Shiloh, and somebody had to help the poor souls along. And so I could climb like a squirrel and ride like a jockey long before I knew a great deal about the three R's." At the Clarksville Grammar School Mrs. Gilmer did distinguish herself by her essay writing. However, there was no thought then or later of any professional writing.

At 18, she writes in a brief autobiographical sketch, "I tucked up my hair and got married, as was the tribal custom among my people." Her husband was George O.

DOROTHY DIX

Gilmer, a debonair gallant in his late 20's and a brother of Mrs. Gilmer's stepmother. One gathers that it was because young Elizabeth was flattered by the attention of an older man that she followed the "tribal custom." Soon after the marriage, it developed that Gilmer had fallen victim to an incurable mental disease. For 35 years the disease ran its slow course until Gilmer died in a madhouse.

If Mrs. Gilmer needed to develop courage and character in order to become the nation's chief confidante, the early years of her marriage provided it. She tried to make a home, to keep up appearances in front of pitying friends. She had no way of earning money and had, in fact, been brought up in an atmosphere that looked upon self-support in a woman as somehow shameful. After a year or two she suffered a nervous collapse.

She went to recuperate at a little resort on the Mississippi coast and during the long leisure hours took to scribbling stories. One, a fictionized version of how an old family servant had saved the Meriwether family silver during the Civil War by hiding it in a tomb, she showed to a friend, Mrs. E. J. Nicholson, owner of the New Orleans *Picayune*. Mrs. Nicholson bought the story outright for \$3 and offered Mrs. Gilmer a job on the *Picayune*.

The *Picayune* during this era used an alliterative style, and so Mrs. Gilmer chose the name of Dorothy Dix—Dorothy because she liked it, and Dix in honor of the old family slave Dick, who had saved the Meriwether family silver. Her column, *Sunday Salad*, caught the public fancy at once and the title was changed to *Dorothy Dix Talks*, a heading it still bears.

Meanwhile Mrs. Gilmer was learning the technique of news writing and news gather-

ing. She became a full-fledged reporter and right-hand man to the aging editor Major Nathaniel Burbank. Her salary was increased from the original \$5 a week to \$15 and then to \$20.

At this time William Randolph Hearst had come out of the West, and his talent scouts were looking for big names and unusual features. Mrs. Gilmer was offered a place in the Hearst organization at a flattering figure. But she refused because she felt a debt of gratitude to Major Burbank, who had taught her all she knew of newspaper work and who, she felt, needed her. Shortly afterward, when Major Burbank died, she accepted the Hearst offer and came to New York.

She went to work for the New York *Journal* in 1901. The *Dorothy Dix Talks* appeared in the *Journal* three times a week, and they elicited hundreds of daily responses. The shrewd Hearst editors realized that something about Dorothy Dix invited confidences, and they made the fullest use of that quality. Dorothy Dix was to become one of the greatest sob sisters of her time.

One day a sensational murder, the killing of an 18-months-old child by its stepmother, occurred in New Jersey. The newspapers could get no information from officials or relatives. "I know one person who can get somebody down there to talk," the *Journal* city editor said, "Dorothy Dix." She was given a roll of bills, told to go to New Jersey and to get the story. It was Mrs. Gilmer's first murder story. By a stroke of luck she found a former beau of the arrested woman. The erstwhile beau drove Mrs. Gilmer around, helped her find sources of gossip, and proposed matrimony.

As a sob sister Mrs. Gilmer was a decided success. She was so good that for the next 15 years she covered sensational murder trials, vice investigations and heart-interest features. In addition she wrote her column. "I was dreadfully tired of murder stories," Mrs. Gilmer said. "They didn't do anyone a bit of good, and I did feel that my *Dorothy Dix Talks* were of help to people who needed help. Time and time again I received letters telling me how someone had taken my advice, and that it had solved his or her problem."

When in 1917 the Wheeler Syndicate offered Mrs. Gilmer a contract which allowed her to devote herself exclusively to the *Dorothy Dix Talks*, she accepted. Three days a week she wrote the sermonettes and on the other three days she published actual letters and the answers.

In 1923 the *Dorothy Dix Talks* were taken over by the Ledger Syndicate, which has published them ever since. They appear in 273 papers and her publishers estimate that Dorothy Dix has 60,000,000 readers in the United States, England, Australia, New Zealand, South America, China, Mexico, Hawaii, the Philippine Islands, Puerto Rico and Canada. In 1939 Dorothy Dix received 100,000 letters. Each letter that is

signed and bears a real return address is answered, either through publication or an individually mailed reply. Routine inquiries are turned over to Mrs. Gilmer's secretary.

Replies to inquiries not under routine classification are dictated by Mrs. Gilmer, who also dictates her *Dorothy Dix Talks*. A methodical worker, Mrs. Gilmer keeps a supply of three-months talks in a safety deposit box in a bank to be used in case of her illness or incapacity. She has traveled to every corner of the globe and has always kept ahead of her schedule. She has never been late with her copy in 45 years of newspaper work.

Nearing 70, she works daily from 9 to 12 in her pleasant, seven-room apartment in New Orleans, goes for a drive through Audubon Park every afternoon, engages in a pleasant social life, although she attends few parties. Childless, she is devoted to the family of her brother, Charles E. Meriwether, a New Orleans businessman.

She has a maternal feeling for her woe-begone public with its yearnings for advice on domestic problems, puppy love, on its heartaches and heartthrobs, on everything from clandestine romance to advice on methods for removing superfluous hair. Mrs. Gilmer has taken their problems seriously and has tried to give them sincere, honest advice.

When, in the early days of her career, people advised her to get a divorce, she said: "I never once thought of divorce. I could not say to others 'Be strong' if I did not myself have strength to endure." Twice she has published books of her advice, her latest being *How to Win and Hold a Husband*, published in 1939. Although her advice is strait-laced, she has kept pace with the times and with changing morals and social standards. Plump, full of vitality, she knows the problems of succeeding generations and answers them with hard-headed realism.

Her books include: *Dorothy Dix, Her Book* (1926); *Mirandy Exhorts* (1922); *My Trip Around the World* (1924).

DODD, WILLIAM EDWARD Oct 21, 1869—Feb 9, 1940 Historian; author; United States Ambassador to Germany (1933-38)

Dr. William E. Dodd left a quiet life as professor of history at the University of Chicago in 1933 for the political maelstrom of an Ambassadorship to Germany. He

WILLIAM E. DODD

knew the old Germany from his youth as a student at the University of Leipzig and he had high hopes of fostering better German-American relations.

His first few months in Germany were encouraging. The then President Von Hindenburg received him cordially, and the two men exchanged speeches stressing German-American desire for friendship and cooperation. The German people and the new Ambassador liked each other. But as Nazi storm troopers started assaults on Americans for not giving the Nazi salute (twenty such cases were reported in Dr. Dodd's first six months in Germany), and Germany's moratorium on debt payments was announced, his hopes faded.

Dr. Dodd became one of the most bitter critics of the Nazi régime. He finally resigned late in 1937 and returned to the United States in January 1938, issuing a statement which said that he had found representing America in Berlin "a hopeless task."

He declared: "In a vast region where religious freedom is denied, where intellectual initiative and discovery are not allowed, and where race hatreds are cultivated, what can a representative of the United States do?"

The Hitler régime in Germany had filled Dr. Dodd with bitterness, and had in a measure made his relations with Washington strained. His departure from Berlin was unattended by the customary amenities accorded diplomats. Hitler gave him no farewell audience, and the German Foreign Minister omitted the dinner usually given to departing diplomats.

Back in the United States Dr. Dodd resumed work on his history of the Old South, which his diplomatic work had interrupted. But the last two years of his life were

DODD, WILLIAM E.—*Continued*

plagued with trouble. Relieved of his diplomatic status, he continued his attacks on Nazi Germany in outspoken terms before audiences in Canada and Eastern United States. This, coupled with his work on his book, led to a partial physical breakdown. His wife, the former Martha Johns of Wake County, North Carolina, died in May 1938. In December of the same year his automobile struck and seriously injured a Negro child near Hanover Court House, Virginia. Dr. Dodd was indicted as a hit-run driver, pleaded guilty and was fined \$250 and costs. It was brought out that he had paid to the child's parents medical and hospital bills totaling \$1,100.

Dr. Dodd was born at Clayton, North Carolina, on October 21, 1869. He was graduated from Virginia Polytechnic Institute with a Bachelor of Science degree in 1895 and received a Master of Science degree in 1897. He then went to Germany for three years and won his Doctor of Philosophy degree at the University of Leipzig in 1900. He returned to this country to become professor of history at Randolph-Macon College, and went to the University of Chicago in 1908. Dr. Dodd received honorary Doctor of Laws degrees from Emory University, the University of Alabama, the University of North Carolina and the University of Cincinnati. He was president of the American Historical Association in 1934 and was a member of the Mississippi Valley Historical Association, the Social Science Research Council, the Quadrangle and Chicago Literary Clubs in Chicago and the Cosmos Club in Washington.

Dr. Dodd was the author of a number of important historical works and is especially well-known for those dealing with the Old South. In 1924 and 1926, with Ray Stannard Baker (see sketch this issue), he edited *The Public Papers of Woodrow Wilson*. In 1920 he wrote *Woodrow Wilson and His Work*. Among his other important books are *Life of Jefferson Davis* (1907); *Statesmen of the Old South* (1911); *Lincoln or Lee* (1928). He was also editor and joint author of *The Riverside History of the United States* (1911).

Dr. Dodd died February 9, 1940 of pneumonia at his home at Round Hill, Virginia. He is survived by a son, William E. Jr., and a daughter, Mrs. Alfred Stern.

DOHERTY, HENRY LATHAM May 15, 1870—Dec 26, 1939 Public utilities operator; engineer

"A shrewd and aggressive iconoclast with an uncanny knack of knowing which way the wind was blowing while his competitors still were holding their moistened fingers in the air," is the summing up one critic gave to Henry Latham Doherty, who started his amazing career as a newsboy at 10; became in succession a gas company employee at 20; engineer of many companies at 27; millionaire at 35; and a multi-millionaire at 40. Reputedly worth \$200,000,000 in 1929, he was still a multi-millionaire at his death in Philadelphia at the age of 69 after spending much of his last 12 years in bed.

He was born in Columbus, Ohio, the son of Frank and Anna (McElvain) Doherty, of English, Scotch and Irish ancestry. His father had been an inventor and engineer, but family reverses made it necessary for him to follow the well-trod path to riches—selling newspapers at 10 and leaving school at 12. "My preliminary education was largely obtained from the study of catalogs and handbooks," he explained. Thereafter he rose rapidly in the Columbus (Ohio) Gas Company until he attained the position of chief engineer in 1896 and subsequently became engineer or manager of public utility companies in more than 30 cities. At 35, an expert in public utility operation in the West, he came to New York, grew a beard to impress Wall Streeters with his age, and tried to borrow money. The beard didn't work and he had to borrow from Europe. In 1905 he organized Henry L. Doherty and Company and in 1910 Cities Service Company, which was a "super de luxe" holding concern for more than 190 public utility and petroleum properties combining assets of more than a billion dollars.

HENRY L. DOHERTY

A recognized leader in industrial America in gas, electricity and petroleum, his associates called him a human "dynamo of energy with business conferences as likely to be at 2 a. m. as at 2 p. m." When one group left Mr. Doherty's home at midnight, others were waiting to confer with him. When the collapse of Florida real estate sent droves of operators scurrying from that state, Doherty stepped in, bought up 11,000 once valuable properties (Miami Beach's Roney Plaza, Palm Beach's Biltmore, etc.) for the proverbial song. He thereupon started an enthusiastic campaign for Florida's return to prosperity and soon in those lean depression years found his holdings worth \$25,000,000.

Suddenly in 1926 arthritis put a stop to his manifold activities. He recovered, but for the last three years of his life remained at a hospital under constant treatment, conducting his businesses from his bed. The devoted nursing in 1928 by the 40-year-old widow of Percy Frank Eames, International Harvester official, led him to renounce his life-long bachelorhood at the age of 58. He was reputed to have spent \$250,000 on the Washington debut of his stepdaughter in the heart of depression days. In 1931 he bought a half-interest in the *Kansas City Journal-Post*, after his handling of his vast utility empire had been the subject of bitter attack by the powerful *Kansas City Star*. He announced openly that he wanted to present his side of the case, naively unaware that one-sided paid advertisements were one thing, while biased front-page domination of a newspaper was a vastly different matter.

He was a man of simple tastes, without car or yacht long after these were supposedly necessary appendages to the rôle of financier. In his vast penthouse atop one of his skyscrapers commanding a view of New York harbor he was troubled with mosquitoes, so he started a campaign for their extermination. Also he thought the Statue of Liberty would enhance his view if it were lit up, so he started a campaign to get flood-lighting for it. His apartment was full of ingenious devices, the principal one being a bed, powered by motor, which slid along a track so that he could sleep in any room desired without getting out of bed—an invention which might well be put into general use.

DORIOT, JACQUES 1888- Leader of the French Popular Party

"Hulking, bull-voiced" Jacques Doriot, leader of the French Popular Party, is the man whose name is most often mentioned when changes are rumored in the Vichy government of France. In the autumn of 1940 Doriot and Pierre Laval (see sketch this issue) were said to meet often in Vichy, and it was hinted that M. Doriot is "the 'trump' that M. Laval is holding back for use if trouble breaks out and a strong, popular man is needed, particularly in Paris and the suburbs." Doriot has headquarters in Marseille, and his propaganda work has been particularly active in the provinces, in the French Army and among the demobilized soldiers.

Doriot was born in 1888 in St. Denis, a suburb of Paris, which has always been his home. His father was a blacksmith, and he himself began his career as a me-

Pictures Inc.

JACQUES DORIOT

chanic and metalworker. At first a member of the Communist youth organization, he eventually became the most important member of the French Communist Party, a member of the Central Committee. For 16 years "Red" St. Denis elected him its Mayor, and his St. Denis organization was the pride of the Communist Party in France, approximately one-fourth of its entire French membership being drawn from his constituency. He was also an influential member of the Paris Municipal Council, being suspended only once, when in 1927 he returned from an agitatorial tour of the Far East and was arrested and imprisoned for "subversive activities."

But although a brilliant orator and expert organizer, Doriot was not too willing to obey orders from the Communist International or Central Committee. In 1933, according to Ludwig Lore, he began calling publicly for an alliance with the Socialists to oppose Fascism—before the Party advocated such a step. He was therefore removed from his strategic post in the Central Committee and Maurice Thorez put in his place. Nevertheless, in 1934 another attempt at a united anti-Fascist front came from Doriot. The Comintern invited him to Moscow; he refused and was expelled. Almost immediately the official movement toward a Popular Front began. Enraged at such treatment, it seems that Doriot went from Trotskyism to the most extreme anti-Communist position possible, and by mid-July 1936 was ready to launch his own political party, which he called the *Parti Populaire Français*. Its following drawn mostly from the middle classes from the respectable suburbs of Paris, with a sprinkling of workers, war veterans and "bearded academicians wearing the Légion d'Hon-

neur," it stood for opposition to the Popular Front on every issue: for Franco, for Mussolini, for Japan, for an "understanding" with Hitler. Furious at the Comintern and the French Communist Party, Doriot had for a long time been shouting its innermost secrets from the housetops and demanding a parliamentary investigation of financial relations between the U. S. S. R. and the Communist Party of France. Now the tenuous Franco-Russian military pact was to his movement "what the Versailles Treaty was to Hitler." He accused the Popular Front of trying to drive Europe into war, and in an interview which he gave to a Hitler organ in October 1936 he revealed as the three cornerstones of his Party's policy: (1) Destruction of the Communist Party of France; (2) Repudiation of the Franco-Russian alliance; (3) An alliance between Germany and France.

He was getting support, too: at first from a *Croix de Feu* group that had broken with De La Rocque, soon from other groups. While Premier, Pierre Laval ordered the Paris police not to interfere with his fight against Communists. "Jules Romains lent his name and the prestige of his *Juilletiste* movement." Hennessey, the cognac distiller, "supplied funds and a special blessing." A reporter of *L'Illustration* saw him as "preaching the crusade of union to all good Frenchmen." Many of the Rightist papers lauded him. The insurance interests were said to be supporting him financially, as was Goebbels' propaganda bureau (the latter fact was always denied). Well versed in "social lingo," Doriot also won over a great many of his St. Denis constituents, and consistently outpolled the Communists in that suburb.

His fame even reached to Great Britain, where the *English Review* for June 1937 hailed him as an "outstanding figure in French politics today"—the "first great popular orator the Right has possessed for many a long year"—"the Joseph Chamberlain of his country." His speeches were proclaimed "masterpieces of reasoned argument," and it was said that "as Mayor of St. Denis he has transformed that suburb of Paris from a byword for squalor into a model municipality, and alone among French politicians he is really interested in social problems." But then the *English Review* was confident that there was "nothing of the Fascist about him."

By May 1937 Doriot was financially able to launch a daily newspaper; his party had formerly been publishing nothing more ambitious than a weekly, *L'Emancipation Nationale*. It became known that he had obtained control of *La Liberté*, a daily long held by the Rightist André Tardieu. Almost at once Blum's (see sketch this issue) government removed Doriot from his office as Mayor of St. Denis by edict of the Ministry of the Interior, charging that the deficits of his party's whirlwind financial campaign had been covered by ordering the payment of fictitious bills for coal and other supplies out of the St. Denis Treasury.

Doriot asserted: "The accusations against me are fantastic... It is fundamentally a political battle. I have never refused battle and I am going to fight." In protest, he resigned as municipal councilor in June, and so did other councilors belonging to his party. When at the elections of June 20, the Popular Front won an overwhelming victory, Doriot also resigned as deputy in order to "consecrate himself" to the battle against Communism. Wherever he spoke there were threats of general strikes, propaganda posters appeared on walls, workers gathered around the meeting halls to blockade demonstrations and engaged in battle with his "private army of declassed proletarian mercenaries"; but his movement grew.

That same year (1937) an interview with Doriot made Ludwig Lore conclude that "his denunciation of Communism and—just a little less violently—of Socialism, his condemnation of 'international bankers and alien financiers' would have done credit to our own Father Coughlin [see sketch this issue], who also emphatically denies Fascist or anti-Semitic aims." To Doriot "an awakened nationalism is the answer!"—as it had been in Germany, as it had been in Italy. Today he advocates a National Socialist form of government for France.

Doriot is described as more than six feet tall and as weighing around 250 pounds. "To an American he looked like one of our own Bible-yodelers come out of the South, stocky, inexhaustible, with a massive head and a comical touch of horn-rimmed glasses concealing a myopic stare," yet friendly, intelligent, direct, a pleasing personality."

DOS PASSOS, JOHN (dōs pās'us) Jan 14, 1896— Author; winner of 1940 Guggenheim Fellowship

Address: Provincetown, Massachusetts

As one of the creators of a fresh and original technique in novel writing, and as a champion of the underdog, John Dos Passos has already left an indelible imprint on American letters. Some critics have gone so far as to say that his trilogy, *U. S. A.* (1937), is the nearest thing we have to "the Great American Novel" and the first successful attempt to depict America as a whole in fiction. Others, while they find the technical versatility and imagistic brilliance of the trilogy interesting, think the novels lacking in warmth and convincing characterization. However, there is no doubt that *U. S. A.*, which includes *The 42nd Parallel*, *Nineteen Nineteen* and *The Big Money*, places Dos Passos definitely in the foreground of interpreters of the American scene.

That this is so is borne out more fully by the fact that the John Simon Guggenheim Memorial Foundation in 1940 awarded John Dos Passos a fellowship for the second time, in order that he might complete a series of essays on the basis of present American conceptions of freedom of thought, which he began in 1939.

John Roderigo Dos Passos made his first serious mark as a writer with his *Three Soldiers*, his second novel, published in 1921, which was an outgrowth of his experiences in the World War. But the book that established his reputation as a writer was *Manhattan Transfer*, published in 1925. A kaleidoscopic panorama of 25 years of New York City life on all levels of society, it is still considered one of the best attempts to catch in fiction the elusive quality of New York. It has been called the "Rhapsody in Blue of contemporary American fiction." Sinclair Lewis described the book as presenting "the panorama, the sense, the smell, the soul of New York," and predicted that it might be "the foundation of a whole new school of novel writing." It was indeed the foundation of a new school of novel writing for Dos Passos and for a host of his imitators.

The ordinary reader is apt to find some of Dos Passos' writing difficult, for he has used James Joycean stream-of-consciousness devices, and Cummings-isms, particularly in the section of his trilogy called *The Camera Eye*. But these parts contain some of his finest writing. Dos Passos' work has been acclaimed and denounced largely on the score of its manner—the rapidity of his narrative, the coined words and run-together phrases. He regards the novel

JOHN DOS PASSOS

as something more than "the mere chronicle of private lives."

As a chronicler of the American scene, John Dos Passos has an appropriate background. He was born in Chicago, January 14, 1896, a true product of the various racial strains in the melting pot of America. His grandfather had been a Portuguese immigrant, a shoemaker in Philadelphia. His father, who went to the Civil War as a drummer boy, was, as Dos Passos describes him, a "self-made literate" and a corporation lawyer by the time young John Roderigo was born. His mother came of old Maryland and Virginia stock and bore her son at the age of 48.

As a boy John Roderigo moved all over the world with his parents, living in Mexico and in England (where he went to a private school for a while), Belgium, Washington, D. C., and on a Westmoreland County farm in Tidewater, Virginia. He was graduated from the Choate School and in 1916 received his B. A. *cum laude* from Harvard University. After his graduation from Harvard he went to Spain to study architecture, but was sidetracked by the War. In 1917 he was a volunteer in the ambulance service of the Allies, and when America entered the War he served in the United States ambulance service and finally in the United States Medical Corps.

After the War he wandered about Spain, Mexico and the Near East as a newspaper correspondent and magazine free-lance writer. During his adolescent years Gibbon's *Decline and Fall of the Roman Empire* was his Bible, and it was from this and not, as is generally supposed, from Karl Marx that Dos Passos got his taste for history in great perspectives. The world has been his province since an early age. But from each of his journeys he has returned to

confront America as a novelist, after putting down in travel books the sensory impressions of a dozen countries.

John Dos Passos' first book came out of his experiences as an ambulance driver. It was *One Man's Initiation*, published in England in 1917, a highly subjective record of Dos Passos' days with the French ambulance service, "as plotless as a diary," and callow and inexperienced in its writing. *Three Soldiers*, which followed in 1921, was a much better book and is generally regarded as one of the more powerful and effective fictional indictments of war.

In 1923 another Dos Passos novel, *Streets of Night*, appeared. It was arty and pretentious and read like a typical first novel. But in 1925 Dos Passos published *Manhattan Transfer*, a book which was an obvious turning point in his career as a novelist. It marked the beginning of the Dos Passos style, and was a sort of trial balloon of his later innovations in the technique of the novel. It was both an "art novel" and one of the most successful attempts to paint a collective portrait of New York City.

Dos Passos did not publish another novel until five years later when *The 42nd Parallel* came out. In the interim he had experimented with play writing and another travel book. His travel books, *Rosinante to the Road Again* (1922); *Orient Express* (1927); *In All Countries* (1934); show even more than his novels Dos Passos' broadening sympathies and interest in "the little man."

Dos Passos was developing an ever deepening social consciousness. First he had a sympathy for the Soviet Union; the civil war in Spain enlisted his interest; the Kentucky miners found a champion in him; during the Sacco-Vanzetti demonstration he was arrested in the picket line in front of the Boston State House. In Russia Dos Passos was immensely popular as a "proletarian" novelist. But he has said farewell to Europe as far as its power politics are concerned. Even while the Communists were hailing him as a literary fellow traveler because of his sympathy for the underdog, he was saying to those who called him Red, "I'm merely an old-fashioned believer in liberty, equality, fraternity." Later his attitude became definitely anti-Communist.

His novels from *Manhattan Transfer* on have been infused with a hatred of "the iron combination of men accustomed to run things." Disillusioned about Europe, he clings to a hope of a just social order in America. In 1939 he wrote: "I think there is enough real democracy in the mixed American tradition to enable us, with courage and luck, to weather the social transformations that are going on without losing our liberties or the humane outlook that is the medium in which civilizations grow."

Dos Passos' sympathies for the Spanish refugees from the Franco government led him to work for their relief. When the Ecuador government in the spring of 1940 signed a contract with the New World

Settlement Fund of New York to establish in Ecuador Spanish refugees then in France, John Dos Passos was named the recognized representative of the fund in the contract providing for the establishment of farm colonies.

Personally Dos Passos is anything but the picture of a cynical, disillusioned, ultra-sophisticated writer that one might expect from his novels. Scrupulously polite, given to deprecatory gestures, he is youthfully enthusiastic. He is shy and will not speak in public or over the radio, hates literary affectations and shop talk. Year after year he has mixed expeditions to strange places with periods of quiet living on Cape Cod, where he writes mornings and swims and sails in the afternoons.

His wife, Katharine (Smith) Dos Passos, formerly of St. Louis, whom he married after the War, writes for women's magazines. Dos Passos spends his leisure dabbling with sketching and painting, and in 1937 had an exhibit of 30 of his sketches in a New York gallery. Baldish, extremely nearsighted, he is a kindly, pleasant-looking man not at all arty or sophisticated in appearance.

The Dos Passos trilogy, *U. S. A.*, follows 20 or 30 characters in various strata of American life through 30 years of history. Intermingled with their stories are impressionistic biographical sketches of various historical figures of the period: Eugene Debs, Burbank, William (Big Bill) Haywood, William Jennings Bryan, Carnegie, Edison and other idols of the time. There are fragmentary "newsreel" sections or excerpts from newspaper headlines and popular songs, and *The Camera Eye* paragraphs, which are poetic, subjective records of the author's point of view. Although the devices of the biographies, the camera eye and newsreel were artificial, they enabled Dos Passos to take in a whole era and a whole country, to depict all the facets of American life in its industrial, economic and social aspects. He shows the "little man" the goat of the industrial system.

Dos Passos' latest novel, published in 1939, *Adventures of a Young Man*, was considered by most critics slight in comparison with the books in the *U. S. A.* trilogy. It is a satire on the American radical movement as it has become under the sway of the Communists. In addition to his five important novels, *Adventures of a Young Man* (1939); *Manhattan Transfer* (1925); *The 42nd Parallel* (1930); *Nineteen Nineteen* (1932); and *The Big Money* (1936), Dos Passos has published several plays—*The Garbage Man* (1926); *Airways, Inc.* (1929) and *Fortune Heights*, which were combined in one volume, *Three Plays* (1934); *Journey Between Wars* (1938), made up of excerpts from three of his books; a book of verse, *A Pushcart at the Curb* (1922).

DOWDING, SIR HUGH CASWELL TREMENHEERE Apr 24, 1882- Former
chief marshal of the British Royal Air Force
December 1940 Bulletin: Air Chief
Marshal Sir Hugh Dowding will be sent
to the United States on "special duty"
by Lord Beaverbrook, Minister of Air-
craft Production (see sketch this issue),
it was announced in November 1940.
He will be replaced by Air Vice-Marshal
Sir William Sholto Douglas.

From November issue:

The British Royal Air Force has for
many weeks taken heavy toll of the *Luft-*
waffe in the intensive German raids that
come every day, sometimes as often as six
times a day. Much of the success of British
defenses can be attributed to Air Chief
Marshal Sir Hugh Dowding. He is the
man who convinced the British Air Council

SIR HUGH DOWDING

that eight synchronized machine guns should be placed on the British fighter plane; he is the man who is responsible for the decision to place the cockpit on the Hurricane behind the engine, where the pilot would have maximum protection, and on his own initiative worked with a firm of glass manufacturers for a year until they developed a pilot's windshield that would shed machine bullets; and he is the man who has built up and now controls the whole British system of defense against air raids—fighters, anti-aircraft guns, the observer corps and the balloon barrages.

"A thin, inscrutable figure in blue," he sits at headquarters directing his fighter pilots by radio. By a vast complicated telephone system he knows the position of every bomber over the country and directs the defense to meet every maneuver of the raiders. His junior officers idolize him, and when comments are made on British effectiveness in the air they all say: "'Stuffy' did it."

The service calls him "Stuffy" mainly because of his reserved manner and his "university don" appearance. Dowding is an officer of the intellectual type whose interest in aviation goes back to 1913. A Scotsman, he was born at Moffat, Dumfriesshire and was educated at Winchester College and the Royal Military Academy, Woolwich. On August 18, 1900 he was gazetted to the Royal Artillery and for some 13 years pursued the ordinary humdrum career of a subaltern, serving in India and the Colonies.

In 1913 he was made a captain and in the same year took a flying course at the Central Flying School, Upavon, Wiltshire. When the First World War began he was attached to the Number 6 Squadron of the Royal Flying Corps and flew in it to Bruges

on October 7, 1914—only to find the action lost when he arrived. For about a month he was stationed at St. Omer and on November 18 was appointed general staff officer, third grade.

In March 1915 Dowding was put in charge of the Number 9 (Wireless) Squadron and was sent to England, where he was prominent in organizing the first home wireless school of the Royal Flying Corps—this was only the first of the many times in which he played a useful part in the development of radio communication. By July he was back at St. Omer commanding the Number 16 Squadron, which did some only moderately successful reconnaissance and photography prior to the Battle of Loos. Through intensive work and experiment in the next six months this arm's efficiency was increased so that it was more successful at the Somme Battle which began in July 1916. Throughout the Somme offensive Dowding, now a wing commander, led the ninth wing until he was succeeded in December by Sir Cyril Newall (see sketch this issue).

Dowding spent the rest of the War period in England. During 1917 he was at Salisbury commanding the Southern Training Brigade and in 1917, when the Royal Air Force was established, he was attached to the headquarters of the northeastern area of England with the temporary rank of brigadier general. In 1916 he had been mentioned in dispatches and in January 1919 was made a Companion of the Order of St. Michael and of St. George.

The War over, Dowding had to choose between the Army and the Royal Air Force. Without hesitation he chose the R. A. F., even though it meant reversion to the rank of group captain. It was only a little over two years, however, before he became an air commodore and later chief staff officer of the inland area. In September 1924 he went out to Iraq as chief staff officer to Air Vice-Marshal Sir John Higgins, there helping to organize raids against Akhwan tribesmen. In 1926 he was back in England again as director of training at the Air Ministry and in 1929 was made an air vice-marshal.

In September 1929 Dowding went to Palestine and Transjordan for three months as temporary air officer in command, and at the end of the same year he was brought to England to take over the fighter command. In September 1930 he was appointed a member of the Air Council for Supply and Research; in January 1933 an air marshal's baton followed; and in June of the same year he was knighted.

When in June 1936 the R. A. F. was arranged in three big commands, Bomber, Fighter and Coastal, Dowding was put in charge of Fighters. He has worked ever since that time in raising that group to its present state of efficiency. It was in January 1937 that he became an air chief marshal and principal air A. D. C. to the King, and in July of that year he was

awarded the additional knighthood, Grand Cross of the Victorian Order—his previous knighthood was Knight Commander of the Bath.

In September 1940 he was promoted a stage in the Order of the Bath, to Knight Grand Cross.

Dowding is a quiet man, noted for his "unsmiling wit, his stubborn Scottish temper and his quick decision in battle." He is a widower with one daughter and a son who is now a pilot.

DU BOIS, WILLIAM EDWARD BURG-HARDT (dū'bwä') Feb 23, 1868- Editor; author; Negro leader

Address: Atlanta University, Atlanta, Georgia

For 55 years Dr. W. E. B. Du Bois has been fighting for the Negro. He has fought to give him his place in American history; he has fought to give him his place in American life today. His has been mainly the battle of the pen. In the periodical, the

Crisis, in articles in many magazines, in books, he has told of discrimination against his race and has preached to his race courageous independence.

In preaching independence he was a pioneer. Booker T. Washington, Negro leader, had urged upon his race "dependence, and through compromise an emergence into an economic, social and cultural stability never quite equal to the white man's." Du Bois urged instead "a fight to obtain without compromise such rights and privileges as belonged to members of the civilization of which he was a part."

Dr. Du Bois was born in Great Barrington, Massachusetts on February 23, 1868. He received his B. A. from Fisk University in Tennessee in 1888 and the same degree from Harvard in 1890. From Harvard he also received his M. A. in 1891 and in 1895, after a period of study at the University of Berlin, he acquired his Ph. D. His thesis was the *Suppression of the African Slave Trade*, still the standard work on this subject.

Right after he left Harvard Dr. Du Bois married Nina Gomer of Cedar Rapids (they have one daughter), and taught for a short while at Wilberforce University. For some time he was an assistant at the University of Pennsylvania, during which period he worked on *The Philadelphia Negro* (1899). It was the research for this book which gave him that intimate knowledge of the practical problems with which the Negro masses had to contend.

Already, in 1896, he had accepted the professorship of history and economics at the old Atlanta University, and there he remained until 1910. At Atlanta he was the moving spirit of the Atlanta Conference which assembled each year during commencement week, and through his annual

W. E. B. DU BOIS

DU BOIS, WILLIAM—*Continued*

editing of the *Studies of Negro Problems* became known as one of the leading sociologists of the day. He contributed to the *Atlantic Monthly*, *World's Work* and other magazines.

Disillusion had begun for Du Bois early and it continued at Wilberforce. In Atlanta, however, he was reborn. He learned to play as well as work and he formed some of his strongest friendships. In *Souls of Black Folk* (1903) there was cynicism, bitterness, but a great sympathy. In it he stated that "the problem of the twentieth century is the problem of the color line," and he who had been the critic of his people now became their defender: "I saw the race-hatred of the whites as I had never dreamed of it before—naked and unashamed! The faint discrimination of my hopes and desires paled into nothing before this great, red monster of cruel oppression. . . I emerged into full manhood, with the ruins of some ideals about me, but with others planted above the stars . . . determined, even unto stubbornness, to fight the good fight."

In 1905 twenty-nine Negro men launched the Niagara Movement, whose aims included the abolition of all distinctions based on race or color, the recognition of the principle of human brotherhood as a practical present creed and the recognition of the best training as the monopoly of no class or race. Du Bois wrote most of its manifestoes and was a leader of the movement, but, because it lacked coherence, the life of the organization was short.

Nevertheless it had paved the way for a larger and stronger organization. In 1909 some persons of both white and colored races in New York determined upon a new effort for the full freedom of the Negro. The result was the National Association for the Advancement of Colored People. Dr. Du Bois was called from Atlanta in 1910 to be director of publicity and research and he began to edit the *Crisis*, the organ of the Association. For 24 years he remained in this work, wielding a tremendous influence on Negro thought and letters through his articles and editorials.

In 1919 Dr. Du Bois organized the Pan-African Congress, which had its first meeting in Paris, and in 1920 he was awarded the Spingarn Medal, given yearly to the Negro who reflects most credit on the race in any field of honorable endeavor. In 1932 he went to the new Atlanta University to devote his time mainly to historical research.

During these years Dr. Du Bois wrote many books, historical and imaginative. *Souls of Black Folk* (1903) was the first product of combined feeling and thinking. "It is in this book that he grows to fullness as a writer, fusing into a style that is beautifully lucid the emotional power that later made his *Crisis* editorials unsurpassed by any writing of their kind." In 1909 ap-

peared his biography, *John Brown*. In 1911 *The Quest of the Silver Fleece*, his first novel, was published. This was not so much a novel as fact fictionized, endeavoring to impress the mind by a reasonable exposition of facts about the economic status of the Southern Negro. In 1920 came *Dark-water*, a collection of essays, editorials, sketches and six poems, many of which had appeared in the *Atlantic Monthly* and the *Independent* and most of which had been published in *Crisis*.

Dr. Du Bois' second novel, *Dark Princess* (1928), has been called a "strange compound of revolutionary doctrine and futilistic philosophy, refuting, it seems, Dr. Du Bois' own text of aggressive independence." In 1935 appeared *Black Reconstruction*, which has been called "remarkable" and "an important and enlightening book," and which fills the gaps white historians have left in the history of the South in the years between 1860 and 1880. In 1939 he wrote *Black Folk: Then and Now*. In the fall of 1940 he published *Dusk of Dawn*, "the autobiography of a concept of race," and also a picture of a "dark man of genius, with a tough mind and a tender skin, in a white world." This year, too, he launched a new *Review of Race and Culture*.

DUFF COOPER, ALFRED See Cooper, A. D.

DUFFY, EDMUND Mar 1, 1899- Winner of 1939 Pulitzer Award of \$500 for best editorial cartoon

Address: b. The Sun, Baltimore, Maryland;
 h. 901 Cathedral St, Baltimore, Maryland

Being on the list of Pulitzer winners has become habitual with Edmund Duffy, political cartoonist for the Baltimore *Sun* since 1924. In 1931 he won the award for his cartoon showing a Russian Communist

EDMUND DUFFY

pulling a cross from a mosque. In 1934 he repeated the feat, with *California Points with Pride*—a drawing of two San José lynch victims hanging from a gallows. On May 6, 1940 he received this recognition (and \$500 cash) for the third time. *The Outstretched Hand*, published October 7, 1939, shows Hitler with outstretched right hand, dripping in blood, labeled "the peace offer"; in his left hand torn papers marked "broken promises, treaty and no more territorial demands"; crouched before him a group of people marked "minorities"; in the background, smoking ruins. Only one Pulitzer winner can rival Duffy's record, and that is Rollin Kirby, the Scripps-Howard political cartoonist, who also has received three awards.

Edmund Duffy, the son of Anna (Hughes) and John Joseph Duffy, a Jersey City policeman, was born in that city on March 1, 1899, but "as soon as possible crossed over to New York." He began his education in the ordinary way, but wound up by discarding algebra for drawing and at 15 found himself a student at the Art Students League. There he stayed for five years, under such instructors as George Bridgman, John Sloan and Boardman Robinson.

When Duffy was graduated in 1919 his "first job of any consequence was a page of the Armistice celebration printed in the Sunday magazine section of the New York Tribune," although he also contributed drawings to the New York Herald Sunday magazine and sports sections, to the New York Evening Post's Saturday magazine and sports' pages, and illustrated stories for *Scribner's* and *Century*. In 1920, with a hard-earned \$150, the 22-year-old artist boarded a Liverpool-bound ship and arrived in England by steerage with \$90 left. A job on the London

Daily News was both a stroke of luck and a financial necessity, and when Duffy grew tired of poverty in London he was free to try the Parisian variety. He moved over the Channel to "study art, investigate Montmartre night life, and sip vermouth at the Café du Dôme," at the same time contributing drawings to the New York Herald's Sunday section by long distance. Finally in 1922 he returned to the United States, "lugged his lanky frame into the Brooklyn Eagle offices," and proceeded to waver with his drawings between their offices and those of the short-lived New York Leader until he was offered a job on the Baltimore Sun on Labor Day 1924.

Duffy immediately took the job, and with the assistance of his artist-wife, Anne Rector, whom he married on November 26 of that same year, and his daughter, Sara Anne, has managed to remain in one spot ever since, physically speaking. He boasts that he never exercises, and complains that "aside from a slight weakness for horse-racing, which I developed after coming to Maryland, I have no hobbies." He contributes cartoons to *The Nation* and to the *Saturday Evening Post* and sometimes writes for the Sunday papers—for the most part book reviews. But chiefly—and most important—he is active on his own paper in a Pulitzer sort of way.

DU MAURIER, DAPHNE (dü-môr'yă)
May 13, 1907- Author

Address: b. c/o Curtis Brown, Ltd, London, England; h. Bodin-nick-by-Fowey, Cornwall, England

Described as blonde, blue-eyed, athletic, and "pretty enough for a screen test in anybody's studio," Daphne du Maurier is in her early 30's a noted English novelist, the author of five novels and two biographies. Her novel *Rebecca*, published in 1938, was a best seller, as was her *Jamaica Inn* in 1936.

She first came to the attention of American readers with her witty and frankly indiscreet story of her family, *The Du Mauriers* (1937) and the biography of her famous actor-father, *Gerald* (1936). In these were recorded the doings of the remarkable tribe which for well over a century has produced famous actors, dramatists and novelists.

The story of her family tree, which Daphne du Maurier presents like some absorbing novel in *The Du Mauriers*, began at the turn of the eighteenth century with Mary Anne Clarke, an actress who was the toast of London and mistress of the Duke of York. When the lovely but scandalous Mrs. Clarke's connection with the Duke became too public, she went to France. There in Tours her daughter Ellen married a young inventor named Louis Mathurin du Maurier, son of a schoolmaster.

They had two sons, George and Eugène, and a daughter, Isabel. George du Maurier became famous as a caricaturist and novelist, the author of *Trilby* and *Peter Ibbetson*. George du Maurier's two sons carried on

the family tradition. Major Guy, although a soldier by profession, was the author of *An Englishman's Home*, and Sir Gerald du Maurier, Daphne's father, was the famous British actor.

It was not strange, therefore, when David O. Selznick came to produce the motion picture of Daphne du Maurier's novel, *Rebecca*, that he was amazed at the small number of changes necessary to transform the book into a photoplay. Daphne du Maurier was a true daughter of the theatre, and her book fell naturally into the dramatic medium. Not only her father but her mother had been on the stage. Her sister and half-sister were actresses; her uncle was a dramatist.

Daphne du Maurier was born in London May 13, 1907, the second daughter of Gerald du Maurier. Her famous grandfather, George du Maurier, died 11 years before, and Miss du Maurier says that one of her greatest sorrows is that she never knew him. As a child, she was said to have borne an extraordinary resemblance to his drawings of *Trilby*.

Educated privately in England and France, Miss du Maurier began writing at the age of 19. Her poems and short stories appeared in the *Bystander* and the *Sunday Review*. She wrote her first novel, *The Loving Spirit*, when she was 22. When the book was published in 1931 it received enthusiastic praise from Rebecca West and other well-known critics. There followed, however, two more novels, *I'll Never be Young Again* in 1932, and *The Progress of Julia* in 1933, before Miss du Maurier wrote her first major success, *Jamaica Inn*, an exciting story of smugglers and wreckers on the Cornish coast more than a 100 years ago. Séan O'Faoláin described it as a tale Robert Louis Stevenson would not have been ashamed to have written.

Miss du Maurier was married in 1932 to Major Frederick A. M. Browning of the Grenadier Guards. They have two daughters, Tess and Flavia. Since her marriage, Miss du Maurier has written her books at whatever place her husband happened to be stationed. For a while they divided their time between a small cottage in Hampstead and their place at Fowey, Cornwall, the little seaport where Miss du Maurier wrote her first novel. Much of *The Du Mauriers* was written in Alexandria, Egypt, where Major Browning was stationed temporarily. *Rebecca* was started in Alexandria in September 1937, and finished in England during April 1938.

Miss du Maurier follows a workmanlike schedule in her writing. She does it just like going to an office, she declares. "I usually work from about ten to one o'clock, have an hour for lunch, and then get at it again from two to four. That way I can finish a novel in about three months.

"It is a strange and rather puzzling thing," she observes, "that the profession of writing should cause more interest and curiosity in the mind of the layman than

any other craft on earth." She cannot understand why the artist, be he writer, actor, composer or painter, "should be considered as though he were a species apart, a rare being, dreamy and temperamental, who lives in another world, working when he chooses and when the spirit moves him.

"How nice," she says, "it would be to lock the door every morning and simply turn on the tap.

"As for me, I may determine to write a gay, light romance. But I go for a walk on a moor and see a twisted tree and a pile of granite stones beside a deep, dark pool, and *Jamaica Inn* is born.

"I find a lot of old letters in a forgotten drawer belonging to my grandfather and his father before him, and I must know why they wept and why they suffered, and what strange memories enfolded these Du Mauriers of 60 and a 100 years ago."

Miss du Maurier's husband once told her she would never be a great writer until she wrote a happy story about happy people. Sometimes, Miss du Maurier says, she believes that he is right. But she can't do anything about it.

During the Second World War, Daphne du Maurier turned from novelist to war worker. She told an interviewer early in 1940, when she was in Kent where her husband was stationed, that she had an idea for a new book, but had little time or will to write it because it was to be about peace. And the post-War, which she intends to put in her next novel, "won't be real peace, but chaos," she said.

One reason Miss du Maurier put off the novel is that work on a committee looking after 250 Grenadier Guardsmen's families, learning to be of use in case of air raids, and other War work took a great deal of time. And although her two children were staying with her mother-in-law she still had too many interruptions to do much writing.

Although her novels have had great success in America, Miss du Maurier has never visited the country, and is a little timid about going there. "They're frightfully hospitable there, aren't they?" she asked an interviewer. "Lots of cocktail parties, I understand. I really don't like so much social life." She likes looking for birds and studying them. She likes walking because it's something she can do while she looks for birds and identifies them by their songs.

Before the War broke out, she and her husband had dreams of buying a boat, going to the United States to get it, and cruising around in Southern waters for a while. Miss du Maurier says she is not a good sailor, but likes it.

Despite her attractiveness, the author is no artificial glamour girl. She is modest and unassuming. The village in Kent where she was living during the early days of the Second World War knew her simply as Mrs. Browning.

When the movie version of *Rebecca* was being made she was hoping for the best. She didn't like what the movies had done

DAPHNE DU MAURIER

to *Jamaica Inn*, which starred Charles Laughton.

"I came to London and went to see *Jamaica Inn* all by myself," she said. "I bought a seat in the three and sixes (the cheaper section) and nearly wept. About all that was left was the title."

Miss du Maurier has been most fortunate at the hands of the critics. *Rebecca*, the melodramatic story of the young, sensitive second wife haunted by events that revolved around her predecessor, received unqualified praise. The *New York Times* wrote: "Almost in a class by herself, Daphne du Maurier's special forte becomes increasingly established: the ability to tell a good story and people it with a twinkling reality."

The *Christian Science Monitor* said of it: "Many a better novelist would give his eyes to be able to tell a story as Miss du Maurier does, to make it move at such a pace and to go with such mastery from surprise to surprise."

Despite its obvious and unashamed melodramatic quality, the craftsmanship in *Rebecca* won admiration from critics, several of whom compared it to a Charlotte Brontë story, and predicted it would be a best-seller. It has fulfilled that prediction.

The American Booksellers' Association, in announcing its national book awards at a luncheon in New York on February 1939, chose *Rebecca* as the booksellers' favorite novel.

In November 1940 a slim Christmas book, *Happy Christmas*, was published. Reviewers liked that, too.

Miss du Maurier was as fortunate with her other books. The *Saturday Review of Literature* described *The Du Mauriers* as "so readable one cannot put it down. It

DU MAURIER, DAPHNE—*Continued*
is a fitting sequel to that most beguiling story of *Gerald*."

DU PONT, PIERRE SAMUEL Jan 15, 1870- Industrialist

Address: b. Wilmington, Delaware

Although at present only a director and member of the finance committee of E. I. du Pont de Nemours & Company, Pierre Samuel du Pont is one of the best-known members of "the family which has built up the most spectacular industrial dynasty in history," with an empire of more than 70 factories. The Du Ponts have been named by the Securities and Exchange Commission as one of the three American families who exert most influence on the economic and political life of the United States through their hold on industry; in Delaware their "ducal estates line both banks of the Brandywine above the ruins of the old powder mill and stretch across the state line into Pennsylvania"; "no other family so completely dominates a state as they do" through their journalistic, banking and political connections.

Pierre Samuel du Pont is the great-grandson and namesake of a refugee from the French Revolution, who in 1802 with his second son set up as a powder maker on the banks of the Brandywine. Pierre's father, Lammot, was a partner in the powder company, but never became the head of it; his mother, Mary Belin, was of an old French family. He himself was born in Wilmington, Delaware on January 15, 1870, and 14 years later Lammot du Pont's death in an explosion left him to father his younger brothers and sisters. His brothers Lammot and Irénée still call him "Dad."

After preparing at the Penn Charter School in Philadelphia, Pierre went on to the Massachusetts Institute of Technology, where he emerged in 1890 with a B. S. in chemistry and a position as chemist with the family company, helping to develop a smokeless powder. For two years he was assistant superintendent of the Brandywine Black Powder Mills; for seven years superintendent of Carney's Point Works. But his rise didn't seem to him sufficiently rapid, so in March 1899 he went to Lorain, Ohio to liquidate the real-estate holdings of a certain Johnson Company and, with the \$50,000 which his father had left him, to become president of the company. In Lorain, too, he acquired the stenographic services of a

shrewd young man called John Jacob Raskob.

In 1902 Coleman du Pont brought Pierre back into the family company, together with Alfred du Pont, and the three cousins organized the corporation of E. I. du Pont de Nemours & Company, which purchased and took possession of the properties previously owned and operated by a corporation of the same name. Pierre was first elected treasurer of this new corporation, afterward became successively vice-president and member of its executive and finance committees. As his assistant, Raskob came with him.

Originally more than 50 per cent of the corporation's stock was held by the triumvirate of cousins, Coleman owning the most, but after a consolidation in 1903 they ceased to be controlling stockholders. In 1915 a group headed by Pierre bought Coleman's stock for their "family investment trust" (the Du Pont Securities Company, now the Christiana Securities Company). When Alfred fought the sale as a breach of trust he was ousted from the corporation by its directors. On March 6, 1915 Pierre became president of E. I. du Pont de Nemours & Company, and it is the three brothers (Pierre, Lammot, Irénée) who have held control ever since.

In October 1915 Pierre married his cousin, Alice Belin, although there had been so many earlier marriages between Du Pont cousins that a family dictum had already been laid down against the practice.

Du Pont sales during the World War meant unprecedented profits—are said to have represented 276 years of "normal" business. After the Allies agreed to pay \$1 a pound for powder, contracts were let so rapidly that, as one executive wrote later, "we were forced to start a new plant nearly every day." It was during the War, too, that Pierre bought the *Wilmington Journal*—it is claimed for the purpose of fighting Alfred, who had bought the *Morning News*. Pierre afterward acquired the *News* from Alfred and finished the job by adding the *Every Evening* to the family holding company, combining it with the *Journal*.

During all this time Pierre du Pont had been assisted by Raskob's very able advice. It was Raskob who brought first Pierre and then the Du Pont Company into General Motors, and after the War, two years after buying the first shares in the company, 49 Du Pont millions were used to buy absolute control. On May 1, 1919, when Alfred's litigation against Pierre was definitely settled in Pierre's favor, Pierre became board chairman of both Du Pont and General Motors, passing the presidency of Du Pont on to Irénée, while Raskob became vice-president of Du Pont and finance committee chairman of General Motors.

There followed a period of tremendous expansion. The seizure of German patents by the United States government in 1917 had opened the way for large-scale entry into the dyestuffs industry. And the Du Pont Company after the War had a surplus on

hand large enough to acquire a vast "chemical empire." A large number of industries were also acquired by exchange of stock, and by 1935 the scope of Du Pont enterprises was to include, besides explosives and sporting and military powders, the making of rayon, paints, lacquers, varnishes, pigments, plastics, cellophane, ammonia, acids, chemicals, Duco, Fabrikoid, Ethyl gas, shatter-proof glass, motors and airplanes (the "Lindbergh line"). According to Raskob, in 1934 the Du Ponts controlled "a larger share of industry, through common stock holdings, than any other group in the United States."

In the meanwhile there had been ventures into politics. It was in 1925 that Pierre was appointed tax commissioner for Delaware for his first term, serving until 1938. Then, although a Republican in state politics, in 1928 he supported Al Smith for the White House and Roosevelt for Governor of New York—both anti-prohibitionists, as was Pierre. The Association Against the Prohibition Amendment also received his strong financial support, and in 1933 he was given the job of Delaware's single liquor commissioner, a non-political appointment which he held until 1938, and a part in writing the state's liquor control law. In 1932 he supported Roosevelt for President; in 1934 he was appointed to the National Labor Board which mediated labor disputes under the NRA.

But he was not to support the Administration long. In 1934 a Senate munitions investigation committee headed by Senator Gerald P. Nye charged that the Du Pont Company during the World War had not only made huge profits from munitions but had "defrauded the government on war contracts on a gigantic scale." Although the company was exonerated, that same year marked the founding of the anti-Administration Liberty League, sponsored with others by Pierre du Pont. Mr. Du Pont states that his "change of position was entirely due to the failure of the Administration to carry out any of the pledges of the platform which adherents had been promised without qualification." Then about the time that the Liberty League was getting into high gear, the government, through the Bureau of Internal Revenue, pounced again: Du Pont and Raskob were charged with having evaded \$1,824,112 in taxes through a 1929 transaction involving cross sales. To this Pierre du Pont replied that the prosecution was merely "part of a scheme to injure me and to force a compromise of claims in a manner amounting to extortion," and in 1936 he and Raskob were prime movers in the Liberty League campaign to get Roosevelt out of the White House.

On May 20, 1940, at the age of 70, Pierre du Pont retired as chairman of E. I. Du Pont de Nemours & Company, though retaining his membership on the board of directors and the finance committee. Perhaps he was "ready to retire to his enormous hothouses at Longwood Gardens, where he plucks

Hazel Ives

PIERRE SAMUEL DU PONT

orchids and figs, to sit in the evening on his broad plaza and watch his \$500,000 fountain swish and spurt in beams of many-colored lights" or listen to his powerful \$250,000 organ, built especially for his wife, who is growing deaf. But his 1,000-acre estate, Longwood, is not his only hobby. Education and philanthropy are others. A former member of the State Board of Education (1919-21), long a member of the Corporation of the Massachusetts Institute of Technology, he has contributed millions both to the building of Delaware schools and to M. I. T. He has also contributed \$750,000 to roads, has built a hospital in Pennsylvania in memory of his favorite chauffeur and lends his financial support to the Metropolitan Opera Association.

Pierre and his wife are childless, and Longwood is said to be rather lonely except on the days when the great gardens are thrown open to the public, especially since the young nieces for whom Pierre used to give elaborate dances in the conservatory have grown up. Perhaps that is why he takes a great personal interest in the younger men who work for him and won't let his chauffeurs wear livery because he likes to dine with them away from Wilmington. He has few close friends outside the family, but is uniquely generous with his friends, keeping cars and chauffeurs in both New York and Paris especially for their convenience. They usually occupy his box at the Metropolitan, too. He is the most insured man in America: in 1932 he carried policies amounting to \$7,000,000. An article in *Fortune* described him as "inclined to heaviness around the waist and jowls. His head is large and bald; his nose is large, thick and heavy, topped by spectacles or pince-nez; his eyes are small and mild. Like most of the Du Ponts he wears collars that are too high and slightly

DU PONT, PIERRE SAMUEL—*Cont.*

oversize." He also wears the rosette of an Officier de la Légion d'Honneur.

DUROCHER, LEO (dü-rō-shā') July 27, 1906- Baseball player; manager of the Brooklyn Dodgers

Address: b. Brooklyn Dodgers, Ebbets Field, Brooklyn, New York; h. Lindell Towers, St. Louis, Missouri

In 1940 the Brooklyn Dodgers made a serious bid for the championship of the National League. According to most sports writers and fans much credit for their amazing successes should go to Leo Ernest Durocher who has been managing them for

not quite two years and who has signed a contract to manage them in 1941. "Leo, the Lip," who has been "the talkingest, most talked about and most talked against shortstop in baseball," has finally won support for himself from his team and from the fans. It has taken a good many hard years, but "baseball's ugly duckling" has become baseball's swan.

Durocher has been playing baseball for as long as he can remember. Born in West Springfield, Massachusetts of French parents, he attended the local parochial school and high school in Springfield. In high school he played a fast game of basketball, a powerful game of football and baseball that was already distinguished. After being graduated he went to work for the Wyco Electric Company, learning to make motorcycle batteries and playing shortstop for the factory's baseball team. His playing was noticed by Yankee scouts and in 1925 he got a contract with the Yankees' Hartford, Connecticut farm team.

The Yankees sent him to Atlanta in 1926, where he played 154 games as shortstop, and then to St. Paul in 1927. In 1928 they brought him up to their home team. From the first day he showed up with the Yankees, Durocher was "the cockiest player in the training field." "His voice was loud, but his wardrobe was louder" and his vocabulary was something "worthy of the typewriter of Ring Lardner." He played in the 1928 World Series and stayed with the Yankees until 1929. That was the year that Yankee Manager Miller Huggins, with whom Durocher was a favorite, died. Leo was left without a friend on his team, with a reputation for being wild and untamable, with a good many debts. His fielding, somehow, seemed less steady and less spectacular, and his batting, which was never very good, seemed less so. So the Yankees, without regrets, "palmed him off" to the Cincinnati Reds.

During the seasons of 1930, 1931 and 1932 Durocher alternated second base and shortstop for the Reds. In 1930 they finished seventh; in the next two years eighth. After three seasons with them Durocher, in 1933, was traded to the St. Louis Cardinals and became a star. That 1934 World Series was a memorable one. When it was over the Cardinals had beaten Detroit in seven games, and Durocher was recognized as the best fielding shortstop in baseball and as a hitter as well, for his average for the series was .259. In 1935 he was made team captain of the Cardinals and in 1936 was selected for the National League All-Star Team.

It was while he was with the Cardinals that Durocher made his second, successful marriage. His first marriage, to Ruby Hartley in Cincinnati in 1930, ended in divorce in 1933. They had one child, Barbara. In September 1934 Durocher married Mrs. Grace Dozier of St. Louis and she became "the rudder that was finally to steer his course in a straight line." On the

LEO DUROCHER

day after their marriage "she sat down and made out countless checks to clear up all his remaining obligations." At home in St. Louis, where Mrs. Durocher is owner of a large dress manufacturing concern, the Durochers live at the Lindell Towers.

After four years as "keyman" with the Cardinals, Durocher was traded to the Brooklyn Dodgers in exchange for four players. The fans thought the officials were out of their mind. By this time Durocher was along in years as baseball players go and besides had a reputation for fighting. It was true that he had "never booted a grounder or muffed a throw in a World Series," but he had an attitude of "noisy bravado" about his hitting and was always involved in rows.

In 1938 Durocher was made captain of the Dodgers and in that same year he asked Larry MacPhail for the job of manager. To the surprise of a good many people, he got it. When he took over the Dodgers they had been a bad seventh. They went out West in 1939 and received six straight beatings. Then Durocher proceeded to "give them hell" together and individually and swore to send them all back to the "sticks" unless they played real ball. Within two weeks after that they were in third place. And when the season was over Durocher had been given the Sporting News Award for being the outstanding manager of the year.

The Dodgers' success in 1939 was more than matched in 1940, when they came right to the top of their league as one of the main contenders for the pennant. When Durocher was asked how he had done it he said: "All you have to do is get a lot of good ball-players together, make them hustle all the time and the percentage is bound to be with you."

EDEN, ANTHONY June 12, 1897—Appointed British Foreign Minister, December 1940; former British Secretary of State for War

Address: 17 Fitzhardinge St, W. 1, London, England

Anthony Eden, who has spent the whole of his public life in a strenuous and single-hearted effort for peace, is in 1940 England's Secretary of State for War. The man who told Neville Chamberlain: "I do not believe we can make progress in European appeasement," who urged a "firm spirit" against the dictator nations and resigned from the office of Foreign Secretary rather than go along with Chamberlain's policies is now organizing the British Army.

Robert Anthony Eden (he never uses the Robert) was born at Windlestone Hall in Durham, the son of Sir William Eden, a man who added to the usual preoccupations of a country gentleman a nice talent as a water colorist. In 1906, he was sent to Sandroyd Preparatory School in Surrey and from there, in 1911, went to Eton where he "worked industriously and behaved quietly, seldom making himself conspicuous either by prowess or by misdeed." In 1915 he obtained a commission as second lieutenant in the 21st battalion of the King's Royal Rifle Corps. He spent two years on the French front, won the Military Cross and rose to be captain and brigade major.

In 1919 Eden entered Christ Church, Oxford, where he specialized in Oriental languages so successfully that he was once able to amaze the Aga Khan by making an entire speech in Persian and the Arabian

ANTHONY EDEN

envoy by quoting fluently in Arabic from the *Koran*. He was graduated with first-class honors in 1922 and immediately contested a Durham seat for Parliament with the ringing declaration: "I am a Conservative, always have been a Conservative and expect to die a Conservative." Despite, or perhaps because of this declaration, he was unsuccessful. In 1923, however, he was returned for Warwick and Leamington. In that same year he married Beatrice Helen Beckett, daughter of the Honorable Sir Gervase Beckett, an influential banker who owned the *Yorkshire Post*. They have two sons, Nicholas and Simon.

After his marriage Eden settled down in London, dividing his time for the next three years among the House of Commons, where he spoke "prosaically" on subjects of which he had special knowledge, journalism and travel. In 1925 he traveled around the world and published a book on his experiences which dealt mostly with the scenic beauties he had seen.

It was inevitable that Eden's rise in politics should be rapid: good family, impeccable clothes, conventional good looks, private means, good war record, education at Eton and Oxford, a handsome wife and two sturdy boys, and—what other "young-men-about-politics" lacked—tact, skill, patience and the ability to work hard. By 1925 Eden had become Parliamentary Private Secretary to Commander Locker-Lampson and in 1926 he was under the late Sir Austen Chamberlain. His was a post which offered unrivaled opportunities for studying the work of the Foreign Office from within and for knowing, at first hand, everything going on in the world. In it Eden "fetched and carried, unobtrusive and industrious," remembered as a "somewhat frail fellow with a marked stoop and the tired eyes of

a student rather than the arresting gaze of a leader."

His first government post came in 1931 when he was made Under-Secretary for Foreign Affairs, and in 1934 a special post was created for him, when he was made first Lord Privy Seal and later minister without portfolio for League of Nations Affairs. In 1934 he was a leading figure in the negotiations and plebiscite for the return of the Saar to Germany. With the Foreign Secretary, Sir John Simon (see sketch this issue), he traveled to Berlin, Moscow and Warsaw to discuss an Eastern mutual assistance pact and by himself went to Rome, where Mussolini is supposed to have spluttered words to the effect: "The nerve of the British government to send, as their representative in dealing with me, a little boy!"

Because of his efforts for the League of Nations he became to the British public a sort of "Knight in Shining Armour" and "the natural idol of that mass of British public opinion which was firmly convinced that world disarmament could and would be achieved." When Simon was replaced by Sir Samuel Hoare (see sketch this issue) Eden worked under him, but it wasn't long before he was in active opposition to Hoare's compromise policies and after the Hoare-Laval (see Laval sketch this issue) proposals for ending the Ethiopian war were made, came out squarely against him.

When, in October 1935, public opinion drove Hoare out of office, Eden became Foreign Secretary, the youngest Britain had had in almost a century. Strenuously he advocated sanctions against Italy. He later engineered the non-intervention treaty in Spain, however, and although it was flouted by the other signatory powers he insisted on maintaining the Spanish embargo. Yet all this time it was clear that a clash between him and Chamberlain was inevitable. Eden hated appeasement, according to some commentators not because of democratic indignation but because of "an old fashioned diplomat's contempt for botched negotiations and for trucking to gangsters."

Their differences came to a head over Mussolini's demand that the British come to Rome to talk peace "now or never." Eden could not agree with the proposed plans for closing the London-Rome breach. "I cannot recommend to Parliament a policy with which I am not in agreement," he said and resigned on February 20, 1938, "to the delight of Rome, Berlin and Tokyo" and to the dismay of many of the British. Crowds thronged the streets of London, shouting, "Chamberlain must go! Hitler and Mussolini must not dictate to Britain! Eden must stay!" But Eden did not stay and two days later Winston Churchill (see sketch this issue) sadly commented that Eden was "the one fresh figure of first magnitude arising out of the generation which was ravaged by the War."

It was felt then that Eden might break with the Conservative Party, and observers were even more certain right after Munich that a break was inevitable. But Eden, instead of leading dissident Conservatives, asked for "unity" in the Party, and shortly after left for America to express unofficially "the British view." In the United States he was received with "friendliness and enthusiasm which no foreign statesman has had since the days of the Allied War missions."

He returned to government work in 1939 when Chamberlain made him Secretary of State for Dominion Affairs shortly after the outbreak of the Second World War. In that same year his book, *Foreign Affairs*, was published. It is a "collection of his speeches on foreign affairs from his maiden speech on air defence, in 1924, to his speech in New York in December 1938." When Winston Churchill took office he promoted Eden to the position of Secretary of State for War. In November 1940 Eden returned from an inspection of British forces in the Mediterranean with an optimistic pronouncement: "The future is safe." In December he received his new appointment.

Eden has always seemed to many a "glamour" politician, not only because of his high-minded opposition to appeasement but because of his appearance. A model of sartorial elegance, his trousers faultlessly creased and his shoes flawlessly polished, he moves with a sort of angular grace, tall, slightly stooped, his dark hair just beginning to be flecked with gray. But he is more than good looking and well-bred. Anthony Eden is "a man of great knowledge and intelligence . . . animated by intense seriousness of purpose."

EDISON, CHARLES Aug 3, 1890- Democratic Governor-elect of New Jersey; former Secretary of the Navy

Address: b. West Orange, New Jersey; h. Llewellyn Park, West Orange, New Jersey

Charles Edison was elected Governor of New Jersey in November 1940. However, his formal announcement of his candidacy for Governor of New Jersey on the Democratic ticket, made on March 30, 1940, took political leaders and business executives by surprise. It was only in January of the same year that he had been appointed Secretary of the Navy. At a time when naval defense is one of the main concerns of this country, his resignation from the cabinet aroused a good deal of speculation.

Former Ambassador Walter E. Edge of New Jersey attacked the move strongly. He said that the naval post was the most important office in this country outside of the Presidency and asserted that if the Secretary "was an ideally equipped man for the post, as he must have been, or surely the President would not have appointed him, then, in these days, with the War brought almost to our very door, he should remain Secretary of the Navy. That would be his duty as a patriotic citizen."

Edison himself said that he had discussed his move with President Roosevelt and "he is entirely in sympathy with what I am doing." To some, the reason for the President's support and Edison's candidacy was that

CHARLES EDISON

Roosevelt was anxious to bolster his chances of getting New Jersey's electoral vote for a third term. To others, Edison left because, as they thought, the President was *not* running for a third term and Cabinet changes in November would deprive him of his post as Navy Secretary. There were still others who questioned Edison's efficiency as Secretary of the Navy.

Those who detracted from Edison's forcefulness and efficiency in his Navy Post pointed out that although Edison had been assistant head of the Navy since 1936, that although 1939 was a year of great preparedness, Roosevelt got along with the ailing, aging Swanson as head of the Navy for many months, and then with no Secretary of the Navy, after Swanson died in July 1939, until December 1939. Edison's supporters pointed to his record, and to the complete sympathy between his naval views and President Roosevelt's.

When soft-spoken Charles Edison was made Assistant Secretary of the Navy in November 1936 he stated: "My own personal belief is that we should have a very strong, very fine navy for defense. . . I don't see any sense in being weak in defense. No one respects you if you are." His main job has been that of building ships. It is true that he didn't "know the front of a ship from the back," but he did know business and manufacturing; he was a strong supporter of the New Deal; and he was not in awe of gold braid.

When Edison became Secretary of the Navy at the beginning of 1940, his creed was a Navy "so invincible" that it could at all times bring the enemy to "our terms as quickly as possible while keeping him at a safe distance from our shores." The most ambitious naval program in the history of

this country was already under way. Two billion dollars were to be spent to increase our combatant strength from 272 to 372 ships. Edison urged this spending and more. He argued against those who felt that air power was more important than sea: "So far as the United States is concerned battleships were, are and will be for many years the backbone of our first line of national defense. Trust your fleet."

As Secretary of the Navy Edison worked hard, and admirals were often disturbed by calls for Saturday afternoon or all-day Sunday conferences. In only one case was there any conflict between him and the government. Shortly after he took office he proposed that direct contracts instead of competitive bidding be used for naval construction, for with bidding the result was an "unstandard ship" and "huge wastage through differences in plans and duplications." Immediately the House Naval Affairs Committee put him on the carpet for suggesting that Congress empower the President to make United States manufacturers take Navy orders on Navy terms. There was discussion, argument and disturbance. Edison apologized: "I was taken completely by surprise by all the commotion. I ask the country not to jump to the conclusion that I am so intrigued with the idea of national defense that I would sell democracy short to get it."

On June 24 Edison quit his post, 30 days after the New Jersey primary, because "during these trying times there must not be the slightest suspicion that decisions of a Secretary of the Navy are influenced by political expediency." Roosevelt gave him his blessing and wished him success.

This was the first time that Edison aspired to elective office, although he has been in politics since 1932. And his power to get votes in New Jersey, "the state where I was born, the state where I have lived for most of my life and the state that I love," has been proved. Mayor Hague of Jersey City gave him "100 per cent support," even though Edison was not an ideal candidate so far as his own political interests were concerned.

The new Governor of New Jersey, who likes to collect books, who is "happiest when perched at his piano dashing off impromptu tunes and boisterous jingles," has clean-cut features and prematurely gray hair that remind many people of his father, Thomas Alva Edison, the inventor. He has his father's deafness, too, and his father's prodigious capacity for work, but not his father's creative genius.

He was born in Llewellyn Park, in West Orange, New Jersey on August 3, 1890, the eldest son of Edison's second marriage to Mina Miller. Gifted with none of Thomas Edison's inventiveness and "blessed with an appreciation for the trivia of living," young Charles Edison spread his share of wild oats around Llewellyn Park. It wasn't until he had labored through the Massa-

chusetts Institute of Technology (he came out in 1913) and settled down in the business end of the loosely joined Edison Industries that Charles got along well with his father. He gradually took over the management from him and reorganized the business. Here he attacked the business problems of the many Edison enterprises as energetically as his father attacked the technical ones. Frequently he could be found in his gray-walled office in West Orange for 17 hours at a stretch.

In March 1918 Edison was married to Carolyn Hawkins of Cambridge, Massachusetts, who loved the job of naming ships which was frequently hers when her husband was Secretary of the Navy, but who "just turns green" on water. She does accompany him occasionally on the fishing trips of which he is so fond, however. Once she caught a 104-pound tarpon, but it was so big she couldn't bear to think she had killed it and it made her cry. The Edisons, who have no children, have a large stone house in Llewellyn Park, a private residential section in West Orange.

Charles Edison's first acquaintance with the Navy was during the last War, when Thomas A. Edison served as President of the Naval Consulting Board under Assistant Secretary of the Navy Franklin D. Roosevelt. It was then, too, that he first came to know Roosevelt, of whom he has always been a firm supporter and close friend. Since 1932 he has been in politics, the only Democrat in a Republican family. He supported Roosevelt strongly for the Presidency and after the election "few businessmen gave their support to the New Deal earlier or more enthusiastically than Charles Edison."

The New Deal was only a month old when Edison plastered the walls of the plant in West Orange with messages urging his 3,500 employes to "get going" behind the President: "Buy something—buy anything—anywhere. Paint your kitchen. Send a telegram. Get a car. Pay a bill. Rent a flat. Fix your roof. Get a haircut. Get married." He handed each employee \$5 and told him to spur on recovery by buying something he wouldn't have bought otherwise. When the New Deal was being criticized by other business men, Edison voiced his belief in Roosevelt. "I believe in the new experiments going on. It takes courage to try new things and it takes courage to stop them if they are not successful."

Edison became an important cog in New Jersey New Deal politics. He was successively a member of the State Recovery Board, of the Regional Labor Board, NRA Compliance Director, State Director of the National Emergency Council and a member of the National Industrial Recovery Board. When the Federal Housing Act was being drafted, Edison was a consultant and later was made regional director of the Federal Housing Administration.

He has, it has been said, consistently refused the position of head of the FHA.

In 1940 for the first time, he ran successfully for elective office with the support and blessing of the Roosevelt Administration he has served since 1933. In announcing his candidacy he said: "I have been deeply impressed by the sincerity of those who think I might be of some help to New Jersey... Candidly I should like to be of service to New Jersey." Now he has his chance. Among other things, he wants to revise the New Jersey constitution and election laws, giving the Governor "a veto that would stick" and a longer term, giving every bill a public hearing before it becomes law, making it easier to pass amendments.

EGLOFF, GUSTAV (ēg'lŭf) Nov 10, 1886-Chemist

Address: 310 S Michigan Ave, Chicago, Illinois

Dr. Gustav Egloff, one of the world's greatest experts in the field of petroleum and hydrocarbon chemistry, was awarded the gold achievement medal of the American Institute of Chemists in May 1940 for his "prodigious contributions" to this field.

For 25 years Dr. Egloff has been conducting research into oil and oil products; he has written almost 400 articles relating to the oil industry; and he holds more than 250 patents for the processing of petroleum, shale oil, coal and hydrocarbon derivatives. Perhaps his greatest contribution to crude oil refining is the multiple coil cracking process "which increases the yield of high octane gasoline from crude oil." This process "is now used in every refinery of any size in the world," makes it possible to operate high speed planes and motor cars of today "with 40 per cent increased efficiency."

In 1939 Dr. Egloff created quite a stir by his announcement that he had devised a new way to make synthetic rubber from butane gas. Butane, used for heating, welding and motor fuel, is present in natural gas and is a by-product of oil refining and so

Associated Press

GUSTAV EGLOFF

is extremely plentiful and cheap. The rubber made from it, Dr. Egloff stated, "is not only more wear resistant in tires, hose and shoes than natural rubber but has in addition other valuable properties in that it is resistant to acids and alkalies and to heat." After almost a year's further work on this synthetic rubber Dr. Egloff told the Institute of Chemists, when they presented him with their medal, that the potential supply of synthetic rubber from United States oil wells was 200,000,000,000 pounds or nearly 200 times more than the quantity of natural rubber used in this country in 1939.

Dr. Egloff was born in New York City on November 10, 1886 and was graduated from Cornell University in 1912. From Cornell he went to Columbia, which gave him a master's degree in 1913 and a Ph. D. in 1916 after two years as a Barnard Fellow.

While working for his Ph. D., Dr. Egloff spent one year with the United States Bureau of Mines and as soon as he received his degree started to work for the Aetna Chemical Company as engineer and chief chemist. He stayed there only one year and then went to the Universal Oil Products Company of Chicago. He is still with the same company, director of its research.

While with the Universal Oil Products Company Dr. Egloff has lectured at many of the great colleges of the United States. He has been official delegate to numerous technical conferences in many countries and in 1937 he was elected vice-president of the World Petroleum Congress. He has been honored by many lands for his work.

EILSHEMIUS, LOUIS MICHEL (ěl-shēm'ĩ-ūs mĩ-shěł') Feb 4, 1864- Artist
Address: 118 E 57th St, New York City

"For 20 years Manhattan's most persistent exhibition-goer was a little old gentleman with a beard, a beady eye and baggy trousers. Standing before a painting, preferably a high-priced one, he would mutter: 'Pffft! Such crude pigments! My, such a stencil technique—brr—let me get away!' He stopped other gallery-goers to tell them he was the world's greatest artist, passed out handbills describing himself as 'Mesmerist-Prophet and Mystic, Humorist Galore, Ex All Round Athletic Sportsman (to 1889), Scientist Supreme: all ologies, Ex Fancy Amateur Dancer...'

"He wrote crank letters to the newspapers. His letterhead: 'Mahatma Dr. Louis M. Eilshemius, M. A. etc., Mightiest Mind and Wonder of the Worlds, Supreme Parnassian and Grand Transcendent Eagle of Art.' His paintings, on the rare occasions when he could get them shown, brought horse laughs from critics and public alike."

Recently, Louis Eilshemius has been hailed as "the greatest living master," but this time by somebody else. In October 1939 three Manhattan galleries were simultaneously showing his pictures while other Eilshemius exhibitions were touring the country. A biography of him, *And He Sat Among the Ashes* (October 1939), had just been published and was stirring up a good deal of enthusiasm and attention. At the age of 76, more than a half century after his first paintings were shown, Eilshemius won recognition.

The story of Louis Eilshemius is the story of a gifted man who was his own worst enemy: a man whose career got off to a bad start because of "an almost incredible blindness in the art world of the nineties," and who, as his failures continued year after year, resorted to "frenzied publicizing of his own talents and, finally, to pathological self-glorification."

His was a happy childhood. He was born on February 4, 1864 in Arlington, New Jersey, in a spacious manor bought by his father who had come to this country from Dutch Friesland. With his many sisters and brothers, Louis spent much of his childhood traveling abroad and studying in foreign schools. In 1881 he received his diploma from the Dresden, Germany, Realschule.

At 17 Eilshemius already knew that art was his proper calling. But his father thought differently and got him a job as bookkeeper in a wholesale glove house. That didn't work, and as another compromise between what he wanted and what Louis wanted, his father suggested that he go to the State College of Agriculture at

Cornell University. Louis wasn't unhappy there, for he continued with his drawing and began to write poetry, "neither better nor worse than the run of its kind."

However, he made up his mind that he wasn't going back for his senior year, and he proceeded to study art at the Art Students League and with Robert Minor. With the grudging blessing of his father but with his father's hard cash, Eilshemius set out for Paris in the fall of 1886. Shortly after he had begun studying there he submitted a painting, *Evening, Milford, Pennsylvania*, to the American National Academy of Design and it was accepted. In 1888 two more of his paintings were accepted by the Academy. Neither of them sold, but it seemed like a promising start.

Although none of his pictures was ever accepted by the Academy again, Eilshemius kept on working. In 1892, made rich by a legacy left him by his father who died in that year, he went to Algeria, stopping off at Spain on the way back. His canvases up to that time had been painted more or less under Minor's influence, but now they began to show the influence of Impressionism while still being distinguished by a "new, personal idiom." Always there was diversity in them, for "Eilshemius had a healthy scorn of repetition."

Eilshemius traveled again—to Europe, to Samoa, and continued his painting. He started writing poetry, too, with rather more facility than inspiration. One critic said, then, of his poetry: "We have searched these volumes faithfully for one line of poetry and if there is such a thing in either of them it has been most artfully concealed." He himself advertised his verse by calling himself "most original—most prolific—most versatile—unique, towering with all the giants of past ages above the workaday world."

In 1909 Eilshemius started a magazine, *The Art Reformer*, a 10-cent pocket monthly, mostly devoted to praising himself. A reporter came up to interview him about it after Eilshemius wrote a letter to his editor saying: "I am perhaps the greatest inventor of the age. . . I am the Da Vinci of modern times." The magazine died very shortly.

In 1914 Eilshemius gave an exhibition of his own works to which nobody came and in which nothing was sold. In 1917 he sent his paintings in to the Society of Independent Artists, and Marcel Duchamp (*Nude Descending a Staircase*) declared that Eilshemius' *Supplication* was one of the two really important paintings in the entire exhibition. From then on Duchamp took an interest in him, tried to get him to meet people and tried to interest people in his work.

When Eilshemius was 57, in 1921, he found himself poor. The rent for his studio was increased, and he had sold no pictures. He "put aside his brushes and paint for good and all." During this period and

LOUIS EILSHEMIUS

later, he spent much of his time writing letters to the *New York Sun*, on art, on the subject of premonition, on Walt Whitman, on bananas, on himself.

In 1920, through the efforts of Duchamp and Katherine Dreier, Eilshemius was given a one-man show by the Société Anonyme. The efforts of these people and of Henry McBride, art critic of the *New York Sun*, finally brought results when in 1926 the Valentine Gallery gave him a one-man show of 31 paintings. The criticism was almost completely adverse, with one critic going so far as to say that the pictures "ranged from something terrible, up through pathetic, to almost good." It was six years before the Valentine Galleries would exhibit his works again.

When the Valentine Galleries did show him again, in 1932, he received a good deal of praise and became something of a fashion. In this year the Whitney Museum showed his *Delaware Water Gap Village* which was bought later by the Metropolitan Museum of Art. In 1934, Eilshemius finally broke into a history. In *Art in America*, edited by Alfred H. Barr Jr., and Holger Cahill, the latter wrote: "Naïve and visionary and romantic in style, Eilshemius has a note of unexpectedness and fantasy which is very delightful. Altogether he is one of the most extraordinary 'singulars' in contemporary American art." From then on frequent Eilshemius exhibitions were held in New York. In April 1940 he was given his first one-man Boston show.

There has always been and probably always will be a good deal of controversy on the importance and effectiveness of Eilshemius' work. It is so varied—there are gentle, uncontroversial water colors; there are fanciful landscapes and romantic ones; there are wild nudes and tender ones. The

EILSHEMIUS, LOUIS—*Continued*

general consensus of opinion seems to be, however, that "there are reminders of Ryder, the Barbizon School and the Impressionists, but, by no means dominated by any one influence, a victorious and very definite Eilshemius emerges." The future will probably judge that "neither the greatest nor the least of his contemporaries, he ranks high among them."

Although dealers have snapped up for a song his lush romantic landscapes, his pictures of Samoa, his moonlit fantasies, his clear sun-lit American scenes, his strange nude nymphs bathing in improbable streams, and have sold them at high prices, Eilshemius until recently was in want. Even now he still lives with his brother Henry in his old brownstone house on East 57th Street in New York. His chair exactly faces the door of his room. "From it he can see down the dark hall of the house to the stairs that bring people to him. Callers come now. They never used to. They come to him, he does not go to them. They climb those stairs, approach along the dark hall, walk through his door and stand before him. They are coming to him. To Eilshemius. A light suddenly smolders in the old anguished eyes."

ELIOT, GEORGE FIELDING June 22, 1894- Author; lecturer; radio war commentator

Address: b. Columbia Broadcasting System, 485 Madison Ave, New York City; h. 19 E 88th St, New York City

If England has its famed military expert, Captain B. H. Liddell Hart (see sketch this issue), America's equivalent must surely be Major George Fielding Eliot. He was born in Brooklyn, the son of Philip Park and Rena (King) Eliot, but when he was eight his family emigrated to Melbourne, Australia. When the World War broke out, young Eliot had just been graduated from Trinity College, University of Melbourne. He immediately joined the Australian Imperial Force (infantry), where his school cadet corps training won him a second lieutenant's commission. Later he was promoted through the ranks to acting major. He saw four years of fighting in the Dardanelles, Egypt, the Western front, the Battles of 1st Somme, Arras, Passchendaele, Amiens, Hindenburg Line.

After the War Eliot came back to the United States, and here earned his major's title during eight years' service as a reserve officer with the Military Intelligence Reserve (1922-30).

In Kansas City, Eliot became an accountant, a field he had studied before the War. This occupation he must have found less than exciting after his war experiences, and when he picked up a pulp magazine called *War Stories*, he decided he could certainly write as well as its authors. He thereupon typed out an account of one war experience and received \$100 for it. Several years later he dropped accounting to concentrate on writing and lecturing. In 1928 he came to New York, and began occasional serious military writing for *The Infantry Journal* and the *United States Naval Institute Proceedings*.

When one of these articles was read with much interest by a captain on a United States battleship at Norfolk, Virginia, Eliot was invited to visit him. On the steamer he met Sara Elaine Hodges, whom he married December 23, 1933. After collaborating, in 1937, with Major R. Ernest Dupuy on his first book, *If War Comes*, Major Eliot's reputation was increased and his skill as a lecturer put him in the higher brackets of authors booked by the important lecture bureaus.

"This book should be required reading for every American," commented Dorothy Thompson (see sketch this issue) of his second book, *The Ramparts We Watch* (1938). It is a serious analysis of "the problems of American national defense" written for the layman in non-technical language by a soldier who is in no sense a jingoist. The critics received it enthusiastically.

GEORGE FIELDING ELIOT

Major Eliot makes a plea for a large navy and for a small but mobile army. Attack by air he considers not a grave danger for us.

So long as our Star-Spangled Banner waves Eliot will have titles for his books, for his recently published one is called *Bombs Bursting in Air* (1939). In it, he regards air power as one of the three revolutionary changes throughout the world's history of warfare—the other two being military discipline and gunpowder. "The true measure of air power," he says, "as a means of waging war lies as yet hidden behind the veil of the future." The book fills a distinct need at the present when jittery Americans, hysterical over the menace of airplanes in war, are asking the War Department for anti-aircraft protection even in towns as far inland as Tucson, Arizona.

On May 17, 1940 Eliot's publishers rushed his latest work—*Strategy Map of Europe*—off the press. Designed by Richard E. Harrison, well-known map artist of *Fortune*, it is valuable for its new picture of Europe's many war fronts.

Major Eliot is an extremely busy man these days. He is military and naval correspondent for the New York *Herald Tribune*, with semi-weekly articles syndicated in 40 newspapers. He broadcasts a war commentary nightly for the Columbia Broadcasting System. He is a regular contributor to *Life*; his articles have also appeared in *Harper's*, *Foreign Affairs*, *New Republic*, *Current History*, *American Mercury*, *Saturday Evening Post*, *Fortune* and other magazines.

He is a member of the United States Infantry Association, Army Ordnance Association, Military Intelligence Reserve Society, the United States Naval Institute, American Military History Foundation, Foreign Policy

Association and Institute of Pacific Relations, and is a fellow of the American Geographical Society.

ELLIOT, KATHLEEN MORROW Feb 14, 1897—Mar 3, 1940 Author

Kathleen Morrow Elliot, poet and author of books for children, died in New York City, March 3, 1940. Surviving are her husband, Arthur H. Elliot; a son, Arthur, Jr.; and a daughter, Patricia.

Mrs. Elliot was born in Illinois in 1897, the daughter of the Reverend and Mrs. Winfield Morrow. She was graduated from Wooster College at the age of 19, and three years later married Arthur H. Elliot, an executive of the Standard-Vacuum Oil Company, stationed in the Dutch East Indies. Most of their married life has been spent in the Far East, first in the Straits Settlements, later in Java. During her years in the Orient Mrs. Elliot became noted as

KATHLEEN MORROW ELLIOT

ELLIOT, KATHLEEN MORROW—*Cont.*
a hostess, entertaining almost every important visitor to Java. When her children were old enough to go to schools in the United States, she began to write.

Her poems have appeared in a number of contemporary poetry magazines. Her three books for children, *Riema* (1937); *Soomoon* (1938); and *Jo-Yo's Idea* (1939), all treat of the East India scene and its people, and have received high critical praise.

ELLIOTT, HARRIET WISEMAN July 10, 1884- Educator; member of the National Defense Commission

Address: b. Federal Reserve Bldg, Washington, D. C.; h. 316 McIver St, Greensboro, North Carolina

Miss Harriet Elliott, only woman member of President Roosevelt's National Defense Commission, was appointed in May 1940 to represent the "consumers" of this country. She has promised American housewives that food prices will be watched against undue rising and that standards of living will be protected. "Hungry people, ill people are a liability in a defense program," she said. "The President is thinking in terms of a unified nation, of a people mentally and physically prepared to meet the responsibilities which the impact of the world crisis forces upon us." She has warned, however, that at present many millions of Americans are living below the "safety line."

Miss Elliott's job is a big one, but she is optimistic about its success. "We are in a better position today—1940—than we were in 1917. We start with a relatively stable cost of living standard. We start with some unused manpower and surplus commodities—with unusual plant facilities in some fields. We have a better national attitude to assist. All of this combines to make, for the moment, a less critical situation, if we use our available information and ingenuity in an intelligent way."

Without doubt, "agreeable round-faced" Harriet Elliott is well equipped for the task of seeing that prices stay down and living standards up. In 1940 she was elected president of the Social Service Conference, a group significant for its broad interest in all social questions. During the period of the Emergency Relief Administration, she was appointed a member of the State Advisory Commission of the ERA by the Governor of North Carolina. For many years she has been a professor of political science at the University of North Carolina.

HARRIET WISEMAN ELLIOTT

Born in Carbondale, Illinois, Miss Elliott, the daughter of Allan Curtis and Elizabeth Ann (White) Elliott, received her B. A. from Hanover College in 1910 and her M. A. from Columbia University in 1913. Right out of Columbia, she went to the University of North Carolina to teach political science. Her great interest then was woman suffrage, and she organized the first woman's suffrage group in North Carolina. Then, as now, she believed that women should have "responsible freedom."

This is the phrase that guides her now and has been the symbol of her relationship with the students at Woman's College, University of North Carolina, where, since 1935, she has been dean of women as well as professor of political science. When Miss Elliott went there it was a small normal school. Now it is one of the largest colleges in the country. During those 27 years Miss Elliott has built up not only her own political science department, but the whole social régime on the campus. She emphasizes that a broad educational policy means more than training girls in the skills; it means an appreciation of human relationships and of beauty.

As a political science teacher the classes she has taught have always been active discussion groups, with students encouraged to provoke questions at all times. An able speaker, Miss Elliott is constantly in demand by groups not only of women, but of men, for her "searching opinion" of the affairs of the day. In 1935 she toured the country, speaking from coast to coast, as director of an educational program for the women's division of the National Democratic Committee.

Miss Elliott has been associated with the government before her present position. In 1936 she was a member of the Woman's Advisory Committee of the Democratic National Convention. To the White House Conference on

"Children in a Democracy" in 1940 she gave her wholehearted support. And now this dynamic dean of women is glad to serve her country because she is a feminist who believes that "for the first time in history women today are equally important with men, not only in a crisis but in all the affairs of the nation," and because she is a woman who knows that "this is a time when we must have unity in every phase of national life." Although she insists that her major interest is still in education, Miss Elliott says that "when the President says I am needed, I shall be glad to go."

 American Women

ELLIOTT, MAXINE Feb 5, 1873—Mar 5, 1940 Actress

Long before the term "glamour girl" was coined, Maxine Elliott was the personification of that term. She was one of the most beautiful women the American stage has ever known. And while she was a competent actress, it was her beauty and personal charm that sent reviewers home to write of her in glowing adjectives and superlatives, and audiences to exclaim about her grace.

Daughter of a New England sea captain and brought up in a middle-class household, she was to charm two continents with her personal magnetism, to win fame and fortune and to become the friend of crowned heads. She was born in Rockland, Maine, February 5, 1873, and began life as Jessie Dermot, daughter of Thomas Dermot, a sea captain, and Adelaide (Hall) Dermot. As a young girl she made several trips on her father's sailing vessel and took a long voyage to South America and Spain. She studied at the Notre Dame Academy at Roxbury, Massachusetts, and, becoming interested in school theatricals, decided on a stage career.

At 16 she came to New York to study under Dion Boucicault. He suggested that she change her name to one that would be more striking for stage purposes, and thus "Maxine Elliott" was born. She made her first public stage appearance in 1890 in a minor part, that of Felicia Umfraville, in *The Middleman*, at the American debut of E. S. Willard, a noted English actor. For three years she played small parts in Willard's company, winning a few more important rôles occasionally, and then went

Culver

MAXINE ELLIOTT

to play supporting rôles for the late Rose Coghlan in *Diplomacy*, *A Woman of No Importance* and *Forget-Me-Not*.

Despite her industry and beauty, she served a five-year apprenticeship before she became at all well-known. It was in 1895, when Augustin Daly engaged her as one of the many who supported his star, Ada C. Rehan, that she began bowling over reviewers and stirring up controversy over whether it was her beauty or her acting ability that attracted attention. An anonymous reviewer describing her in her appearance with Ada Rehan in *A House of Cards* in 1896 said: "A wondrously beautiful woman who can act." The next year, when she appeared in *An American Citizen*, another reviewer was willing to grant her loveliness but to question her skill. "Maxine Elliott," he wrote, "contrary to recent testimony, is no more an actress than before, although her undoubted beauty is quite sufficient again to make one overlook other shortcomings."

However, whatever her acting ability at the time, Daly's strenuous demands on his players was an excellent training school for the future star. Three or four days after a new play was produced, its successor was put into rehearsal, and Maxine Elliott got plenty of experience. She went to London with Daly's company, playing Shakespearean rôles, and gained considerable success. In 1897 she left the Daly entourage and spent a summer in Tim Frawley's stock company in San Francisco in the Columbia Theatre, where later the star's dressing room was to be called the "Maxine Elliott Room."

Early in her stage career the young actress had married George A. McDermott, New York lawyer and marshal to Mayor William

ELLIOTT, MAXINE—*Continued*

R. Grace. She divorced him in 1896, and two years later, on February 20, 1898, married the late Nat C. Goodwin, whom she had met on one of her tours and with whom she was co-starring at the time of her marriage.

For several years she and her husband toured together, appearing in such hits as *Nathan Hale*, *A Gilded Fool* and *The Cowboy and the Lady*, and playing not only in the United States but in England and Australia as well.

When their stage partnership began Nat Goodwin was a veteran of the stage and one of the most popular comedians in the United States. Miss Elliott was comparatively little known. But she soon began stealing the show. When Goodwin presented *The Merchant of Venice* she won further acclaim; she was recognized as a player in her own right, and this was reflected in her contract for \$200 a week salary and half the profits over \$20,000.

Finally on September 28, 1903 she saw herself billed alone when Clyde Fitch's *Her Own Way* opened. Charles B. Dillingham had elevated her to stardom, and it marked her ultimate professional triumph over her husband. The reviews of *Her Own Way* sounded as if the reviewers had all collaborated. For almost every reviewer, impressed by her beauty and her performance, began his account of the show with the obvious: "Maxine Elliott had *Her Own Way* at the Garrick Theatre last night." Ethel Barrymore, seeing her for the first time, said: "She's positively beautiful. She's the Venus de Milo with arms."

Maxine Elliott was to have "her own way" as a star and a woman for the next 10 glittering years. She had already made successful appearances in London in *When We Were Twenty-One*, and in 1905 she took *Her Own Way* to London. The play was a marked success there, and so was Miss Elliott. She won the praise of King Edward VII, who asked that she be presented to him, and thereafter remained one of her warm admirers.

Mr. Goodwin had in the meantime passed out of her life, obtaining a divorce from her in Reno, Nevada, in 1908. Miss Elliott never married again.

When she returned to the United States she opened her own theatre. The Maxine Elliott, as the first woman manager and owner in New York. She opened in *The Chaperon* on December 30, 1908. From then on she began devoting more time to her theatrical enterprises and less to acting. She spent a great deal of time traveling abroad, scouting for plays she thought Americans would like. In 1911 she returned to England, bought a large estate, Hartsbourne Manor at Bushey, set up residence

for herself and the family of her sister Gertrude, wife of Sir Johnston Forbes-Robertson, and embarked on a brilliant career in British society. The Duchess of Sutherland, Lord Rosebury and Lord Curzon were among her close friends. She received international social notice when she was invited to Belvoir Castle, the ancestral seat of the Duke of Rutland, who was said to be so bored by society that for days at a time he would not exchange a dozen words with acquaintances in his clubs.

Her appearance in *Joseph and His Brethren* with Sir Herbert Beerbohm at His Majesty's Theatre in London in 1913 was a sensational success, but it marked the end of her theatrical career, except for desultory appearances between 1918 and 1920.

The War really ended the most glamorous period of her life. She threw herself into war work, and except for professional nurses was said to have been the first woman permitted at the front. She had her automobile transformed into an ambulance, and enlisted as a Red Cross nurse. She outfitted a fleet of barges to carry relief supplies to civilians along the canals of Belgium, devoting her entire income to this project. She scrubbed decks, cooked, did not spare herself. As a reward she received the Belgian Order of the Crown, and also decorations from the French and British governments.

Miss Elliott returned to the United States in 1917 and tried the silent motion pictures for a brief engagement, toured with William Faversham in *Lord and Lady Algy* in 1918 and 1919, and in 1920 appeared for the last time on the American stage as Cordelia in *Trimmed in Scarlet*, at her own theatre.

She refused to return to the theatre later, saying she "wished to grow middle-aged gracefully." In an interview in the United States in 1937 she was quoted as saying: "I never did like playing—never did really. All I care about are my friends and peace." This was looked upon as explaining in a sense the fact that, although she was one of the most important figures of the American theatre, she was never acclaimed as one of its greatest actresses.

After 1925 she spent most of her time on the Riviera. Her estate near Cannes, Villa de l'Horizon, was a show place, and European royalty and the elite of the social world gathered there. She was one of the most popular hostesses on the Riviera. At one dinner party in 1938 her guests were the Duke and Duchess of Windsor, Winston Churchill (see sketch this issue) and David Lloyd George. The Duke of Windsor, the former Edward VIII, leased the Villa de l'Horizon in 1936 when he was planning his first holiday away from England following his accession to the throne. There was a

sentimental link between Maxine Elliott and the Duke of Windsor, whose grandfather, Edward VII, had been the actress' friend.

Maxine Elliott won wealth as well as international popularity. Many had worshiped her from afar, like the late Robinson Locke, editor and publisher of *The Toledo Blade*, who compiled a three-volume scrapbook of her career which was bequeathed to the New York Public Library. It is one of the fullest available sources of the biography of the dark-haired statuesque beauty.

As in the case of many beautiful women who start out with glamour as their only asset, there was gossip about Maxine Elliott, and people speculated on whether her wealth was the result of her own earning and investments or whether she profited by market tips from men friends who were "in the know" in Wall Street. Despite whispers Maxine Elliott went calmly about her business untouched by scandal, was deeply affectionate to her family and took good care of them. It was through Maxine's efforts that her sister Gertrude began her stage career in Goodwin's troupe.

She was known as a shrewd business woman and died a wealthy woman. She had owned two valuable residences in New York, and the Villa de l'Horizon was built at a cost of \$350,000. Its rear wall was soundproof and its swimming pool was hewn from solid rock. She had in addition a valuable estate in Bushey and was reported to have given her niece, a namesake and a daughter of Sir Johnston Forbes-Robertson, \$500,000 as a wedding present in 1924.

One of her hobbies was dressmaking, probably a hangover from the early days of her career when she made her own dresses. She insisted on sewing for the Forbes-Robertson children, who adored their Aunt Maxine. And, strange to say, in her later years she sought comfort more than beauty. While other women dieted Maxine Elliott ate what she liked and weighed over 200 pounds on her last visit to the United States. "I love a quiet life," Maxine Elliott said, but to the end she was a lavish hostess.

She died at her villa near Cannes after a half-year's illness of heart disease.

ENTERS, ANGNA (anj-nä) April 28, 1907- Mime; painter; author

Address: b. c/o Newhouse Galleries, 15 E 57th St, New York City; h. 113 W 57th St, New York City

"The art of Angna Enters defies analysis," says one critic. "She isn't a monologist because she never says a word on the stage. She isn't exactly a dancer. She can't with accuracy be classified as an actress because she hasn't been in a play for a long time."

ANGNA ENTERS

She doesn't sing either." Angna Enters, who always packs in crowds to her performances, remains the great "What is it?" of the theatre.

This doesn't bother the audiences at all. The people who really worry are the critics who get very learned and technical after they have seen one of her performances. After listening to some of their highbrow dissertations, Angna Enters retorts: "Esthetics of the dance! I leave those to my colleagues. I plan my compositions to be interesting. I'd like to have the audience think of my performance as just a good show."

In *First Person Plural* (1937) Angna Enters describes the trend of her own life and recounts the background and evolution of the figures which compose her repertory. She wrote it partly to give some facts about herself and her compositions, partly because the Civil War in Spain, of which she was a witness, caused her "to realize that art alone, like bread, is not enough for life" and made her want to speak not as an artist but "as a person about persons."

When Angna Enters achieved success in 1927 rumors about her dark past began to circulate. There were reports that she was an Italian aristocrat who had fled from vast Italian estates because of thwarted love. Or some older woman would remark at a matinée: "My dear! My dear! They say she is a former nun! Fancy." Actually there is no mystery. Though she was born in New York, "today, with beer, Angna Enters is one of the things Milwaukee is proud of."

She says she would like to begin *First Person Plural* with a little anecdote about how she began to dance and mime (she pronounces it "meem") at the age of two,

but can offer only a prize which she won when she was four for coloring a newspaper drawing. As a child she studied ballet "for no special reason . . . just to be accomplished," but these studies stopped almost as immediately as her formal education, for Angna Enters' childhood was "harried by poverty."

Her study of painting was limited "to an intermittent elementary school course, some work (chiefly swimming) during an adolescent summer month in a camp, and one unfinished evening semester at the New York Art Students League." The evening course was unfinished "because what I earned by day at commercial lettering in an advertising concern wasn't enough to pay for the course. I had augmented my earnings as a 'free lance,' getting assignments from other advertising offices during my lunch hour, but these additional jobs could be done only after my nightly attendance at the Art Students League. That obliged me to work half the night."

In the intervening time, between job and night course, Angna Enters began working in the studio of Michio Itow, the Japanese dancer. She toured with him, portraying a Japanese dancing girl. In 1924 and 1925 she played a small part in *The Lady Cristalinda*, in which she was a Japanese girl.

She kept on with her painting and it was painting that drew Miss Enters to "mime," as it was her "miming" that brought fresh vision to her painting. "Working directly with myself as a medium instead of with a brush on canvas might solve a lack of approach—just as now the study of painting seems to help me in the study of form in movement." But times were hard and in 1925 she was up against it. She spent time with her art, she did lettering for printers and advertising agencies.

Late in that year she decided to give a recital of her miming. She borrowed \$25 for the theatre and the money to print handbills. She mailed the handbills to names picked at random from the telephone book. At her performance on February 26, 1926, to everyone's surprise, there was a fairly good attendance. She cleared expenses and short, vivid sketches. Sometimes she gave another recital, this time together with a singer and a violinist because she didn't have enough numbers to fill up a whole evening. She continued to borrow money and put on shows until suddenly in 1927 she was successful.

Today Angna Enters is a complete one-woman theatre. Quite by herself, without scenery and without dialogue, she gives short, vivid sketches. Sometimes she dances, sometimes she remains quite motionless in a chair or at a table and conveys her characterization by movements of her hands or the expression on her face. The characters she has imagined are realistically commonplace—like the girl practicing the piano; or they are rich and strange—a sultry, majestic Spanish girl of the sixteenth century dancing the slow pavana; or they

are humorous—a young woman reversing the strip tease act; or they are socially significant—*Spain Says Salud*.

The dances are built up bit by bit from odds and ends scribbled in black-bound notebooks. These volumes, the size of a high school student's composition book, contain water colors, pencil sketches and disconnected paragraphs. Out of these workbooks come ideas for costumes as well, for Miss Enters does all the cutting and fitting of her stage garments.

Miss Enters has won a reputation for herself, too, as a painter. From 1933 on she has had seven successive New York exhibitions, two of them in conjunction with two Guggenheim Fellowships awarded in 1934 and 1935 and she has had a number of exhibitions in many cities of this country and Europe. One of her paintings, *Spain Says Salud* was bought by the Metropolitan Museum of Art in 1940. Of her art work one critic said: "Taken either as spadework for her miming or as independent creations, her paintings and drawings of archaic Greek and Oriental forms, Spanish bullfighters, imagined figures from history are fresh, economical, expert." She has also written the play, *Love Possessed Juana* (1939), which deals with the inquisition in Spain and has stage settings and music by the author.

No matter what she is doing, Angna Enters works very hard, from 12 to 14 hours a day in her studio, on costumes, on musical arrangements, on details of her tours and on painting. Her tours are mostly one-night stands, the most tiring for an artist, and there was a time when Miss Enters suffered a breakdown because she was trying to do too much. She is a "chic, puckish young woman with bright black eyes and thick black bangs."

ERNST, MORRIS LEOPOLD Aug 23, 1888- Lawyer

Address: b. 285 Madison Ave, New York City; h. 46 W 11th St, New York City

When Franklin D. Roosevelt was Governor of New York State he called Morris Ernst to Albany and asked him to become a member of the State Banking Board. Ernst accepted. "And now, Morris," said the Governor, "I'd like to ask for one favor. Don't try to free Tom Mooney tomorrow."

Morris Ernst is a lawyer who has helped organize movements to save the Scottsboro boys and who fought Mayor Hague of Jersey City for the CIO when the Mayor expelled or locked up CIO organizers for giving out leaflets. He is also an authority on literary censorship, libel, radio legislation, taxation and finance. He is the attorney for the National Jewelers' Board of Trade, for the Society of American Composers, for the Sauerkraut Workers' Union, for the American Civil Liberties Union, for the Authors' League, the Dramatists' Guild and the Macaroni Workers' Union.

It is probably as a censorship lawyer, however, that he is best-known. For years he has waged an almost continuous fight against Federal, state, local, private and ecclesiastical censorship bodies. In 1927 he gained the right of general sale for Dr. Marie Stopes' *Married Love*. Radclyffe Hall's *The Well of Loneliness*, Schnitzler's *Casanova's Homecoming* and James Joyce's *Ulysses* were put on sale through his court fights. And it is largely due to his own efforts that Morris Ernst was able to say in March 1940: "Now no book published by a regular publisher or reviewed by a regular critic, no book published honestly and without surreptition is in any danger of suppression."

When Morris Ernst argues a censorship case, he doesn't use any courtroom tricks. Once in a while, as in the case of *Ulysses*, he uses the sort of argument which states that, since *Ulysses* is the essence of frankness it is also the essence of purity. But mostly he relies on making a public issue of the case. He himself says: "As a good many of my professional associates know, I am not a good office lawyer. We have boys in our office who know more law than I do. As an outside man, however, occasionally I do pretty well."

MORRIS ERNST

When Morris Ernst does his regular routine of business and commercial law for his firm (Greenbaum, Wolff and Ernst) he makes a good deal of money. His cases and his clients are important ones; he has bested such opposing counsels as John W. Davis and the late Samuel Untermyer (see sketch this issue) before the Supreme Court, and has acted as counsel for Maurice Evans (see sketch this issue), Edna Ferber and others. He has to make a good deal of money to be able to take those long layoffs in which he indulges in non-revenue or low-revenue producing pursuits—defending unions, fighting for civil liberties, acting as a member of the State Banking Board.

Ernst does not and never has belonged to the American Bar Association, though he is an active member of the less conservative Lawyers' Guild. He refused to join the American Bar Association because it won't admit Negroes. When the association asked him to become a member, he wrote back asking whether colored attorneys were eligible for membership. In return he received an apology, which he still treasures, which said that the invitation was sent under the assumption that Ernst was white.

Much of the law in which he has been involved and much of what he believes is incorporated in the books and articles which Ernst has written. With Pare Lorentz (see sketch this issue) he wrote *Censored* (1930); with Alexander Lindsey he wrote *Hold Your Tongue!* (1932) and *The Censor Marches On* (1939). He also wrote *America's Primer* (1931), which chartered a new order of things and presented several of the fundamentals of the New Deal, and the *Ultimate Power* (1937), a study of the Supreme Court, voted one of the 10 best non-fiction books of 1937 by a jury of distinguished critics. His latest book, published in June 1940, is *Too Big*,

a study of Big Business in this country—coal, steel, insurance, banks, movies—in which Ernst concludes that the "pursuit of size as a symbol of success is ruinous to our society. . . . We are developing a race of clerks devoid of initiative, stripped of individuality and barren of imagination."

Ernst started law as a shirt manufacturer. He was born in Uniontown, Alabama, the son of a country general storekeeper, S. Carl Ernst, and Sarah (Bernheim) Ernst. When he was about two, his family moved to New York, where his father made a comfortable living from real estate. Ernst finished Horace Mann High School at 16 and then went to Williams College, from which he was graduated in 1909. After college he started in the shirt business in Brooklyn, making what he called "the world's ugliest shirts"—"fifty numbers" at \$3.75 to \$4.50 a dozen.

While manufacturing shirts he went to the New York Law School at night. After about a year or so he quit the shirt business and went to work selling furniture in Ludwig Baumann's Brooklyn store, where he rose to be manager. But he got his law degree in 1912 and in 1915 left the store to form the law partnership of Greenbaum, Wolff and Ernst. In his first year of practice Ernst made about one-sixth of what he made in the furniture store, and was probably overpaid at that, he says. "Very quickly I realized the inadequacy of my part-time preparation. I started out to make up for it by exhibitionism and have never recovered."

Very soon after he started practicing law, Ernst was included in a group formed for the discussion of a free employment service, to be run by New York State. Ernst got the job of drafting a bill which the Legislature later adopted. Within a few years newspapers were referring to him as a "labor expert," and as such he was made a member of the United States Shipping Board during the War.

After the War Ernst became involved in a fight for the truck farmers around New York, alleging that the public markets were graft- and racketeer-ridden, and for years he was involved in a number of labor cases. In 1934 he was appointed Mayor La Guardia's (see sketch this issue) personal representative to try to settle the taxi drivers' strike, and he brought about a settlement. He was the champion of the Newspaper Guild and won its biggest case in the Supreme Court. Besides labor, he has particularly championed the causes of the book trade, achieving lower postal rates, fighting censorship, arguing for fair trade practices.

"A small man, broad-shouldered and vital looking, with a keen apperceptive face and an easy manner which can change in a minute to something that just misses being too aggressive," Ernst spends four months of the year at Nantucket, building furniture, garages and houses, and sailing in his boat, *The Episode*. In New York City his cocktail parties are distinguished for the diversity of

guests. At any one you might find labor leaders and Morgan partners; fan dancers and leading authors all together. Winter, spring and fall weekends are spent with his wife and three children on their farm in New Jersey. In 1924 he married Margaret Samuels, a teacher in the City and Country School and author of several books on etymology. (His first wife, Susan Leeburger, died in 1922.)

Ernst himself is a general contributor to a number of magazines, and a chronic contributor to *The Nation*. Once, and only once, he wrote a love story, which *Cosmopolitan* bought for \$500, "unaware," says Ernst, "that I would have given \$500 to be able to say it had been accepted."

ESTIGARRIBIA, JOSE FELIX (ěs'te-găr-rě'byă hō-să' fā'lěks) Feb 21, 1888—Sept 7, 1940 Dictator of Paraguay; killed in airplane crash

From June issue:

Conquering hero of the Chaco War, diplomat, president and dictator is the path that General José Félix Estigarribia's life has followed. The outbreak of hostilities between Paraguay and Bolivia over the Chaco region in 1932 found Estigarribia in command of the first division of infantry in the Chaco and well prepared to take command of the field. When he returned to Asunción in 1935 at the head of his victorious armies, he was hailed as a conquering hero. To honor him the Paraguayan Congress created the rank of general of the army, equivalent to that of marshal, and he was also granted a life pension of 1,000 gold pesos a month. And it seemed only natural that a grateful people further reward a national hero with the post of Minister to the United States, and later elect him President of Paraguay.

José Félix Estigarribia was born in Caragatay, Paraguay, February 21, 1888, the son of well-to-do parents, Mateo and Casilda (Insaurraldo) de Estigarribia. When he was a child his parents moved to Asunción, and young José Félix received his education there, attending the military college. In the army he was assigned to the infantry. A year later, in 1911, he supplemented his military studies by attending the military college in Chile for two years. On his return to Paraguay he rose rapidly in army rank. In 1923 he was appointed principal of the Military School of Asunción with the

JOSE FELIX ESTIGARRIBIA

rank of major. In 1924 he was sent to L'Ecole Supérieure de Guerre in Paris, France, for a three-year military course. Once more back in Paraguay in 1927, he was promoted to the rank of lieutenant colonel, and appointed deputy chief of staff. Early in 1931 he was named inspector general of the army and in that capacity went to the Chaco to organize the first division of infantry.

When hostilities broke out he was commissioned to organize the defense of the Chaco. He covered himself with glory. After a hard-won victory at Fort Boqueron in 1932 he was advanced to the rank of colonel. His victories in the "green hell" won for him successively the titles of chief of the first army corps, then of a sector of the Chaco, next, of all the Chaco forces, and, finally, of all campaign forces, with the rank of general of division.

There was only one setback in the career of Paraguay's war-hero President. When Colonel Rafael Franco, another Chaco hero, seized the Presidency in a revolution that upset the administration of President Ayala, Estigarribia and Ayala were exiled for a brief period in 1937.

But in 1938 Estigarribia's star was again in the ascent. In March of that year he was appointed Minister to the United States and also represented his country on the governing board of the Pan-American Union. While he was Minister to the United States Estigarribia tried his hand at making peace between Paraguay and Bolivia. A truce had been arranged in 1935, but the efforts of the United States, Argentina, Brazil, Chile, Uruguay and Peru to settle the conflict seemed to be doomed to failure. As late as June 1938 armed incidents were increasing between Bolivian and Paraguayan troops. The tide was

ESTIGARRIBIA, JOSE—*Continued*

turned by Estigarribia. Leaving his post in Washington, Estigarribia conferred with neutral delegates and his own countrymen. As a result of his work common sense prevailed, and in July 1938 Paraguay and Bolivia signed a treaty ending their bloody war in the Chaco swamps. Paraguay got most of the Chaco, but Bolivia got a free port on the Paraguay River.

Estigarribia's election as President in 1939 was unopposed. Estigarribia was not even on the scene; he was in Washington, serving as Minister.

The Paraguayan President is a small, military-mannered man, a bit taciturn. He is 5 feet 6 inches tall, weighs between 130 and 140 pounds and is a man of direct action. He wasted little time after his election in setting himself up as a dictator. In a radio address made February 18, 1940, following a decree he had issued, Estigarribia told the people of Paraguay that the nation faced anarchy and that as soon as orderly government was restored he would call an election of a national assembly to draft a new constitution. The old document, in force since 1870, was out of date, Estigarribia declared. Paraguay, he insisted, must proclaim a new democracy which must be a social as well as an economic one. In setting himself up as a dictator, President Estigarribia put to a public test the popularity he won as a war hero. The new Constitution was signed on July 10, 1940.

Both as Minister and President, Estigarribia has worked for Paraguay's economic advancement through financial and trade agreements with the United States. He wrote to Secretary of State Cordell Hull (see sketch this issue) of the United States just prior to leaving to take up his duties as President of Paraguay: "The peaceful and successful settlement of the boundary dispute between Paraguay and Bolivia which was agreed upon by the two parties with the assistance of six mediatory nations at the Chaco Peace Conference leaves my country free to devote itself to the constructive task of developing its natural resources. Paraguay knows from bitter experience what sacrifices and what diversion of energies from economic and social progress are imposed by war. It turns from the sword to the plowshare with deep satisfaction, and as a result of the freely-expressed choice of the Paraguayan people. I realize, as do my fellow citizens, the magnitude of the task which faces us, but we are determined to succeed and to obtain those benefits of modern civilization which will mean happiness and prosperity to the country."

EVANS, MAURICE June 3, 1901- Actor; manager

Address: St. James Theatre, New York City

In 1935, when Maurice Evans, without any preliminary fanfare, sailed quietly from London to play Romeo with Katharine Cornell, nobody could possibly have prophesied that within the brief space of five years he would climb to a position of commanding importance in the American theatre. Yet Mr. Evans has done this, single-handed. He has become known to Times Square and to Texas, to Boston and to Ohio. "If his career should close tomorrow," says one theatre expert, "Maurice Evans would have earned a chapter for himself in any subsequent history of the American theatre."

Maurice Evans has been acting almost since he can remember. He was born on June 3, 1901, the son of a Justice of the Peace in Dorset, England. His father, who was "something of a local light," used to dramatize for amateur performances the novels of another local light, Thomas Hardy. Maurice made his debut as a shepherd lad in *Far From the Madding Crowd* when he was seven. Later he held the post of musical director for another of these performances. This meant that he played the pianola between acts.

He attended the Grocer's Company School and spent much of his time appearing as a boy singer and amateur actor. During the War, he says, he "would go around to the war hospitals and torture the poor wounded soldiers" with his singing. After his voice broke he continued his musical career as assistant cashier at Chappell's music publishing house, Bond Street, London. Mr. Evans says that he wasn't much good at Chappell's because he was very bad at figures. While pretending in the daytime to be a cashier he appeared regularly with an amateur company every night. "It was down in a slum, but I went there every evening and played everything." It was while he was playing Saint Francis of Assisi in an amateur offering that he got his first chance. The owner of the Cambridge Festival Theatre saw him and liked him and insisted that he give up commercial life and act professionally at Cambridge. His first professional appearance was on November 26, 1926 as Orestes in *The Orestia* of Aeschylus. He stayed in Cambridge for one season, acting everything from Greek tragedy to Sweeney Todd, the "Demon Barber of Fleet Street," in which, because

of a defective trap slide, he suffered a case of near concussion.

Maurice Evans' first London appearance was on August 25, 1927 in *The One-Eyed Herring*, in which he portrayed a policeman who arrived at an opportune moment with the authority of the law and three lines of dialogue. He had a lot of jobs after that, none very good, until what he calls "his first burst on the London public" came in John Van Druten's *Diversion*. He was a success in a number of plays and a tremendous success as Second Lieutenant Raleigh in *Journey's End* (January 1929).

After *Journey's End*, Maurice Evans was one of London's leading actors. In 1929 he also went into pictures and was seen in *White Cargo*, *By-Pass to Happiness*, *Wedding Rehearsal* and others. But while he was making a name for himself in the London theatre and in the films, he established and carried on the "Nine to Six Cleaners" in Bloomsbury, one of the first cleaning and dyeing places in London where customers could get service within a day. "He was deluged with dirty clothes in the daytime and applause at night and was pleased with both."

"Probably the most important move in his life" came when Dame May Whitty, with whom he was playing in *The Voyage of Inheritance*, persuaded him to join the "Old Vic" company, for the same reason that Charles Laughton and John Gielgud had joined it—to study the classics. In the one year that he was there, from 1934 to 1935, he played Octavius Caesar in *Antony and Cleopatra*; Benedick in *Much Ado About Nothing*; Petruchio in the *Taming of the Shrew*; Iago in *Othello*; Richard II; and Hamlet, as well as rôles in three or four Shaw plays and the title rôle of a Greek drama.

At a party in London one night he was introduced to a man named Guthrie McClintic. McClintic had been searching for a Romeo from Broadway to Hollywood and back and thence to London, where he saw Maurice Evans in *Hamlet*. Immediately upon introduction, McClintic asked Evans: "How would you like to go to the United States and play Romeo with Mrs. McClintic?" Evans dodged the answer and rushed a friend off to a corner to ask him: "Who is this Mrs. McClintic?" When he found out that it was Katharine Cornell, he said he'd be delighted.

He acted Romeo with Katharine Cornell on tour throughout the fall of 1935 and made his first New York appearance in it on December 23, 1935. He was a success, even though he confesses that he really doesn't care much for Romeo. "He is disagreeable, really," Evans insists. "He falls in and out of love at the beginning of the play in very fickle fashion; he is directly responsible for the killing of his friend, Mercutio; he sobs like a child in the Friar's cell; he leaves the newly-wedded Juliet to face the consequences alone; in fact, he was not even

MAURICE EVANS

permitted to propose to her—she herself did the proposing."

While Evans was playing Romeo with Katharine Cornell, she wrote Shaw (who always likes to be consulted) asking who should play the Dauphin in his *St. Joan*, which she was planning to put on next. Shaw wired back: "If you can find Maurice Evans, engage him." She did. That Maurice could play the Dauphin, "a richly satiric portrait," right after Romeo is proof of his astonishing versatility. According to one critic, he conveys much of the differences between characters through a flexible voice of variable range and quality. For Romeo it is "rich, full and steady," for the Dauphin it rises into falsetto and has a sharp edge. According to some critics, it is "his best asset."

As Napoleon in *St. Helena* in 1937, Evans gave proof of "how remarkable is his talent." But *St. Helena* was a failure. Because this play, Evans' first solo effort in America, had failed and because there was a lot of Shakespeare on the stage that year, first-night audiences looked forward with a good deal of doubt to Evans' production of *King Richard II* in February 1937. "But if the first curtain had risen on more doubt than certainty, the final curtain brought unanimous yells of enthusiasm that proclaimed one of the most startling triumphs in years."

It is said that *Richard II* had been made possible by a still anonymous Evans fan who handed him a check for \$25,000 at the Gotham bar one afternoon.

In November 1937 Maurice Evans appeared as Falstaff in *Henry IV, Part I*. "In Evans' shrewd and comprehending hands Falstaff lurched over the footlights not only for the last, true ounce of his classic self, but with an amiable clarity and beaming self-criticism that many hams who

EVANS, MAURICE—*Continued*

previously have batted on him have denied him."

"In the entire history of the English-speaking stage since 1600," says Clayton Hamilton, "I can find no record of any other actor who having achieved success as Falstaff, was also willing to attempt the part of Hamlet." Maurice Evans not only attempted the part of Hamlet; he attempted it in an uncut version in October 1938. Of this version, which started at 5:30 in the afternoon, most critics are agreed that the spectators "receive not only a heightened and intensified emotional impression of the play but a sense of its logical structure and motivation which none of the condensed versions has achieved."

The critics are not agreed, however, on Evans' interpretation of the melancholy Prince of Denmark. Evans himself said: "I wanted to produce a *Hamlet* which was a play and not a study of dyspepsia." John Mason Brown thinks he succeeded splendidly: "Unlike most recent Hamlets, Mr. Evans' is not a neurotic princeling with a pale visage who strikes despairing poses under spotlights. He is the first entirely masculine Hamlet of our time." But by others, Evans' Hamlet is called a work of "bold showmanship rather than profound interpretation": it is said to "shed no light on Hamlet himself, to add no cubit to his stature." *Time* says Evans makes Hamlet into "more of a Great Dane than a melancholy one."

In October 1940 Mr. Evans and Helen Hayes opened in Boston in *Twelfth Night*, preparatory to bringing it to New York. He was commended for having found "something that seems to be new for the part in a slight cockney accent" although "he has skillfully followed the tradition, with richly varied means, to emphasize the humorous connotations of the dilemma."

Maurice Evans, who lectured on Shakespeare during the fall of 1940 for the British War Relief Fund, has enjoyed producing and acting in the United States—"it's more alive," he says. And he has been commended by George Jean Nathan for his attitude towards America. "He's giving the American theater the doggone best that's in him; he shows frankly that he is doggone tickled to death that the American theatre likes him; and we gladly give him back what he doggone well deserves."

When you meet Maurice Evans minus the blond wig of Richard or the pot-belly of Falstaff, "you discover a young man who might easily be a rather firmly-set businessman with a flair for wearing a brown and white checkered jacket with dark trousers. His black-brown hair is close-cut and he has a neat set of features, including a good forehead and chin which balance nicely. He loves to sail his boat, he likes to swim, to play golf and to eat heavy meals before performing. And he loves his dog Hamish. Hamish hates mice and the last time Evans called London to talk to his family—he's

unmarried—they held Hamish up to the telephone. Evans made a noise like a mouse with a file and Hamish said "woof."

In everything he does, Evans is clipped and briskly efficient. "When he found out he was really going to produce *Richard II*, he put a telephone call through to London to Margaret Webster (see sketch this issue) to arrange her coming over to direct it. . . . As he snapped out one item after the other—when, and on what boat she was to sail, what the designer was to do, and a dozen and one other things—Miss Webster could only cling to the phone in silent prayer that she'd remember each crackling detail. Abruptly he stopped. 'We've half a minute left,' he said crisply. 'How's the King?'"

EVES, REGINALD GRENVILLE 1876-
English portrait painter

Address: 149 Adelaide Rd, London, N. W. 3, England

After fighting had been going on for two years in the First World War the British decided to appoint a number of official artists to record scenes on the various battle fronts and at sea. Sir Muirhead Bone was the first and the greatest of these, but there were a number of other fine painters similarly occupied, and their works are now to be seen in the Imperial War Museum, London. This time the official artists were appointed a few weeks after war had begun. The best-known among them is Reginald Eves, and since he is a portrait painter his chief task will probably be to put on canvas the features of generals, admirals and statesmen. That he is an excellent choice is proved by his existing portraits of Earl Jellicoe, Earl Beatty, Sir Charles Townshend and other military figures.

Though Eves is a full-fledged member of the Royal Academy he is not like the popular conception of an Academician either in his appearance or in his painting. Typical of the man is his conversation with a reporter who called to ask him how his portrait of Sir Giles Scott was painted. "How did I paint him?" Eves replied. "Well, I took a brush and I took some paint and I took a canvas, and he came half a dozen times and I painted him." Said the reporter, "That's not what I meant; I mean, in what clothes did you paint him?" Eves thought.

"I can't remember . . . wait a moment; let me think. Yes, I remember; he was wearing a medal!"

Nor is he much interested in money. When acting as visiting teacher at an art school (which he does from time to time) he is quite capable of dashing off a fine drawing to illustrate some point and leaving it, endowed with obvious commercial value, as a gift to the student concerned. He is said to be "no businessman," and leaves financial matters in the hands of a brother who carefully watches the painter's best interests.

As for his work, it is "academic" only in the sense that it is correctly drawn and does not go in for distortion. His strong, breezy handling of paint, his keen, penetrative sense of character and his mastery of color combine to make him a portraitist second only to Augustus John. And over and above this better-known work are his water colors, big drawings comparable in size to those of the late George Ennis, but not otherwise similar; for where Ennis handled his brush with a Sargent-like largeness and dash, Eves almost dissolves his subject in color and light, producing ethereal poems which place him among the first half-dozen water-colorists of England.

He was born in London, the son of the late W. H. Eves, Justice of the Peace, and began to draw and paint as soon as he could write. He was using water colors at the age of 10 and started on oils soon afterward. He attended University College School, Hampstead, London, but left in 1891 at the comparatively early age of 16, after winning an award called the Trevellany Goodall Scholarship which would maintain him through a course at the Slade School (the art department of University College, London).

While at college Eves won another award, the Slade Scholarship, and so was able to complete his course, winning his diploma in 1894. His parents—like most parents of would-be artists, when there is no family fortune in the offing—objected to his taking up painting as a career; but his father went so far as to grant him a small allowance, and on this he lived for five years on a farm at Holwick, in Yorkshire, concentrating on painting animals and landscapes.

It was the Royal Academy that began Eves' real career by accepting a picture called *Waiting* in 1899 and hanging it "on the line" (that is, at eye-level)—an unusual honor for a newcomer. This made him decide to try his fortunes in London, and when he set up a studio there in Fitzroy Street, where many of the younger and poorer artists gather, he was lucky enough to pick up three portrait jobs almost at once. He painted with energy and en-

thusiasm, studied the works of the past at the National Gallery and at the British Museum, and in 1900 moved out to the more prosperous artistic quarter of St. John's Wood, two miles north of the Marble Arch. In 1902 he exhibited at the academy a portrait of Miss Bertha Sybil Papillon, his fiancée. Two portrait commissions at \$500 each the same year made him feel more financially secure, and in 1903 he married. The couple now have one son.

Since that time Eves' career as a portrait painter has shown steady progress. He has exhibited regularly at the Royal Academy, of which he was made Associate in 1933 and full Academician in 1939. The Paris Salon has also honored him, granting him a silver medal in 1924 for *Sir Charles Townshend* and a gold medal in 1926 for *Sir Acton Blake*. He is a member of the Royal Society of Portrait Painters and the Royal Institute of Oil Painters, and in 1933 was elected an honorary member of the Royal Institute of Painters in Water Colors. His list of distinguished sitters is extensive. Royal patrons have included the ex-Queen of Spain, Princess Beatrice and Lord Leopold Mountbatten; politics have brought him Earl Baldwin; from legal circles he has painted the famous judge Lord Darling; from the services Lord Jellicoe and Lord Beatty; from literature Thomas Hardy and Max Beerbohm; from the stage Lady Diana Manners and Leslie Howard. He is represented in the Tate Gallery, the National Portrait Gallery, the Luxembourg, and the National Gallery of Australia.

Eves lives in Hampstead, London, a suburb which is the residence of many other British writers, actors and artists.

FAIRBANKS, DOUGLAS May 23, 1883—Dec 12, 1939 Film actor

Douglas Fairbanks was the son of H. Charles Ulman, a New York lawyer and Shakespearean scholar who went West to

DOUGLAS FAIRBANKS

Museum of the City of New York

WILLIAM FAVERSHAM

look after mining interests. Shortly after Douglas' birth, in Denver, Colorado, his mother was divorced and resumed the use of the name of her first husband, John Fairbanks. Young Fairbanks attended the Colorado School of Mines, spent five months as a special student at Harvard, and then struck out for the stage, working up from Richmond, Virginia, to Broadway. After a dull stretch in a Wall Street office and a little tramping as a hardware salesman he landed some rôles on Broadway again, and came eventually into his fabulous career on the screen.

Fairbanks was thrice married: in 1907 to Beth Sully, an actress, the mother of Douglas Fairbanks Jr.; two years after his divorce from her, to Mary Pickford (1920); and a year after his second divorce (1935), to Lady Ashley, Sylvia Hawkes of stage fame.

FEDOROVA, NINA (fěd-or-ō'vā nē'na or fyo'dō-rō-vā) Mar 7, 1895- Author
Address: h. 1848 Moss St, Eugene, Oregon

One of the novels to attract special interest in the fall of 1940 was *The Family* by Nina Fedorova, which won the *Atlantic Monthly* prize of \$10,000 for its surprised author. An extremely successful first novel, it has drawn consistently favorable reviews from the critics, one of whom commented that "*The Family* is written in the tradition of the great Russian novelists; it may, indeed, be rated as the best Russian novel that has emerged in the last two decades. Neither Tolstoi nor Dostoievski would be loath to give a smile of brotherhood to Nina Fedorova. . . . Out of a welter of suffering, imprisonment, exile, poverty and incredible hardship, she has fashioned a simple tale of essential goodness and compassion."

Not all the critics are ready to agree that Nina Fedorova is ready to receive the mantle of greatness right off the shoulders of Tolstoi and Dostoievski. Lewis Gannett of the New York *Herald Tribune* sees her rather as a compound of Chekhov, Pearl Buck and Alice Hegan Rice, while Charles Poore of the New York *Times* called the book halfway between *Grand Hotel* and *Mrs. Wiggs of the Cabbage Patch*. There seems to be no doubt, however, that Nina Fedorova has written an entertaining and excellent book, a story of human sorrow but alive with both humor and gaiety.

Nina Fedorova's book deals with the story of a White Russian family, eking out its existence among thousands of other refugees by running a boarding house in the British Concession of Tientsin. The family consists of "a granny, a mother, a daughter and two nephews," and their story is closely interwoven with the fantastic tales of all the transients who make a brief stay at the shabby boarding house. Yet somehow this pageantry of the defeated—including an Englishwoman of means regrettably addicted to the bottle, a Russian scientist once internationally known, a Bessarabian fortune teller—is not a gloomy spectacle. On the contrary, the whole book is permeated by a sort of innocent merriment and joy of living; tragedy and heartbreak alternate with sudden disconcerting flashes of humor, so that the book becomes a "sunlit parable of this world in which almost everyone is in some sense a refugee." And "The Family" is what gives the sense of reality to the crumbling and illogical world in which we live.

The novel has a distinct ring of authenticity—the incidental characters, the customs, the local color of the war-torn Tientsin (the story takes place in 1937) are sketched with confidence and deftness that betoken personal knowledge rather than research. Until 1938 Nina Fedorova (in private life Mrs. Antonina Riasanovsky) had lived in Harbin as one of the ever-present colony of the White Russian refugees. She claims that her life has been rather ordinary—but her attitude in that respect is reminiscent of the characters in her novel, with their capacity for taking in their stride the unusual and disturbing things that happen to them.

The daughter of Fedor Dimitrievitch Podgorinov, she was born in Poltava, a small South Russian town of historical importance: Peter the Great had routed the Swedes there. Her life, until the Revolution, pursued the smooth, even tenor of the pre-revolutionary middle-class existence. She went to the local Gymnasia—high school. Afterward she attended the University of Petrograd—now Leningrad—for three and one-half years, studying philology and history. The great storm that was the Revolution swept her, together with many other people of her station in life, eastward and over the Russian border. She migrated across Siberia into Manchuria and settled in Harbin.

In Harbin Nina Fedorova taught literature, history, psychology and logic in a high school and at the same time attended courses at the Y. M. C. A. college. In 1923 she married a Russian exile, Valentine A. Riasanovsky, a brilliant professor of law. The Japanese invasion of Manchuria drove the Riasanovskys out of Harbin and to Tientsin, where the author of *The Family* helped to balance the family budget by writing for the English-language papers.

The War, however, pursued them to Tientsin, and in 1938 they decided to come to

NINA FEDOROVA

the United States and settle in Eugene, Oregon. The selection of the town seems to have been based on a typically Russian feeling for family. While poring over maps and travel books in search of a place to settle, Nina Fedorova's eye was arrested by the name of her present residence because her sister's name is Eugenia. An omen! Accordingly, to Eugene the Riasanovskys went. They have since lived there with their two sons, Nicholas and Alexander, and are now in the process of becoming American citizens.

The author bears a marked resemblance to some of the nicer characters in her book; her face, with its typically Russian high cheekbones, is intelligent, sensitive and humorous. Until June, when her first novel, submitted at the last minute, won the *Atlantic Monthly* prize for 1940, she had been living the simple and modest life of a small-town housewife with her husband and their two young sons, one of whom is studying at the University of Oregon. For months before she won the prize, her happiness was darkly clouded by the illness of her husband—"I spent three months with him actually living in the hospital," she says, "while the boys imitated Robinson Crusoe at home." Now, she writes, he is "firmly on the way to a complete recovery." And her prize money has helped pay the bills, as it has paid for a new house, called, in honor of its source, "Atlantic Laurels." Nina Fedorova admits to being a little old-fashioned: she does not smoke or drink or even dance, she confessed on her arrival in Boston to collect the prize from her publishers, The Atlantic Monthly Press and Little, Brown & Company. "I like classic literature and music. I do not follow fashion closely."

FEDOROVA, NINA—*Continued*

Nina Fedorova says about her life: "A considerable part of it has been spent in moving from place to place (Europe, Asia, America), and a great amount of my energy in different kinds of short-lived activities connected with the needs of the moment and the place... Now I am developing a taste for peace and solitude."

She has no time for many hobbies. If she had she would like to collect old porcelain teacups. Also, "if given another life," she would devote it to astronomy. Her great passions are reading and symphonic music. She would like to spend the rest of her life "living in a very small town, seeing mountains from my windows, studying Italian and reading Dante and Petrarch in the original." Eugene, Oregon seems to have been made to order for her and her family.

FINKELSTEIN, LOUIS, RABBI June 14, 1895— Professor and president of the Jewish Theological Seminary of America Address: b. 3080 Broadway, New York City; h. 612 W 112th St, New York City

In September 1940 an "august collection of Nobel Prize scientists, college professors and clergymen of all faiths" met in a Conference on Science, Philosophy and Religion, called to find unifying principles strong enough to meet the challenge of totalitarianism. Dr. Louis Finkelstein, president of the Jewish Theological Seminary and one of the founding members of the Conference, opened its first meeting and answered the humanist arguments of Dr. Albert Einstein. He pointed out that "a natural scientist has a great responsibility when speaking in the field of philosophy and religion; he should realize that he must speak with as much reserve in these fields as he habitually does in his own field of natural science." With differences of this sort cropping up time and again, the participants admitted that

their search for unity was a hard one, but they intended to try for it again in 1941 and 1942.

At this conference tall, lean, bearded Dr. Finkelstein, chosen chairman of the executive committee, was a prominent figure. He has been a prominent figure in intellectual and religious life for many years. Since 1920 he has taught at the Jewish Theological Seminary of America; from 1934 to 1937 he was assistant to the Seminary's president, in 1937 its provost, and he is, today, its president. The Jewish Theological Seminary, established in 1902 "for the perpetuation of the tenets of the Jewish religion, the cultivation of Hebrew literature, the pursuit of Biblical and archeological research, the advancement of Jewish scholarship, the establishment of a library and the formal education and training of Jewish rabbis and teachers," ordains rabbis and confers academic degrees. It also conducts the Institute of Interdenominational Studies "to enable ministers of all faiths to study under the guidance of eminent theologians of the various denominations." In the session of 1940 to 1941 Dr. Finkelstein is giving a course, together with Professor Robert L. Calhoun of Yale University, entitled "Two Ancient Philosophers and the Problems of the Present Day."

At the Seminary Rabbi Finkelstein is both president and Solomon Schechter professor of theology: his duties are both executive and professorial. An outstanding Jewish scholar, literature, philosophy and theology have been his interests all his life. He was born in Cincinnati, Ohio, the son of Rabbi Simon and Hannah (Brager) Finkelstein. He received his B. A. from the College of the City of New York in 1915 and his Ph. D. from Columbia University in 1918.

After studying at the Jewish Theological Seminary in New York for a year he became the Rabbi of the Congregational Kehilath Israel in New York City, a position he held until 1931. Meanwhile, in 1920, he had become a member of the Seminary's faculty and in 1921 received the Abraham Berliner Award for research in Jewish history. Two years later he was awarded the *Hattarat Horash*, the highest form of rabbinical ordination, by the seminary. His books began to appear: in 1924 *Jewish Self-Government in the Middle Ages*; in 1929 *The Pharisees, Their Origin and Their Philosophy*; in 1938 *The Pharisees: the Sociological Background of Their Faith*.

By 1931, when he left his rabbinical post to teach full time at the Jewish Seminary, Dr. Finkelstein was acknowledged to be one of the greatest living Jewish scholars. After teaching Talmud and lecturing in theology, in that year he became Solomon Schechter professor of theology. Others of his books were published—perhaps the one best-known to laymen is *Akiba—Scholar, Saint and Martyr* (1936)—and articles by him appeared in the *Journal of Biblical Literature*, the *Harvard Theological Review*, the *Jewish*

RABBI LOUIS FINKELSTEIN

Quarterly Review and other publications, both American and foreign.

Dr. Finkelstein is known as a leader in Jewish rabbinical life as well as a scholar. From 1928 to 1930 he was president of the Rabbinical Assembly of America. In 1932 he became a member of the executive committee of the United Synagogues of America, a position he held for seven years; from 1932 to 1934 he was on the Hillel Foundation Commission; and in 1940 he is a delegate to the Synagogue Council of America, a member of the executive committee of the American Jewish Joint Distribution Committee and of the publication committee of the Jewish Publication Society of America, honorary vice-president of the United Palestine Appeal and a member of the executive committee of the American Jewish Committee.

Dr. Finkelstein is well-known outside Jewish circles. In 1937 he lectured at Johns Hopkins University; in 1939 at Oberlin College; and in 1940 was Carew lecturer at the Hartford Theological Seminary Foundation.

Dr. Finkelstein was married in 1922 to Carmel Bentwich. They have three children, Hadassah Nita, Ezra Michael and Faith.

Who's Who in America

Who's Who in American Jewry

FINLEY, JOHN HUSTON Oct 19, 1863—Mar 7, 1940 Editor; educator; philanthropist

Dr. John H. Finley, editor emeritus of the *New York Times*, former president of the College of the City of New York and

FINLEY, JOHN—*Continued*

former New York State Commissioner of Education, died March 7, 1940. He was 76 years old. Throughout his long career Dr. Finley held many journalistic and professorial positions, was also active in civic and philanthropic work and was the author of several books. His recent positions and offices held include: vice-president of the National Institute of Arts and Letters and the National Institute of Social Sciences; president of the American Social Science Association, the National Dante Committee, the National Recreation Association, the National Child Welfare Association and the New York Adult Education Council; director of the Hall of Fame of New York University; national chairman of the Phi Beta Kappa campaign for intellectual freedom; and vice-chairman of the Near East Relief. He served a number of years as trustee of the New York Public Library, and in 1939 was made honorary member of the American Library Association.

Like several other educators, Dr. Finley rose from farm boy to college president. But his record is unusual in that he did not content himself with a college presidency, but continued his work in various fields, taking an active part in human affairs at an age when most men have long since retired. When he became editor in chief of the *New York Times* at the age of 73, he came to his office daily at nine and put in his full quota of editorial and routine work.

John Huston Finley was born on a farm near Grand Ridge, Illinois, on October 19, 1863, of solid Scotch ancestry, the son of James Gibson Finley and Lydia Margaret (McCombs) Finley. He passed his boyhood on the farm, where he plowed, hoed and split rails. In his spare time he learned the printer's trade. He paid his tuition at Knox College by running a job-printing office and reading proof for one of his professors. He was graduated in 1887 and for two years was a student at Johns Hopkins University, taking courses in politics, economics and history to prepare himself for work in the field of journalism. He assisted in the editing of economics publications while there, working with Dr. Richard T. Ely.

In 1892 he returned to Illinois and became president of Knox College, his alma mater. He was then 28 and the youngest college president in the country. After serving as president for seven years, he returned to the East to be editor of *Harper's Weekly*. He planned and helped found *World's Work*, intending to stay with the publication; but in 1900 was offered the newly established chair of politics at Princeton. His methods of teaching there made the science of politics a living thing to his students.

After three years, Dr. Finley was asked to take over the presidency of the College of the City of New York. For 10 years he maintained high standards of scholarship and efficiency at the college: under

his direction the institution grew, and educational plans were forwarded. In 1913 he resigned to become Commissioner of Education of the State of New York, emphasizing the value of physical training during his régime. He studied his job thoroughly, often walking throughout the State incognito, visiting the country schools to learn at firsthand what educational conditions were like.

When the United States entered the First World War Dr. Finley happened to be in France on a special mission to the schools of that country. He offered his services to General Pershing and carried out his war work as head of the Red Cross Commission to Palestine and the Near East in 1918 and 1919. It was work to his liking, for he could take long walks in the Holy Land, the country that had always fascinated him.

In 1921 Dr. Finley was appointed to the position of associate editor on the *New York Times*; in 1937, after the death of his predecessor, Rollo Ogden, he became editor in chief. But several months later he was stricken with a severe illness which took heavy toll of his health, and on November 16, 1938 Dr. Finley took the title of editor emeritus, heartily approving the appointment of Charles Merz as his successor in charge of the editorial page of the *Times*. Among his other manifold activities Dr. Finley was Harvard exchange lecturer at the Sorbonne, Paris, in 1910 and 1911, in which connection he wrote two books on the French and French education; he was lecturer on the Watson Foundation, University of Edinburgh, 1929 and on the Earl Foundation, Pacific School of Religion, 1931.

In 1935 he went to Scotland, representing the six American Carnegie trusts at the Andrew Carnegie centenary observances. He has received various honors in America, including a bronze bust from City College, New York, on his seventieth birthday; and he has been the recipient of innumerable decorations from foreign countries, including the Légion d'Honneur of France and Commander of the Order of the White Rose of Finland. He has been a director of the English Speaking Union since 1923, and of the Russell Sage Foundations of Knox and Berea Colleges.

Surviving Dr. Finley are his wife, the former Martha Ford Boyden, of Sheffield, Illinois, whom he married in 1892; two sons, Dr. John H. Finley Jr., of Cambridge, Massachusetts, associate professor of the classics at Harvard, and Robert L. Finley, of New York City; and a daughter, Mrs. William H. Kiser Jr., of Atlanta, Georgia.

Besides his journalistic and academic interests, Dr. Finley was a noted pedestrian. He considered walking not only a matter of health, but a mental benefit. "As a farm boy in Illinois," he said in a recent interview, "I remember leaving my plow, going to the house and changing into my suit of black, walking eight miles to take an examination in solid geometry which I

had studied by myself, passing it and walking eight miles home again. A good walk clears the mind, stimulates thinking. I walk to the *Times* office each morning. At least once each year I walk around Manhattan, 32 miles. I have walked 70 miles in a day in the White Mountains. Several times I have walked from New York to Princeton. Even on an ocean crossing I will walk 100 miles. Gramercy Park circuit is just equal to the deck circuit on the *Aquitania*."

While Commissioner of Education for New York he had a medal made: the figure of a walking boy and the motto, "à la Sainte Terre." This was designed to be awarded to Boy Scouts and others who have become faithful walkers, and to cripples who have overcome handicaps and learned to walk. Once, on visiting a home for incorrigible boys about 30 miles from his office in Albany, he promised a medal to the first boy who would walk to his office. One day six of them arrived, and Dr. Finley walked the 30 miles back to the school to deliver the six medals in person.

Several years ago he made a tour on foot along forgotten bypaths in the Great Lakes and Mississippi River country and in Eastern Canada. While in France and in Scotland he also went for long tramps over the countryside, getting acquainted with the scene and the people. Bridges fascinated him. There was not a bridge built within the New York region during his long residence in this city which he did not cross afoot soon after its opening. He used a pedometer to clock off the miles he walked from home to office; and constantly he carried with him a *Baedeker*, by which method he transferred the distance he walked in New York to some imagined point or town of interest. Such imaginary "journeys" took him to many parts of the world he had never visited.

Dr. Finley was for many years interested in the Boy Scouts; at his death he was a member of the Scouts' National Executive Board. Daniel Carter Beard, National Scout Commissioner, was among the many who expressed deep sorrow at the news of his death. "Dr. Finley was my idea of a real pedestrian," he said. "He was as thrilled by the sights in a walk through a congested district as by the beautiful scenic effects afforded in the open country. Several years ago I became enthralled as I listened to Dr. Finley recount his experiences of a day's hike around the edge of Manhattan Island. . . He described at least 30 persons he saw on that trip.

"When I asked him if he saw nothing but people, he told me he also was delighted to find potato patches, small gardens of cabbages, lettuce and other vegetables tucked away in the most unexpected places near the shoreline. He appeared pleased when I told him that while everybody considered him a good editor I knew he was a good reporter, as he had proved it from his account of that trip."

New York Times

JOHN HUSTON FINLEY

In spite of his many interests, and the demands made on his time by various organizations which engaged him to speak and preside at dinners, Dr. Finley found time also to write a number of books. Among these were *The American Executive and Executive Methods* (1908), in collaboration with J. F. Sanderson; *French Schools in War Time* (1917); *A Pilgrim in Palestine* (1918); and *The Debt Eternal* (1923). He was also one of the editors of Nelson's *Encyclopedia* and greatly interested in the *Dictionary of American Biography*. Three days before his death he had finished reading proof on another book, *The Coming of the Scot*, which was published late in March 1940. It is a study of the part the Scottish people had in the development of America.

Dr. Finley's close friends knew him as a man of kindness and affection, filled with deep appreciation of his fellow men and to whom nothing was ever too much trouble. He was a constant visitor to friends and acquaintances who were sick, though he himself had never known a sick day till his serious illness in 1938. His travels abroad and at home made him a citizen of the world, giving him a deep understanding of all human problems.

Of him, Dr. Nicholas Murray Butler (see sketch this issue) has said: "Dr. Finley was an American of the highest type. His learning was always at the service of some good cause and his religious faith gave richness and elevation to his character. His human sympathies made him as much beloved as he was admired. His influences upon our people will be permanent."

FINN, WILLIAM JOSEPH, FATHER

Sept 7, 1881- Founder of Paulist Choir

Address: b. 411 W 59th St, New York City

Father William Joseph Finn is the organizer of one of the world's best-known corps of singers, the Paulist Choir of the Church of St. Paul the Apostle, Manhattan. The choir has traveled throughout the United States and in Europe; it has appeared on national radio programs and in the leading concert halls of the country and it was one of the attractions of the New York World's Fair. Yet its programs have been for the most part the sacred music of the sixteenth century. Father Finn has made modern lay audiences like the heavy musical fare of the medieval church. He has resurrected the sacred music of the sixteenth century and made it a living thing.

Father Finn has had much to do with bringing boys' choirs back into prominence. The rebirth of the boys' choirs began in 1903 when members of the American Catholic clergy were shocked by the Pope's encyclical letter deploring the lax custom of employing women sopranos and urging the churches to return to orthodoxy and to have only men and boy singers.

Soon after this, as one writer puts it, "the ear-splitting noises of the boy choirs were all but driving the worshippers from church." It was in this crisis that Father Finn was summoned to take charge of a Paulist Choir in Chicago, in a district so tough that priests were often accompanied by policemen on their parish visits.

Before he came to Chicago, Father Finn was undecided between a musical education and a religious education. He was born in Boston, September 7, 1881, son of James Anthony Finn, a physician, and Margaret (Hussey) Finn. There were musicians in the family, including one or two professionals, and amateurs on both sides, and his father was also musically inclined. Father Finn's preoccupation with ecclesiastical music began when he was 14 and his mother dragged him to a Tenebrae service at the Boston Cathedral. For the first time the music of the medieval church burst upon his consciousness, to become his greatest interest.

The future Paulist priest prepared for college at the Boston Latin School, the oldest boys' high school in the country, and studied organ at the same time. At 16 he was the organist at the Carmelite Monastery in Boston. He attended St. Charles College near Baltimore for two years and then began his theological studies at the Catholic University in Washington in 1900. Then, leaving his theological studies incomplete, he went back to Boston for more musical study.

He went in 1904 to Chicago to take charge of the Paulist Choristers at St. Mary's Church. He was ordained in 1906, and for 11 years afterward not only directed the choir but acted as curate of the parish.

One of Father Finn's practical aptitudes is for managing choirboys. No one is better at reducing mischievous barbarians of about 12 or 14 to order and to music. Father Finn himself cannot sing a note! Two boyhood operations on his larynx flattened his voice forever. But he took the street urchins from his tough Chicago parish and turned them into angelic boy sopranos by reviving the medieval "Spanish tenor" or "counter tenor technique of singing the boys through the adolescent change of voice." This means that soprano boys whose voices are about to mature are trained to perform the alto parts in the choir. As the Chicago Paulist Choir began attracting attention, boys with fine voices volunteered their services, and Father Finn had a wider field from which to choose his choir.

The first great triumph for the Paulist Choristers and Father Finn came in 1912 when the choir toured Europe and won an international contest in Paris in competition with 96 choirs. The choir so delighted Pope Pius X in a private concert that the Pontiff gave Father Finn the title of Magister Cantorum (Master of Singers). Father Finn was also honored by the French Academy.

In 1918, when the Paulist Choristers already had an international reputation, Father Finn was transferred to New York and became associated with the Church of St. Paul the Apostle. Here in 1919 he started a choir school which flourished as a regular boarding school, with grammar school and college preparatory courses. By having a place to board the boys, Father Finn found he could have his pick of voices from all over the United States. It was impossible to keep up with the expense of the school, however. What the choristers took in from concerts did little more than meet the expenses of the unit. Today the choristers are recruited from the New York metropolitan area, although Father Finn still hopes some day to have a choir school.

The Paulist Choristers have become known to a great many people through their regular appearance on the *Catholic Hour*, broadcast by the National Broadcast-

ing Company over a network of 40 stations. Those who are accustomed to the cold formality of choral performances are amazed at what Father Finn has accomplished with the Paulist Choristers. The ecclesiastical restraint of the medieval music is permeated with warmth, sincerity and an ethereal quality. Father Finn's interpretations of heavy musical fare such as the *Requiem* of Brahms, the Mozart *Requiem* and the *St. Matthew Passion* music of Bach have been astonishingly popular.

Despite his classical tastes in music Father Finn has a flair for showmanship. The Paulist Choristers have been a huge attraction to radio audiences of all creeds. The Paulist Father gets letters from people in all walks of life and of all religions telling him what a deep emotional experience the music of the Paulist Choristers has given them.

The Paulist Choristers have sung their way around the United States, Canada and Europe. They have given innumerable benefit performances for charitable and civic undertakings. In 1918 they took a six months' tour of the United States to raise money for the rebuilding of the Rheims Cathedral. During the First World War the choristers gave more than 300 concerts for War relief measures. They have appeared with symphony orchestras, on commercial radio programs, in an annual concert at the Metropolitan Opera House and at the World's Fair.

They have received the unstinted praise of metropolitan music critics, and have received various radio awards. But the choir members, about 60 boys and 35 men, remain anonymous. Father Finn strives for and achieves this perfect anonymity of the individual voices called for in orthodox church music. Normally, the soloist just happens. He may be discovered singing at rehearsals or in some other uncompetitive way. His station is no more exalted than that of the other youngsters from nine years to fifteen years old who work hard at rehearsals.

In addition to their regular NBC Sunday evening performances on the *Catholic Hour*, the choristers sing regularly for Sunday high mass and the church festivals of Christmas and Easter. At the minimum they have three rehearsals a week; at the maximum they may be required every day of the week, as benefit performances or special occasions pile up. They are on probation for six months, and the only pay they get is 50 cents for supper money on Sunday night. The choristers are not fanatically sectarian. When they sang before Pope Pius the head solo boy was a Protestant, and there is always a sprinkling of non-Catholic boys.

Father Finn follows the routine of the monastic order of St. Paul, of which he is a member. He rises for mass at 6 a. m., then attends a chapel service before lunch, another before supper and then night prayers. But he not only finds time to keep the

William Haussler

FATHER FINN

choristers up to the high standard they have attained but to write books and compose appealing melodies that are always a hit with audiences when the choristers sing them on secular occasions.

He is America's foremost authority on choral music. He is the author of the *Epitome of Choral Technique*, published in 1934, and *The Art of the Choral Conductor*, 1938. In 1939 he conducted a short course in choral music for 75 choir-masters, organists and music teachers, Catholic and non-Catholic, from all over the country. He is also the composer of a large number of Christmas carols and other choral music.

About 25 years ago Father Finn began going abroad a few months at a time to study and listen to the music of the old masters. He studied the hints left by the great medieval conductors and also modern choir technique, but has taken little from his research. His music has been a matter of intrinsic intuition. It has been living music instead of dead, scholarly research. Father Finn has one complaint against operatic and orchestral music. The instruments it relies upon, he says, are mechanical, while his instrument is the human voice in massed chorus.

A big burly man with white hair, Father Finn has an Irish twinkle in his eye that shows he likes a wisecrack. He lives in the rectory and observes the vows of poverty of his order. He has a sister who is a nun in Newfoundland, another sister married to a curator of a Vienna museum, and two more sisters and a brother who live in New York.

FISCHER, LOUIS Feb 29, 1896- Author; European correspondent

Address: c/o W. Colston Leigh, Inc, 521 Fifth Ave, New York City

Russia's conquests in the Baltic and her invasion of Finland will probably be one of the most stupendous boomerangs of modern times according to Louis Fischer, special European correspondent and noted author, who, with his family, in early 1940 returned to the United States to deliver a series of lectures.

Mr. Fischer, the son of David and Shifrah (Kantzapolsky) Fischer, was born in Philadelphia. He attended the Philadelphia School of Pedagogy from 1914 to 1916, then taught in the public schools for the next two years.

When he was 25 Mr. Fischer became a contributor to the New York Post from Berlin. The following year *The Nation* sent him to Russia as its special European correspondent. There he met and married

Bertha Mark of Libau, Latvia. Their two sons, George and Victor, were born in Russia and their current stay in the United States is their first visit to their own country. Like their father, both boys speak Russian and German, as well as English. Mr. Fischer also speaks French and understands Spanish.

In addition to having been the regular European correspondent for *The Nation* for 18 years, Mr. Fischer contributes articles to the *Baltimore Sun*, *New Republic*, *Current History*, *New Statesman and Nation*, the *Paris L'Europe Nouvelle* and the *Prague Tagebüch*.

He has written many books. His first, published in 1926, *Oil Imperialism*, describes the international struggle for the vast petroleum concessions in Russia. It was variously reviewed as "well-documented" and "a shrill-voiced and furious indictment of all capitalistic nations." The *Soviet in World Affairs* which followed in 1930 is "a standard reference for all students of Russian activities." This work might have been written "either by a journalist with scholarly leanings or a scholar with journalistic leanings," said one commentator.

Why Recognize Russia? (1931) presented arguments for and against the recognition of the Soviet government by the United States. *Machines and Men in Russia* (1932), illustrated with photographs by Margaret Bourke-White (see sketch this issue), an account of the life, industry and future plans of Soviet Russia, "filled with a great deal of shrewd observation and common sense," is "a fine, honest, informing book," and "not wholly impartial."

In the introduction to his *Soviet Journey* (1935) Mr. Fischer says: "I want to try to make the reader see, hear, feel and smell Russia. I want him to travel with me on trains and boats, go with me into homes and factories, probe with me the private thoughts and private life of various kinds of Soviet citizens. I would like to make Russia concrete and real to the person who has never seen it or whose knowledge is incomplete. I will stress the permanent fundamentals which enable one to watch future developments."

A reviewer in the *Christian Science Monitor* wrote: "It is nothing short of an acrobatic feat to remain as poised as Louis Fischer in the vast arena of Red Russia, to see so much and to see so clearly, to probe depths, to indicate shallowness, to discern the human and the barbaric."

Today Mr. Fischer believes that not only has Russia made herself more vulnerable to attack by the great nations of the West, now and in the future, through her seizures of Baltic lands, but that through her aggression she has lost an opportunity for the moral leadership of the world. He also believes that her invasion of Finland has alienated the sympathy of the working class throughout the world.

There is "no difference in principle between the British tenure of Gibraltar and

Bachrach

LOUIS FISCHER

Russian occupation of the Estonian Islands of the Gulf of Finland," he says. But, by the break with her traditional policy against all imperialism, Russia has lost her right to champion the cause of the proletariat the world over. The cause of world labor is not identical with that of Russian territory.

Although Mr. Fischer's headquarters have been in Moscow for the past 18 years, he has made frequent and long visits into Germany, into what were Austria and Czechoslovakia, into France and Italy. He also covered the Ethiopian conquest.

Mr. Fischer was in France when War broke out in September 1939 and a little later went to London to watch developments in the various diplomatic maneuvers which followed. He interviewed all the Allied governments' heads and was in constant touch with many behind-the-scene leaders both in France and England. He was certain "that the Allies neither want nor expect active military participation by the United States. The chief problem of this War is materials and all they are asking for at present is goods sold for immediate cash and carried in their own ships."

On the lecture platform "he has a pleasing presence and a strong personality. His voice is deep and resonant and he likes nothing better than answering questions."

In addition to the books on Russia Mr. Fischer wrote *The War in Spain* (1937) and *Why Spain Fights On* (London, 1937).

FISHBEIN, MORRIS July 22, 1889-
Physician; editor

Address: b. 535 N Dearborn St, Chicago, Illinois; h. 5543 Blackstone Ave, Chicago, Illinois

Americans pay \$3,210,000,000 annually for doctors' bills and for many persons the financial burden is too great. Some of them don't get care and some of them don't pay their bills. One way of bringing medical services to persons who can't budget for sickness, and of improving, at the same time, the incomes of physicians—in 1929 one out of every four doctors was earning less than \$2,300 a year—is the medical cooperative.

With the medical cooperative doctors are hired for fixed salaries which are paid out of health-insurance "premiums." In addition to their prepaid doctors' care, the members receive free physical examinations and other medical benefits. In November 1937 such a cooperative was formed in Washington, D. C.—the Group Health Association—and in less than a year it had nearly 2,500 members.

Around the Group Health Association of Washington has raged one of the major storms of modern medicine. Organized medicine, under the banner of the American Medical Association and led by Dr. Morris Fishbein, immediately opposed the plan. The A. M. A. stated that "physicians who sell their services to an organization like the G. H. A. for resale to patients are certain to lose professional status." The Medical Society of Washington, D. C. (a branch of the A. M. A.) threatened the doctors who worked for the group plan with loss of membership in the A. M. A. and in August 1938 expelled one. It also applied pressure upon the Washington hospitals to exclude Group doctors.

In July 1938 the United States Department of Justice indicted the A. M. A., the local society and 21 physicians under the Sherman Anti-Trust Act on charges of restraining trade. In August 1939 the indictment was dismissed in a District Federal Court on the ground that the term "trade" didn't include the medical profession. In March 1940 the Circuit Court of Appeals reversed this decision and said that the A. M. A.'s interference with doctors who worked for the Group was a violation of the Sherman Antitrust Act. Medical Association members were up in arms over this decision. And no one was more wrought up than Dr. Morris Fishbein, editor of the A. M. A.'s *Journal* and of *Hygeia*.

For many years Dr. Fishbein has been a strong and voluble opponent of "socialized medicine" in any form. When the American Medical Association's Committee on the Costs of Medical Care, drew up a set of principles for medical care in 1937, beginning with the proposition that "the health of the people is a direct concern of the government," Dr. Fishbein was one of the leading A. M. A. members who "rejected it with enthusiastic unanimity" and

MORRIS FISHBEIN

was in the forefront of the movement which led to the ousting of the Committee.

For many years Dr. Fishbein has been contributing articles and editorials to medical and popular magazines, pointing out the evils which he believes inherent in any system of dispensing medical care other than that by which the average American doctor practices. He has stated firmly that George Washington's dictum, "he who would surrender liberty for security is likely to lose both," is directly applicable to those who would support socialized medicine. He has called compulsory socialized medicine "another insidious step towards the breakdown of democracy." He has insisted that socialized medicine isn't possible "until that time comes when human beings have been standardized."

His arguments against any form of group health insurance or governmental aid in medical care can be summed up, from his writings, as follows: He feels, first of all, that it is not preventive insurance, but merely aids people after they have become sick. Second, he feels that it "breaks down that initiative and ambition which are the marks of a young country going ahead," for the young doctor who steps into a regular job "begins a mechanized routine type of service that is harmful not only to his patients but to his own character and advancement." Third, he feels that it "brings into the picture of medical practice business methods and commercialization which are fatal to medical science." Fourth, he believes that with any governmental system, such as now prevails in most European countries, we would get "incompetent political control." Fifth, it seems to him that a real epidemic would send any insurance scheme into bankruptcy.

Dr. Fishbein's solution to the problem of the people in this country who cannot afford medical care is the exercise of a little common-sense economy by the average man and the support of hospitals from the motive "which makes the care of the sick a high moral objective."

Dr. Fishbein has received a good deal of support for his views among American Medical Association members, and he has also aroused a good deal of opposition, both from doctors and laymen. To many people his view seems rather old-fashioned in light of the social security and unemployment programs this government has instituted, in light of the various hospitalization plans to which many Americans subscribe, in light of the widespread practice of socialized medicine in England, Scandinavia and most of the countries of Europe. In fact, *Fortune* Magazine said that Dr. Fishbein "hasn't displayed much flexibility when faced with new medical and political realities. He has, in a word, failed to develop in social consciousness as fast as the needs of the day require."

Dr. Fishbein is, without doubt, the most prolific and articulate of the leaders of the American Medical Association. He writes 15,000 words a week, reads 3,000 manuscripts submitted annually, and daily goes over 30 to 40 medical magazines. Three times a day on the average he is asked to make a speech and every three days, on the average, he does. He is the author of fifteen books and the editor of five more. He contributes to lay periodicals—from *Plumbing and Heating* to the *Saturday Evening Post*—and syndicates a daily column in 200 newspapers.

Dr. Fishbein has written articles not only about socialized medicine, but about obstetrical care, muscles, colds, hay fever, social diseases, harmonious hormones, poliomyelitis, medical quacks, influenza and the truth about candy. His books include *Medical Follies* (1925); *Your Weight and How to Control It* (1927); *Fads and Quackery in Healing* (1932); *Frontiers of Medicine* (1933); *Syphilis* (1937); *Do You Want to Become a Doctor?* (1939); and the *Modern Home Medical Adviser* (1935) of which he was editor.

Actually, Dr. Fishbein has never practiced medicine on his own. He was born in St. Louis, Missouri on July 22, 1889, the son of Benjamin and Fanny (Glück) Fishbein, and was brought up in Indianapolis and educated in Chicago. Since childhood he has spoken with a Hoosier twang, as does his wife Anna. He received his B. S. from the University of Chicago in 1910 and his M. D. from Rush Medical College in 1912. After receiving his degree he spent one year as a fellow in pathology at Rush Medical College and then had one year's service in the Durand Hospital of the McCormick Institute for Infectious Diseases, which was the extent of his personal contact with patients.

Morris Fishbein was first spotted as a bright young man by Dr. Ludvig Hektoen, who in 1913 proposed him for the post of assistant to the late Dr. George H. Simmons,

editor of the *Journal* of the A. M. A. In 1924 Dr. Simmons retired and Dr. Fishbein became editor of the *Journal* and of *Hygeia*.

As editor of the A. M. A.'s publications and chairman of several A. M. A. councils, "Dr. Fishbein," according to *Fortune*, "has been a promoter. He has promoted the A. M. A. from a mild academic body into a powerful trade association." He has done this by his writings, and by his speeches given all over the country. When he talks he is "easy, charming and as poised as a master of ceremonies. His addresses are interspersed with jokes and he is constantly being reminded of the one about the etcetera." In 1931 he started a speech to the A. M. A. House of Delegates: "Unaccustomed as I am to public speaking," and the delegates rolled in the aisles.

His wife Anna (Mantel) Fishbein, whom he married in 1914, goes with him on all his trips around the country and on the road acts as his personal secretary and purchasing agent (ties, shirts, socks). Since he is subjected to a good many libel suits, he turns over his entire income (\$30,000 to \$40,000 a year) to her as a precaution. They have three children, Barbara, Marjorie and Justin.

Some of Dr. Fishbein's colleagues who have shown their appreciation of his work by electing him to the American Association for the Advancement of Science, to the American Public Health Association, to a Fellowship in the American Medical Association, still feel that his speeches and his lectures and even some of his writings aren't quite in keeping with the dignity of the profession, and his outside activities have been criticized before the A. M. A. House of Delegates. Since one of the main ethical tenets of the A. M. A. is the prohibition of self-advertising, some doctors believe that he does put himself in an ambiguous position "by inspiring murder-sized headlines wherever he goes."

"Dr. Fishbein," according to one commentator, "is precisely the sort of person that people who take Dale Carnegie courses would like to be. He is the great winner, the great influencer." His associates keep saying that he would make a "good advertising man." Most laymen and doctors agree that that is what he already is. He intends to stay that in the medical field. He has turned down a number of attractive bids from business—the largest one \$50,000 a year from the Great Atlantic and Pacific chain of grocery stores—and intends to keep turning them down.

FISHER, STERLING May 24, 1899- Director of Education and Radio Talks of Columbia Broadcasting System

Address: b. 485 Madison Ave, New York City; h. Wilson Park, Tarrytown, New York

Since the summer of 1936 Mr. Fisher has officiated as director of the CBS presentation, *American School of the Air*, also of *The School of the Air of the Americas*, which he founded; as director of religious broadcasts, including Columbia's *Church of the Air*, and editor of *Talks*, a quarterly magazine, and of the *CBS Student Guide*, a monthly publication.

Extension of the *American School of the Air* to the other countries of the Western hemisphere was started in the fall of 1940, and at present 15 countries other than the United States are participating in this radio educational project. According to Secretary of State Hull (see sketch this issue): "It would be difficult to devise a form of international cooperation which holds more promise for the deepening and broadening of understanding between the peoples of the American republics." In the United States these radio programs are used in 210,000 classrooms by about 8,000,000 pupils.

Sterling Wesley Fisher (he does not use his middle name) spent his boyhood in San Antonio, where he was born, and San Marcos, Texas. His primary and secondary education was received in the Coronado Institute, of which his father, for whom he was named, was president. His mother was Sue (Harper) Fisher. He studied for two years at Southern Methodist University, Dallas, and one year at the University of Texas, receiving his B.A. in 1919.

STERLING FISHER

From 1919 to 1921 Mr. Fisher taught in the Middle School, Himeji, Japan, and also at the University of Western Japan (Kwan-sei Gakuin) in Kobe.

He then returned to the United States, and from 1921 to 1922 took courses at the School of Journalism at Columbia University and also at Teachers College. He next devoted his time to teaching English at the Georgia School of Technology, and followed that experience with further study at the Graduate School of the University of California in Berkeley, where in 1924 he received his M. A.

Then followed a further stay in the Orient, and from 1924 to 1929 he was professor of English language and literature at the University of Western Japan in Kobe.

After his long sojourn in Japan, Mr. Fisher came back to his native country and joined the editorial staff of the Springfield (Massachusetts) *Republican*, remaining in that post until November 1929. His next journalistic venture was on the New York editorial staff of the Associated Press. From August 1930 until 1937 Mr. Fisher served as a writer on the New York *Times* and also as the Far Eastern authority on that newspaper. In October 1935 he was sent as the representative of the publisher of the New York *Times* to the inauguration of the Commonwealth of the Philippines. He remained in the Far East to report Japanese activities in northern China, Manchuria and Korea for the *Times*. Soon after his return to this country he was assigned by the *Times* to write articles on the Yosemite Conference of the Institute of Pacific Relations.

It was in April 1937 that he joined the staff of the Columbia Broadcasting System and in the fall he was sent on President

Roosevelt's Pacific and Northwestern tour to arrange special broadcasts. Mr. Fisher was subsequently instrumental in organizing the CBS Adult Board of Education (in 1938), whose chairman was and is Professor Lyman Bryson (see sketch this issue). He was further responsible for the arrangement of the working agreement between the *American School of the Air* and the National Education Association, an organization comprising 983,000 members, and likewise won the favor of the Pan American Union for the *School of the Air of the Americas*. He attended the Second Conference of American Secretaries of State in Cuba in July 1940, when he inaugurated the new radio *Escuela de Las Americas* as an official part of the agenda of the Conference, finally completing arrangements for holding in February 1941 the first International Conference of the *School of the Air of the Americas*.

Although Mr. Fisher has devoted a great deal of time to study and teaching, he has had his share of exciting experiences, particularly when he was in China for the New York *Times*. He was successful in obtaining for his newspaper a copy of the map of the hitherto unknown double-track B. A. M. strategic railroad in Siberia. Being thoroughly familiar with the Japanese language enabled him to get this exclusive information and the ink sketch. During this period he was instructed by cable to go from Shanghai to Tientsin, a distance of about 1,000 miles. When his plane was over the Tientsin landing field, the pilot and others observed on grounded planes below the red ball insignia of Japan. When Mr. Fisher's flying machine landed it was soon afterward visited by Japanese army officers, who had their eyes out for cameras. Although Mr. Fisher had a camera, the fact that he spoke Japanese so well won the favor of the Japanese officers and caused them to abandon their aggressive search of the Chinese-American plane.

Mr. Fisher is an honorary life member of the American Museum of Natural History, a member of the Philosophical Society of Texas, of the Sigma Delta Chi, an honorary journalistic fraternity; also a member of Pi Kappa Alpha; of the executive committee of the Federal Radio Education Commission, and of the advisory committee of the Chicago Radio Council.

Mr. Fisher, who was married in 1923 to Jean Alice Callahan, has two sons. His hobbies are tennis and reading, especially reading history and biography. He is a contributor to the New York *Times Magazine*, *Current History* and other magazines and is the editor of many radio booklets, including *Americans at Work* and the CBS *Student Guide*.

FLAGG, JAMES MONTGOMERY June
18, 1877- Artist

Address: 340 W 57th St, New York City

James Montgomery Flagg, whose posters covered the land during the First World War, is again drawing patriotic messages. Famous for his beautiful young women and strong-jawed young men in magazines and in advertisements, Mr. Flagg is able also to produce encouraging posters for national defense.

"At an age when many limners have put away their drawing boards, he is doing more work than ever before and with a zip." He has always worked incredibly fast and is still able to turn out about 250 pictures a year, less three months' vacation. These pictures are frankly commercial ones—done for the "slick" magazines to illustrate stories and for large companies to promote their products—for Mr. Flagg has no pretensions toward being an "artist." He says the difference between the artist and the illustrator is that the latter knows how to draw, eats three square meals a day and can pay for them.

In the years that he has illustrated stories and articles, Mr. Flagg has, inevitably, become an authority on women—"physically attractive women are the most plentiful thing produced in America," he says. His idea of a beautiful woman is that she should be "tall, with wide shoulders, a face as symmetrical as a Greek vase, thick, wavy hair, either dark or light, thick, long lashes, straight, short nose tipped up a bit at the end, a wide, rippling, full-lipped mouth, even white teeth, eyes so full of feminine allure that your heart skips a beat when you gaze into them." But physical beauty, according to this authority, isn't enough. To be really beautiful a woman must have "certain fundamental qualities of spirit—serenity, kindness, courage, humor and passion."

Flagg's first drawings weren't of women, however. They began when he was two.

Häl Phyte

JAMES MONTGOMERY FLAGG

He was born in Pelham Manor, New York, the son of Elisha and Anna Elida (Coburn) Flagg. His first published drawing appeared in *St. Nicholas* when he was 10. By the time he was 14 he was a regular illustrator for the magazine. He was, of course, going to school, too—to New York City's public schools and Dr. Chapin's private school. After he began drawing for *Judge* and the old *Life* in 1892 he studied at the Art Students League and later at Herkomer's Art School in England and under Victor Marec in Paris.

For a while Flagg painted portraits—in Paris, St. Louis and New York. These were exhibited in the Paris Salon in 1900 and at the National Academy of Design and the New York Water Color Club. It was about the beginning of the century, too, that Flagg became famous for his adventures of "Vervy Nat, a bibulous ne'er-do-well and imposter who was living by his wits in Paris." His first book, *Yankee Girls Abroad*, appeared in 1900. This was followed by other funny or satiric books—*Tomfoolery* (1904); *If—A Guide to Bad Manners* (1905); *Why They Married* (1906); *All in the Same Boat* (1908); *City People* (1909) and others. One of his more successful books was *The Well-Knowns as Seen by James Montgomery Flagg* (1914), a collection of caricatures.

When the United States entered the First World War Mr. Flagg was appointed New York State military artist for the duration of the War and was kept busy designing posters to stir up enthusiasm for recruiting and for liberty loans. After that commissions for illustrations began coming in, and still do, for some of the most important products in this country. Besides illustrating and writing, Flagg also wrote a series of motion pictures, *Girls You Know*, and satirical comedies for famous players.

FLAGG, JAMES MONTGOMERY—*Cont.*

Flagg's first marriage, to Nellie McCormick of St. Louis, took place in 1899. The first Mrs. Flagg died in 1923 and in 1924 Mr. Flagg was remarried—to Dorothy Wadman. They have one daughter, Faith.

When Flagg works he wears tortoise-shell glasses. He twirls his big black eyebrows as he talks. "His mind has the speed of a roulette wheel and his tastes are fastidious. He is openly hostile to ignorant people."

FLEMING, JOHN ADAM Jan 28, 1877—
Geophysicist; magnetician

Address: b. 5241 Broad Branch Rd, N W, Washington, D. C.; h. 8 Drummond Ave, Chevy Chase, Maryland

On Easter Day 1940 radio communication with Europe was cut off and the teletype in America "talked like a jabberwock." "Sun spots," was the immediate opinion of the learned and the layman, and according to John Adam Fleming, director of the department of terrestrial magnetism of the Carnegie Institute of Washington, sun spots it was.

He confirmed the theory that the upset was caused by a new rash of sun spots and cyclonic disturbance among them. The heavyside surface deflected their electrical charges North and South to the poles, scrambling air traffic, although it is this same barrier which routes our communications in an orderly way around the earth, keeping us talking to ourselves instead of to other planets, "which is perhaps just as well, considering our present contribution to the music of the spheres."

Dr. Fleming has been observing the actions of the spheres and of this earth for more than 40 years. He was born in Cincinnati, Ohio on January 28, 1877, the son of Americus V. and Catherine B. (Ritzmann) Fleming. He went to school in Cincinnati and received his B. S. degree from the University of Cincinnati in 1899, from which he later was awarded an honorary degree. Right after graduation he started to work for the United States Coast and Geodetic Survey, first as an aide, then as assistant and finally as magnetic observer.

While he was working for the government, Dr. Fleming married Henrietta C. B. Ratjen of Lawrenceberg, Indiana, who died in 1912, leaving one daughter, Margaret Catherine. In 1913 he was married again, to Carolyn Ratjen, also of Lawrenceberg, Indiana.

In 1904 Dr. Fleming began work with the Carnegie Institute in Washington and has stayed there, holding the following positions: magnetician, chief of the observatory division, chief of the magnetic survey division, assistant director and finally director in 1935. He has held a number of other important positions in his field: trustee of Woods Hole Oceanographic Institution since 1930; president of the Association of Terrestrial Magnetism and Electricity of the International Union of Geodesy and Physics, 1930 to 1939; member of the executive council of the International Council of Scientific Unions since 1937.

Many honors have been given Dr. Fleming for his work in terrestrial magnetism. He is a fellow of the American Association for the Advancement of Science and of the American Physical Society; he is a member of the National Academy of Sciences and an honorary member of the State Russian Geographical Society. There are many published works to Dr. Fleming's credit and he

is a frequent contributor of articles and reviews to magazines and journals.

A young disciple of Dr. Fleming's once summed up Dr. Fleming's importance in the field of terrestrial magnetism and the scope of that field. It was just after an expedition had emerged from a year in the Arctic ice. When the disciple was asked to tell something about the scientific gains of the expedition, he said: "We will have to leave that to Dr. Fleming. Polar discoveries boil down mostly to terrestrial magnetism, and if Dr. Fleming could spend 20 or 30 years at the Pole, we might learn something."

PHILIP B. FLEMING

FLEMING, PHILIP BRACKEN Oct 15, 1887- Administrator of Wages and Hours Division of the United States Department of Labor

Address: b. Department of Labor Bldg, Washington, D. C.

Colonel Philip Fleming, serving as administrator of the Wages and Hours Division since October of 1939, was officially appointed to the position—and salary—on the 19th of February 1940 by the passage of a special amendment to the Defense Deficiency Bill.

Born in Burlington, Iowa, the son of John J. and Mary (Bracken) Fleming, he was educated at the University of Wisconsin and the United States Military Academy. He has had a long military experience, starting as a West Point Cadet in 1907 and being promoted through the ranks to colonel in January 1940. He temporarily held the rank of colonel during the First World War.

Colonel Fleming, quiet, grizzled and unmilitary in appearance, has earned the confidence of President Roosevelt and the title of "trouble-shooter" for the New Deal Administration. "Both as executive officer and deputy administrator of the Public Works Administration he was largely responsible for early organization of that undertaking. He started building on the Passamaquoddy project and was later picked to straighten out the snarl in the Resettlement Administration after Rex Tugwell retired from the Brain Trust."

His latest task has been to unwind the tangles of the Wages and Hours Division in the second year of its existence. In following Administrator Elmer F. Andrews, Colonel Fleming stepped into what was literally a hot spot. The Wages and Hours Administration, subject to much scrutiny from its be-

ginning, had been recently criticized for slowness in establishing minimum wages for workers in other than the textile industries. There had also been opposition from the South to the ruling that there should be no distinction between wages paid workers in the textile industry in the North and South, and President Roosevelt finally upheld the Southern viewpoint.

"It is taken for granted," said *Survey Graphic* at the time of this appointment, "in informed Washington circles that his connection with the Wage-Hour Division is temporary—an assignment of a year, or even less. He is brought in, not as a liberal spokesman, or an expert in Labor legislation, but as an ace administrator."

When former Administrator Andrews resigned, Fleming's appointment could not be made because of a Federal law of 1870 which forbids army officers on active duty to hold civilian office. A "dummy administrator," former administration-chief of the Division, Harold Duane Jacobs, "white-maned, competent publicity man ... a one-time Scripps-Howard editor who is capable of going to work in a green sports coat with orange stripes, pea-green vest, blue tie, gray shirt and gray flannels," was appointed.

Fleming discharged his duties while in fact he was only an assistant to this "phantom boss," until the passing of the Adams amendment to the Defense Deficiency Bill made it possible for the chief to administer—officially.

Colonel Fleming, recent army district engineer in St. Paul (as reported by *Business Week*), "doesn't relish his new job, but it's a good bet that neither employers nor unions will push him around." His appointment was coolly received by both Capital and Labor. Labor resented the power of an

FLEMING, PHILIP BRACKEN—*Cont.*

army officer, and business anticipated that the new chief might enforce the law too rigidly. Now that Colonel Fleming has been in office a year, Labor, while sensible of his opposition to reduction of wage and hour benefits because of national defense, still feels that under him "effectiveness of a number of standards has been greatly weakened and their application to several large groups of wage earners completely surrendered." Business believes that he should grant employers more concessions. Both parties, however, do concede that he has been an able and efficient administrator.

One of his first official acts (March 18, 1940) was the approval of upward minimum-wage adjustments affecting about 24,500 of the 83,000 employees in the knitted underwear and knitted outerwear industries. He approved a minimum-wage recommendation of 33½ cents an hour, made by the knitted underwear and commercial knitting committee, and a minimum-wage recommendation of 35 cents an hour, made by the knitted outerwear committee. This is above the minimum of 32½ which went into effect on October 24, 1939 for the textile and hosiery industries. Since then other industry committees have been set up and have made their recommendations for minimum wages.

In October 1940 he issued a new ruling exempting certain classifications of administrative and professional employees from the provisions of the Wages and Hours Act.

On December 5, 1914 Fleming married Dorothy Carson; he has two children, Carson and Joselyn, both in college. He has retained an interest in his place of birth, continuing to hold the position of president of the William Carson Company in his native city.

FLY, JAMES LAWRENCE Feb 22, 1898-
Chairman of Federal Communications Commission

Address: New Post Office Bldg, Washington, D. C.

The recent television controversies between the government and private corporations reached new pro and con peaks during April

1940. Bearing the brunt of these controversies, as chief protagonist for the government, is Chairman James Lawrence Fly of the Federal Communications Commission, versus David Sarnoff (see sketch this issue), president of Radio Corporation of America. Lawyer "Jim" Fly is a tall, rangy, level-headed Texan who has made his name with the New Deal TVA's general counsel since 1937, winning its two major cases in the Supreme Court. President Roosevelt appointed him Chairman of the FCC in August 1939 to succeed Frank R. McNinch, who resigned because of illness. Since Fly had previously won the respect of utilitarians for his tact and moderation, many observers hoped that he might bring some degree of house-cleaning order into the turbulent FCC. In September 1940 President Roosevelt made him head of a National Defense Communications Board to coordinate the nation's telephone, telegraph, radio and cable facilities.

He was born February 22, 1898 in Seagoville, Dallas County, Texas, son of Joseph Lawrence and Jane (Ard) Fly. After his graduation from the Dallas High School in 1916 he entered the United States Naval Academy, from which he was graduated in 1920. He saw service as a midshipman during the War; for three years after his graduation he was commanding officer aboard the *U. S. S. Idaho* and the *U. S. S. Baltimore*. In 1923 he retired from the Navy, and in that year also married Mildred Marvin Jones. They have two children: James Lawrence and Sara Virginia. He is a member of the Protestant Church.

Deciding on law as a profession, Fly entered the Harvard Law School, where he received his LL. B. degree in 1926. He entered private law practice and was associated with the firm of White and Case of New York City. He then engaged in anti-trust work as special assistant to the United States Attorney General, 1929 to 1934. Then he became general solicitor and head of the legal department of the Tennessee Valley Authority, and served in this capacity until 1937, when he became general counsel of the TVA. In 1939 President Roosevelt nominated him as the new Communications Commission chairman.

The current television problem began in 1938, when the major television receiver manufacturers, chief among them RCA, had formulated, through the Radio Manufacturers' Association, a group of television transmission standards and recommended their adoption by the FCC. But other companies objected to the Manufacturers' Association's standards. It is essential, however, that specifications be fixed: in television, unlike radio, receiving and sending must correspond technically. If the transmitter is improved, the receiver must likewise be adjusted or improved, or it becomes useless. The principal concern of the FCC has always been that no one company, such as RCA, shall control transmission, and that owners of television sets may be able to pick up tele-

casts on any radio bands with any type of set. President Roosevelt, for instance, remarked that he wanted to be able to use his own television set to see either a town hall meeting or a prize fight, although there was "little essential difference between them." Despite fears and difficulties, the commission, however, had made an order allowing semi-commercial television broadcasting, scheduled to begin September 1, 1940. At the same time Fly warned against any attempts to "freeze" the standards of television transmission, and emphasized that it must remain on an experimental basis.

On Easter morning 1940 the radio industry was shocked to read that the commission had rescinded the September 1st order. A definite reason was given: RCA had suddenly begun a concentrated commercial advertising campaign, offering sharply reduced prices for their receivers. This activity was not in line with the commission's policy. And, at about the same time, the backers of Frequency Modulation for radio, led by Major Edwin Armstrong (see sketch this issue), appeared before the FCC demanding one-fifth of television's ether surface.

Private business and Republican newspapers were quick to attack what they called the FCC's "arbitrary restriction of a new and promising industry" and "government interference in business." Chairman Fly was forced to answer the bombardment on two national networks. His argument was that, if RCA's transmission methods should be superseded by technological developments, its sets would be useless to purchasers. Ironically, he broadcast this over NBC's red network, owned by RCA, at a cost to them of \$10,000.

On April 11 the case came up for debate before the Senate Interstate Commerce Committee, of which Senator Burton K. Wheeler (see sketch this issue) is chairman. The Committee was asked to ascertain whether the FCC had exceeded its authority, interfered with private enterprise. At the same time a bill was introduced into the Senate to curb the FCC. In his defense, Chairman Fly urged flexibility in both television receiving sets and transmitters so the public could view all systems and make its choice. David Sarnoff said RCA had no intention of "freezing" standards, and that RCA receivers could be adapted to any new type of transmission at a cost of about \$40 a set. Senator Wheeler said he hoped RCA would build a receiver capable of taking all transmissions, and that the industry would stop fighting within itself and get together. Morton Davis of RCA said that if the FCC specified what standards were to be, the RCA was prepared to build receivers on which the public could receive programs from FCC licensed transmitters.

Apparently the FCC did not decide immediately to fix standards, but indications in late April 1940 were that it would accept the industry's assurances at face value: a license was granted to Allen B. DuMont

JAMES LAWRENCE FLY

for a Class 2 "public programme service" television station to be located in New York City. This station will operate alternately on the several proposed types of transmission, and the public can compare results by adjusting flexible receivers.

FLYNN, EDWARD J. Sept 22, 1891-
Chairman of the Democratic National Committee

Address: b. 60 E 42nd St, New York City;
h. 2728 Henry Hudson Parkway, New York City

Edward J. Flynn accepted the position of Chairman of the Democratic Party in August 1940 as "an honor, a privilege and a duty most welcome." Most political observers agreed that he took on a hard job, for he had the third term issue to contend with; he had to fight against the unpopularity in some quarters of Wallace's (see sketch this issue) nomination as Vice-President; he had to conciliate the many important Democrats who were alienated by the "purge" of 1938; he had to line up strongly the city machines; and he had to consistently yet tactfully remind the public of the billions in bounties dispensed by the administration

EDWARD J. FLYNN

in the last years. That he did his job well is evidenced by the Roosevelt and Democratic successes in the November 1940 elections.

When, at the insistence of President Roosevelt, Ed Flynn took the job, he said he didn't hope "to equal the record of my predecessor and friend, Jim Farley, but—I will do my best." Comparisons between the two men were, of course, inevitable. The *New York Times* said that Mr. Flynn "can hardly match Mr. Farley in energy"; others pointed out that although Flynn knows the "big wig" Democrats, still he is a stranger "to thousands of local party hacks whom Jim Farley calls by their first names." Personally, it was felt, Flynn lacks a certain warmth and ease with people which Farley exercises to perfection.

Nobody doubted, however, that Flynn has much of Farley's political astuteness and that he is a first class campaigner. For 18 years he has been Democratic leader of The Bronx—Wendell Willkie (see sketch this issue) calls him "Boss Flynn of The Bronx"—and in these 18 years he has made The Bronx "proportionately the strongest Democratic borough in New York City."

This six-foot-two handsome Irishman, the son of Henry Timothy and Sarah (Mallon) Flynn, was born, brought up and educated in The Bronx. He went to public schools there and then to Fordham University, from which he got his law degree in 1909. He was only 18 then and had to wait three years before he could go before the Bar. After he was admitted he opened law offices in The Bronx, and his firm of Goldwater and Flynn is still prospering.

Flynn first stepped into real politics in 1917, when he was elected to the New York State Assembly. He spent three terms there and then, in 1921, was elected sheriff of

Bronx County. It was only a year later that he was made Democratic leader of The Bronx, much to the dismay of Tammany. "He didn't even speak the language and probably didn't understand it. Him with his fancy talk and expensive suits. How could that kind of a guy be boss of a borough?" But Tammany leader Charles Murphy knew him to be one of his "brightest young men" and a clean young fellow—which was what the Democrats needed then.

Since then Flynn has bossed The Bronx successfully. He has come unsmearred through every municipal scandal, including the Seabury affair, and he has "been careful to keep his coattails clean in connection with the courts." The only accusation of this sort against him was made by Dewey, (see sketch this issue) when he was running for Governor of New York State in 1938. He charged that Flynn had appointed Arthur (Dutch Schultz) Flegenheimer, an ex-convict and trigger man for Legs Diamond, as special deputy sheriff in The Bronx. Flynn easily convinced the public that Dewey had "deliberately distorted" the facts and that Flynn had appointed Flegenheimer before he was known as Schultz and had revoked the appointment when he was found in Diamond's company.

In his borough of well over a million, Flynn is said to know personally thousands of voters, and to have built a closely knit, highly efficient machine which repeatedly turns in huge Democratic majorities. Of course, any organizer who builds up a well-oiled machine comes in for both praise and criticism, but probably the most general impression even among his opponents is that Flynn is a "practical politician, perhaps no better but certainly no worse than political bosses everywhere."

During these years, from the pre-convention campaign of 1924 on, Flynn has always been a staunch friend and supporter of Roosevelt. Mr. and Mrs. Flynn (Flynn was married in 1927 to Helen Margaret Jones, and they have two sons and a daughter) are frequent Roosevelt guests, and have been hosts to the President and Mrs. Roosevelt at their Lake Mahopac summer home, where Ed Flynn has many acres under cultivation and 56 cows. When Roosevelt became Governor of New York, Flynn became his Secretary of State, and it has been said that Roosevelt "constantly sought and followed his advice." Flynn was an early supporter of Roosevelt for the Presidency and worked with Farley to bring about his nomination in 1932. Since then he has taken the course desired by the President in all Democratic Party clashes in New York. And he has often been heard to say, "I'm for anything Roosevelt is for. I'm for whatever he wants."

When Lehman took Roosevelt's place as Governor, Flynn continued as Secretary of State until 1939, when ill health caused him to resign, but he was always regarded as a Roosevelt man. In New York City politics he allied himself with Alfred E. Smith in

the fight to get rid of Mayor John Hylan when Jimmy Walker's campaign was considered a reform effort. When Walker got in he appointed Flynn City Chamberlain. But it was over Walker that Flynn broke with Tammany when Walker wanted to run for Mayor after having resigned under charges.

The next year, in 1933, he waited until late in a heated Mayoralty campaign and then bolted the Tammany candidate, John P. O'Brien, to support Joseph V. McKee as a Recovery Party nominee. Because of the split he made in Tammany's ranks, La Guardia (see sketch this issue) was elected. As a result, there wasn't much enthusiasm at Tammany Hall when Flynn's appointment to head the Democratic Party was made known in August 1940. Most of the statements had about the same warmth as that of Tammany Leader Christopher D. Sullivan, who said: "Ed is a well-known man. I have known him for 30 years. He has a lot of practical experience in politics."

Since 1939 Mr. Flynn has been the United States Commissioner General for the New York World's Fair. On August 17, 1940 he took over his Democratic Party duties from James Farley, after a series of conferences with him and the President, with forces "trained to victory" and intentions of running the campaign as "thoroughly as though the results were doubtful." After election he announced that he would keep the job, maintaining a New York office and commuting when necessary, but that he would not take on the duties of Postmaster General.

Edward J. Flynn is "trimly built, iron-gray and dresses splendidly"; in fact he is known as the best-dressed politician in New York. He has read widely, is informed about economics, plays a fair game of golf and collects Pennell etchings. He loves to argue and when not arguing can "carry on a lively conversation on almost any subject." His friends say, "Ed is just like a successful uptown businessman whose business happens to be politics."

FOLKS, HOMER Feb 18, 1867- Secretary of State Charities Aid Association of New York

Address: b. 105 E 22nd St, New York City;
h. 428 Hawthorne Ave, Yonkers, New York

Education, public health, child care—these have been the chief preoccupations of white-haired, distinguished-looking Homer Folks, who on October 27 was presented with the Roosevelt Distinguished Medal for 1940, almost since the day when he stepped up to receive his diploma from a small Michigan college in 1889. He was born in Hanover, Michigan on February 18, 1867, the son of James and Esther (Woodliff) Folks. He was 22 when he received his B. A. from Albion, went on to take another B. A. from Harvard, and immediately stepped into a position as superintendent of the Children's Aid Society of Pennsylvania. A year later, in 1891, he married M. Maud Beard of Albion, Michigan, and it was 1893 when he became secretary of the State Charities Aid Association. This is the position which he has held ever since, with the exception of a two-year interval from 1902 to 1904, when he was Commissioner of Public Charities of New York City, and during his service abroad with the American Red Cross.

His duties as chief executive officer of the Association only begin to describe the extent of Mr. Folks' activities, however. There is hardly a field of social service in which he has not been a pioneer. In his unceasing fight for child care, he organized the first agency in New York for aiding homeless mothers to care for their children (1894). In 1902 he published a book, *The Care of Destitute, Neglected and Delinquent Children*. In 1909 he was first vice-chairman of the White House Conference on Dependent Children. In 1935 he became vice-chairman

Vandamm

HOMER FOLKS

FOLKS, HOMER—*Continued*

of the National Child Labor Committee, of which he is now chairman; in 1936 chairman of the Governor's Commission on Illegitimacy, in 1940 chairman of the report committee of the White House Conference on Children in a Democracy, and in February 1940 he was appointed by Frances Perkins (see sketch this issue) to select a group to carry out the recommendations of the Conference over a 10-year period.

A pioneer in the battle against tuberculosis, Homer Folks attended the first international tuberculosis meeting in Washington in 1909 and later went to Albany to try to get help from the State in building much-needed hospitals and dispensaries. He was told that the taxpayers wouldn't stand for it. The counties took over the work, however, and in 1930 the State itself built three tuberculosis hospitals for counties which couldn't afford their own. One was named after Homer Folks, who in 1912 was the first layman to be elected president of the National Association for the Study and Prevention of Tuberculosis and at present is a member of both the National and the New York Tuberculosis Associations. The fact that from 1907 to 1939 the State's death rate from that disease was reduced 75 per cent must have made the taxpayers more amenable.

One of the by-products of the tuberculosis campaign in New York was the establishment of the Special Public Health Commission in 1913, of which Mr. Folks was appointed secretary. A new public health law (through which the State Public Health Council was established) was enacted through this Commission's efforts, and when in 1930 another Special Public Health Commission was appointed Mr. Folks was again one of its members.

Mr. Folks has very definite ideas about the matter of public health. He is not a proponent of socialized clinical medicine, believing the rôle of a public health authority should be a preventive one, though by no means limited to indigents. But so far, he thinks, we have only scratched the surface. Since 1913 he has been vice-chairman of the New York State Public Health Council, and he is a member of the board of the National Committee for Mental Hygiene, of the technical committee of the New York City Health Department, and chairman of the governing board of the East Harlem Nursing and Health Demonstration. Most recently, Governor Lehman appointed him to head a Committee to make a complete survey of the State's mental hygiene services.

Homer Folks' responsibilities have by no means been limited to this country. In 1900 he was a special agent of the United States Commission to the Paris Exposition, and he has also been a special agent to the military government of Cuba. During the

First World War he organized and directed the department of civil affairs of the American Red Cross in France, after the Armistice served as chief of the American Red Cross Survey Mission to Italy, Greece, Serbia, Belgium and France, and in 1921 was adviser to the American Red Cross in Europe. A book, *The Human Costs of the War*, was published in 1920.

In Mr. Folks' opinion this is an era in which wealth will be redistributed by raising the social, educational and health levels of all the people, and taxpayers might as well resign themselves to the fact. At the time when he became secretary of the State Charities Aid Association, he said, "There was just as much yelling about high taxes then as there is now, but it wasn't organized. Today it is organized, therefore it carries more weight." Nevertheless, what made the taxpayers indignant in those days is today taken as a matter of course: for instance, State hospitals rather than almshouses for the care of the insane.

In 1934 Mr. Folks said, in an article entitled *Making Relief Respectable*: "I see no reason for thinking that we shall ever wholly outgrow the need for a public relief system. . . My plea, therefore, is to accept it, not as a necessary evil, not as a makeshift, not as something demoralizing and unsocial. . ." From 1935 to 1936 he himself was a member of the Governor's Commission on Unemployment Relief. In the days before the institution of Federal relief he was commissioner of public charities in the City of New York (1902-3), president of the National Conference on Charities and Correction (1911), and in 1923 a member of the National Conference on Social Work. At present he is chairman of the executive committee of the Welfare Council of New York City.

Mr. and Mrs. Folks have two daughters, Gertrude Homera and Evelyn Esther. Mr. Folks is a Republican and a member of the University, Harvard and National Arts Clubs. His fraternity is Alpha Tau Omega. He holds honorary LL.D.'s from both his own Albion College and from Ohio Wesleyan, and in November 1940 Albion presented him with a Phi Beta Kappa key.

FOSDICK, HARRY EMERSON, REV.
May 24, 1878- Pastor of the Riverside
Church, New York City

Address: b. 490 Riverside Drive, New York
City; h. 606 W 122nd St, New York City

"Fuzzy-haired, magnetic" Harry Emerson Fosdick has been known for the past decade as a "sectless theological liberal" and probably the most influential clergyman in the United States. He is the pastor of the Riverside Church in New York City, built especially for him by his good friend John D. Rockefeller Jr. (Raymond Fosdick, his brother, is president of the Rockefeller Foundation.) In August 1940 he spoke against the "hysterical haste" with which the nation is being rushed into military conscription. "Conscription of wealth, conscription of industry, conscription of factories, conscription of labor, conscription of educators—why is not that democratic also if conscription of life is?" he asked.

For three centuries Dr. Fosdick's ancestors have been Puritans. Born in Buffalo, New York on May 24, 1878, he is the son of the late Frank Sheldon Fosdick, for 25 years principal of a Buffalo high school, and of Amy I. (Weaver) Fosdick. He attended Colgate University with no intentions of becoming a minister. Known as "Fuzzy" there because of his "flocculent, dark hair," he was prominent in the debating society, editor of the college paper, cheerleader. It was at college that he learned about a man named Darwin. Writing to his father about his discovery, he was amazed to get this letter: "Dear Harry: I believed in evolution before you were born." When he returned to school for his junior year he announced: "I'm throwing over my old idea of the universe! I'm building another—and leaving God out." He did build another in the next two years, but he couldn't quite manage to leave God out. By the time he was graduated in 1900, a member of Phi Beta Kappa, he had decided to attend Union Theological Seminary in New York City, even though not quite sure that his ideas weren't too "radical" for any church to risk him as its preacher.

Harry Emerson Fosdick was ordained for the Baptist ministry in 1903, and in August 1904 married Florence Allen Whitney of Worcester, Massachusetts. (They have two daughters, Elinor Whitney and Dorothy.) He received his B. D. from Union Theological Seminary in 1904 and the same year became pastor of the First (Baptist) Church at Montclair, New Jersey. In 1908 he acquired his M. A. from Columbia University, published his first book, *The Second Mile*, and began teaching homiletics at the Seminary.

He was very popular with his Montclair parishioners, but didn't impress them as particularly "radical." He led a campaign against the town's saloons, but in general his ministry was quiet. A new building was erected for the church, and the membership was trebled. Once he joined four

REV. HARRY EMERSON FOSDICK

other ministers in a gymnásium class, and the New York papers published a picture with the heading: "Five Muscular Christians." For the most part, he tried to be that. In 1915 he left Montclair to become a professor of practical theology at the Seminary, and the same year published his second book, *The Meaning of Prayer*. He also preached in colleges and universities, lectured in England and spoke to the British and American troops at the front in France and Flanders during World War I.

The aftermath of the War brought changes in religious feeling as well as in everything else. Dr. Fosdick felt that the unity that had sometimes manifested itself even among Catholics, Jews and Protestants during the grimmest days of the War made the time ripe for an experiment in interdenominationalism. In New York City two other churches were merged into the First Presbyterian Church, and Dr. Fosdick, a Baptist, was called in as minister. It was to be "a house of prayer for all people."

Dr. Fosdick preached the right of science to its place in the modern world, the right of scholars to trace the origins of the books of the Bible, the validity of faith which doesn't rest on any miraculous element, the duty of the Church to be something more than a defender of the social *status quo*. Presbyterian Fundamentalists shook their heads and some businessmen didn't approve, but the storm didn't really break until after the famous sermon delivered on May 21, 1922: "Shall the Fundamentalists Win?" In the uproar that followed, the general assembly of Presbyterian Churches finally asked Dr. Fosdick politely to take the Presbyterian vows or resign. He did the latter, severing relations on March 1, 1925. "I wouldn't live in a

FOSDICK, HARRY EMERSON, REV.—
Continued

generation like this and be anything but a heretic," was his opinion. And in May 1925 he was called to the Park Avenue Baptist Church, John D. Rockefeller Jr., agreeing to build him a \$4,000,000 temple on Riverside Drive at 122nd Street to accommodate the overflow of worshippers.

The heresy charges served to make Dr. Fosdick's name better known than ever and, as he said, really put a "sounding-board" in back of his opinions. There were many other ministers of unpublicized unorthodoxy preaching to unshocked congregations, but it was Harry Emerson Fosdick who became the spokesman for "modernists" all over the United States. As the radio became more and more common his following grew enormously, even among those who didn't read his books, which sold over a million copies during the 1920's.

Some agnostics claimed Fosdick's attempt to reconcile religion with the modern world was not so much a battle with the Fundamentalists as with the material universe. They said he asked such questions as "Is God unnecessary?" and was forced to return always to the fact that he knew Christ's existence because he had "experienced direct contact with him," that he believed only because he believed. Also his "original intellectual contributions" were not numerous. But most liberals praised him as much for his views as for his courage, seeing the future of the Church as dependent on ministers of similar ideals. Fosdick himself was as confident that modernist theology would triumph over materialism as over Fundamentalism. "Each age of unbelief is followed by an age of belief; after Epicurus came Christ; after Descartes came Kant; after Spencer and Nietzsche someone must come. It is now near the time."

In 1927 Dr. Fosdick's professional manner was described by an interviewer as resembling that of "the famous specialist of nervous diseases where the illness is largely imaginary, needing only confidence for its cure." Actually "specialist of nervous diseases" was not so far off the mark. Dr. Fosdick had revived and streamlined the "confessional," and with a knowledge of the rudiments of psychiatric procedure was attempting scientifically to diagnose the spiritual ailments of those who came to him for help. He ended by working with seven or eight specialists in nervous diseases. An energetic and tremendously alert little man, with a humor and self-confidence that never failed, Dr. Fosdick kept a regular schedule, taught a series of classes in the modern use of the *Bible* at the Seminary, spent long hours preparing his Sunday sermons, continued to publish books which continued to be read all over the world. Some of them are: *The Hope of the World* (1933); *The Secret of Vic-*

torious Living (1934); *The Power to See It Through* (1935); *Successful Christian Living* (1937); *A Guide to Understanding the Bible* (1938).

Although Dr. Fosdick's receptiveness to scientific theory has never grown less, his inherent mysticism has been deepening over a period of years. In 1935 he claimed that "the Church must go beyond modernism," astonishing those who still thought of him as modernism's most popular exponent. He also challenged the conception that it is religion's business to adjust man to his environment, especially if it is an environment that should be changed. Since the First World War he has been preaching vigorously against "putting Christ in uniform." An anti-war sermon which he delivered in June 1939—*Dare We Break the Vicious Circle of Fighting Evil with Evil?*—was later printed in pamphlet form by John D. Rockefeller Jr., and 50,000 copies distributed.

Dr. Fosdick is a firm believer in democracy, and defines it as "the conviction that there are extraordinary possibilities in ordinary people and that if we throw wide the doors of opportunity so that all boys and girls can bring out the best that is in them, we will get amazing results from unlikely sources."

FWLER-BILLINGS, KATHARINE

June 12, 1902- Geologist; author; explorer
 Address: c/o W. W. Norton & Company, Inc,
 70 Fifth Ave, New York City

Because Katharine Fowler-Billings (then Fowler-Lunn), herself a geologist, was forbidden by the British Foreign Office to accompany her geologist husband to the Gold Coast, West Africa and was not to be "downed so easily," she set out independently for Sierra Leone (West Africa), a region that remained almost unscratched from a scientist's point of view. She went very specifically *not* to write a book, but in the course of a few years *The Gold Missus* was inevitable.

Katharine Fowler was born June 12, 1902, the daughter of William Plumer and Susan Farnham (Smith) Fowler. She had a typically Bostonian Puritanical upbringing; survived the regimen of a select girls' school; sternly refused to "come out" socially; and because she had never set foot out of New England settled upon Bryn Mawr as an acceptable college. Here she took courses in geology—hay-fever retreats in the White Mountains had endeared her to this—and biology. During her sophomore year her aunt took her to Europe: "Persuading Auntie that she needed a rest . . . I scaled the Jungfrau, the Breithorn and the Eiger. The trip up the Eiger was unfortunately visible through the telescope at our hotel in Mürren. The strain of knowing our movements for 13 hours, when we encountered difficult going and had to cut steps in the ice all the way up and down the Eiger's cone, was too much for Auntie. We took the next train to London. . ."

She pursued graduate studies at the University of Wisconsin (M. A. 1926) and here got her first geological field-work. She hitch-hiked through the Black Hills and beyond, and found that in order to get into some of the Montana mines she had to be smuggled along as a boy. At Columbia University she continued her studies, and wrote her Ph. D. thesis (1930) on the Laramie Mountains, Wyoming.

In the summer of 1929 she went to the International Geological Congress held in South Africa; did some exploring along the Congo tributaries; and on a clammy day in December of that year was married in a London registry office to James W. Lunn, also a geologist. It was the red tape surrounding his transfer by the British Foreign Office that drove her into feminist desperation—and the depths of West Africa.

After a divorce she was married, in April 1938, to Marland P. Billings, Harvard professor of geology. Since, she has been periodically engaged in the mapping of the Mount

Washington (New Hampshire) quadrangle. Until recently she was instructor of geology at Wellesley; her son, George Bartlett Billings, was born in the summer of 1939.

FRANK, WALDO DAVID Aug 25, 1889-
 Author

Address: c/o Doubleday, Doran, 14 W 49th
 St, New York City

Waldo Frank's recent program for the world's future, *Chart for Rough Water: Our Role in a New World* (1940), brought him once more into the public eye as the defender and advocator of "the rebirth of our lost humanism." His concern is with "the new world which reaches further back in time than the World War of 1914 and extends into a future far beyond Hitler." It is also, in the last chapter, with the problems presented to America by the present conflict in Europe. The concrete proposal Frank makes for a solution to the "rough water" in which the United States finds itself in 1940 is that "we make ourselves non-belligerent allies of the Allies" who are fighting to preserve "The Great Tradition."

The merit of Mr. Frank's book, according to Max Lerner, author and professor, is that "it dares deal greatly with a great theme. Its complexity lies in the multiple rôle Mr. Frank essays of being at once religious prophet, moral exhorter, fashioner of new myths, social analyst, historian of ideas, political polemicist."

The most consistent criticism leveled at the book is that it has been "miscalled *Chart for Rough Water*." One critic complained that "there is nothing in it of the simple accuracy the word chart implies. . . It is confused, contradictory and tormentingly dull. . . Its confusion and dullness are compounded of a number of ingredients—Mr. Frank wants everybody to get religion but doesn't say so right out."

After the First World War, Frank, like many other writers, veered sharply to the Left. He was forced slowly but surely into the arms of radicalism, though "he did not surrender without a protracted inner struggle." He accepted the doctrine of the class struggle and the ends proposed by

Marxism—"the establishment of collective society," but never in orthodox Marxist form.

By the time 1936 came around Frank had written a novel, *The Death and Birth of David Markand* (1934), dealing with the workers of the mining region in Kentucky, and had gone so far as to say that "only the swift maturity of a mass party of revolutionary Communism, manned by Labor and by the enlightened guards of petty bourgeoisie and intelligentsia, can destroy American Fascism by destroying the Capitalist system before it has time to enter the last period of paroxysm, euphoria and catalepsy." *The Bridegroom Cometh* (1939), a sequel to *David Markand*, developed the same theme. However, Frank, though a sympathizer, was no Communist, and at the time of the Trotsky trials had definitely broken with the Communists. After the outbreak of World War II Waldo Frank believed that "with every ounce of our economy, of our political prestige, we should make ourselves non-belligerent allies of the Allies." It was because he felt this belief was not shared clearly enough by the *New Republic* that he resigned from that magazine in May 1940. This resignation, like that of Lewis Mumford's (see sketch this issue) created a stir, for Waldo Frank had been a consistent contributor to the magazine and long a member of its staff.

Waldo Frank made his first protests against this "godless" world on August 25, 1889 in Long Branch, New Jersey. He was the son of Julius J. and Helen (Rosenberg) Frank. Young Frank was a precocious lad; by the time he was five years of age he had written a play, and at the age of sixteen had a novel accepted by a publisher. He attended Yale University, receiving both his B. A. and M. A. degrees there, and in 1911 was elected to Phi Beta Kappa. While in his senior year he ran a column as drama critic on the *New Haven Courier-Journal*.

After graduation he did some writing for the *New York Times* and the *New York Post* and in 1913 left the United States for a year in Europe. Back in New York in 1914, he lived in an East Side block similar to the one in *City Block* (1922) and freelanced as a writer. In 1916 he founded the short-lived *Seven Arts* magazine with James Oppenheim.

In 1917 Frank objected to the War for political reasons, and to elaborate his beliefs wrote an essay, *Our America* (1919). During that period he was a correspondent for *La Nouvelle Revue Française* and *Europe*, two Parisian publications, was a contributing editor of the *New Republic* and *Masses* and lectured on modern art and literature at the New School for Social Research, New York City.

Frank married Margaret Naumburg in 1916. Miss Naumburg, well-known as the founder of the Walden School, was a leader in the application of psychoanalysis to education. They had one son, Thomas. Later they were divorced, and Frank married

WALDO FRANK

Alma Magoon in 1927. They have two children, Michal and Deborah.

Frank has received more recognition from foreign lands than from his own country. He has an honorary degree from the Universidad Nacional de San Marcos, Lima, Peru, and most of his life has lectured abroad. "Handsome, dark, intense," he makes his strongest appeal mainly to the French and Spanish (his book on Spain, *Virgin Spain* [1926] is accepted as a classic by the Hispanic peoples), though he has a good-sized following in the United States. Included among his numerous works are the novels, *Rahab* (1922); *City Block* (1922); and *Holiday* (1923), which first made his reputation abroad. There are also biographical sketches, a play, *New Year's Eve* (1929), many articles, translations and a number of books which he has edited.

FRAZIER, EDWARD FRANKLIN Sept 24, 1894- Professor of sociology; author
Address: Howard University, Washington, D. C.

Professor E. Franklin Frazier, Negro educator, of Howard University, has been twice honored in 1940. In April he was awarded a Guggenheim Fellowship for a year in Brazil and the West Indies to make a comparative study of the Negro family there. In May he received the John Anisfield Award, presented each year for "a sound and significant book published in the previous 12 months on the subject of racial relations in the contemporary world."

The book for which Dr. Frazier received the Anisfield Award is *The Negro Family in the United States* (July 1939), a history of the Negro family group from the days of slavery to the present. Although the main study of the book is never obscured, it incidentally throws much light on such specific subjects as Negro education, the Negro in business and industry, Negro housing and similar problems. "Few studies," according to competent reviewers, "have done as much to illuminate the obscure processes of social change as this thorough-going treatment." Most significant, perhaps, is its revelation of wide variations in the standards of different social classes among the colored population and of the still wider variations in the behavior of different individuals. The substantial, authenticated material is often given added point by the very successful organization of the whole and the engaging manner in which it is presented.

Long before the publication of *The Negro Family in the United States* Dr. Frazier was recognized as an authority on Negro problems. His first sociological writing on the Negro, *Durham: Capital of the Black Middle Class*, appeared in the *New Negro* in 1925. In 1932 the University of Chicago Press published his *The Negro Family in Chicago*; his study of *Traditions and Patterns of Negro Family Life* came out in 1934. Numerous magazines, including academic ones such as the *American Journal of Sociology* and the *American Sociological Review*, and popular ones like *Forum*, *Current History* and *The Nation*, have published his articles. His *Negro Youth at the Crossways*, prepared for the American Youth Commission, was published in 1940.

Dr. Frazier's writings are based on firsthand study and firsthand knowledge. Frequently he has directed research projects, and in 1935 and 1936 headed an economic and social survey of Harlem for Mayor

EDWARD FRANKLIN FRAZIER

La Guardia's (see sketch this issue) New York Commission on Conditions in Harlem. From this came his study, *Negro Harlem*; from his surveys in Chicago had come his book on the Negro family in Chicago; and from his personal study of Brazil and the West Indies will undoubtedly come a well-documented, analytical survey of the Negro family.

Edward Franklin Frazier was born in Eastern Shore, Maryland on September 24, 1894, the son of James Edward and Mary (Clark) Frazier and received his schooling in Baltimore. From high school he went to Howard University, from which he was graduated *cum laude* in 1916. Right out of college he got a job—teaching mathematics at Tuskegee Institute in Alabama—but he stayed there only a year and then went to St. Paul's Normal and Industrial School in Lawrenceville, Virginia. A year later he was teaching mathematics again—at the Baltimore High School.

In 1919, however, Dr. Frazier took a leave of absence from teaching to get his master's degree in sociology from Clark University (1920). He did so well there that the New York School of Social Work gave him a year's research fellowship, after which he went to Denmark as a fellow of the American-Scandinavian Foundation. In Denmark Dr. Frazier studied "folk" high schools.

Back in the United States in 1922 he married Ellen Brown and became an instructor in sociology at Morehouse College in Atlanta, Georgia. He stayed there until 1924, when he became director of the Atlanta School of Social Work. Then he went to Fisk University, first as a special lecturer in the department of sociology and then as research professor in the same department. From 1934 to the present he has been professor and head of the department of sociology at Howard University in Washing-

ton, D. C. During his years of teaching Dr. Frazier found time to earn his Ph. D. from the University of Chicago in 1931.

Full-faced, energetic Professor Frazier has made his classes at Howard University significant not only to his students but to Negroes and white people everywhere. His influence as a sociologist is far-reaching, and the two awards he received in 1940 are but further recognition for a man who has already made himself and his work a force in this country.

FREYBERG, BERNARD CYRIL (frī-bērg) Mar 21, 1889- Commander in chief of the New Zealand Expeditionary Force
Address: 7 Clarendon Pl, W. 2, London, England

General Freyberg, who in 1940 has charge of the New Zealand troops in the Near East, was one of the most picturesque figures to emerge from the First World War. His feats of valor in that War read suspiciously like fiction. Not only does he hold the Victoria Cross, but he won the Distinguished Service Order no less than three times, the first episode which gained him this distinction being one of the most amazing in the whole history of warfare. He has also gone rapidly up the ladder of army promotion: at the age of 28 he became a temporary brigadier general and at 45 a regular major general of peacetime status, after a uniquely short army service of only 18 years.

Though he was born in London, Bernard Cyril Freyberg went out to New Zealand as a child and was brought up there as a colonial, even learning the Maori language. He was educated at Wellington College, New Zealand, and at the Staff College, Camberley, England. As a youth he was a notable oarsman and boxer and won many

trophies at swimming. There are journalistic stories about the years just prior to the First World War which should be treated skeptically. It is reported that Freyberg served against Victoriano Huerta in the Mexican Civil War of 1913; that in 1914 he was a dentist in New Zealand; that he sold his swimming cups to raise the fare to England; that when he reached London he buttonholed Winston Churchill (see sketch this issue), demanded a commission and received one. But a circular letter to the English press sent out by Freyberg to correct misstatements contains no allusion to these episodes. It states clearly that he was trained at the Staff College, Camberley, and joined the New Zealand forces in 1911, which would seem to rule out Mexico, dentistry and the improbable-sounding Churchill story.

Leaving conjecture for fact, it is certain that Freyberg was commissioned to the royal naval division in 1914, that he served with it in the abortive Antwerp expedition (where he received his first wound) and that in 1915 he went out to the Dardanelles as a lieutenant commander in the Hood battalion. It was then that the exploit described above as one of the most amazing in the history of warfare occurred. On the evening of April 24 a number of warships were maneuvering off Gallipoli. That night the destroyer *Kennet* staged a feint landing, and it was planned that the following night a platoon of the Hood battalion should be thrown ashore to light flares as a further feint. Freyberg, however, suggested that this would mean useless casualties; but that, being a strong swimmer, he might be rowed to within a mile of the shore, where he could swim off and light the flares. This was agreed to, and on the night planned for the feint Freyberg, naked, and with his body dark-stained, lowered himself into the water and set off, towing a waterproof bag containing oil flares, calcium lights, a knife and a revolver. He swam for an hour and a quarter in bitterly cold water, landed, lit his first flare, swam some 300 yards, lit his second flare, and crawled up the slope to some trenches, which he discovered to be dummies. He then lit a third flare on the beach, and set off once more into the bay, in pitch darkness. It was not until 3 a. m. that he was picked up. By means of this astounding feat the Turks were kept guessing for many hours about a part of the coast that was not really menaced, while the real landing was taking place much further south. For this Freyberg was awarded the D. S. O.

Freyberg served right through the Gallipoli campaign and then went, still with the royal naval division, to France. He was commissioned to the army on May 19, 1916. In November 1916 he won his Victoria Cross by leading the attack on Beaumont Hamel, as sometimes stated). Though he was wounded four times during the day, he pressed on to the

FREYBERG, BERNARD CYRIL—*Cont.*

capture of the village and five hundred German troops by savage hand-to-hand fighting. He was weak with loss of blood, but refused to be carried back to a dressing station until the position had been thoroughly consolidated.

Freyberg rose steadily in rank and in June 1917 was promoted to a brigadier generalship. He won two bars to his D. S. O.—that is, he earned the distinction twice again. The first bar came from another piece of Freybergian dash and daring. The only way of investigating the position on his brigade's left flank was by a road running through No Man's Land. Freyberg got hold of a bicycle, pedaled down the road under heavy fire, reorganized the position and pedaled back again. Altogether he was wounded nine times in the War and mentioned in dispatches five times. In 1919 he was made Companion of the Order of St. Michael and St. George.

Peacetime soldiering inevitably entailed a slipping back in rank, but Freyberg was gazetted to the aristocratic Grenadier Guards. He was granted leave in April 1921 for a world tour to recuperate from his wounds and in 1922 married the Honorable Mrs. Barbara McLaren, widow of the Honorable Francis McLaren, an M. P. who had been killed in an air crash in 1917. His best man at the wedding was the late Sir James Barrie, a great friend of his.

In October 1922 Freyberg stood for Parliament as an Independent, with Liberal leanings, at South Cardiff, Wales, but was not elected. His military career continued with distinction, and he preserved all his fondness for strenuous outdoor pursuits. At one time he is reported to have made a practice of walking in from Windsor, where he was stationed, to London, 22 miles away. The yarn even credits him with walking back again in the afternoon! At all events, on August 5, 1925, at the age of 36, he set out to swim the English Channel. He was 16 hours and 44 minutes in the water, but was taken out only 500 yards from Dover, defeated by an old War wound.

On February 4, 1929 Freyberg obtained his lieutenant colonelcy in command of the first battalion, the Manchester regiment. He rose to full colonelcy in 1931, when he became assistant quartermaster general of the Southern command. In 1933 and 1934 he was a general staff officer, first grade, at the War Office, reaching the rank of major general in the latter year. Then on October 16, 1937 he went on retired pay, and in April 1938 was adopted prospective National and Conservative candidate for the parliamentary division of Spelthorne, Middlesex. When in September 1939 the New Zealand Expeditionary Force was formed, Freyberg was placed in charge of it and in February 1940 went out to Egypt.

Freyberg has one son who was 16 years old and at Eton College when World War II broke out. He ran away from school

to join the army, was sent back again because of his age and had to content himself with Sundays spent doing War work in factories with other Eton boys.

FUNK, WALTHER (fōōnk) Aug 18, 1890- German Minister of Economics; president of the Reichsbank

Address: Deutsche Reichsbank, Berlin C 111, Germany

Dr. Walther Immanuel Funk is the man who succeeded Dr. Schacht, in title at least, as ruler of the entire German national economy: the creation of money, the direction of trade and economic policy. He would like also, to be called "Minister of World Economics," and in the summer of 1940 was kept busy issuing dire warnings to the United States—denouncing free trade, denouncing the United States' cartel scheme, declaring barter the only salvation for world commerce, threatening to peg all European currencies to the Reichsmark (the "work dollar"). His tone makes it difficult to believe that actually he is a friendly, fat little man, "the gentlest of the Nazis," who lets others put most of his theories in his mouth and who is respected as a great political economist mainly by his musician friends.

He was born of an aristocratic Königsberg family, the son of Walther and Sophie (Urbschat) Funk, in Trakehnen in East Prussia. After attending high school at Intersburg and the Universities at Berlin and Leipzig, acquiring his doctorate, he became a reporter on a small provincial paper. He changed jobs frequently, and in 1916 found the 26-year-old journalist in Berlin on the editorial staff of the Berlin *Börsen-Zeitung*, a stock exchange paper. There his job was to express the desires of the Pan-Germans, the heavy industries, the coal barons, the East Prussian military caste, the large agriculturists. Throughout and after the First World War, Dr Funk fought socialism, fought inflation, published propaganda for I. G. Farben, Krupp and Thyssen (see sketch this issue) for a suitable remuneration. Finally, marriage in 1920 to Luise Schmidt-Sieben, the daughter of a wealthy manufacturer, brought him into circles where he occasionally acquired inside information that gave him a reputation for understanding finance. By 1926 he was chief editor of the paper.

On political currency questions it is said that his friends Helfferich and Schacht used Dr. Funk for a mouthpiece, and he preached the obnoxiousness of foreign credits, the pre-eminence of the home market, the importance of a national trade policy and increased production—theories of two men who were at that time liberals, but whose views were perfectly agreeable to Hitler. At that period, however, Dr. Funk showed no trace of anti-Semitism, moving respectfully, even obsequiously, among Jewish industrialist and banking acquaintances. The

WALTHER FUNK

head of the economic department of the Nazi Party was also one of his friends, urged him to join, but industry's hesitation in supporting the movement kept him cautiously away.

In the end it was Dr. Funk who linked the industrialists and their capital to the National Socialist Party by introducing Krupp, Thyssen and others to the Nazi leaders. The result was the first election success of 1928. And when some sort of scandal lost him his newspaper position in 1930 he no longer hesitated to join the economic department of the Party—according to the *New Republic* it was simply that "he had lost a job and needed a new one." His duties were to continue obtaining financial support, to supervise money matters, to keep the Party apparatus and propaganda running smoothly. It was true that under his guidance the National Socialists were enormously in debt by the time of the 1932 election defeat, but when Hitler became chancellor a month later the entire money resources of the state became available to them.

In 1933 Dr. Funk was appointed chief of the Reich Press Bureau, and when Dr. Goebbels expressed a desire to handle the affairs of the press himself Funk became his state secretary. But his positions as chairman of the Berlin Philharmonic Orchestra, the Radio Corporation and the Filmkreditbank he found not only more remunerative but also more soul-satisfying: his home was a center for highbrow soirées at which he would himself perform at the piano whenever permitted, and he had always found the company of musicians, film stars and artists highly agreeable. Perhaps he thought of himself as a thwarted artist: back in his *Börsen-Zeitung* days he had once paraphrased Goethe by writing under a para-

FUNK, WALTHER—*Continued*

graph of his own to be published in a press almanac: "Only he who knows what the stock market is, knows what I suffer."

Dr. Funk had remained on good terms with Dr. Schacht (he had a talent for remaining on good terms with people who had not only turned Nazi) but had been given the Ministry of Economics and the presidency of the Reichsbank. Though acknowledged as the financial wizard of the Reich, he was independent, and when finally he thought he foresaw economic disaster as the result of obeying orders from above, he refused to be responsible. In 1938, therefore, he was forced to resign the Ministry of Economics, and the pliable Dr. Funk took his place, with his main task to justify the new Nazi trade agreements. Though Dr. Schacht cooperated with him for a while as president of the Reichsbank, a conflict with the Nazi leaders soon arose. Schacht refused unlimited expansion of credit on the basis of note issues, and Dr. Funk inherited the second office, too. Doing what he was told to do with "neither theoretical nor practical scruples," economic considerations were increasingly subordinated to military ones as German currency began to lose practically all connection with world markets.

Doubtless there was time free to play the piano, however, for in practice the management of the bank was turned over to a Berlin banker, the Ministry of Trade to Funk's secretary, and after Funk had made a rather disastrous Balkan tour in October 1938 the former chief of the Foreign Exchange Office was called on for similar duties arising in the future.

In December 1938 Dr. Funk acquired an additional title—Commissar for Increasing Production, at the head of the shipbuilding, motor, machine and most other industries—but in January 1940 even his nominal powers were reduced when a General Economic Council was devised which pared down his staff and his jurisdiction, transferred final authority to Goering.

A plumpish, thick-necked little man, not quite bald, Dr. Funk is known more for his happy-go-lucky opportunism than for his energy. He manages to get along. Besides, he has other assets: "he knows the best years for wine from the Rhine to Bordeaux" and is said to be the funniest after-dinner speaker in Berlin. There was humor even in his appeal to the German people to save not "real" wealth, but marks and pennings: "Some people are hoarding even bathtubs, although they can neither eat them, wear them around their necks, nor pay taxes with them."

It takes an artist to put humor into German taxes.

Who's Who in Commerce and Industry

FYFE, H. HAMILTON Sept 28, 1869-Journalist

Address: The Cliff, Roedean, Brighton, England

Hamilton Fyfe is one of the ten most famous journalists in Europe. There is nothing he doesn't know about news gathering and presentation, about scoops and the workaday life of a pressman. He has been an editor, he has contributed to many of the world's journals, written over 20 books and several plays. But though he might easily have made a fortune, in 1940 he is writing mainly for *Reynolds News*, the organ of the British Cooperative Movement. After the last War he decided that he had so great a care for his conscience and political ideals that he would never again write anything for the Conservative press except non-political matter such as book reviews. He has kept that determination.

Henry Hamilton Fyfe (he uses only the H of the Henry) was born in London, the eldest son of the late James Hamilton Fyfe, a barrister and journalist who for some years was Parliamentary correspondent of the *London Times*. When Hamilton was only 10 his father died, but Hamilton's mother was able to send him to Fettes in Scotland. It was unusual for an English boy to attend a Scottish public school, but Mrs. Fyfe had heard Fettes described as the "Scottish Eton" and, since she couldn't afford the real Eton, sent him there.

At 17 Fyfe started to work for the *London Times*, first at odd jobs and later at reporting and sub-editing. Since his mornings were free he spent them studying and writing free-lance articles. Eventually he became editorial secretary to the *London Times'* editor, George Earle Buckle, and through this position was able to meet people prominent in the political, literary and art worlds. He also wrote reviews, dramatic criticisms and occasional leading articles.

In 1902 Fyfe committed the first of many actions which his friends considered rash or unworldly. The Licensed Victuallers' Association, the trade organization of the saloon-keepers, asked him to take over the editorial chair of their daily newspaper, the *Morning Advertiser*. Fyfe, well set as editorial secretary on the most dignified daily newspaper in the world, immediately threw up his job

to run a journal which only saloonkeepers buy—he saw scope for initiative.

The late Lord Northcliffe, who missed nothing, saw the great improvements Fyfe was making in the victuallers' journal and in 1903 took him on to the *Daily Mirror*, then just starting to make its fortune as the first London all-picture daily. Fyfe stayed with the *Daily Mirror* four years and invented for it the very short leader and other devices to appeal to the public to which the *Daily Mirror* caters. In 1907, still under Northcliffe, Fyfe moved over to the *Daily Mail*, for which he acted as special writer, covering such notable stories as the Blériot cross-Channel flight.

By this time Northcliffe had gained control of the London *Times* and in 1913 sent Fyfe to cover the Carranza revolution in Mexico. The next year found Fyfe reporting the Ulster ferment over Irish home rule and, when the First World War broke out in August, Fyfe went immediately to France. His account in the London *Times* of the retreat from Mons was spectacular and his other reports were journalistic feats. In 1915 Fyfe was sent to Russia and Rumania (he was there during the German attack); then back to Russia, from which he gave the British public its first account of the strange career and tragic death of Rasputin. In 1917 he reported from Spain and Portugal, then from Italy, and finally was sent to the United States as honorary attaché to the British War Mission. In 1918 he was in London preparing propaganda to be distributed among the German Army and civilians.

The year 1919 marked a turning point in Fyfe's ideas and career. He refused a knight-hood and also refused to do anything but neutral reviewing for the *Daily Mail*, for this was a strongly Tory paper while his own views were going more and more toward the Left. He got a chance to work for a paper with which he was more in sympathy in 1922 when he was asked to become editor of the *Daily Herald*, Labor's first real attempt at a national daily. When Fyfe took over it was a poorly published sheet with a circulation of only 130,000. Fyfe made it into a real newspaper and within four years had brought its circulation up to 450,000.

Nevertheless, he wasn't entirely happy there. He had a number of disagreements with Ernest Bevin (see sketch this issue) and other trade union leaders on matters of procedure. Still, during the General Strike of 1926 he ran a successful emergency edition called the *British Gazette*. That same year he resigned. For a while he did some work on the *Daily Chronicle* until it was merged with the *Daily News*. He also ran for Labor candidate at Sevenoaks, Kent in 1929 and at Yeovil, Somerset in 1931. Both times he was defeated.

In 1907 Fyfe married Eleanor Kelly, daughter of the late William Kelly, an official at the War Office. Mrs. Fyfe accompanied him on many of his journeys in search of news. Today he lives at Roedean, near

Brighton. His books include *Northcliffe, an Intimate Biography* (1930); *The British Liberal Party* (1928); *Pinero's Plays and Players* (1930); *Life of T. P. O'Connor* (1934); and an autobiography called *My Seven Selves* (1935). He has also written several plays, including a wordless drama called *The Pool*, which was successfully produced in London in 1912.

GALLUP, GEORGE HORACE (gäl'lup)
Nov 18, 1901- Public opinion statistician
Address: The Great Rd, Princeton, New Jersey

Founder and director of the American Institute of Public Opinion, Dr. George Gallup, streamlined tabulator of the democratic viewpoint, has in the past few years

Bachrach

GEORGE HORACE GALLUP

become America's foremost soothsayer. Unlike most oracles, he is generally right. The election year of 1940 has been a busy one for him and one, he feels, which has definitely established scientific sampling polls. Observers agreed with him that he hadn't "got out on a limb" as other polls have done at election time, but they felt, too, that he had hedged considerably in predicting the returns. There is no doubt that he underestimated the Roosevelt vote, though he has scientific reasons to explain this.

The Institute of Public Opinion is at present equipped to measure within three per cent of accuracy the views of the electorate on current social and political questions. For this reason the Gallup polls, appearing three times a week (with two Sunday surveys) in more than a hundred newspapers throughout the country, are read eagerly by many groups and interests. The Institute maintains a research office at Princeton, New Jersey, which sends out thousands of ballots every week. There are also a predetermined number of personal interviews by nearly 300 staff reporters stationed across the United States. Six categories, or "controls," of population-types are used to reflect opinion from all social strata. Dr. Gallup in 1940 has in operation four independent checking systems for the results of the surveys. In June 1940 a book on the Institute's methods and results, by Dr. Gallup and Saul Forbes Rae, called *The Pulse of Democracy*, was published.

The man who thus keeps his finger on the collective pulse of America was born in Jefferson, Iowa, November 18, 1901. His father was a speculator in ranch and farm lands, something of an eccentric, who spent a lot of time trying to develop a new sys-

tem of logic. He was also a staunch advocate of "dry" farming; Dr. Gallup says that he contributed to the formation of the Dust Bowl. Land values fell, and financial reverses came to the family while young Gallup was attending the University of Iowa. On his own, he organized a towel service in the swimming-pool locker room; and when a junior became editor of the college daily. He raised the paper to professional status by covering local news, obtaining a national wire service and a substantial amount of advertising. This made such an impression on university authorities that after his graduation they asked Gallup to be an instructor in journalism. The story is told that his first survey was of the campus to select the prettiest girl. The girl who won was Ophelia Smith Miller of Washington, Iowa, whom Gallup married December 27, 1925.

For the thesis of his Ph. D. in journalism, Gallup told how he had developed and tested a method of measuring reactions of newspaper readers to certain features by questioning a small selected number of them. This was the germ of the Gallup Institute method. While teaching journalism at Drake University, and at Northwestern in Evanston, Illinois, he continued to make his surveys of newspaper readers, financed by the Des Moines *Register and Tribune*. His work came to the attention of Young & Rubicam, a New York advertising agency, who hired him in 1932, and for whom he has been piling up statistics since, estimating the number of people who listen to their clients' radio programs or read their advertisements in the magazines.

In 1935 Gallup set about organizing the American Institute of Public Opinion. His first test question was to get the reaction of the average man on New Deal spending. But the first real test of the Institute was the Presidential election of 1936. The business of predicting the election became almost a contest between Gallup's new Institute and the traditional *Literary Digest* poll. The *Digest* poll was made up of names culled from subscription lists; automobile registration; and the telephone directory. Gallup, who had sold his service to papers on a money-back guarantee, got paler and paler as November came. His figures kept showing up for Roosevelt, whereas the *Digest* figures calmly proclaimed Landon. Abusive blasts against him he filed in a "Dirty Editorials" file. He worked himself into a state, knowing that if wrong this once, his Institute was ruined. But it is history now that Gallup's poll predicted the election results better than those of anyone else; and though he had to spend five months resting up after election, the Institute was saved.

Granting their accuracy, and despite their values, there have been objections to the Gallup polls on the grounds that they are a bad political influence. Dr. Gallup once answered that objection by pointing out, among other factors, the continued existence of the Republican Party. And undoubtedly

people like being questioned on a Gallup poll. When an Arkansas tenant farmer was recently asked his opinion on a third term for Roosevelt, he was amazed and pleased. "You're asking *me*? Does my opinion count? Nobody ever asked me for it before."

Dr. Gallup also started in 1936 the British Institute of Public Opinion, which uses the methods of the American Institute. He is the author of *A New Technique for Measuring Reader Interest*.

In private life Dr. Gallup, who has been called the most discussed man in the advertising world, is a pretty typical and model American. His own reactions and opinions check almost exactly with the majority of those received on his polls. One writer has described his appearance as that of "a grown-up, dog-eared edition of a 4-H Club boy. His heavily muscled shoulders, draped in tailored tweeds selected by his wife, are the best features of his solid torso. His face is round and amiable and photographs badly, mainly because of an insolent, tip-tilt nose. His black hair is thinning but his eyebrows remain nicely bushy." Dr. Gallup's childhood friends all call him "Ted." He likes to sprawl at his desk; he has professorial fits of forgetfulness; and his own filing system consists of putting everything into a heap and pulling one piece out at random.

Dr. Gallup, his wife and three children, George, Jr., Alec and Julia, live in a pleasant early-American farmhouse near Princeton. Here Dr. Gallup has some 300 acres, where he raises a purebred herd of Aberdeen Angus cattle. He says his prime motive in life is to make his family comfortable. His chief aversions are flummery and red tape; an occasional beer, horseback riding and heroic novels his favorite relaxations.

GAMELIN, MARIE GUSTAVE See Gamelin, M. G.

GAMELIN, MAURICE GUSTAVE (găm'lăN) Sept 20, 1872- Former commander in chief of the Allied Armies and former chief of the French national defense

General Maurice Gustave Gamelin, former "Generalissimo of the Allied Armies of Air, Sea and Earth," was in the autumn of 1940 under arrest, on trial at Riom for his acts that "led to the passage from the state of

peace to a state of war . . . and thereafter aggravated the consequences of the situation thus created." General Gamelin, who for a time was reported to have been executed, to have committed suicide "following a definite invitation of the French High Command," to have fled France, had previously been interned along with others of France's former leaders at the Château Chazeron, busy preparing his defense brief.

Even though he may now be accused by the Vichy government of sacrificing ill-equipped troops to cover his own blunder, of depending on a Maginot Line that was no defense—accused by others of lack of action and the tactical blunder of moving the French Army into Belgium, still it is certain that "no commander in chief in the First World War came to his task as Gamelin did last September, because none had, like Gamelin, gone through another World War." And it also seems certain that few commanders so enjoyed the entire confidence and respect of their men. In the last War Gamelin displayed an amazing talent for being right rather than rash, and for disentangling himself from engagements with minimum losses. Soldiers appreciate that particular brand of economy. And French people had often been heard to say: "He will bring us victory and peace, but not by talking about it."

Maurice Gustave Gamelin was born just across from the War Ministry in Paris on September 20, 1872. His father was a former controller general of the French Army; his uncle had been the last Governor of Strasbourg before the city was lost to the Germans; on his father's side he was descended from at least five generals, and many of the ancestors of his mother, a distinguished painter, had been officers in the French Army. But as a boy a literary career was predicted for him. He consequently attended the Collège Stanislas, "a strict and scholarly Catholic school with considerable social standing and a military flavor," and disciplined his mind by memorizing 10 lines of prose at night and reading a book of philosophy a week. Upon graduation in 1891 he succumbed to the military tradition by attending St. Cyr, French training school for army officers, but he never recovered from the habit of philosophy.

At St. Cyr young Gamelin had overawed his classmates by being second in his entrance examinations, by graduating first in a class of 449, and most of all by his physical endurance in being the only one among them never to fall asleep during evening lectures. He now began his career in the infantry, spending three years with an Algerian regiment in Africa, where a different kind of physical endurance was necessary. In 1895 he was promoted to the rank of lieutenant, and soon afterwards was seconded to the Army's cartographical service, where he spent three years because "he liked to paint landscapes in water color, survey and map."

MAURICE GAMELIN

By 1898 Gamelin was back in Paris at l'Ecole de Guerre for French officers, where Foch was one of the instructors. There he studied "topography and a species of military metaphysics then in vogue," but was saved from too extreme a military mysticism by Foch's critical attitude: "Remember, the solution now counts only 25 percent, the application of the solution in war later on 75." He finished in 1901 with a record marked, "very good," and was promptly posted to the staff of Corps XV with the rank of captain. In 1904 he was given a company of chasseurs.

From 1906 to 1911 Gamelin was on Joffre's staff as confidential officer. It was an amazing combination, and one that was to become famous. Joffre having "all the practical experience and Gamelin all the theory it was then possible for officers of the French Army to acquire," together they formed very nearly "an intellectual entity." When in 1911 General Micheler was relieved of his command in the midst of the "perennial war scare," Joffre became commander in chief of the French Army, and Gamelin head of his small group of advisers, with the title "Chef de Cabinet." There was an interval of staff work in 1913, but in 1914, when war broke out, Gamelin was officer and chief of staff at general headquarters, still Joffre's "ears and eyes, hearing of everything that happened in the Army and knowing, before anybody except Joffre, what the Army was going to do next."

Joffre called him "one of my red blood corpuscles." In September of 1914 it was Gamelin who worked out the strategic move which stopped the German advance on Paris and saved the Allied cause at the famous Battle of the Marne. The story goes that Gamelin, detecting a weakness in the German position, presented Joffre with

his arguments for an early attack. "I agree. Write the order," Joffre said. Replied Gamelin, pulling it out of his pocket: "Here it is, my General."

"Very much all there," one British general was reported to have characterized the calm little tactician—and it seems he was, in more than one sense. In 1916, when things looked darkest, he asked for an active post, and was given command of a brigade of chasseurs, with the rank of colonel. He was in Alsace; in the Somme; he was twice mentioned in army orders; and at the end of the year he was promoted to the rank of brigadier general. He was then recalled to serve again on Joffre's staff, and when Joffre was superseded he was shifted to the post of chief of staff to General Micheler, commanding the group of Armies of Reserve. Then from May 1917 to the end of the War he commanded the Ninth Division which made such a brilliant record in some of the last offensives of the War.

After the War Gamelin was away from the home army until 1925 on an assignment as head of the Military Mission to Brazil, counteracting German influences in that country, and reorganizing the Brazilian Army on the French pattern. In 1925 he was sent to Syria as commander of the French forces in Levant to suppress a rising of the Djebel Druse and to relieve the besieged outpost of Soneida. There he displayed "an almost irritating complacency and deliberateness, working out his plan of campaign and accumulating men and material." In one report local authorities announced sarcastically: "Gamelin now has more men than the entire population of the Druses, men, women and children included. When he gets some more reinforcements he may perhaps attack."

Gamelin, however, continued to do things in his own studied way, and Soneida was re-occupied with almost no losses on the part of the French, Damascus besieged and the resistance of the tribesmen finally completely broken down, although it must be said that he showed little interest in inflicting minimum losses on the enemy.

In 1928 he returned to France and was given command of Corps XX at Nancy (Foch's command in 1914). Two years later he was made chief quartermaster of the Paris general staff, and in 1931 he became chief of the general staff of the French Army. At that time he believed war between France and Germany inevitable, but believed it would be a "war of movement" rather than a war of numbers. The actual war was only four years closer when he succeeded Weygand (see sketch this issue) as head of the army, and, as such, also inspector general and vice-president of the Higher Council of War, responsible for the drafting and execution of all plans and for the organization, equipment and training of the army.

The "Gamelin Plan" for the anticipated coming war was known as one to knock

Italy out as quickly as possible by an attack through the Alps. But there must be plans for fighting any combination anywhere—as Gamelin put it: “Like a timetable. . . Trains in all directions.” He extended the conscript period from a year to eighteen months to two years, supposedly speeded up the mechanization of the army, extended the Maginot Line of fortifications from the Rhine to the English Channel, originated the defense system of Belgium, on the Italian side created a system of defense considered so perfect that there would never be the slightest fear of attack by Mussolini at France’s “back door.”

At the same time he was a sincere advocate of collective security and favored the Russian alliance. In 1936 he urged Léon Blum (see sketch this issue) to pitch in with the Loyalists in Spain. When the Germans reoccupied the Rhineland in the same year he went to the government to say he could chase them out if given permission. At the time of the Munich crisis he begged Daladier (see sketch this issue) to support Czechoslovakia and went to London to tell British statesmen that his army was ready to fight. Finally, when all failed, his trips to London during the numerous crises that followed Munich had much to do with the forging of close plans for the cooperation of British and French forces.

On January 23, 1939 Gamelin became chief of the general staff of the National Defense, and it was understood that France would be entitled to the nomination of commander in chief for the Allied land forces when war broke out, since France had the largest army. On September 1, 1939 Gamelin became almost automatically Generalissimo of the Allied Armies, which were later to include those of Belgium and Holland as well as France and England.

Criticized for lack of action during the first few months of the War, Gamelin explained the situation thus: “The last War developed a stage of stagnation after the fall of 1914. This one begins with stagnation. The other then developed a stage of attrition, with the Allies trying to kill two Germans for every Allied casualty. This has been a war of accumulation, with us building two planes for every one the Germans can build. The object is the same—to reach a definite superiority.” It was generally agreed that Gamelin was waiting for the Germans to attack or for the Allied strength to be so great that an attack on the Allied side would overwhelm them, although Reynaud (see sketch this issue) said: “Time is not necessarily on our side. She is a neutral who will rally to force.”

On May 10, 1940 Gamelin’s order of the day to the allied troops read:

“The attack which we have foreseen since last October was launched this morning.

“Germany has begun to fight to the death against us.

“The orders are for France and her Allies: Courage, energy, confidence.”

As for the growing danger of Italy entering the arena on the side of the Axis powers, his reported comment was sardonic: “If Italy should remain neutral, I need five divisions to watch her. If she goes over to Hitler, I should need some ten divisions to beat her. But if Italy should join the Allies, I should need fifteen divisions to help her.” This was his last order.

This little general “with gray hair, a small gray mustache, a small, neat dignity” was both a disciple of Bergson and a world authority on Napoleon’s movements.

Past the ordinary retirement age, but looking extremely young for his years, Maurice Gamelin was first married not many years ago, on his fifty-fifth birthday. “Madame la Générale” is “as neutral-toned as her husband, a kindly, unpretentious woman who dislikes publicity” and who is on the directorates of at least a dozen war charities. A note received by a needy woman from General Gamelin in the fall of 1939 tells something about both the extent of his wife’s activities and his own sensitivity. “I am sorry,” it began, “that my wife is too busy to answer your request. . .”

Gamelin hated publicity even more than his wife, and perhaps that’s why his face often looked so grim in newspaper photographs. Actually it was a rather kindly face, that of “a sceptical but indulgent Dutch uncle in a Frans Hals painting.” (“One must not command, but persuade,” he often said.) He had a quiet voice, and a “curious detachment of manner which those who are not admitted to his friendship consider cold and aloof,” but he was not unsociable: he didn’t mind the luncheons and dinners he had to attend, he had friends on every general staff except the German, he enjoyed going out evenings to hear opera and ancient music. His Paris apartment near the Bois de Boulogne, where his wife continued to stay, and where he actually was, tending its rose garden in the days when rumors of his death and disappearance flew fast, was strictly in keeping with his modest income. In more normal times it was his habit to get up at 7 a.m. and to work straight on through until evening, only stopping sometime in the afternoon to take his big police dog out for a brisk walk. He was a “methodical but also an imaginative worker with a special passion for maps,” treated his staff with “benevolent formality” and was always willing to learn from subordinates. In religion he was a Catholic, “a believer but not a strict observer,” and politics he left alone. The politicians should leave the army alone, too, he thought. Occasionally he rode, and he had had so much experience walking all over France that he kept his feet and legs comfortable even when he was in full regalia, with at least 20 ribbons obligatory. Mountain skiing used to be his favorite sport, but there’s been little of that for a long time, and he hasn’t touched a paint box in years.

GARLAND, HAMLIN Sept 14, 1860—Mar 4, 1940 Author

Hamlin Garland was one of the great literary pioneers. His pioneering was not in literary style, for his prose was as direct and honest and as unaffected as the country about which he wrote. But he was one of the first "dirt farmer novelists"—the first American to write successfully about the West, and "to sell what he had written to sophisticated publishers and readers in Boston."

At the time of his death of a cerebral hemorrhage at the age of 79 in Hollywood, California, he was called the "dean of American letters." It was a title he richly deserved. He had worked hard for it, enduring poverty and privation, floundering grimly in a world of letters new to him, yet always refusing to compromise artistic standards, or to write anything he considered cheap or untrue.

Hamlin Garland had come to Boston in the 1880's, a lean, gawky boy with hands

calloused by the plow, and eyes used to the limitless distances of the western prairies. He was born in West Salem, Wisconsin, September 14, 1860, and spent his entire boyhood in the West and Midwest. His father was Richard H. Garland, a native of Maine; his mother, Isabelle (McClintock) Garland, of New England and Scottish ancestry. The couple had trekked westward in the immigration wave of the '50s. Richard Garland had enlisted in the Union Army in the third year of the Civil War, and one of Hamlin Garland's first childhood recollections was of his father's return from the War, a memory he incorporated in *The Return of the Private*, an ironic short story.

In 1869 the Garlands and their children moved to Minnesota, and then to Iowa, building a homestead in Mitchell County, in northern Iowa. Here at 10 young Hamlin was following a plow, turning two acres a day in a 10-hour stretch, after first getting up to do the chores.

The Garlands moved to Osage, the county seat in 1876, and Hamlin entered the Cedar Valley Seminary. Here farm chores were forgotten for a while, and new vistas to literature, oratory and debate were opened. Young Garland was graduated from the Cedar Valley Seminary in 1881, and his first work outside of the farm was a year of school teaching in Illinois. In the interim there had been, too, another move for the Garland family, this time to Ordway, South Dakota, after a plague of grasshoppers and chinch bugs had descended on the Iowa homestead. There was also a tramping tour on which Hamlin and his brother Franklin went about the country, digging ditches, shingling roofs and doing odd jobs for board and lodging. The two boys went to Chicago, Niagara Falls, Boston and New York. But Hamlin was terrified of the cities, and at 23, after a winter of school teaching, he staked out a claim in McPherson County, South Dakota. It looked as if "his literary ambitions might be plowed under," but two withering summers and three blizzards ended his farm career.

He went East again. His life at this period is graphically described by Joseph E. Chamberlain of the Boston *Transcript*. Chamberlain writes: "He lived in bleak little attic rooms, breakfasted on eight cents, dined on fifteen, and supped on ten; wore his prairie-born coat to a frazzle, and was shrunken thin by low fare; but his head was up and his manner, though grave, was confident."

"He would not equivocate or compromise or deny anything that he really believed in. When he was earning \$8 a week, and sent a part of that to support his father and mother, whose crops on their claim in Dakota had for two years running been entirely eaten by grasshoppers and chinch bugs, he refused to write anything for a newspaper that he was not willing to sign with his own name, or to write romantic love stories for a magazine. 'We have had

enough of those lies,' he said, and went off and dined on a dime."

Mr. Garland's interest in oratory led to an opportunity to deliver a lecture, and subsequently to his appointment as an instructor of English and American literature in the Boston School of Oratory. He also wrote occasionally for the *Transcript*, but his first literary contribution of consequence was a story on corn husking which he sold to *Harper's Magazine* for \$25. Boston was beginning to discover the slender 27-year-old farm boy-author.

In 1890 he sold a story to *Century* for \$500 and in 1891 published his first book, *Main Traveled Roads*, a collection of his best short stories, now considered a classic. The following year he published his first novel, *A Spoil of Office*.

Meanwhile he had met Boston's literary celebrities, William Dean Howells, who before Hamlin Garland had the title of "dean of American letters," and others, and had formed many lifelong friendships.

But the cities did not make a lasting impression on his writing, although they made him articulate. His most famous books are realistic pictures of the Midwest he knew so well. Among the best remembered is the trilogy, *A Son of the Middle Border*, *A Daughter of the Middle Border*, which won the Pulitzer Prize in 1921, and *Trailmakers of the Middle Border*, all three of which were largely autobiographical and recorded the efforts of the Garland and McClintock families to transform the raw prairie land into livable homesteads.

As his writing and lectures found a steady market, Hamlin Garland traveled. He lived in New York for a time. Then he went to Chicago for the Columbian Exposition in 1893. He took his parents on a trip to California and persuaded them to return to New Salem, Wisconsin, where he bought a comfortable home for them. There was also an interlude in 1898 when he and a former classmate went to the Yukon in Alaska.

Returning from Alaska, he married Zulime Taft, sister of Lorado Taft, the Chicago sculptor, in November 1899. Mr. Garland lived in Chicago until 1916, then returned to New York, where he remained until 1930. That year he established a home in California.

He made one excursion into the political arena, when he made a speaking tour of the West for the Farmers' Alliance and the People's Party, to expound Henry George's philosophy of the single tax in the nineties.

The country boy who had learned to read from *McGuffey's Reader* on an Iowa homestead, lectured on literary style and won honorary literary awards. He was elected to the American Academy of Arts and Letters in 1918, later becoming its president. He won the Pulitzer Prize in 1921. And in 1931 he was awarded the Roosevelt

HAMLIN GARLAND

Memorial Association Medal "for distinguished service as a social historian." Hailed as one of the first realists in a period dominated by the traditions of a Victorian Europe, he disliked the term "realist." His stark, realistic and sometimes grim picture of pioneer life he preferred to describe as that of a "veritist," a word he coined to express his attitude towards his writing.

He was ever an interested observer of life. When he moved to Hollywood and became a neighbor of Cecil B. De Mille, the motion picture director, he became interested in the doings of the motion picture colony.

At the time of his death Mr. Garland was completing the final chapters of a book, *The Fortunate Exile*, describing his 10 years in California, and had instructed his family that he wanted it published only after his death.

He had two daughters, Mrs. Constance Harper and Mrs. Mindret Lord, both of whom took part indirectly in his writing, the former by illustrating several of her father's books, and the latter by making his works better known by her readings before audiences.

In addition to the *Middle Border* trilogy, which made for him a lasting place in American literature, Mr. Garland was the author of *A Spoil of Office*, *Jason Edwards*, *A Little Norsk*, *A Member of the Third House*, *Crumbling Idols*, *Wayside Courtships*, *Prairie Songs*, *The Spirit of Sweetwater*, *The Eagle's Heart*, *Her Mountain Lover*, *The Captain of the Gray Horse Troop*, *Hesper*, *Light of the Star*, *The Tyranny of the Dark*, *Money Magic*, *Boy Life on the Prairie*, *The Shadow World*, *Cavanagh Forest Ranger*, *Victor Olnee's Discipline*, *Other Main Traveled Roads*, *The Forester's Daughter*, *The Trail of the Gold-Seekers* and a biography of Ulysses

GAYDA, VIRGINIO (gī'dà) Aug 12, 1885-
 Italian editor

Address: h. Paläzzo Sciarra, Rome

The latest blasts of Virginio Gayda, editor
 of *Il Giornale d'Italia* and spokesman for Mus-
 solini, have been directed against the United
 States. "By participating with too much
 indiscretion in European affairs and in the
 solution of problems that are entirely Euro-
 pean in their origin and significance," he said,
 "the United States is automatically giving
 to the European powers the right to retaliate
 today or at any future time in American
 history and on American territory." His
 latest activity has been the formation, with
 Otto Dietrich, German press chief, of a
 new international society of journalists "to
 fight against falsehood, which is the favorite
 tactic of the enemy."

The most quoted Italian of all is Gayda,
 to many outside of Italy, Fascist No. 3.
 Daily, in anywhere from two to four col-
 umns spread across the front page of *Il
 Giornale d'Italia*, he announces, explains and
 defends Mussolini's foreign policy. On
 Sundays his comments appear in *La Voce*

Pix

VIRGINIO GAYDA

d'Italia; his reviews appear weekly in serious
 magazines; books and special articles appear
 constantly under his name. The most pro-
 lific journalist in Italy and probably in the
 world, Gayda's weekly output has been esti-
 mated at 50,000 or 60,000 words.

Gayda's style is more conspicuous for
 its tones of "wounded innocence, anger and
 threats" than for its clearness. As quoted
 in the foreign press his messages are clear
 and striking enough, but they have usually
 been taken from the mass of verbiage which
 surrounds them when printed in Rome.
 They are not, as is sometimes supposed,
 directly dictated by Mussolini, and as a
 matter of fact Gayda seldom submits his
 copy for approval to Mussolini or Ciano
 (see sketch July issue). What happens is
 that "Mussolini or Ciano strikes a note on
 the Fascist political piano and Dr. Gayda
 writes the theme song." But he is careful
 to get it right. Almost every statement is
 bolstered with columns of figures, facts and
 quotations, and almost daily Gayda calls at
 the Chigi Palace of the Foreign Ministry
 to confirm his own impressions.

Virginio Gayda, the son of Stefano and
 Clotilde (Stratta) Gayda, was born in Rome
 of Piedmontese stock and was originally cut
 out to be a political economist, but after
 being graduated from the School of Political
 Economy of the University of Turin he
 plunged into newspaper work. His first
 job, which he got in 1908, was as reporter
 on *La Stampa*, a Turin newspaper. As re-
 porter he was sent to the Balkan Peninsula
 and Turkey and finally to Austria, where
 he stayed for over five years. When the First
 World War broke out he was in Rome, together
 with the principal Italian politicians exiled
 from Austria, directing the Italian policy
 toward intervention on the side of the
 Entente Powers.

GAYDA, VIRGINIO—*Continued*

In 1915 Gayda was sent to Russia as a special envoy of the Milan *Corriere della Sera* and later became special envoy of the Rome *Il Messaggero*. When Italy went into the War he became an attaché in the Italian embassy at St. Petersburg, entrusted with arranging exchanges of Austrian prisoners for Italians captured by the Austrians. In May 1917 Gayda left Russia, and in the next eight years occasionally carried out a few minor diplomatic tasks in Sweden and England.

In 1921 Gayda became editor of *Il Messaggero*. Little is known about how he came to be a front rank Fascist, for Gayda makes light of whatever part he played in the Fascist revolution. It is known, however, that as editor of *Il Messaggero* he was one of the first to give Mussolini's movement his complete support. His position as editor of *Il Giornale d'Italia* was secured for him in 1926 when Count Ciano was Minister of Press and Propaganda and was looking for a mouthpiece for the Foreign Office. Without official status or title in the Fascist Party, Gayda has become one of its leaders.

A "small, mild little man with twinkling blue-grey eyes behind shell-rimmed spectacles," with "a wispy brownish mustache stained by ceaseless cigarette smoking," Gayda certainly looks little like the foreigner's idea of a powerful Fascist leader. He is a notoriously poor conversationalist who prefers to let off steam on his typewriter, hammering with his two index fingers at an amazing rate of speed. His home is a modest villa in Rome, every room packed from floor to ceiling with books. When Gayda leaves Rome he goes mountain climbing or looks after his kennel, which specializes in Pekinese.

 Who's Who

GEDDES, NORMAN BEL Apr 27, 1893-
 Theatrical producer; stage and industrial
 designer; author

Address: b. 50 Rockefeller Plaza, New York
 City

Those who know anything about Norman Bel Geddes know that nearly all his life the famous designer has been trying to create a world of tomorrow—today. For the New York World's Fair of 1939 and 1940 he designed the General Motors' *Futurama*, but the exhibit by itself is a toy. This pioneer of the streamline is not content merely to make predictions; what really interests him is seeing that his own predictions come true. And, since he has

shown himself to be an amazingly persistent person, it seems probable that some of them will.

He was born in Adrian, Michigan, April 27, 1893, the son of a Scottish father and a German mother, Clifton Terry and Lulu (Yingling) Geddes. He was a poor boy. His schooling was irregular—public schools in Michigan, Ohio, Pennsylvania, Illinois, Indiana—and he was finally expelled from the ninth grade for drawing a caricature of the principal on the blackboard. At 13 he was working, and for several years it was at anything he could get to help him keep his head above water. Reports are that he had early experience as a vaudeville magician ("which may have taught him the showmanship of producing effects"), that he spent three months at the Cleveland School of Art and seven weeks at the Chicago Art Institute, working as a bus boy in exchange for his meals and as a super for the Chicago Opera Company, and that his earliest recognition came as a portrait painter. The young artist then found a job with some company which started him at \$3 a week. He stayed there until he was promoted to a \$125-a-week position, commissions extra, and that same year sold his first play, a drama of American Indian life. Whether or not it was a good play is not stated, but from then on it was the stage that occupied all his spare time and enthusiasm.

It was to be the stage for some time. In 1916 Geddes had married Helen Belle Schneider of Toledo, Ohio; in 1917 he threw up his safe job and was off to Los Angeles to stage his own and five other plays for the Los Angeles Little Theatre. That same year there was a brief excursion into Hollywood, where he wrote and directed *Nathan Hale* for Universal. It took him just six weeks to learn that he didn't like directing movies, and being a man of action, he quit. Sitting on a Los Angeles park bench one hot summer afternoon in 1918, he was counting his diminishing worldly possessions (at this point a wife, a daughter and \$5.83) when a newspaper headline caught his attention. "Millionaires Should Help Young Artists," it said flatly. This interesting statement led to an interview with Otto Kahn, the banker patron of opera and the stage. After paying for a two-page telegram asking Mr. Kahn to lend him enough money for two weeks in New York while he looked for a job as stage director, Geddes had four cents left over. Twenty-four hours later he received \$400 by cable, the following Saturday he arrived in Mr. Kahn's office with a soapbox full of sketches for novel theatrical sets, and within a week he was stage designer for the Metropolitan Opera. What he did with the four cents is unknown.

From then on, Norman Bel Geddes was to do a job of artistic pioneering. His was not a talent for ornamentation and pictorial effects, but a unique sense of clean, functional form that inevitably made him much more than a stage designer. Because he believed that every detail of the stage should

be "the organic outgrowth of the action of the play," he must be director as well as designer, for he maintains that "the art of design and the art of direction are inextricably part of one scenic pattern." True scenery to him consisted of "three-dimensional plastic space, lighting and clothes"—not of extraneous pictures. The audience "was not to be conscious of any scenery or background other than the mood in which the characters of this particular play should move."

During his career in the theatre he was in charge of more than 200 productions, among them *Pelléas et Mélisande*; Max Reinhardt's *The Miracle* and *The Eternal Road*; *Jeanne d'Arc* (with Eva Le Gallienne); Sidney Kingsley's *Dead End*; *Hamlet*. Of his famous set for *Dead End* (produced in 1935), Stark Young said:

"By force of emphasis it becomes more convincing than actuality. And, though few persons there might know it, the gasps and applause of the audience when this setting is first revealed, are not so much that the scene is so like any actual scene as that so many actual scenes appear to be swept up into and expressed in this scene. It could not be any actual place, but any actual place could be it."

But for Geddes it was not enough to revolutionize the artistic concept of the stage. His philosophy (for it was as much a philosophy as it was good art and showmanship) could be carried over into more than one field. In 1927 he became an industrial as well as a stage designer, and in 1935 he entered into partnership with George Howe, the well-known architect, in order to "provide domestic and commercial building owners with a broad survey of mechanical and architectural trends for their consideration and use." He created radio cabinets, furniture, refrigerators, office, restaurant and airplane interiors, a medal to commemorate the silver anniversary of General Motors (now a part of the permanent exhibit at the New York Metropolitan Museum), gas stoves, window displays, automobile tires, gasoline service stations. He was largely responsible for popularizing streamlining in America. He designed the first combined focus and flood lamp for stage lighting, the first streamlined ocean liner, the first ocean-going streamlined yacht. He was architect for the Ukrainian State Theatre of the U. S. S. R., for the factory and administration buildings of the Toledo Scale Company, for the Theatre Guild Theatre in New York (with Howard Crane).

In the meanwhile, he expounded his ideas in print as well as in practice, contributing to the theatrical section of the *Encyclopedia Britannica*, to various magazines, and publishing two books (*A Project for a Theatrical Presentation of the Divine Comedy of Dante Alighieri*, 1923; *Horizons*, 1932). His paintings, models and drawings were exhibited in New York, Chicago, Amsterdam, Milan, London. Norman Bel Geddes' name became known internationally.

Leon de Vos

NORMAN BEL GEDDES

Finally in 1938 the unprecedented happened: Big Business "backed an artist on a gigantic scale." General Motors engaged Geddes to design its entire World's Fair exhibit, and when the Fair opened in 1939 "the adventurous quality of this artist's dream" drew greater crowds than any other exhibit on the grounds.

Superlatives were tossed around freely in describing the architecture of the vast exhibition building, *Highways and Horizons*. "It is not classic. It is not diluted Gothic. It is not Colonial. It is not American Factory. It is not familiar and conventional. It has not been done before. It is original, different, striking, adventurous. It is pure form, in eye-surprising movements, angles, and dimensions. . ." The building was totally without ornamentation, only the various necessary signs being sculptured. The architectural forms used on the exterior were "a translation of the streamline forms used in the design of automobiles, trains, and other transportation units, interpreting not so much the automotive, but the artistic characteristics." And, true to Geddes' theories of function, the whole design and casting of the General Motors' building was to orient it on its plot after a careful study of the actual traffic flow past it.

Perhaps most talked-about of all the exhibits within was the *Futurama*, Geddes' miniature model of the world of 1960 in action. And certainly the most astonishing feature of that world is its traffic system. Far from the cities, cars move in segregated traffic lanes at different speeds, automatically directed from control towers. This is no whimsical idea of Geddes, however; he has actually brought it to Washington, and a book, *Magic Motorways*, published in 1940, expounds the same idea. He is very serious about his plan for roads and traffic control.

GEDDES, NORMAN BEL—*Continued*

and violent in his condemnation of "haphazard planning and resulting congestion implicit in a traffic system that has grown up helter skelter from carriage paths and Conestoga wagon ways." He says, very sensibly: "The roads we have today should be designed in terms of the automobile." In the last 20 years \$30,000,000,000 has been spent in road building, and he believes that the same amount could be utilized in a planned program for the next 20 years that would make his world of 1960 a reality. Nevertheless the Federal Bureau of Public Roads has so far been inclined to poo-hoo his suggestions as impractical, and economically-minded Rexford Tugwell points out that a nation fitted out with his magic motorways "could not tolerate the slums of Brooklyn or of the Mississippi Delta, the miseries of California ditch-banks, or of Pennsylvania coal towns." "Nor," he adds, "the particular professions of General Motors. Either this book is nonsense, or most of solemn industrial America is; how shall we choose?"

Housing officials are keeping a less skeptical eye on Geddes, however. In January 1940 it was announced that he was at work developing a pre-fabricated house for low-income families. Although at that time the material was not decided, the house was to contain a living-dining room, two bedrooms, kitchen and bath; there was to be a system of air circulation and overhead, indirect lighting; it was to be set up in a day; and the estimated cost (exclusive of land) was to be \$2,350. His backer is Theodore Backer, brother of the owner of the *New York Post*. His latest activity is in a still different field—the redesigning of the Ringling Brothers Circus in Florida.

Geddes, who has two daughters, Joan and Barbara, by his first wife, was married a second time in 1933 to Frances Resor Waite of New York. He lives in New York City, and has his offices in Rockefeller Center. Members of his design staff say that the "massive blond" artist is a hard man to work for. He approaches no problem without a fantastic amount of preliminary research, and he is a hound for detail. But it is also true when the facts are all assembled he calls the entire staff into a conference where free speech isn't merely a catch phrase. He is a stimulating driver, and experimental even in his recreations: naval and military strategy and tactics and motion picture photography.

Geddes' philosophy of design which has done so much to change at least the expression of part of the face of the modern world has been summed up in a paragraph:

"For every given set of conditions there is an ideal form which does not need to be ornamented or decorated to make it beautiful. The preamble to finding the successful solution is to master first all the facts which may properly condition that solution. This done, the designer must pursue his research

for the right form with every bit of ability and honesty he possesses. The acceptance of traditional things which have been outdated is evidence of mental laziness. Think things out fundamentally. Then express them—in the same terms."

GEHRIG, LOU (gěr'īg) June 19, 1903—Former baseball star; parole commissioner
Address: b. 139 Center St, New York City; h. 5204 Delafield Ave, New York City

After 15 years of outstanding performance, Henry Louis Gehrig, the idolized "Iron Horse" of the baseball world, was retired from the New York Yankees in 1939 at the age of 36. An account of his life and exploits is being prepared by sportswriter Richards Vidmer.

Born of sturdy German stock in a congested neighborhood of upper Manhattan, Henry Louis Gehrig was one of a sickly family of four children. Three perished during the struggle of his parents to rear a family in their constricted home, but from a sickly tot "Lou" grew into a robust youngster, one with the strength and stamina of four ordinary boys. He went in early for all sports—baseball, football, basketball, skating and swimming.

He began to play ball with the students of the Sigma Nu fraternity house at Columbia University, where his mother was cook and his father man-of-all-work. "Heinie," as the boys called him, was "then big for his age and had reached the period when the change from short to long trousers was imminent, but still wore short ones whose tightness exaggerated the size of his fat, round legs."

He attended the New York High School of Commerce, where he starred in all sports activities under Coach Harry Kane. In the 1920 inter-city championship game, played with Lane Tech at Wrigley Field, Chicago,

the schoolboy slugger of the New York team amazed the fans by hammering a homer over the right-field fence. He duplicated this feat twice when he paid a return visit to the same field in the World Series of 1932.

Lou just missed being a member of the rival New York team, the Giants. He was invited to the Polo Grounds in the spring of 1921 for a trial by former manager John J. McGraw. The Giants arranged for him to go to Hartford, where he played a few games under the name of "Lewis." Then he was rescued by Columbia's graduate manager of athletics, the former fraternity house manager. McGraw has since placed Gehrig on first base in his All-Star Team of All-Time.

Aided by the sacrifices of his parents, Lou entered Columbia University in 1921, remaining until his junior year. He had not been ready at first to take the entrance examinations, but six rather painful months in the extension school got him by. He continued to get by for two years, and meanwhile played on the football team in 1922 and was alternate pitcher and first baseman for the baseball team in 1923.

One spring afternoon, in a college game, he hit the longest homer that any Columbia, perhaps any undergraduate, player had ever made—more than 400 feet. Reports of this hit brought some scouts from professional teams to see him. Much to the concern of his parents, who wanted no "bummer" for a son, Lou gave up college to sign with the Yankees. He was farmed out to Hartford, Connecticut in 1923 and 1924 and was assigned to first base on the Yankee team in June 1925.

Known as the "Iron-Horse," Lou Gehrig established one of the most remarkable careers in the history of baseball. Over a period of 14 years, while compiling a lifetime batting average of .341, he played 2,130 consecutive major-league games besides seven World Series and hundreds of exhibition games. Some of his batting records surpass even those of Babe Ruth's. Gehrig has led the league four times in runs scored, four times in total bases, five times in home runs.

"Buster," as his teammates called him, was one of the best-liked players in the game. For his honesty, courage and modesty the "sparkplug" of the Yankees received the Best Player Award of the major-league four times. He was a strong defensive first baseman, one of the greatest hitters of all time, and has averaged more runs driven in per season than any other contemporary player. Even the old-timers, die-hards though they are, call him the greatest first baseman of all time. In December 1939 the Baseball Writers Association of America waived the rule that a candidate must be out of play for at least a year and unanimously voted Lou Gehrig into Baseball's Hall of Fame at Cooperstown, New York.

George Burke

LOU GEHRIG

When asked if he was going to be married shy Lou told reporters "my mother makes a home comfortable enough for me." But finally, six years after meeting Eleanor Twitchell (who owned and operated an apartment house in Chicago), comments and questions of friends rushed him into marriage. His wife was worried about her ability to cook, particularly to prepare "pickled eels," about which there were many Gehrig legends. She wrote: "I had never pickled an eel in all my life. I wouldn't know how to begin. It was terrible. Our happiness might be smashed by eels. Lou's batting average might slump. At the first opportunity I broached the subject. 'Lou,' I said wistfully, 'are you so very fond of eels?'"

"'Why, I never ate an eel in all my life,' he replied. 'I like to catch 'em.'"

Dimple-cheeked, piano-legged Lou Gehrig, standing six feet one inch tall and weighing 205 pounds, allowed neither injuries nor sickness to snap his streak of consecutive games. A strong wrestler with huge hands and bulging, bony wrists, he kept healthy by taking care of himself. Off-season he used to play 54 holes of golf every day until he found it cramped his batting swing. Now he walks or goes fishing for the sporty marlin. He plays bridge well, but can take it or leave it alone. He goes hatless most of the time, leaving his dark curly hair uncovered, and even on the coldest days tries to slip out of the house without an overcoat. Usually his wife catches him and makes him wear one.

In the spring of 1939, when he had succeeded in getting only four hits and driving only one run in the first eight games of the season, Lou Gehrig voluntarily benched himself. Examination proved that a rare

GEHRIG, LOU—*Continued*

form of paralysis, "amyotrophic lateral sclerosis," now called "Lou Gehrig's disease" even by his physicians, had ended his baseball career.

But he was still able to walk and to live a normal life if he avoided overexertion. When Mayor La Guardia (see sketch this issue) called him in and suggested the position of Parole Commissioner for New York City, Lou modestly urged his lack of training and asked for three months to think it over. He took home stacks of books and reports on crime, prisons and psychology, and spent the summer in hard study and visits to jails.

Meanwhile he had a dozen offers of soft jobs with fancy salaries—in night clubs, hotels, commercial testimonials and Hollywood, merely for the use of his name and prestige. "But Lou believes in working for what he gets." Though at the peak of his baseball career he earned \$36,000 for one season's work, he was born poor and knows what it is to struggle. He took the city job at a salary of \$5,700 a year—no more than he received by vote of his teammates for sitting on the bench in the World Series.

On January 2, 1940 Henry Louis Gehrig became a parole commissioner. "This is the luckiest thing that ever happened to me," he said, speaking of his appointment. And *Scholastic* thinks "it is the luckiest thing that ever happened to the youngsters of New York to have men like Gehrig—honest, conscientious, human and public spirited—going to bat for youth."

GERAUD, ANDRE [PERTINAX, pseud.] (zhā-rō') Oct 18, 1882- French journalist

When the Armistice of Compiègne was signed André Géraud, known the world over as Pertinax, was among the first of the French journalists to flee France. In July 1940 he arrived in the United States from Montreal and in the winter of 1940 to 1941 he is going to publish a book explaining how and why France fell.

Pertinax escaped from France because he faced a jail sentence if caught: his escape has cost him his money and property, which have been confiscated by the Pétain (see sketch this issue) government. This famous French correspondent, whose "political dispatches sparkle like champagne at a diplomat's table," who has been called "France's most distinguished writer" and "Europe's mouthpiece," has been forced to leave his native country because of his strong anti-German stand and his firm belief in a French-English alliance.

For more than a decade, at first almost alone among French observers, he has insisted that a reborn Germany would bring Europe to a new crisis. His articles have been dominated by his fear and hatred of pan-Germanism; he has fearlessly campaigned against the timidity of French statesmen in their policy toward the Reich.

During these years, and particularly in the past few years, he has advocated a French-English alliance. "France and Britain," he said, "only if joined to each other in the closest bonds, can hope to uphold their traditional civilization." And as late as June 1940 he stated that an "Anglo-French union is an instrument from which we expect not only victory but the reconstruction of Europe." Called an "Anglophile" by many, Pertinax has, however, opposed the Chamberlain group in England and has insisted firmly that his politics are not this or that, but "France."

Charles Joseph André Géraud was born in St. Louis de Montferrand on October 18, 1882. He attended the Lycée of Bordeaux and took the highest degree in history in the university there. Soon out of school, in 1908, he became the London correspondent of the *Echo de Paris* and his writings began to appear in English papers as well, in the *Daily Telegraph* and the *Pall Mall Gazette*. He knows English thoroughly; the English articles were written in English and continue to be.

Géraud served as interpreter during the greater part of the First World War. In 1917 he became foreign editor of the *Echo de Paris* and first used the name of Pertinax. From then on articles on foreign policy, on world politics came almost daily from his pen, published in his own paper, in Eng-

ANDRE GERAUD

lish papers, in many American papers. The Manchester *Guardian* spoke of him as the man "who usually says today what the French Foreign Office denies tomorrow but confirms the day after." When in 1938 the *Echo de Paris*, a Rightist and Catholic paper, merged with *Le Jour*, an even more Rightist paper, Géraud resigned and devoted his full time to the editorship of a weekly, *L'Europe Nouvelle*, while continuing his pieces for foreign newspapers and journals. In 1929 his book, *Le Partage de Rome*, on the reconciliation of Italy and the Vatican appeared and created quite a stir. In 1931 he accompanied Laval (see sketch this issue) to the United States to see Hoover; in July 1934 he came with Barthou to London.

During these years Pertinax's comments on foreign affairs gave a good many people the impression that he had just left the French foreign ministry. Pertinax denied this and explained his methods simply: "My good friends telephone me; the others I telephone."

Stocky, with an impressive monocle and mustache, Pertinax is always beautifully dressed, usually in a gray suit, a gray homburg and gray gloves. He is, his friends say, "essentially a homebody," and in fact complained in 1939, when the European crisis was at its height, that the effect on him had been "to destroy my home life and ruin my exercise." "I am," he says, "a lover of dogs, good food, fine French wines and sports."

Who's Who

GESELL, ARNOLD (gě-zě'l') June 21, 1880- Psychologist

Address: h. 185 Edwards St, New Haven, Connecticut

Dr. Arnold Lucius Gesell believes that "the first five years of life are the most consequential in the formation of the human individual." "Coming first," he says, "they inevitably influence all the years that follow": in them are laid down the social and individual behavior patterns which later manifest themselves in the adult. It is to the study of these patterns that Dr. Gesell has devoted most of his life, and the Yale Child Development Clinic under him has become the nation's foremost laboratory for the study of infant behavior.

Dr. Gesell was born in Alma, Wisconsin, the son of Gerhard and Christine (Giesen) Gesell, on June 21, 1880. He went to grade school in Wisconsin and later to the State Normal School at Stevens Point, Wisconsin. From there he went to the University of Wisconsin, from which he was graduated in 1903 with a Bachelor of Philosophy degree. Immediately after graduation Arnold Gesell went East to attend Clark University, from which, three years later, he received his Ph. D. in psychology.

His first position was teaching psychology in the Los Angeles State Normal School. He stayed there for three years, until 1911, when he became assistant professor of education at Yale. It was during his first year at Yale that he established the Yale Psychoclinic (now the Child Development Clinic) at the Yale School of Medicine. Four years later he was made professor of child hygiene at the Yale Graduate School.

Before he received his professorship Dr. Gesell had received his M. D. While working with children he decided that medical training would be a tremendous, in fact, indispensable help, so he took medical studies at Yale, which awarded him the degree in 1915.

Dr. Gesell's first interest at Yale was in the study of backward children, but the course of his interest soon changed. While dealing with abnormal children it seemed to him that the age at which abnormality might be discovered and diagnosed could be pushed farther back, even to babyhood. He became a pioneer in studying the mental growth of babies—from the time they were born until the time they went to school. As he studied the "preschool" abnormal child it became clear to him that unless more was known about the mind of the normal infant and child, it wasn't possible to deal adequately with the abnormal. By 1919 his original interest in the mentality of abnormal school children had been changed into an interest in the mental development of the normal infant.

Since tools and techniques were lacking Dr. Gesell had to work out a system of observing and measuring infant behavior. His

ARNOLD GESELL

chief work has been to show that the mental growth of the child reveals itself "in consistent and characteristic behavior patterns, governed by laws of growth similar to those which control the development of his body." Thus he works with children not in terms of psychology alone, but in terms of physiology and medicine as well.

Dr. Gesell's main instrument in the Child Development Clinic and in the "Guidance Nursery" which was added to it in 1926 is the motion picture camera. This to him is a scientific instrument by means of which infant behavior patterns can be charted, for it captures behavior in its totality; "it crystallizes any given moment of behavior in its visible entirety"; and it records the developmental cycle. As the infants and children play, eat, wash, dress, sleep, they are under observation. By means of an ingenious screen device they are watched without knowing it and pictures are made on every phase of child activity. Dr. Gesell considers his collection of pictures as perhaps the most important achievement of the clinic.

From Dr. Gesell's long years of work with infants and children have come many books. Some of them are: *The Preschool Child from the Standpoint of Public Hygiene and Education* (1923); *Mental Growth of the Preschool Child* (1925); *An Atlas of Infant Behavior: A Systematic Delineation of the Forms and Early Growth of Human Behavior Patterns*, illustrated by 3,200 action photographs (with collaborators) (1934); *Feeding Behavior of Infants* (1937); *Biographies of Child Development* (with collaborators) (1939); *The First Five Years of Life* (with collaborators) (1940). He has also prepared a volume on *Developmental Diagnosis* designed for medical students and practitioners. In his books and in his many articles Dr. Gesell writes with

a style that is "thorough, very scientific and more than a little difficult. Colleagues have been known to smile over the doctor's preference for long words compounded in the Teutonic manner where a simpler term would do as well."

Besides being head of the Yale Clinic, Dr. Gesell is attending pediatrician at the New Haven Hospital, has been school psychologist for the Connecticut Board of Education, a member of the Connecticut Commission on Child Welfare and member or director of innumerable scientific societies, conferences and associations.

Now, in 1940, Dr. Gesell is "handsome, distinguished with that variety of white hair known as 'leonine.'" Mrs. Gesell, the former Beatrice Chandler of Los Angeles, whom he married in 1909, was a supervisor of primary education in the Los Angeles Normal School. Her interests, like Dr. Gesell's, lie in the field of child psychology and education. In fact, Dr. Gesell's first book, *The Normal Child and Primary Education* (1912) was written in collaboration with Mrs. Gesell. It has been rumored, too, that the Gesells used to try out their theories on their own two children, Gerhard Alden and Katherine Gesell Walden.

GIDEONSE, HARRY DAVID (gīd'ē-ŭns) May 17, 1901- Economist; president of Brooklyn College

Address: b. Brooklyn College, Brooklyn, New York

Brooklyn is only one of New York City's five boroughs, but it could be a metropolis in its own right. Its population (2,792,000) is bigger than that of any other American city except Chicago. But it wasn't, until 1930 that Brooklynites had a free municipal college of their own. In that year the New York Board of Higher Education began giving Brooklyn boys and girls higher schooling in offices and lofts in the downtown business section. In 1937 the college shifted to a more scholarly atmosphere: a \$7,100,000 campus and five buildings in residential Flatbush.

In 1940, with 13,700 students and a faculty of more than 500, Brooklyn College is the largest college of its kind in the United States. Its arts and sciences enrollments outnumber those of Barnard, Columbia, Williams, Amherst, Colgate, Smith, Vassar, Mount Holyoke and Princeton combined.

Since October 1939 the job of handling this vast enterprise has been in the hands of "a brilliant young economist," Harry David Gideonse. Dr. Gideonse, who has taught in four colleges and who has made his ideas on higher education widely known, has already busied himself in stimulating the academic and "other than intellectual" activities of his college. In 1940 and 1941, as professor of economics, he is also teaching a course on "Freedom and Order."

Harry Gideonse, the son of Martin Cornelius and Johanna Jacoba Helena Magdalena (de Lange) Gideonse, was born in Rotterdam, The Netherlands, on May 17, 1901 and was brought to the United States when he was three. He did his undergraduate work at Columbia University—he received his B. S. in 1923—and did graduate work there, too (M. A. 1924). Right after he received his M. A. he became a lecturer in economics at Barnard College and Columbia College and stayed there until 1926, when he went to Switzerland to become director of international students' work in Geneva. In 1928 he received the Diplôme des Hautes Etudes Internationales from the University of Geneva. In Switzerland he met Edmee Koch, and they were married on June 17, 1926. In 1928 Dr. Gideonse returned to the United States to become assistant professor of economics at Rutgers University.

Dr. Gideonse "settled down" as associate professor at the University of Chicago in 1930 and all was quiet until the war between him and President Hutchins (see sketch this issue) of the University of Chicago got under way. It started with President Hutchins' book, *The Higher Learning in America* (1936) in which Hutchins proposed that United States universities try to restore order to a

HARRY D. GIDEONSE

confused world by teaching people the truths uttered by the great philosophers of the past.

Gideonse replied with *The Higher Learning in a Democracy* (1937). What Dr. Hutchins proposed, said he, was "intellectual dictatorship," and pointed out that due to its faculty, not its president, the University of Chicago was stressing "the understanding and enrichment of twentieth-century human life in all its phases." After his book was published Harry Gideonse continued to teach at the university. "Tall, lanky," he used to "stride about the campus with his big German shepherd dog, Bob, at his heels," sometimes taking the dog to class.

While his controversy with President Hutchins brought him his chief fame, in eight years at Chicago he acquired a reputation as a crack economist—he published *America in a World Economy* (1934) and *The Commodity Dollar* (1936)—and became "the most popular speaker on the University's radio *Round Table*." Nevertheless his rank still remained that of associate professor and his salary stayed at \$5,500. Three times his colleagues recommended that he be appointed to a full professorship. Three times President Hutchins ignored the recommendation.

In June 1938 Harry Gideonse quit the University of Chicago to take "a comfortable job as professor" at Barnard College, Columbia University. On leaving he said: "There has been no personal quarrel between President Hutchins and me. . . Dr. Hutchins and I have simply not seen eye to eye on educational policy. . . I expect to find a more congenial atmosphere at Columbia."

Dr. Gideonse taught economics at Columbia until he was offered the \$17,500 post at Brooklyn College. He mulled the offer over for two months before deciding to

GIDEONSE, HARRY DAVID—*Continued*
accept what he called Brooklyn's "challenge."

The Dies Committee (see sketch this issue) has pictured Brooklyn College's 7,700 men and 6,000 women as "dominated by Reds." But Gideonse has had no trouble in that quarter. There is the more or less apocryphal story of the group of young Communists who came to him shortly after he took office to get permission to sell the *Daily Worker* on the campus. Certainly you may sell it, he said, if you'll also let me allow *Social Justice* to be sold. On the issue of academic liberty he agrees with Dr. Butler (see sketch this issue).

President Gideonse has, however, come into conflict with his student body a couple of times since he took office. At two meetings in March 1940 he warned the undergraduates that "splinter" groups such as the American Student Union were in control of extracurricular activities at the college, and told them that he wanted "truly representative activities on the campus." In June he ordered the Student Union disbanded and found his home picketed as a result. There was also a student strike after a teacher was suspended.

In fact, President Gideonse, who considers the Brooklyn student body "less rah-rah and more grown-up than most collegians," has had, in the first months of his occupancy, a little difficulty in getting his educational ideas across to the entire student body. To him the college is a trifle too intellectual. He thinks Brooklyn could easily build up the best band in the country and a crack football team.

Dr. Gideonse is something of a pessimist. As early as June 1940 he predicted a possible thirty years' war and announced that "the sooner we get over this oratorical rubbish about preserving the social gains of the last ten years the better. . . . The only question asked today of any proposal must be 'Does it contribute to total productivity?'" How Brooklyn College answers this question he has not said, but at his installation "the tall good-looking president" told the delegates from 250 other colleges that: "No college can live by training mind alone. . . . Talent must be shifted from sheer cultivation of the intellectual virtues to education for the *whole man*, for men as 'knowers and doers and appreciators.'" He begged the students to remember Brooklyn College's size: "If we go slow—and if we seem somewhat impersonal—keep the arithmetic in mind."

America's Young Men
Who's Who in America

GILBRETH, LILLIAN EVELYN May 24, 1878- Engineer

Address: h. 68 Eagle Rock Way, Montclair, New Jersey

The rambling Gilbreth house at Montclair, New Jersey is run with factory-like efficiency and precision. Despite the procession of 12 children and grandchildren who wander in and out, and the confusion that might be expected to develop from a large family, there is not a step of waste motion. The house is divided like a factory into work centers, work surfaces, work motions. Work is done by charts and a follow-up system.

That is because "Mother" Gilbreth is an efficiency engineer and specializes in the elimination of fatigue and waste motion in industry and the home. "Mother" Gilbreth is really Dr. Gilbreth and has almost as many major degrees as she has children. She is a Bachelor of Letters, a Master of Literature, Doctor of Philosophy, Doctor of Science, Master of Engineering, Doctor of Engineering and a Doctor of Laws, holding her degrees from the University of California, Brown University, Rutgers College, the University of Michigan and Russell Sage College.

Dr. Gilbreth is the widow of Frank Bunker Gilbreth, efficiency engineer, with whom she pioneered in the study of the relationship between the machine and the human beings who run it. She was born in Oakland, California May 24, 1878, the daughter of William and Annie (Delger) Moller, and was graduated from the University of California in 1900. She intended to follow a career in psychology and to become a dean of women. Instead she married Frank Bunker Gilbreth October 19, 1904 and devoted her energies to making a "best marriage."

The Gilbreths had twelve children, six boys and six girls, and both parents were tremendously interested in their home, sharing alike in its responsibilities. Frank Gilbreth was the kind of an industrial engineer "who discovers with interest that motion and energy can be saved by lathering the two sides of the face at once with two shaving brushes." It was natural therefore, that the Gilbreth marriage should develop into a partnership in the designing of model nurseries, model kitchens and the reduction of office and factory routine to a state of efficiency. With so much to do, the Gilbreths had to find an efficient way of doing it. Their efficiency work became almost a ritual.

When Frank Gilbreth died in 1925, his wife sailed for a scheduled European conference two days after his burial, reading his papers before the convention and taking his place on committees. She explained her fortitude with the remark: "I am only adhering to my husband's principles—the elimination of waste motion." After his death, she devoted herself almost exclusively

to those principles, becoming a bona fide engineer in her own right. Her motion-saving devices can be found in a number of American plants.

Lecturer, author and teacher, she has done a man's job in woman's sphere—the home. She has put thousands of United States kitchens on an efficiency basis. Once, at a National Organization of Better Homes in America, she stopped 4,000 busy housewives so that she could measure the distance from their elbows to the floor to get information on the proper height for stove and sink. Dr. Gilbreth is president of Gilbreth, Incorporated, consulting engineers in management; has been professor of management at Purdue University since 1935; and is a lecturer at Bryn Mawr College.

As combination of successful career woman and mother, Dr. Gilbreth is perhaps unexcelled. Honors which have been bestowed on her have taken into consideration her domestic background as mother of 12 children. A citation read to her at a dinner given for her in New York, when the Engineering Woman's Club honored her in 1940 by making her an honorary life member, is an example. It read: "For your scientific achievements in the field of industrial psychology, for your pioneer work in applying these principles to the practical problems of the efficiency of human labor, for your intelligent womanhood, and for the esteem in which you are held by your fellow members."

Dr. Gilbreth's writings, too, reflect her double interest in efficiency and the home. She has written articles ranging from *This Grandmother Job* to *Reducing Federal Expenditures* and *Efficiency of Women Workers*. She is the author of *Psychology of Management* (1912); *The Home-Maker and Her Job* (1927); and *Living With Our Children* (1928). She is coauthor with her husband of *Time Study* (1920); *Fatigue Study* (1919); *Applied Motion Study* (1917); and *Motion Study for the Handicapped* (1919).

Engineers and efficiency experts have honored her for her outstanding work. She is an honorary member of the American Management Association, of the Society for the Advancement of Management, of the Society of Industrial Engineers. She was also chosen by *American Women* as one of the 10 outstanding women of 1936. In addition to being a member of various engineering societies and professional organizations, she has found time to serve on the President's Emergency Committee for Unemployment and the President's Organization for Unemployment Relief. She was a member of the New Jersey State Board of Regents from 1929 to 1933.

She is fond of music and reading and her favorite recreation is walking.

GILDERSLEEVE, VIRGINIA CROCHERON Oct 3, 1877- Dean of Barnard College, Columbia University

Address: h. 3007 Broadway, New York City

Doctor of Philosophy, Doctor of Literature, Doctor of Laws, recipient of many honorary degrees and medals, Dean Gildersleeve was described in an article in *Literary Digest* as having "enough caps and gowns to fill an ordinary New York apartment closet." She is undoubtedly one of the foremost women in American education.

She was born in New York City in 1877, the daughter of a Supreme Court Justice, Henry Alger, and Virginia (Crocheron) Gildersleeve. A vital, dark-eyed, dark-haired figure, she is tall and erect and has the poise and dignity becoming to her position. Dean of a women's college for almost 30 years, she has little good to say about coeducational institutions. Once at a convention of the American Association of University Women in 1937 she advised women to steer clear of coeducational institutions and their "lordly Male complex" and denounced

Pach Bros.

VIRGINIA C. GILDERSLEEVE

male professors and presidents of women's colleges as "softies" whose decisions "are more often swayed by emotion than women's." Although she has a strong interest in the youthful worries of her charges, she has never yielded to the desire to be called "The Dear Dean" and to pry into their private affairs. She calls students by their last names and herself prefers to be a stern "older sister," rather than a "mother" to her girls.

"Everyone knows that the Dean is a good executive, a magnificent speaker, a wise woman, an intellectual," Alice Duer Miller has written of her, "but not everyone knows she can lose her temper over examples of stupidity and spite, and that, therefore, her tact and calm are the more to be admired, since they are achieved and not wholly innate."

Dean Gildersleeve is inclined to deprecate her own accomplishments. She once said to an interviewer: "I never had to try for anything in my life. My father sent me to college and after that everything fell into my lap." However, she has a passion for perfection. As a student she was dissatisfied unless she received an "A" rating on every paper. In 1899 she was awarded her first degree, B. A., from the college where she is now dean, and received her M. A. from Columbia University. Before being appointed dean, she was instructor in English at Barnard College.

Archeology is her greatest hobby. Her idea of a perfect life is one spent among the ruins of some ancient castle. On summer vacations she used to look for old stones on the traces of early Roman roads near the cottage of a friend who lives in Sussex, England, and always hoped some day to find a Carthaginian penny. She plays deck

tennis for relaxation. Occasionally she smokes a cigarette and enjoys a glass of claret with her meals. She is fond of dogs, and of books on polar exploration. The "Deanery," her home in the college, is a comfortable apartment with the living room filled with many soft chairs and lamps, and lined with books.

Although she is a gifted scholar in English and Latin literature, Dean Gildersleeve also takes an active interest in current national and international affairs. She served twice as president of the International Federation of University Women, from 1924 to 1926, and again from 1936 to 1939. In politics she is a vigorous Independent Democrat and internationally she is urging American aid for the Allies. She belongs to the school of current opinion which finds American youth too "soft."

GOLDMARK, PETER CARL Dec 2, 1906- Engineer; inventor of color television
Address: b. Columbia Broadcasting System, 485 Madison Ave, New York City; h. 129 E 69th St, New York City

Color television is now an established development. On August 29, 1940, in the Columbia Broadcasting System's laboratories, Dr. Peter C. Goldmark, Columbia's chief television engineer, demonstrated his new method of full-color television to James L. Fly (see sketch this issue), chairman of the Federal Communications Commission. The new development is said to be the most important contribution to television in the last 15 years. The Columbia Broadcasting System expects to have color television ready for commercial use by January 1, 1941.

Dr. Goldmark's method produces a rapid alternation of three colors, red, green and blue, along rapidly moving rows of three hundred and forty-three dotted lines (one hundred lines less than required in black and white pictures), shifting with such speed from row to row that the eye is given the illusion of a single full-color picture. The color itself is produced by a rotating filter placed before the camera. The method requires only one camera at the pickup point, one transmitter and a single wave band for transmission instead of three colors and three bands. It is estimated that the cost will not be substantially more than for black and white images.

A further demonstration was given September 3rd for the press. As reported by *PM* (September 5, 1940): "The program of color selected for the demonstration made all major stops along the spectrum. 'Small multi-colored object,' the first subtitle announced, and the picture flashed was of a variegated bowl of flowers and a girl's hands. 'Intense color,' the next one said, and a brilliant zinnia appeared against a Maxfield Parrish sky. Then there were other gay samples: nodding black-eyed Susans; red sails in a sunset; a group of textiles. There was a startlingly beautiful brunette girl in a red scarf; and a peach-bloom blonde in a beach robe applying lipstick ('Red on Pink').

"For a motion test, to show that color television does not run, the blonde girl slipped out of her beach robe and chased a bounding red, white and blue beach ball into the surf. To cap everything, just like

PETER GOLDMARK

a minstrel show, the last scene was the American flag, waving in the breeze in tele-genic, dry-cleaned splendor." The marked contrast between images in black and white and the same scenes in color was revealed by having a standard screen alongside a television receiver equipped for color. The texture of velvet and other fabrics, indistinguishable in black and white, was immediately discernible in color.

The brilliant young inventor of color television, Peter C. Goldmark, was born in Budapest, Hungary, December 2, 1906, the son of Alexander and Emmy Goldmark. His heritage of scientific skill is attributed to a grand uncle, Joseph Goldmark, who served in the Hungarian Parliament in 1848. He won fame as a chemist through the discovery of red phosphorus, a nonpoisonous substance used in match manufacture; and, after arriving in this country, for the invention of percussion caps which were first used in the rifles of the Northern Army during the Civil War.

Peter Goldmark was educated at the Universities of Berlin and Vienna, received his doctorate in physics from the latter institution. While still a student there he read a thesis on "A New Method for Determining the Velocity of Ions" before the Academy of Science in Vienna. Following graduation he was employed by Pye Radio, Limited, in Cambridge, England, assuming control of its television activities. He remained with the British company until 1933.

In 1936 Dr. Goldmark, having come to this country as a consulting engineer, joined the Columbia Broadcasting System's television research department. Later, as CBS's chief television engineer, he supervised installation of the television transmitter atop the Chrysler Building. He has also had several patents issued on his various inven-

tions. These include the CBS type of film scanner, which he completed in 1938, and the scientific reverberation device, which was first demonstrated shortly thereafter. Dr. Goldmark discovered that synthetic reverberation could be made equally useful in sound broadcasting and recording. Based on the electro-optical principle, it adds reverberation to a "dead" studio.

Dr. Goldmark is proud of the American citizenship which he acquired a few years before his marriage in 1940 to Frances Trainer of New York City. Her ancestors settled in New England early in the seventeenth century.

He is fond of outdoor sports, preferring tennis, swimming and skiing. His favorite indoor pastime, besides television, is music. He is an accomplished pianist and cellist, for music is another family heritage. His grandfather's brother is the late Carl Goldmark, distinguished Viennese composer of opera, orchestral and chamber works. Dr. Peter Goldmark himself performed at concerts in Vienna and played in university recitals while employed in the Pye television plant in England.

GOLDSMITH, LESTER MORRIS July 1, 1893- Engineer

Address: b. 260 S Broad St, Philadelphia, Pennsylvania; h. 1012 W Upsal St, Germantown, Pennsylvania

Chief engineer of the Atlantic Refining Company, Philadelphia, Pennsylvania, Lester M. Goldsmith was awarded the Melville Medal at the annual meeting of the American Society of Mechanical Engineers at Philadelphia, December 6, 1939.

Mr. Goldsmith was born July 1, 1893 at Pottsville, Pennsylvania, son of George Jay and Sara R. Goldsmith. He attended the Philadelphia public schools, the Northeast Manual High School and Drexel Institute. He married Florence Frankel June 26, 1921. They have three children: George Jay, Richard Lester and John Charles.

In 1914 he held his first position as research engineer for the Perpetual Fuse Company, Philadelphia. He became inspector of the Gas Engineering Department of Public Works, City of Philadelphia, in 1915. Since 1916 he has held, in order, the following positions with the Atlantic Refining Company of Philadelphia: mechanical draftsman, research engineer, engineer of tests and superintendent of the Mechanical Laboratory, technical assistant to the President, consulting engineer, manager Engineering and Construction Department, chief engineer.

Since 1929 Mr. Goldsmith has been vice-president and director of the Atlantic Pipe

Line Company; from 1931 to date a director of the Atlantic Oil Shipping Company and chief engineer for the Atlantic Pipe Line Company, the Keystone Pipe Line Company and the Buffalo Pipe Line Corporation.

Mr. Goldsmith is the author of the following papers relating to various processes and instruments in engineering: *New Process for Gas Purification*, *Pitot Tube Testing Methods*, *Measurements with Knife Edge Orifices*, *Diesel-Electric Drive for Tow Boats* (presented personally before the Institution of Engineers, Greenock, Scotland), *Diesel-Electric Drive for Tankers*, *Diesel-Electric Drive for Pipe Lines*, *Diesel-Electric Power Plants*, *Earth Resistivity Measurement*, *Smith Rotary Type Displacement Meter for Tank Truck Service* and *The High-Pressure, High-Temperature Turbine Electric Steam Ship J. W. Van Dyke*.

He is a member of the American Institute of Electrical Engineers, the American Petroleum Institute, the American Society of Mechanical Engineers, the American Welding Society, the Society of Automotive Engineers and the Society of Naval Architects and Marine Engineers, all located in New York City; of the American Society of Naval Engineers of Washington and of the Engineers Club of Philadelphia.

Mr. Goldsmith has obtained eight United States patents and is awaiting action on four more, relating to oil refining, oil heating, ship, motor truck, centrifugal pump and oil engine design. Several of these patents have been granted by Canada and Great Britain.

His home is in Germantown, Philadelphia, Pennsylvania. Although his chief interests have always been those of the professional engineer, he has several hobbies, among them amateur photography (both still and motion pictures), boating and fishing.

GORMAN, HERBERT SHERMAN Jan 1, 1893- Author

Address: Wappingers Falls, New York

Called the best and most complete study of the author of *Ulysses* yet written, Herbert Gorman's biography, *James Joyce*, was published early in February 1940. Mr. Gorman is well known as a writer of several excellent historical novels: *The Place Called Dagon* (1927); *Jonathan Bishop* (1933); *The Mountain and the Plain* (1936); and for critical studies of literary figures and biographies: *The Incredible Marquis, Alexandre Dumas* (1929); *The Scottish Queen, Mary Stuart* (1932). In 1924 he wrote a short analysis: *James Joyce—His First Forty Years*. The present book, on which Gorman has spent 10 years gathering material, covers Joyce's complete career to date.

It is a careful, well-documented biography, written with skill and clarity, interesting because of its intimate portrait of Joyce himself, with whom Gorman spent a great

HERBERT GORMAN

deal of time. Noteworthy chapters in the book include Joyce's revolt in youth against his religious education and Dublin as a center of culture and "Nationalism"; a destitute period in Paris when the young writer all but starved; his marriage and journeys from one European city to another to find teaching jobs; his years of struggle with publishers to get his work published, and published as he wrote it—particularly the struggle for esthetic freedom versus censorship that involved the publication of *Ulysses*. A good many of Joyce's letters are printed in the book, and it contains several hitherto unpublished poems, including the satiric *Gas From a Burner* and *The Holy Office*.

Herbert Gorman was born in Springfield, Massachusetts, January 1, 1893. A writer of commendable Irish wit and frankness, he sends us the following biographical details about himself:

"Father: Thomas, born in Ireland, 1842, died 1924. A hard-riding, hard-drinking, improvident cuss with a fiery temper. Fought in the Civil War. A great horseman, noted in Western Massachusetts as a racing driver in the days of sulky racing. Always broke. Gave me a Gawd-forsaken, poverty-stricken childhood. Mother: Mary Longway, born 1860, still living. Daughter of Louis Longway and Lucinda Griswold. Small, dark, talkative, an inveterate bookworm.

"Education: Public schools and high school, Springfield. But most of it came from the public library. I used to read about 15 hours a day for months on end. How could a penniless boy get 'eddycated' any other way? Jobs: Was assistant to a cobbler, pasted up newspapers in a newspaper mailing room, worked in a rubber-stamp factory where I nearly lost

my finger, spent a year in a bank (Springfield National) as the worst bank clerk ever born, labored for a lumber company where had first love affair with a stenographer. She turned me down cold. Spent about a year and half (circa 1912) trying to be an actor. Was frightfully stage-struck. Played in stock, in vaudeville and with Robert B. Mantell. I simply stank.

"About 1914 started reviewing books for *Springfield Republican*. Had written oceans of poetry, some of it placed in small newspapers and fly-by-night magazines. About 1915 became reporter for *Springfield Union*. Later assistant literary editor, then motion picture editor. In 1916 was called to New York to work for the Liberty Loan Publicity Bureau, Second Federal Reserve.

"Travels: After end of war went to Europe every chance I could get. Returns home became farther and farther between. (Whatever that means—sounds like Gertrude Stein trying to write like Colonel Stoopnagle.) Lived for a number of years in France. All my furniture is still stored in Paris, and I hope to return there as soon as this crewel crewel war is finished. Lived also for a year or more in London. Spent some time in Mexico. Also Switzerland. Also Scotland. Also Ireland—ooh, pardon me, Eire.

"Am a member of P. E. N. Was once member of the Players but dropped membership. Or rather, they dropped me for nonpayment of dues. . . Was close friends with Edwin Arlington Robinson, Vachel Lindsay, Elinor Wylie, Ford Madox Ford, Padraic Colum, James Joyce, etc.

"No religious affiliation but lean toward Roman Catholicism. No political affiliation. Am anti-Communist and anti-Nazi. Lean rather toward the Right. As bad as it is it isn't so bad as the Left. Do NOT believe in the equality of people but DO believe in justice for all. Desire the utmost freedom—every man and woman in the world to be able to say anything he or she desires to say at any time and in any place. But *not* by persuasion or conspiracy to limit the freedom of others.

"Love (outside literature) music—NOT swing; painting (very pro-Picasso, Modigliani, Vlaminck and Utrillo); sculpture, football and boxing (to watch); dancing (do only a one-way fox-trot); and flirtation. Love my liquor and love it strong, but can drink beer all night.

"Passion for hot spicy foods, curries, Chinese dishes, etc. Two secret passions: 1) to be a chef; 2) to meet Myrna Loy."

Herbert Gorman was married to Jean Wright of Cleveland in 1921; the marriage was dissolved in 1932. Jean Wright is now Mrs. Carl Van Doren. In 1932 Gorman married Claire O. Crawford (Schneider) of New York. They have one daughter, Patricia Anne d'Auray, born on Shakespeare's birthday, 1933. The Gormans are living at present in the country near New York City. He is working at a novel on

General Boulanger, tentatively called *Brave General*.

**GORT, JOHN STANDISH SURTEES
 PRENDERGAST VEREKER, 6TH VIS-
 COUNT** July 1886- British inspector gen-
 eral to the Forces for Training

Address: 98 Mount St, W. 1, London, England

When General Lord Gort was appointed chief of the imperial general staff in 1937 over the heads of 32 generals, veteran General Sir Ian Hamilton said: "Thank God, we have got a proper soldier. Now we shall not be shot sitting." The confidence of England in General Gort is still high, not only in spite of Dunkirk, but even because of Dunkirk. That this military disaster did not degenerate into something even worse was due to the qualities of the troops, the work of the navy and in no small measure to the leadership of Britain's "miracle man," Lord Gort, then commander in chief of the B. E. F. in France. As the *Birmingham Post* put it, "Lord Gort has shown himself to be not only a great fighting soldier, but a brilliantly skillful general. Generalship of the highest order has extricated the B. E. F. from a position from which, a few days ago, there seemed no way out."

Lord Gort is the complete practical soldier and has won more medals actually on the field than any other officer in the last 30 years. Field Marshal the Earl of Cavan said of him: "A man with those medals has no right to be alive. By all the laws of averages he should have been killed half a dozen times." It is generally agreed that the authorities have been wise to confide the training of the British Army to a man who has wide experience and personal knowledge of the conditions under which this War is being fought.

John Vereker (he succeeded to his Irish viscounty in 1902) is the son of the fifth Viscount Gort and is descended on his father's side from John Vereker, a Royalist leader in Cromwellian days. His mother (who died in 1933) was the daughter and co-heiress of R. S. Surtees of Hamsterley Hall, County Durham, author of the famous "Jorrock's" hunting books. Gort was brought up partly in County Durham, where he learned to ride, and partly at East Cowes, on the Isle of Wight, where he acquired a great love of yachting. At 14 he went to Harrow, passing from there in 1904 to the

VISCOUNT GORT

Royal Military College, Sandhurst, from which he was gazetted on August 16, 1905 as a second lieutenant in the Grenadier Guards. He was known to his intimates then as "Fat Boy" (the nickname "Tiger" is merely an invention of newspaper men) and led the normal life of a young officer with little incident until his promotion to captain on August 5, 1914.

From then on action piled itself up with a vengeance. Gort alternated staff appointments with periods spent in the thick of the fighting in France. He won the Military Cross in June 1915; in September 1917 he was awarded the Distinguished Service Order; and during 1918 he won it twice more (gaining two bars to the medal). In September of that same year he was given that rare distinction, the Victoria Cross. This was gained for performing "a suicide job" near Flesquières on the Canal du Nord. Gort was ordered to lead his men across the canal under heavy fire and on marshy ground. Though wounded early in the action, he carried on, crossed open ground and boarded a tank, from which he proceeded to direct enfilading fire at the enemy. He was again wounded, but when the men began to wither under heavy punishment he directed operations from a stretcher and so heartened the troops that they rallied and took their objective.

At the end of the War Gort had been acting lieutenant colonel for 18 months. In January 1919 he was appointed to the general staff in London. The next year, however, he took the first post-War course at the Staff College, at Camberley, "to learn something about this business of soldiering." With theoretical studies in strategy and tactics added to his practical experience Gort was appointed to the instructional staff of the College in January 1921.

GORT, VISCOUNT—Continued

Four years later Gort was made a colonel and spent the year of 1926 as chief instructor at the Senior Officers' School. On January 24, 1927 he was appointed general staff officer to the Shanghai and North China Defence Force. While in China he had a narrow escape from death when he rescued some nuns from Chinese bandits and was saved only by the intervention of a French Jesuit named Jacquinot who was known in the neighborhood.

Gort returned from China in November 1927 to take charge of the Eastern Command in England. He was appointed to be commanding officer of the Grenadier Guards on January 1, 1930; in November 1932 he sailed for India, with the rank of brigadier, as director of military training. March 1936 found him commandant of the Staff College; in September 1937 he became military secretary to Leslie Hore-Belisha, then Secretary of State for War. That same year he rose to the rank of general and reached the eminent position of chief of the imperial general staff.

An even greater honor was his when he was made commander in chief of the British Expeditionary Force immediately after the Second World War started. Visitors to his headquarters in France were all impressed by the plainness and severity of its furnishings and by the extreme informality of its routine. André Maurois, looking for some place to put his cigarette butt, was astonished to be told, "Chuck it on the floor." After his visit, Maurois wrote of Gort: "I admired the precision of his information and the clarity of his mind. Much good sense. Gaiety. And always the astonishing vitality, coming out in his laugh, his movements, the rapidity of his words."

Gort is strong and stocky, five feet nine inches tall. "Red faced in the best British officer tradition," he has a wide face, a bald head with sandy hair at the sides, a close-clipped mustache and pale blue eyes. He is physically very tough and stays that way by daily cold baths, by walking when others taxi, by hunting and yachting and by flying—he was the first military commander in Europe to pilot his own plane. He is free from the frosty superciliousness of the typical Guards officer and is a frank and forthright talker. There are times when he gets stirred up by people, but once his views have been forcibly expressed, he forgets all about it and resumes his usual friendly attitude.

In January 1940 Gort was given the Grand Cross of the Legion of Honor and, after the Dunkirk evacuation, the Grand Cross of the Order of the Bath. In 1911 he married Corinne, the daughter of George Medlicott Vereker, and in 1925 he divorced her. He has a daughter and a son and heir, Charles Standish Vereker. In 1938 he married Yvonne Frances, the daughter of Geoffrey and Lady Aline Barnett, Sopwell, St. Albans.

GOUDGE, ELIZABETH (gōōzh) Apr 24, 1900- Author

Address: b. c/o Coward-McCann, Inc, 2 W 45th St, New York City; h. Providence Cottage, Westerland, Paignton, South Devon, England

Elizabeth Goudge is the author of novels that are light without being lightweight, stories about "really nice people" that, for most readers, seem to stay on the right side of sentimentality. Those who require more reassurance about the world than can be found in most current problem-novels and who appreciate a magically evocative prose style when they find it are apparently numerous enough to make her name appear on best-seller lists with unflinching regularity.

Best known for her ability to conjure up a romantically beautiful yesterday, her first novel dealing with contemporary characters is *The Bird in the Tree* (1940). The setting, however, is the eighteenth century home of the Eliots, Damerosehay, "tucked away between the marshes and the sea on a forgotten stretch of the Hampshire coast," and much of the action leads back into the past. It is most of all the story of a family's love for Damerosehay and what it symbolizes. Bought by widowed Lucilla Eliot years before in order that one might "come to it weary and sickened and go away made new," its peace is threatened by her grandson's love for his uncle's divorced wife. *The Bird in the Tree* is that old-fashioned thing, a story with an inescapable moral, and the moral is an old-fashioned one, too: something to do with renunciation. A few critics were afraid Miss Goudge was preaching, wondered if there might not be a little too much "sweetness and light," but most of them found her faith in living as refreshing as her unique understanding of children, her humor, her fantasy and a kind of "lyrical joyousness" found more often in poetry than in prose.

Most of her life Miss Goudge herself has been living in and falling in love with old houses, usually within sight and sound of one cathedral or another. Both are as important in her books as any of the human characters. She was born in 1900 in Wells, Somersetshire, England, where her father, Henry Leighton Goudge, was vice-principal, later principal, of the Theological College. Her mother, Ida de Beauchamp Collonette, was an invalid with a marvelous gift for storytelling; she herself was "a watery child," on the plumpish side, who climbed mulberry trees, wrote a monthly magazine with a neighbor-

ing family of little boys, and every other summer visited her Norman-French grandparents in the Channel Islands (later to become the setting for *Island Magic*). When she was 11 her father was made canon of Ely Cathedral in Cambridgeshire, "another small and beautiful cathedral city"; at 14 she went to a boarding school from whose high garden the lovely tower of Christchurch Priory could be seen, and stayed there quite happily all during the War, though "a dunce at everything except English composition and the court curtesy."

Once through with school it was considered necessary to learn to make a living, and after Elizabeth had been discouraged from the idea of becoming a nurse she turned to writing children's stories. The magazines wouldn't buy them, though, and the one volume of fairy stories that was published didn't sell. During this period she earned all of 15 shillings and ended by turning to art as possibly more lucrative. For two years she attended the Art School of Reading University, where she not only "fell devastatingly in love" but "conceived a passionate attachment for William Morris and all the pre-Raphaelites." Upon returning home, she turned her house into a studio and proceeded to find students of design and applied art among the good ladies of Ely.

Moving to Oxford in 1923 when her father was appointed Regius Professor of Divinity there, she lived in still another old house in Tom Quod, Christ Church. Life in a big university town she found at first "most alarming" for a naturally shy person—it was necessary to return calls, go to dinner parties—but soon it was more stimulating than alarming, and she found herself wanting to write again. In her odd moments (she was still teaching art) she began to work on plays and continued even after London managers showed themselves unimpressed. Finally in 1932 a play she had written about the Brontës achieved a London performance and good reviews, and though no publisher wanted to bring out her plays one suggested that she write a novel.

She did. It was *Island Magic* (1936) published in England in 1935 after having been revised and rejected twice. There followed *City of Bells* (1936); *Pedlar's Pack and Other Stories* (1937); *Towers in the Mist* (1938); *The Middle Window* (1935); *Sister of the Angels* (1939); and in 1940, *The Bird in the Tree*. In October 1940 appeared her first story for the children about whom she writes so understandingly: *Smoky House*, a story of smugglers, free traders and a "spy who bewitches the countryside with marvelous music" in the West Country of England of a century ago.

In 1939 a volume of three of Miss Goudge's plays was published in England. It is possible that she is prouder of that than of all her other accomplishments, for, she tells us: "Plays, just because they are so difficult and I never have any success with them, are still my first love."

GRAFTON, SAMUEL Sept 7, 1907-
 Newspaper columnist

Address: b. c/o New York Post, 75 West St,
 New York City

Samuel Grafton, columnist for the *New York Post*, *Philadelphia Record* and other newspapers, is one of those individuals ("rare" to everyone but a student of statistics) actually born in New York City. He received a B. A. from the University of Pennsylvania in 1929 and married Edith (Kingstone) Grafton June 28, 1931. They have one daughter, Abigail Alice, born in 1940.

When asked to tell us something of himself, he replied: "I have no hobbies that make any sense whatever. I read as much in American history as my time allows. Wrote for comic magazines while at college, and for the *North American Review* and the *New Republic* while a junior. Became an editorial writer immediately on graduation, thanks to a sudden impulse which hit J. David Stern, publisher of the *Philadelphia Record*. That was 11 years ago; Mr. Stern still publishes my column."

Mr. Grafton's column is called *I'd Rather Be Right*. The title derives from the saying: I'd rather be right than President. Although Mr. Grafton has a great fan mail from well-wishers, occasionally he receives letters de-

SAMUEL GRAFTON

manding "Who asked you to be President, anyway?"

During the heat of the 1940 Presidential campaign, Sidney Skolsky called Mr. Grafton "the best political columnist now writing in the United States." Grafton's columns have been reprinted by newspapers which do not syndicate his column.

In November 1940 Grafton's book *All Out!; How Democracy Will Defend America* was published. Wythe Williams said the book "should be read by every living American. In no other book have I read a more succinct picture of the present world situation."

GRAYSON, DAVID, pseud. See Baker, R. S.

GREEN, JULIAN Sept 6, 1900- Author
Address: b. c/o Harper & Bros, 49 E 33rd St, New York City

Julian Green, American novelist who has lived in France almost all his life, has been in the United States since the summer of 1940, working on a new novel to be published in March 1941. Its tentative title is *Then Shall the Dust Return*. The book which precedes it is *Personal Record, 1928-1939* (1939), an introspective journal which tells of Green's

JULIAN GREEN

work and life, of his friendships with Gide, Dali (see sketch this issue), Gertrude Stein, Cocteau and Malraux.

This book, like all his others except the one he is now working on, was written in French, for though Julian Green's parents were Americans of Scotch-Irish ancestry, he was born in Paris and brought up as a typical young Frenchman. During the First World War he saw active service near Verdun and on the Italian Front. One year after the Armistice he saw America for the first time. He enrolled in the University of Virginia and for two years studied English and American literature, Latin and Greek, teaching French in his spare time. It was while he was in Virginia that he first appeared in print—with a long story called *The Apprentice Psychiatrist* published in the college magazine.

Back in France, Green republished this story in French and began to study art and music, uncertain of what his career should be. It wasn't long, however, before he was writing again: essays on English literary figures, on religion, on art. In 1926 came his first novel, *Mont Cinère*, translated as *Avarice House* (1927). This was a success, and his next novel, *Adrienne Mésurat*, translated as *The Closed Garden* (1928), was awarded the Femina-Bookman Prize for the best French work suitable for English translation. His next, *Léviathan*, translated as *The Dark Journey*, was the Harper prize novel in 1929.

In all these novels and in his short stories Julian Green writes in a "dark manner." His work is sombre, psychologically penetrating, neurotic. But André Maurois feels that his work will eventually become lighter, more tranquil, and perhaps his first novel in English, written in America, will reveal this newer trend.

GREENWOOD, ARTHUR 1881- British Labor Party leader; Minister without Portfolio in the Churchill Cabinet

Address: Transport House, Smith Sq, S. W. 1, London, England

The Socialist movement in England has drawn its most valuable recruits from two very different kinds of people. To it have come manual workers who have progressed by sheer ability—men like Lord Snell who began life as a farm boy or Ernest Bevin (see sketch this issue), ex-tram conductor. To it have come, too, many intellectuals—Dr. Alexander D. Lindsay, Master of Balliol College (a position soundly entrenched in the English social and intellectual system), has Labor views. It is to this second group that Arthur Greenwood, long a leader in the British Labor Party and now a Minister in the Cabinet, belongs. Though his origins are fairly modest, he has never worked with his hands.

Arthur Greenwood is a native of Yorkshire, a section celebrated for the dour, dogged, unsentimental type of mind it produces. He attended the ordinary state elementary and secondary schools in his native city of Leeds and then went on to University College, Leeds, then a part of the old Victoria University. His career there was brilliant. He won frequent prizes in the history and theory of education and in economic research and was graduated with a B. S. degree. Immediately after college he started to teach. From various elementary and secondary schools in different parts of Yorkshire he progressed to a lectureship in economics at his old University and then to the headship of the department of economics at Huddersfield Technical College.

Greenwood's labor views declared themselves early, and for some time he helped run a labor monthly at Leeds. Even more important was the part he played in working-class education. With Dr. Albert

ARTHUR GREENWOOD

Mansbridge, J. J. Mallon and R. H. Tawney he was one of the moving spirits in the establishment of the Workers' Educational Association, which now controls a great network of classes all over the country. He was chairman of its Yorkshire district and later became vice-president of its central organization.

Just before the First World War Greenwood left Yorkshire for London to become general secretary of the Council for the Study of International Relations. Mr. Lloyd George (with his genius for finding able lieutenants off the conventional lines) appointed him secretary to the Reconstruction Committee in 1917 and in the same year made him one of the secretaries at the Ministry of Reconstruction. He served there effectively until after the Armistice and also worked on the Committees on Profiteering and on Trusts.

In 1920 Greenwood came to the parting of the ways. A safe, prosperous, useful career in the Civil Service was his for the asking. He decided to work for Labor instead. He joined the general headquarters of the Labor Party as secretary of advisory committees and within 12 months had become head of the Labor Research and Information Department for which the Labor Party and the Trades Union Congress are jointly responsible. He also founded the University Labor Federation and served as its president until January 1940, when he resigned after an anti-War resolution had been passed.

Greenwood's first attempt at Parliament was in 1918 at Southport, Lancashire, a smart seaside resort largely populated by retired cotton merchants. It was a hopeless constituency for Labor, and of course he failed miserably. In 1922, however, he was returned for Nelson and Colne (Lancashire industrial districts), and during the

short Labor government of 1924 acted as Parliamentary Secretary to the Ministry of Health. When Labor came back in 1929 he was made Minister of Health, a post which gave scope for social reforms near his heart: reforms in housing, slum clearance, public health and widows' pensions. He was sworn a privy counselor in 1929 and in the following year was made honorary Freeman of the City of Leeds and awarded an honorary LL. D. by the University of Leeds.

The general election of 1931, conducted as it was in an atmosphere of financial panic, cleared out most of the Labor Ministers, Greenwood among them; but he returned to Parliament at a by-election a year later, winning Wakefield, Yorkshire, by a narrow majority. He now found himself one of a greatly diminished Labor group constantly at loggerheads with an enormous Conservative majority. He pitched into the "National Government" on every possible occasion, particularly for its weakness in the face of the growing menace from the dictator countries. The strength of his views on this issue caused him to be classified by Hitler with Churchill, Eden and Duff Cooper (see sketches this issue) as a "warmonger." Greenwood is no "warmonger"; he has emphasized the folly and wickedness of war time and again—but he still has never wavered in his belief that England must stand up to the dictators.

Because of his ability, his beliefs and his position in the Labor Party (he was acting leader of the Party during Attlee's [see sketch this issue] illness in 1939), Winston Churchill was quick to take Greenwood into a coalition Cabinet as Minister without Portfolio: At The Labor Party Congress held shortly after the appointment was made, shouting Labor hecklers accused him and Attlee of "treachery to Labor" because they had joined the government. "Such accusations are a foul lie," Greenwood roared back. "It would have been treachery if we had seen other countries go under the harrow and refused to do our share."

It's only on rare occasions that Greenwood roars. Tall and spare in build, he is usually quiet and dignified in manner and looks what he is—a scholar. From time to time he has written books on social and educational matters and is credited with having devised and inspired some of the most effective literature the Labor movement has produced in the last 20 years. Yet in this literature Greenwood is less interested in scholarly theory than in the practical business of organization and government. He has an encyclopedic grasp of detail, together with the gift of quickly clearing away the non-essentials in an argument and leaving the important issues clearly defined. His appetite for work is colossal, and he can turn quickly from departmental duties to a rousing platform speech and then back again to the very different kind of speech that "goes down" at Westminster. Energetic, highly intelligent and socially conscious, he is an important part of the

coalition which faces the gigantic task of preserving England.

GROFE, FERDE (grō-fā) Mar 27, 1892-Composer; conductor

Address: b. c/o National Broadcasting Company, 30 Rockefeller Plaza, New York City; h. 195 Norma Rd, Teaneck, New Jersey

Ferde Grofé (he was christened Ferdinand but has since shortened it and discarded the von in his name) is a "bland-spoken" composer who believes that there is a real place for symphonic jazz in American music. "I am not foolish enough to try to place myself in a class, for example, with Ravel and Sibelius, whom I admire immensely," he says, "but I am going on to try to describe America in music."

Grofé's America is bounded by Manhattan (his *Tabloid Suite*), by New Orleans (*Mardi Gras*), by Hollywood (*Hollywood Suite*). It includes the scenic wonders portrayed in the *Grand Canyon Suite* and the clanging industry of *Symphony in Steel*. With an inimitable flair for melodic inventions and a tremendous skill in orchestration, Ferde Grofé has translated into musical terms much of the face of America.

He has always written music: "It was the first thing my mother taught me before I knew how to write English." Grofé was born in New York City near Battery Park and moved to Los Angeles when he was very young. His mother, Elsa Johanna (Bierlich) von Grofé, a graduate of the Leipzig Conservatory and a cellist of "eminent ability," taught him the rudiments of theory and harmony. His father, Emil von Grofé was a

FERDE GROFÉ

singer with a light opera company, and his grandfather, Bernhardt Bierlich, premier cellist in the Los Angeles Symphony Orchestra, and his uncle, Julius Bierlich, concert master of the same orchestra, coached him in chamber music.

Ferde Grofé started studying piano and violin when he was five. When he was 14 he ran away from home. He worked as a bookbinder, in an iron foundry, as a truck driver, as a theatre usher. He kept on with his music, too, and eventually earned his keep pounding the piano in California mining town dance halls until his family got him a job as violist in the Los Angeles Symphony Orchestra in 1909. In that year came his first published composition—*The Elks' Grand Reunion March*—a notable feature of the Elks' convention.

For 10 years Grofé remained with the Los Angeles Symphony, learning from his grandfather to play the brass instruments as well as the violin and viola. But he wasn't making much money. Dance halls and ballrooms began to supply him with the major part of his income. It was in 1919 while he was leading an orchestra at a dance hall named the Portola Louvre that he met Paul Whiteman. Whiteman had happened by chance to walk in. Before he left he had engaged Grofé for his orchestra as pianist and arranger. To the disgust of Grofé's grandfather, who looked upon anything that savored of dance music as "shoo-fly" music, Grofé went to San Francisco. He stayed with Paul Whiteman for 12 years.

It was Grofé who added melodic shimmer to such Whiteman numbers as the *Song of India* and *Chansonette*. It was Grofé whose early arrangement of Whiteman's rendition of *Whispering* sold more than a million and one-half records. It was Grofé who was "the power behind King Whiteman's throne" and

as such "dressed up many a sleazy Tin Pan Alley Cinderella and made it the belle of the ball." And it was Grofé who brought both George Gershwin and himself fame by his scoring, in 1924, of the *Rhapsody in Blue*, "a mere sketch until he got hold of it."

It was in this same year that Grofé retired from active playing in Whiteman's orchestra and devoted himself mainly to arranging, as well as to making piano roll records for the Ampico Company and phonograph records. What with all the arranging business he got, Grofé was so busy writing other people's music that he had little chance to write any of his own. But from time to time he did turn out an orchestral piece in conservative jazz style, "more notable for expert workmanship than for sizzling licks or hipwrenching tunes." His first serious effort at composing resulted in a tone poem called *Broadway at Night* (1924), which received little attention. The following year came the famous *Mississippi Suite* with the well-known "Mardi Gras" and "Huckleberry Finn" movements. *Metropolis*, a fantasy of New York, followed in 1927, and *Three Shades of Blue*, "a delightfully imaginative number in the modern style," was written in 1928. Then followed a series of smaller piano pieces, and finally in 1931 came the *Grand Canyon Suite*, hailed by musicians and critics as "one of the finest pieces of American music ever produced."

After the success of this suite, Grofé did much less arranging and more composing. He wrote more suites. In 1935 his first ballet was produced in the Hollywood Bowl and in 1938 his second, *Café Society*, "added a persuasive point in his lifelong argument for 'symphonic' jazz."

In January 1937 Grofé made his debut as a conductor in Carnegie Hall, New York City, playing a program of his own music. The jazzy, tuneful, descriptive music made good listening and was often good for a laugh. In his *Symphony in Steel* Grofé employed a siren and pneumatic drills; in *Hollywood* there were the banging and scraping of carpenters and electricians, the ennui of "stand-ins," the barking of a director and a "precision routine" in which the percussion section drummed on its shoes with rhythmic ingenuity to suggest a dance routine. "There's so much noise I can't hear," one member of the audience complained that night.

Grofé has led and continues to lead prominent orchestras, in concerts and broadcasts. He has taught orchestration at the Juilliard School in New York City. His compositions are widely heard. In fact, so strong is his influence with rhythms and harmonies that people are beginning to talk of the "Ferde Grofé School."

There is publicity value in descriptive, alive, fresh music like Grofé's and leading industrialists long ago recognized the advantages of a tie up with him. The American Rolling Mills Company put him on its regular payroll while he composed the *Symphony in Steel* and the Ford Motor Company

supported him while he created the suite, *Wheels*. During 1939 and 1940 he has been presenting the New World Ensemble as a main feature of the Ford Exhibit at the New York World's Fair. This ensemble, composed of four novachords and a Hammond organ, sounds like a full-size orchestra and reproduces the tone of every instrument used in the average symphony. With it Grofé presents some of his own works and many masterful arrangements of favorite pieces, old and new.

On May 11, 1929 Grofé married Ruth Harriet MacGloan; they have two children—Ferdinand Rudolf Jr., and Anne Carlin.

GROPPER, WILLIAM (gröp'per) Dec 3, 1897- Artist; cartoonist

Address: h. Mt Airy Rd, Croton-on-Hudson, New York

For several years William "Bill" Gropper's trenchant cartoons of social protest and satire have been known to the American public. Only recently has Gropper been recognized also as a skilled and effective painter. In New York City during February 1940, "Twenty Years of Bill Gropper" was celebrated with a rally in Mecca Temple; a Gropper monograph of 36 reproductions, with text by his fellow-artist Joe Jones (see sketch this issue); and an important show of his recent paintings at the A. C. A. Gallery. Among these new paintings on exhibit, in oil and water color, are several typically class-conscious canvases: *The Shoemaker*, bare footed, mending other people's shoes; *Brenda in a Tantrum*, satirizing the 1939 Glamour Girl; *The Kibitzer*, a youth absorbed in a poker player's royal flush; and *Art Patrons*, two socialite gallery-goers viewing a picture with disapproving hauteur. At present his paintings are represented in the permanent collections of the Metropolitan Museum of Art, the Museum of Modern Art, the Phillips Memorial Gallery in Washington, the Hartford, Connecticut Museum and elsewhere.

Gropper was born in New York City, on the lower East Side, December 3, 1897, son of Harry and Jenny (Nidel) Gropper. On his way to school he would carry to a sweatshop the bundles of sewing his mother did at home. His first job was in a clothing store at \$5 a week. Later he attended the

National Academy of Design (1913-14), and the New York School of Fine and Applied Art (1915-18). He has been awarded several prizes for illustration, and in 1937 won a Guggenheim Fellowship.

Though he wanted to paint, Gropper, like Daumier, had to earn his living by drawing cartoons. His first job as a cartoonist was with the New York *Herald Tribune* (1920). One day he was assigned to caricature an I. W. W. rally. But Gropper was so moved to sympathy that he became a convert to Left-wing activity. So, in his own phrase, he "fired the *Tribune*," and became successively a Labor organizer, oiler on a freighter, itinerant sign painter and illustrator. He still draws cartoons, willingly and without pay, for the *New Masses* and the *Sunday Worker*; and for the *Freiheit*, Yiddish Communist paper, getting paid only when the *Freiheit* can afford it. He makes his living free-lancing for capitalist and conservative publications such as *Fortune* and *Vogue*. And he has been commissioned as a mural painter for hotels and public buildings. Notable among his murals are those for the post office at Freeport, New York; his Cuban scenes for the Schenley Products Company, New York; and the mural in the new Department of the Interior Building in Washington, D. C. Gropper never embarrasses his conservative employers by making paintings of social comment for them. "To paint a mural that doesn't fit the place would be like painting swastikas in a synagogue," he says. "My only interest, when I haven't got a free hand, is to do as good a job as possible."

William Gropper has been described as "a short, thick man with dreamy gray eyes and an air of subdued but uninhibited amusement." He paints as he draws, usually from memory or from imagination, in fast, bold

WILLIAM GROPPER

GROPPER, WILLIAM—*Continued*

strokes, with bright reds, yellows, blues, slashes of white.

Gropper is a member of the Society of Mural Painters and The American Group. Three books of his illustrations have been published: *The Golden Land* (political cartoons), (1927); *Fifty-Six Drawings of U. S. S. R.* (1928); *Alay-Oop* (story in pictures), (1930). He is considered America's ranking satirist, not only in his forte, black and white, but also in oil. In August 1935 he created quite a stir when the Emperor of Japan demanded an apology from the United States State Department for Gropper's caricature of him. His artistic derivations are Brueghel, Rouault and George Grosz. Among his better known paintings are *Waiting*, a cow dying of thirst, on whom buzzards have already lit; *Burning Wheat*, an echo of the now defunct AAA program; *Klansman*, the modern equivalent of the rider of death; *Survivors*, a full lifeboat on the sea, suggested by the Vestris disaster; and *Burlesque*, a footlight Venus type. A recent exhibit, dedicated to "the defenders of Spanish Democracy," included water colors and oils inspired by the news from Spain. In these, Gropper expressed the helplessness of refugees, the terror of people during air raids, the senseless destruction of human beings.

In 1924 Gropper married bacteriologist Sophie Frankle of Youngstown, Ohio. Soon after their marriage they spent a year in Russia, where Gropper worked on *Pravda*, official organ of the Communist Party. They have two sons, Gene and Lee. They live at Croton-on-Hudson, New York, where they built their own nine-room stone house.

The sharp, dramatic form of his paintings, their discipline of clean line and comment, owe much to Gropper's training as a cartoonist. There are actually two worlds represented in his painting. One, a kind of life that calls for social comment and protest, usually takes the form of a grim portrayal of poverty, cruelty or violence. In these drawings the background of sky, clouds, hills or trees reflects the mood of the painting, and the lives of the figures appearing in it. In *Southern Landscape*, for instance, the gnarled branch of a pine tree is extended like clutching bony hands across the lowering sky. At the base of the picture, startlingly white against a dark rock, lies a half-naked, prostrate figure, with two dark vigilante forms nearby. Even his paintings without figures can express social meaning. In *Still Life* Gropper paints a cheap vase holding faded flowers, with a solitary undernourished herring on a white plate.

Another world is reflected in his paintings with bright, robust activity and portraiture. In singular contrast to his water color *Sweatshop* is the physical exuberance of two woodcutters in *Landscape*; the pathos of his American slum children to the plump, glowing health of *Little Girl*—*U. S. S. R.* Then there is the gay, colorful landscape of *Grape Gatherers*, with figures in pleasant,

zestful occupation. In such landscapes there is no flat, somber gray: the skies are clear and blue, the buildings stand out in sharp, vivid colors.

Discussing the quality of his social comment work, through which he has achieved his real distinction, Ernest Brace writes: "William Gropper's painting is unequivocally effective. Whether he paints the agile mouth of a Senator or the thin, tight lips of a judge, prisoners being marched off to execution or the prostrate victims of an air raid, the briefest glance tells the story. . . Gropper's purpose seems as inseparable from his painting as the pigment. And even when his protest against injustice is loudest and most vehement, it never becomes shrill or raucous with personal animosity. . . He is concerned not with an individual, but with the forces that have conditioned him."

GRUENBERG, SIDONIE MATSNER
 (grü'en-burg sē-dō'nē māt's'ner) June 10, 1881- Educator

Address: b. 221 W 57th St, New York City; h. 418 Central Park West, New York City

Parents' Magazine's annual award for the outstanding book for parents published during 1939 was given to Mrs. Sidonie Matsner Gruenberg for *We, the Parents*, a book written to give parents constructive help in understanding and working toward a solution of basic problems of childhood and family life. In 1930 the same magazine awarded her the medal for Distinguished Service in Parental Education.

Born near Vienna, Austria, Sidonie Matzner (the spelling now changed to Matsner) attended the Hohere Töchterschule in Hamburg, Germany. When she was 14 years old her parents, Idore and Augusta Olivia (Bassechés) Matzner came to New York City. Soon after, her father died. Her mother, descended from a wealthy cultured family and having led a sheltered life, was faced with the problem of making a living for herself and five children. She engaged in rubber importing, a most unusual business occupation for a woman.

Sidonie was graduated from the Ethical Culture School (1897), later took special training in the normal department and then did graduate study at Columbia University. In 1903 she married Benjamin Charles Gruenberg, who was born in Bessarabia,

Russia, and came to the United States when a child.

They have four children: Herbert M., a physician; Richard M., a businessman; Hilda Sidney, a writer; and Ernest M., a medical student. From her study and from her experiences in bringing up her own children, as well as two grandchildren, and helping to meet the problems of other parents, Mrs. Gruenberg is well qualified to advise on all problems of childhood.

One of Mrs. Gruenberg's biggest jobs is directing the activities of the Child Study Association of America. She has been with that organization since 1906, has been its director since 1921. She was Chairman of the sub-Committee of the White House Conference on Child Health and Protection (1930); a member of the President's Conference on Home Building and Home Ownership (1931); and of the 1940 White House Conference on Children in a Democracy. In addition she is a member of the advisory council or board of almost 20 organizations, ranging from the Advisory Board of the Junior Literary Guild to the Council of 100 of the American Association for Adult Education. Most recently she was appointed a member of the Executive Committee of the Progressive Education Association.

A member of the lecture staff at Columbia University Teachers College, 1928 to 1936, and at New York University since 1936, Mrs. Gruenberg also lectures before women's clubs, parents' and teachers' organizations and social workers—her audiences varying from 19 to 9,000. She contributes articles on child training, children's literature, family relationships and educational problems to magazines and has written a number of books.

Her first book, *Your Child Today and Tomorrow* (1913), is a book for parents, dealing with some of the problems of child training. The author's objective is expressed in the introduction: "It has been my chief aim to show that a proper understanding of and sympathy with the various stages through which the child normally passes will do much towards making not only the child happier, but the task of the parents pleasanter."

Sons and Daughters (1916), which followed, has to do with the training of older children—boys and girls of adolescent age. A critic has written: "The author's attitude is wise and sane; her methods unite what is best of the old and new ideals in child training. She points out that many of the supposed innovations in bringing up children are only efforts to restore to them what they have lost in the advance of industrial civilization."

Modestly, Mrs. Gruenberg says that she does everything with her author-educator husband and admiringly states that his record of achievement in *Who's Who in America* is longer than hers. They coauthored *Parents, Children and Money* (1933), which is an elaboration of the simple pedagogical dogma

G. Maillard Kessler

SIDONIE GRUENBERG

that children learn to do by doing. And so, using the "allowance," no matter how small, as the best instrument by which education can be carried on, they discuss the various phases of that training in the home and the ways in which the allowance can be used to make the child feel his responsibility, develop his intelligence and train his understanding of his relations with other members of the family.

Our Children (1936), coedited with Dorothy Canfield Fisher, is a volume made up of 27 articles on the care and training of children, written for parents by specialists in medicine, psychology, physiology and education.

Parents' Questions (1936) answers questions brought to the Child Study Association by inquiring parents.

Mrs. Gruenberg, a striking-looking woman, has brown eyes and is very dark—a "Spanish" type. Her secretary describes her as having a "marked outgoing personality." Without a trace of accent, she has a low-pitched voice and speaks beautifully. Good health, says Mrs. Gruenberg, and the cooperation of her family and staff are the primary essentials which enable her to participate in so many activities which all converge about the problems of parenthood and children. While gardening and travel are her hobbies, her real hobby, as well as her work, is child study.

HAAKON VII, KING OF NORWAY (hāk'kūn) Aug 3, 1872- King of Norway

After they fled from the Norwegian port of Molde, only 28 miles from the German-occupied Aandalsnes, the King of Norway, his family and most of the members of his government reached London on June 10, 1940. In April 1940 had come the announcement from Berlin that neither King Haakon nor the old Norwegian government would have any authority in the occupied territories because they had placed themselves on the side of the Allies.

Interviewed two days after his flight from the Norwegian capital of Oslo on April 9, 1940, the King was reported as saying: "Since I left Oslo Tuesday I have not taken off my shoes and have hardly slept. All civilization seems to have come to an end. I cannot understand how such terrible things can happen. I can no longer be sure of anything.

"... My people can evacuate to Sweden. I will have to stay in my country as long as there remains a single inch of Norwegian soil."

This fugitive monarch who has presided over conservative, liberal, radical, peasant and labor governments in Norway for 34 years is, strangely enough, not even Norwegian-born. He was born Prince Charles

of Denmark (Christian Frederick Charles George Waldemar Axel) on August 3, 1872, the second son of Crown Prince Frederick (later Frederick VIII). At thirteen he was known in Denmark as "the sailor Prince" because for nine months he served in the royal navy as midshipman, the lowest post in the service. In 1896 he married Princess Maud, the daughter of Edward VII of England, and on July 2, 1903 a son, Alexander, was born.

At this time Norway was still annexed to Sweden, having been ceded in 1814 after the dissolution of a four-century union with Denmark. Although Sweden was dominant, Norway had retained her own Constitution and the right to local self-government. When Norway finally separated from Sweden in 1905, its Republican Party was not in a majority, however. Norway wanted a king. And Edward VII of England was prompt to suggest his son-in-law for monarch after Oscar II of Sweden had refused to select one of his own sons. On November 18, 1905, Prince Charles was elected King of Norway by popular referendum (not a strange procedure for a monarchy so democratic that all hereditary titles were abolished by its Constitution of 1814); the same month Charles first set foot in Norway, carrying his young son in his arms; and early the following year he was crowned King Haakon of Norway in the cathedral at Trondheim. Princess Maud became Queen Maud, and Prince Alexander became Crown Prince Olaf. In 1938 the nation mourned the death of Queen Maud.

Although the Norwegian government's power is divided between royal authority and the elected representatives of the Storting (Parliament), with the King presiding over the state council, actually his is "a purely decorative office, closely resembling that of the President of the Republic of France, just as far removed from active participation in the running of the state and just as much of a pompous misnomer." According to the Constitution he has a greater latitude of initiative than the King of England, but his veto rights are limited and he has no power to dissolve Parliament. Fortunately King Haakon, unlike his grandfather, Christian IX, was liberal-minded and easy-going, and he quickly made himself popular with both Parliament and the people. His knowledge of foreign affairs won respect for his statesmanship as well. The first year of his reign found Sweden's attitude toward Norway rather threatening, but in 1907 an Integrity Treaty was signed by which the strategic powers—including Great Britain, France and Russia—guaranteed Norwegian independence. After that treaty King Haakon's reign was one of close cooperation with the other Scandinavian powers—and, until now, of peace for Norway.

When the First World War broke out in 1914, a Scandinavian conference was quickly called in which the monarchs of the "Oslo Nations" affirmed their neutrality

Norwegian

HAAKON VII

and their determination to preserve it. It was the first of many such conferences, always for the same purpose—in 1917; in 1918; "Scandinavia Day" in October 1936, in celebration of a "common front of democracy and tolerance"; in 1938; in September 1939; again in October 1939. Journalists who noted that at the 1917 conference Sweden's King Gustav kissed King Haakon on only one cheek while honoring both cheeks of his brother Christian X of Denmark also noted that the brothers were treated alike at the October 1939 conference, and saw it as a symbol of Scandinavia's strengthened ties. Crown Prince Olaf's marriage to Martha, niece of the Swedish King, had also taken place in the interim.

In Oslo Norway's King drove around the streets unescorted in a modest car, granted audiences to whoever asked, was known for his sea yarns, his habits of strolling down to the waterfront and of talking informally to everyone from fishermen to clerks. The royal family had an estate at Skangum, a summer home at Bygdøy; in winter there were winter sports, in the hunting season there was riding to hounds; King Haakon, "erect, slender and well over six feet in height," was at least as fond of outdoor sports as of diplomacy, and it was not unpleasant to be a King in a country where even the people were so democratic that they didn't bother to stare at the spectacle of a royal family acting quite normally.

The governments over which King Haakon presided went through many changes, however, as did the national economy. In 1935 the Liberals fell from power when they refused to levy higher taxes for the relief of the unemployed. The Agrarians, normally rather conservative in their views, threw their weight behind the Labor Party of Norway, and in 1936, seventy members of

HAAKON VII—Continued

the Labor Party were among the Storting's one hundred and fifty representatives. With the avowed aim of gaining the cooperation of the middle classes by a program of not-too-radical social legislation, Labor still succeeded in winning the serious antagonism of the Conservative Party and of Norwegian business interests by such measures as a 30 per cent income tax, 10 per cent sales and corporation taxes, and a 25 per cent tax on all interests on bank deposits.

Norway had joined the League of Nations in 1920; nevertheless the Scandinavian policy had always been as much isolationist as against large-scale military preparation. The Scandinavian conference of July 1938 had proclaimed sanctions non-obligatory; the neutrality of the Oslo nations continued to be rigidly guarded after war broke out and, in spite of pressure from the Allies, during the war in Finland.

Not long after the Finnish peace, Great Britain, with the announced intention of saving the Scandinavian countries from the results of their isolationist policies, mined Norwegian waters. On April 8, 1940, between midnight and noon of the next day, the Norwegian capital, principal seaports and principal coastal defenses were seized by the Germans in a naval coup which startled the world and which, it is claimed, had been planned weeks in advance. Fully equipped Nazi troops leaped from German transport planes; innocent merchant vessels turned out to be Nazi convoys; Nazi ships landed other troops in the Fjord, meeting with almost no immediate resistance because, reported the journalist Leland Stowe (see sketch this issue) some days later, Norwegian war ships had been ordered by Nazi-sympathizing commanders not to resist, and mines had been electrically disconnected. Three thousand singing, parading Nazis held Oslo for 48 hours, its 300,000 population stunned, until German transports carrying more than 20,000 troops arrived on April 11. Communications and radio stations were seized, censorship established. Quisling (see sketch this issue), Nazi sympathizer, former Minister in the King's council, was temporarily proclaimed Premier.

In the meanwhile King Haakon, Crown Prince Olaf, and most of the Storting and Council had fled to Hamar, where the Storting voted to refuse to capitulate and ordered mobilization. Pursued there by the Germans, they fled to Elverum, where farmers and local guards beat off the Nazis, fighting behind barricades of overturned cars. A *White Book* released by the fugitive government reveals that German attempts to negotiate with Haakon for the formation of a friendly government were at one time on the verge of success, but when Hitler redoubled his demands he was met with a proclamation of war, further orders for mobilization and the formal declaration of alliance with Britain and France. Next Ger-

man planes leveled Elverum to the ground, but Haakon and his government were already in Nybergsund. There planes bombed their hotel; the party, escaping in automobiles, was bombed four times as it took shelter in the woods. Harried from village to village, but refusing to recognize the Nazi-controlled interim government headed by Christiansen, the attitude of Haakon's government stiffened the resistance of the Norwegians. Nine days after the invasion British troops landed to help them, but they were defeated.

Since then the tired 68-year-old monarch who said, not without reason: ". . . I can no longer be sure of anything," has rejected a plea to abdicate, presented him by members of the German dominated Parliament in July 1940. He told the Presidential Board of the Storting that he would conform to the wishes of the Norwegian people if they really wanted him to abdicate, but insisted he would never bow to the wishes of the German Army of Occupation. Two months later the Norwegian Parliament declared that Haakon VII was no longer able to function and named a regent in his place. However, it decided to postpone until after the War the final question of whether he will be allowed to return to his country.

HALDANE, JOHN BURDON SANDERSON (hòl'dān) Nov 5, 1892- Biologist; author

Address: University College, Gower Street, W. C. 1, London, England

Professor of biometry at London University since 1937, "bald, burly, tweedy, shaggy" J. B. S. Haldane is one of the best-known living popularizers of science. His most recent book is *Science and Everyday Life* (1940), a collection of 70 brief articles in which he has tried to give not only a few facts not yet found in textbooks and "which a student leaving a university with an honors degree would not be expected to know," but also "to bring these facts into relation with everyday life." Without the use of a technical vocabulary or the assumption of any previous technical knowledge on his reader's part, he talks about marriage and earthquakes, weather and superstition, the laws of probability and "the economics of cancer." Non-Marxist reviewers find his analogies between science and society the least valuable part of the book, but agree that the eminent biologist has once more "accomplished his purpose of writing an understandable book of real scientific worth."

John Burdon Sanderson Haldane was born on November 5, 1892, the son of J. S. Haldane, an experimentally-minded scientist. He was also the nephew of the Viscount Haldane who became Lord Chancellor. Since his parents both came from Scotland he was brought up to think of himself as a Scot, and it was in an "atmosphere of intellectual curiosity and freedom" that he grew up. After attending an Oxford Preparatory School and Eton he took his M. A. at New College, Oxford just in time to go off to the First World War. He was with the Black Watch in France and in Mesopotamia, was wounded twice, became a captain in 1915. It seems unlikely that the War left any serious scars on him, for he once commented (perhaps frivolously) that at the time he quite enjoyed shooting Germans.

From 1919 to 1922 Haldane was a Fellow of New College, and then became a reader in biochemistry at Cambridge University. After he was involved as correspondent in a London divorce action in 1925 Cambridge put him before a disciplinary body. A year later he married Charlotte Franken, a writer. From 1930 to 1932 he was also Fullerian professor of physiology at the Royal Institution, but it was not until 1933 that he

J. B. S. HALDANE

left Cambridge to become professor of genetics at London University. Since 1937 he has held a life tenure of that University's chair of biometry.

Besides publishing numerous scientific papers on such subjects as human chemical physiology, genetics and natural selection, Haldane began early in the '20s to make a reputation for himself as a popularizer of science. He was never in any sense a "pure" scientist, however: speculation on the philosophic implications and practical possibilities of modern knowledge made every book an adventure to him as much as to his readers. Some of them were *Possible Worlds* (1928); *Animal Biology*, with J. S. Huxley (1927); *Science and Ethics* (1928); *Facts and Faith* (1934); *Heredity and Politics* (1938).

With no desire to shut himself up in the laboratory or classroom away from the problems of the ordinary citizen, Haldane became increasingly concerned with just those problems. In 1935 he was urging that England make herself less vulnerable to attack by storing away a great quantity of food, providing her people with gas masks and building underground shelters that would be both bomb- and gas-proof. In 1936 he spent six weeks in Madrid during the Christmas siege of the city by Franco's forces. Already known as an authority on poison gas, in 1938 he published a little book called *Air Raid Precautions* which sold for 6d and didn't reassure anybody very much about the horrors of modern warfare. "I hate having to write this book," he began, without mincing words. "Air raids are not only wrong, they are loathsome and disgusting. If you had ever seen a child smashed by a bomb into something like a mixture of dirty rags and cat's meat you would realize this fact as intensely as I do." He wanted England

to adopt a two-year program of digging 1,100 miles of brick-lined tunnels at a depth of 60 feet to house the entire metropolitan population—the work to be done by 100,000 unemployed miners.

Since 1914, Haldane once expressed it, he had been living in an "heroic age." His knowledge of Fascism made him doubtful of "surviving into another epoch of peace and quiet," and for a long time he had been convinced that "our civilization will either break up or go forward to a new form." But although he had frequently quoted Marx, Lenin and, particularly, Engels in his writings, it was not until 1938 that he became an avowed Marxist. *The Marxist Philosophy and the Sciences* (1938) deals with mathematical, physical, biological and sociological problems from the Marxist viewpoint, and so do many of his 27 essays, lectures and broadcasts collected into *Adventures of a Biologist* (1940). Of the last book, however, Clifton Fadiman says that it is mainly "straight popularization of a high order, succinct, dryly humorous, clear."

Science and politics were not the only subjects of Haldane's literary ventures. He also wrote a book of nonsense stories for children called *My Friend, Mr. Leakey* (1938). Mr. Leakey is a magician, so that the book is full of delightful but quite unscientific miracles, but there are any number of facts tucked in with the fantasy.

Since the outbreak of World War II Haldane has continued both to work for better defenses for England and to contribute articles to the London *Daily Worker*. Although University College in London was evacuated in September 1939, he refused to go and has since then "made some discoveries." He has also "been doing work of a somewhat dangerous character designed to save the lives of certain members of the British forces."

Since 1928 Haldane has been a corresponding member of the Société de Biologie; from 1932 to 1936 he was president of the Genetical Society; and in 1937 he was made Chevalier of the Légion d'Honneur for his scientific services to France. He has a reputation for "epigrammatic discourse" which makes him a delight to reporters. Typical remarks: "I have never yet met a healthy person who worried very much about his health, or a really good person who worried about his own soul"; "Luxury is the mother of all human kindness."

In an essay titled, *What I Require from Life*, Haldane gives a fairly good idea of his philosophy. His requirements are work that is hard but interesting; a decent wage for it; more freedom, particularly more freedom of speech; health; friendship, in a society of equals; adventure (as distinguished from "thrills"). He would also like to see every other man and woman at work, controlling their conditions of work, healthy, with "class and sex subjection" at an end. To him this means socialism.

He also makes certain requirements of death. Socrates' death, he believes, couldn't

have been better. He died for his convictions, having completed all the work he could reasonably have hoped to do, and his last words were joking words. If Haldane can fulfill even two of these conditions he doesn't think he would deserve anybody's pity.

HALIFAX, EDWARD FREDERICK LINDLEY WOOD, 3RD VISCOUNT Apr 16, 1881- Former British Foreign Secretary; Ambassador to the United States

Address: 88 Eaton Sq, London, S. W. 1, England

December 1940 Bulletin: On December 23, 1940 the appointment of Lord Halifax as British Ambassador to the United States was announced. Anthony Eden succeeds him as Foreign Secretary.

From September issue:

The change of name caused by the grant of or succession to a British peerage causes a great deal of confusion, for it is difficult to realize that three names can belong to one person. In the case of Lord Halifax it might almost be said that each of his names is associated with a different phase of personality. Plain Mr. Edward Wood was an ordinary gentleman until he was nearly 30, and thereafter a not-very-striking member of Parliament and Minister; Lord Irwin was a reformist Viceroy of India who prepared the way for the Round Table Conference; Lord Halifax, succeeding to his viscounty at 53, became a Foreign Secretary who was considered by some the most influential behind-the-scenes member of Chamberlain's National Government, at one time pointed out as probable successor to the Premiership. In all three

Times—Wide World

VISCOUNT HALIFAX

phases he has left his mark, for good or ill, on the policy and destiny of his country. And this same Edward Wood once said he would rather be master of foxhounds than Prime Minister.

Gentleman, sportsman, scholar and devout churchman, Lord Halifax has sometimes been called the "saintliest" character in British public life. He is "a tall, big-boned man with a high forehead, clear, slightly myopic eyes, a firm chin, a sensitive mouth"—unassuming, friendly, quiet-spoken, with a natural dignity and a charm that caused one gentleman to complain: "You know, one trouble with the fellow is that everyone who comes at all into close contact with Halifax becomes enamored of him." Unquestionably he represents the highest type of British aristocrat and since March 1939 he has more than earned the enmity of the Nazis. Yet in the summer of 1940 H. G. Wells was pressing for the removal of Halifax from Churchill's (see sketch this issue) Cabinet along with other men connected with the policy of appeasement, while the *New Statesman and Nation* stated the earnest hope that such an action would facilitate "democratic counterrevolution" against Hitlerism throughout the continent. In October 1940 when Churchill reorganized his Cabinet his retention of Halifax was even more severely criticized by the Liberal and Labor Press. The *News Chronicle* stated that he was "inextricably involved in the policy of appeasement, signs of which still linger too ominously. . . . Until he has gone, distrust of British intentions abroad cannot finally be removed." And again H. G. Wells, now visiting the United States, was quoted as saying: "The man I want to see go is Halifax, the quintessence of what all English-speaking men should be afraid of. I have a feeling, being

HALIFAX, VISCOUNT—*Continued*

a British citizen, that I have never been so misrepresented as by my present Foreign Minister." Lord Halifax's integrity has seldom been impugned; yet earlier in his career Harold Laski predicted: "We shall pay in the end a heavy price for his high character and the moral beauty of his inner life."

In the meantime Lord Halifax was finding refuge from air raids in London's famous Hotel Dorchester, where he and Lady Halifax had rented eight rooms which included a chapel for the Foreign Minister.

Wood grew up on a spacious estate at Garrowby, Yorkshire, where he was riding almost before he could walk, in spite of the disability of a withered left arm. His father, the second viscount of Halifax (who married Lady Agnes Elizabeth Courtenay), lived to the hale old age of 92, leading an active life to the last. He was not only a pious high churchman like his son, working all his life for the reunion of the Anglican and Roman communions, but an enthusiastic collector of ghost-lore. Edward went from Eton to Oxford, where he was an undergraduate of Christ Church, took a first class in history, proceeding M. A., and was elected a Fellow of All Souls. A biography of the churchman, John Keble, was published during his student days.

Right through his 20's he led the life of a country gentleman and showed no special interest in politics; but in January 1910—when even country gentlemen were feeling seriously upset by the Liberals' far-reaching measures of social legislation—he was persuaded to put up for Parliament, and was elected for the Yorkshire constituency of Ripon in the Conservative interest. The year before he had married Lady Dorothy Evelyn Augusta Onslow, daughter of the fourth Earl of Onslow. (They now have one daughter and three sons, his heir being the Hon. Charles Ingram Courtenay Wood).

Wood made no special mark as a back-bencher in the House of Commons, but he got on friendly terms with two other more or less obscure politicians, Stanley Baldwin and George (later Lord) Lloyd. The latter was a fellow Etonian, and from his talks with Wood about the destiny of the Conservative Party there emerged a book called *The Great Opportunity*, which they wrote in collaboration. With the coming of the First World War, Wood went to France with the Yorkshire Dragoons, was twice mentioned in dispatches, ended as colonel of his regiment. At the "khaki election" of 1918 he retained his seat, and at the War's end was one of 200 Conservative M. P.'s who signed a demand for harsher terms with Germany, though he fought Lloyd George's ruthless Irish policy. In 1921 he was made Parliamentary Under-Secretary for the Colonies, serving until 1922. Then, when the Conservative Party repudiated the Lloyd George Coalition and Stanley Baldwin rose from nonentity to the

Premiership, his friend Wood was remembered and from October 1922 to January 1924 served in his Cabinet as president of the Board of Education; in October 1924, after a brief Labor interlude, he became Minister of Agriculture and served until November 1925.

In 1925 Wood was raised to the peerage in his own right as Baron Irwin of Kirby Underdale before becoming Viceroy of India. (His grandfather, incidentally, had been Secretary of State for India). It was Good Friday in the year 1926 when Lord Irwin arrived in the country in which he was to act as the King's representative for five years, and he immediately impressed the religious-minded natives by refusing to disembark on a holy day. During his term as Governor he showed himself willing to work on a long-term basis for some measure of self-government, brought matters so far forward that the Round Table Conference could be held and succeeded in winning and holding Gandhi's respect and admiration in spite of the fact that at one time during his rule as many as 37,000 Indian Nationalists languished in British prisons. Gandhi called him "a man I can trust to tell me what he thinks", "the Christian Viceroy", "one of the noblest of Englishmen"; Indians referred to him as "that thin tall Christian". British Conservatives found him somewhat over-anxious to compromise with the Nationalists; and British Left-wingers went so far as to admit "he made British imperialism look less stark and ugly than it was under Lord Reading or Lord Willingdon."

Back from India in 1931, the next year Lord Irwin at long last became Joint Master of the Middleton Hunt, an office which he was forced to give up six years later. The same year he published *Indian Problems*; from 1932 to 1935 he served again as president of the Board of Education; in 1933 he became chancellor of the University of Oxford; and in 1934 he succeeded his father as Lord Halifax. He was Secretary for War in 1935, Lord Privy Seal from 1935 to 1937, Leader of the House of Lords from 1935 to 1938, Lord President of the Council from May 1937 to 1938. His duties as master of foxhounds being almost more demanding than those of his public offices, outwardly it looked as if he was "on the shelf" politically. Those in the know recognized his influence, however. While Anthony Eden (see sketch this issue) was Foreign Secretary, Halifax was accustomed to pinch-hit for him in his diplomatic absences, was given the tag "pro-German" by some circles, and in November 1937 gained Eden's enmity when sent on a visit of "exploration" to Germany. He talked to Nazi chieftains, was impressed with the Nazi International Hunting Exhibition, and, according to Duff Cooper (see sketch this issue), came back with a report which said in essence "that they were very queer fellows, but that he could see no harm in them and he was glad to say that Hitler had promised him never to interfere with Austria or Czechoslovakia." In March 1938 he suc-

ceeded Eden as Foreign Secretary, as a man actually representing Chamberlain's point of view and yet possessing the sympathy and respect of both friends and foes of appeasement. (Even Churchill calls him "a gentleman, a fox hunter, a friend.")

It is reported that when Halifax received word of the Nazi conquest of Austria on March 12, 1938 he buried his face in his hands and murmured "Horrible, horrible!"—although on March 10 he had "prolonged discussions" with Ribbentrop. Munich to him was "at best the lesser of two frightful evils." Nevertheless until Hitler's seizure of Czechoslovakia on March 1939 he continued to hope that it was possible to remain on good terms with the dictators. Without questioning his sincerity, those who found his views unrealistic called him an "instrument of the country-house aristocracy" which felt that war must be avoided at all costs, described him as "a mystic who could hardly explain his intellectual processes even to himself. He dislikes the clear-cut principle and the downright mind." But five days after the German troops entered Prague he made a speech in the House of Lords finally admitting the necessity for collective security, followed by guarantees of Poland, Romania, Greece and Turkey and the introduction of conscription.

During the earlier stages of World War II it was one of Halifax's rôles to defend the way in which the War was conducted by the Chamberlain National Government, to condemn "amateur strategists," to preach against the danger of "large-scale adventures." Under Churchill's leadership he has become an eloquently religious spokesman for British determination to continue the struggle. When on July 22, 1940 he answered Hitler's bid for "peace," the keynote of his uncompromising reply was: "This is a crusade of Christianity." His closing of the Burma Road (later reopened) brought criticism on his head once more, however.

The tall, reedy, saintly country gentleman with a sense of public duty now finds himself in the anomalous position of one who is scornfully dubbed "Chaplain of the British Empire" and "Britannia's funeral orator" by his country's enemies, yet asked by many of the Britons to withdraw to a position where he "can do no further harm." It could not have happened to a simple master of foxhounds.

HAMBRO, CARL JOACHIM (häm' brō) Jan 5, 1885- Former president of the Storting (Norwegian Parliament)

Address: c/o Appleton-Century Co, Inc, 35 W 32nd St, New York City

Carl Hambro, president of the Norwegian Parliament for 14 years and chairman of the Norwegian Foreign Affairs Committee, is spending the winter of 1940 and 1941 lecturing and writing in the United States. *I Saw It Happen in Norway*, his story of the invasion of Norway, was published in September 1940, "the first authoritative historical account of the Norwegian phase of the War" and is an "excellent book for those who do not want to see 'it' happen here."

On March 15, 1940 Carl Hambro arrived in Stockholm "on a trip for information." It was generally accepted that he was there to discuss the idea of a defensive military alli-

Harris & Ewing

CARL J. HAMBRO

ance of Sweden, Finland and Norway. He remained in Stockholm, but his mission had changed. He was there "to complete a speaking engagement," and because the government considered his trip opportune. Overnight what he sought to prevent had happened, and his country had become the unwilling Northern front for the Second World War.

On April 28, 1940 Carl Hambro announced, in reply to the charge of the Reich Foreign Minister in Berlin, that Norway "aided and abetted" plans for an Allied Scandinavian front so that Germany could be destroyed: "We now have irrefutable proof that Germany prepared detailed plans for the invasion of Norway months before it actually occurred. We would have been in a better position today if the British really had troops ready to land and even more so if the Allied intelligence service, which knew of the German preparations, had warned us previously."

Hambro stated that it was also undeniable that the Germans had a detailed plan for the occupation of Denmark, where they have established a Nazi régime, and for an invasion of Sweden, to come later.

This 55-year-old statesman, once described as "short, rotund and merry-eyed," has been known as a spokesman of peace rather than of war during the greater part of his career. He was born in Bergen, Norway on January 5, 1885, and studied at Oslo University. After having worked on the large Oslo morning newspaper, the *Morgenbladet*, while still a student, he took his final examination in 1907 and that same year found a position as teacher in the Oslo Commercial High School. In 1910 he married; in 1913 he became chief editor of the *Morgenbladet*, a position which he held until

1921; and in 1919 he was elected a representative to the Storting from the Conservative Party.

In 1920 Norway joined the League of Nations, and Hambro became known as one of the most active supporters of disarmament. He was fond of saying that peace can be just as interesting and just as "dangerous" as war. In 1926, the year he was elected President of the Storting, he was also appointed Norwegian delegate to the League, and became active on many committees of the League of Nations as well as being associated with many non-political organizations such as the New Theatre in Oslo, the Norwegian Students Association, the Norwegian-American League. He was honored with the Grand Cross of the Royal Order of St. Olaf, the highest Norwegian decoration. In December 1939 he was elected president of the League Assembly at Geneva, called especially to consider Finland's pleas for help against Soviet aggression.

Hambro is something of a literary figure in his own country—the author of many studies on immigration, on the League, on political and economic questions; the Norwegian translator of such authors as Kipling, Victor Hugo, Dickens, Sinclair Lewis; and, until recent events, one of the literary critics of the *Morgenbladet*, the newspaper which he edited for such a long time.

As a speaker he is familiar to lecture audiences in the United States where he has filled many speaking engagements. In 1935 it was the Oxford Movement rather than the Germans which had swept through Norway and Denmark like wildfire; as a convert to Buchmanism, Hambro "testified" in the Metropolitan Opera House in New York City that the Oxford Group had "changed his life," and told the bankers, lawyers and business men of the Bankers' Club that Europe never would settle its problems until the statesmen themselves ceased their hypocrisy and met on an equal basis of honesty and unselfishness in accordance with the fundamentals of Christian ethics.

He has been denounced by the Germans as a Jew and a relative of the London founders of Hambro's Bank.

Johan Hambro, 24, studying journalism and history as a guest student at Columbia University in New York City, is one of his four sons. His comment on the invasion of Norway was:

"... We have believed too much in disarmament."

HARKNESS, EDWARD STEPHEN Jan 22, 1874—Jan 29, 1940 Financier; philanthropist

Edward Stephen Harkness died at his home in New York City at the age of 66. He had been ill two weeks with intestinal gripe and complications. Few persons in the whole United States have given as much as he has to medical, educational and civic institutions. Although he gave away millions, he was known as "a self-effacing man who shunned the public" and had never made a public speech or granted a newspaper interview. He was born in Cleveland, Ohio, the son of Stephen V. and Anna M. (Richardson) Harkness. He received a B. A. from Yale in 1897 and an M. A. in 1925. The University at St. Andrews, Scotland conferred an LL. D. in 1926, as did Columbia University in 1928. He married Mary Stillman of Brooklyn, New York on November 15, 1904.

Harkness inherited his father's and mother's estates, (Standard Oil Company), valued at more than \$60,000,000, and his brother, Charles W. Harkness, a director of the Standard Oil Company, left him \$36,000,000.

No complete list of his benefactions has ever been known, but estimates are that he gave away more than \$100,000,000 to institutions in this country and abroad for hospitals, medical research and education. Among them are Harvard, where he established house systems of education following those of Oxford University; Yale University; Columbia University, which received medical funds and a library; Phillips Exeter Academy and other preparatory schools. He aided, in addition, various English and Irish

Press Portrait Bureau

HARRIMAN, FLORENCE JAFFRAY HURST July 21, 1870- United States Minister to Norway

Address: h. "Uplands," Foxhall Rd, Washington, D. C.

"Daisy" Harriman first distinguished herself diplomatically in the First World War because she was said to have out-talked the German Minister to Norway at a "ratio of about 700 to 1." It was in connection with the United States freighter, *City of Flint*, which had been seized by a German prize crew, searching for contraband material, in the opening days of the Second World War during October 1939. Contrary to international law, the German crew had sought to anchor in Norway's neutral waters. When the vessel arrived at Bergen, Norway, in November, the German naval convoy claimed that an emergency had made the call at a neutral port necessary. Without delay, dynamic Mrs. Harriman made straight for the port. The German Minister to Norway came racing after her, claiming jurisdiction over the vessel. The two Ministers fought it out, with the victory on Mrs. Harriman's side. *The City of Flint* sailed for the United States; an impasse over neutral ships was averted; and Nazi spokesmen hinted ominously of an "acute situation between Oslo and Berlin."

This diplomatic job was a long way from "Daisy" Harriman's girlhood and her social triumphs in Washington. For Madame Minister Harriman had started adult life as a debutante who had nothing more serious than teas and dances to think of. She was born in New York City of well-to-do parents, Francis William Jones and Caroline Elise (Jaffray) Hurst, attended a fashionable finishing school, spent her summers in Newport and at 19 married J. Borden Har-

riman, a New York banker. As a young matron, she lived in Westchester County, traveled, spent a winter in Egypt and devoted herself to social affairs. She helped organize New York's exclusive Colony Club in 1904 and remained its president from its organization until 1916.

Her abilities as an organizer were put to a wider social purpose in 1906 when she was appointed manager of the New York State Reformatory for Women at Bedford, a post she held for 12 years.

Her first taste of politics came in 1912 when she took an active part in the Wilson campaign. She worked hard, and President Wilson rewarded her by appointing her to the Federal Industrial Relations Commission. The only woman on the Commission, she served on it from 1913 to 1916.

J. Borden Harriman died in 1914, and Mrs. Harriman moved to Washington and settled down to a career there. During the War she became chairman of the Committee on Women in Industry of the Council of National Defense and helped organize the Red Cross Women's Motor Corps, going to France in 1918 to take charge of 500 drivers. She also helped found the Women's National Democratic Club, whose leading spirit she has been for many years.

But Washington knew her chiefly as one of its foremost and most envied hostesses. Her Sunday night salons were sometimes referred to as "Mrs. Harriman's teacup chancellery." In her home, the "Uplands," on the outskirts of Washington, on a Sunday evening one could find judges, Senators, political bigwigs. She did not draw party lines and delighted in throwing conservatives and liberals together. Her Sunday night salons found radical newspaper columnists such as the late Heywood Broun side by side with conservatives such as Justice Roberts, George Creel and David Lawrence. Her book, *From Pinafores to Politics* (1923), is a sparkling account of the events for which she was fortunate enough to have a "box seat in the America of her time."

The depression swept most of the Harriman fortune away, but Mrs. Harriman still entertained lavishly. She eked out her income by renting her luxurious home at times to well-to-do paying guests, once to Otto Kahn during the Pecora investigations, another time to James A. Moffett, while he was Federal Housing Administrator. She even tried her hand at interior decoration for her friends.

The 12 long years of Republican régime dimmed "Daisy" Harriman's political star. An opportunity for a political comeback came in 1932, when as Democratic National Committeewoman for the District of Columbia she was one of the District's delegates to the Democratic National Convention in Chicago, but she made the mistake of supporting Newton D. Baker instead of Roosevelt. However, she was soon back in the Roosevelt graces. It was said that

HARRIMAN, FLORENCE—*Continued*

the battle was waged in the "Uplands" where members of New Deal aristocracy were favored guests. At any rate Mrs. Harriman was the official hostess at the Democratic National Convention in Philadelphia in 1936 and one of Roosevelt's most ardent supporters. (She supported him strongly again in 1940.)

President Roosevelt rewarded her with the post of Envoy Extraordinary and Minister Plenipotentiary of the United States to Norway. Norway took five weeks to confirm the appointment, although it usually takes about 24 hours for an appointment to be confirmed. It may have been that Norway was uneasy about a woman minister. But in June 1937 she became the second woman to be appointed by the United States as a minister to a foreign country.

The Norwegians and Mrs. Harriman liked each other. Mrs. Harriman's physical prowess was interesting to them. Although she is almost 70, Madame Minister's posture is as fine, her back as straight, as any young cadet's. Perhaps it is the result of her early Spartan training. Her father, a Union officer in the Civil War, had an army sergeant drill his three young daughters, three times a week. Mrs. Harriman learned to swim in the Hudson River when she was four and in the summer she used to swim every afternoon in one of Norway's picturesque fiords; in the winter she skied, a sport she quickly picked up from the Norwegians. "I found it easy," she told friends in the United States. "It's mostly a matter of balance, and I had that from riding horseback all my life."

"Daisy" Harriman is an imposing figure. Tall, her gray hair neatly bobbed, her eyes a deep blue, she is partial to blue for daytime wear, and severe black gowns for evening. She has a straightforward, almost brusque charm that made her as popular in Norway as she was in Washington.

When Mrs. Harriman went to Norway, her main concern was to see the signing of a reciprocal trade treaty between the United States and Norway. But the Norwegians, who pride themselves on their self-sufficiency, were not in a bargaining mood. Mrs. Harriman, nevertheless, found her time well filled. She spent mornings answering mail, making reports. Her luncheon hours were almost always taken up with visiting American tourists. Genuinely interested in social reform, she tried to sell Americans on Norway and its cooperative and social advancement. In the evenings she had to attend innumerable state functions and there hobnob with *le grande monde* of Norway.

With the coming of the War to Norway all that was changed. Mrs. Harriman found herself in the thick of the fray, the first to inform the United States State Department of the outbreak of hostilities. She remained as close to King Haakon (see sketch this issue) and his court as she could until air raid after air raid made her decide to make

for Sweden, where she could get better communication facilities.

In May 1940 she was actively working to get American women in Norway out of that country into Sweden and appeared in vigorous health, despite her 70 years. It was not until September that she returned to the United States.

Her experiences as United States Minister to Norway, culminating in the German invasion are told by Mrs. Harriman in a book to be published by Lippincott in the spring of 1941. It will be called *Mission to the North*.

HARRIS, ROY Feb 12, 1898- Composer
Address: h. 160 Cabrini Blvd, New York City

As late as 1925 Roy Harris was earning his living as a truck driver. Today he is one American composer who has found a ready market for his works. Frequently his music is broadcast over national hookups; much of it is recorded; and the great orchestras of this country rush to include a new Harris composition on their programs. His recent *Folk-Song Symphony* was written on a commission from the National Committee of Music Appreciation and his *Challenge*, 1940 came at the request of Artur Rodzinski (see sketch this issue) for a composition for a Philharmonic Lewisohn Stadium concert.

Harris' popularity may be due, in part, to the strikingly American character of his writing. His pieces seem to "taste and breathe of the vast American soil"; in them is an energy that seems especially American, "muscular, spare, adventuresome." This nativeness is a basic quality of the music in *Symphony*, 1933, for instance, or the *Third Symphony* which Koussevitzky (see sketch this issue) called "as completely outside European experience as the prairie morning itself." It is both intrinsically and extrinsically identified with works like *When Johnny Comes Marching Home*, based on a familiar American tune, or *A Song of Occupations* or *Challenge*, 1940, the words of which are the preamble to the Constitution of the United States.

Harris himself says: "If we create an indigenous music worthy of our people, it will make its way swiftly and unfalteringly. . . Whether it be a little more or less 'dissonant' or 'original' is of small import—but it must have the pulsing life stuff in it—creative urge and necessity of continuity. It cannot be a scholarly mosaic of all the materials and forms of the last 200 European years."

Harris' is not modernistic music. It is classical music in the sense that his works embody organically developed musical ideas. But in his conservatism Harris does not imitate older styles. Rather he creates through great labor a self-built style which "is original because he originated it himself, but which is not always new." Many of his rhythms are delightfully novel and vigorous. Many of his "plaintive, originally

G. Maillard Kesslère

ROY HARRIS

modulated bitter-sweet melodies" are equally distinctive. In fact, many critics agree that Harris' "melodic gift is his most striking characteristic."

Often Harris' technical equipment is questioned because he started composing so late, and it is true that there is a certain awkwardness in his early works both in handling his material and in writing for instruments. Gradually, however, "this awkwardness becomes part and parcel of his style, taking on a charm of its own." Yet it has been pointed out frequently that Harris' work is still "unequal." His slow movements, especially, with a tendency toward soft sentiment, seem out of style with the rest of his work.

Harris has listened to his own music critically, aware of its unevenness or its occasional patchiness, and ultimately rejected the inferior among his works. He has "put compositions ruthlessly back on to the stocks when they needed reworking and cut away whole movements and substituted better, and furiously labored at the improvement of his style and form." This "spare, gangling Oklahoman" is in "deadly earnest with a devoted sincerity to musical ideals and with boundless enthusiasm as to his own possibilities."

Roy Harris was born in an Oklahoma log cabin, the son of a farmer and of a waitress who had been brought to the United States from England when a baby. At five he was taken to California, where he lived the life of a farmer. His mother taught him to play the piano and he had a few lessons on it and on the clarinet. Then his father bought a phonograph and some records. "We played them nearly every evening, even in the late summer evenings after a long day's work," he says.

HARRIS, ROY—*Continued*

At public school Roy played piano in occasional concerts, but decided to give up music and go in for athletics. "I grew to normal masculine stature, learned to dance, to neglect my studies and to be at ease in the presence of my schoolmates. All this was probably necessary." Then came the War, and when it was over Harris spent two years at the University of California. But "I could find nothing definite to get hold of," he says.

Then he discovered that music was what he wanted. His job was that of a truck driver, delivering 3,000 pounds of butter and 300 dozen eggs around Los Angeles, but four years of truck-driving were for him "years crowded with enthusiasms. Each new harmony, each new melody each composer discovered was a milestone for me." He began to write "unbelievable commonplaces of harmony like a school-boy's first exercises, melodic fragments of no distinction, rhythm all half-note blocks in four-four meters." But Harris pointed them out "with the firm conviction that they were potential masterpieces."

"Then one week, in desperation," he says, "I wrote a work for orchestra." He took it to Arthur Farwell, his friend and teacher, and it was performed in a festival at Rochester by Dr. Howard Hanson and repeated in a New York Lewisohn Stadium concert and at the Hollywood Bowl. This *Andante*, Harris knew, "was poor, heavy-footed, fumbling. It conveyed none of the racy, taut springiness which I felt as I wrote it. But at last something seemed to be expected of me. People said I was a 'fresh talent' but needed 'technique.'"

In 1927, as a result of this *Andante*, Harris was awarded a Guggenheim Fellowship and went to Paris to study with Nadia Boulanger. For a time he began to pick up sophisticated "tricks" but he kept his drive and "a bit of ungainliness which he has never quite outgrown." After two years he returned to America, where he was, at first, unhappy. "Nobody really cared whether I wrote good music or not. Good American citizens resented one of their own making a lifework out of music unless it netted money." During this period he suffered a fractured spine and spent six months in a plaster cast—a "blessing," actually, because it forced Harris to read and to write music without depending on the piano.

Soon Harris won a creative fellowship from the City of Pasadena. His performances began to receive encouraging reviews; Elizabeth Sprague Coolidge sponsored his chamber music when the Pro Arte quartet decided that it was "virile United States music well worth playing widely."

Harris is a fairly prolific composer, lavish in his ideas and in his development of

them. Best known among his works, perhaps, are the *Symphony*, 1933, which Koussevitzky called the first tragic American symphony; *A Song for Occupations*, a vigorous setting for a cappella choir of Whitman's words; *When Johnny Comes Marching Home*, an "American Overture" commissioned and recorded in 1934 by RCA Victor Company, "rough-hewn, sinewy and directly outspoken"; the *Third Symphony*, which Koussevitzky gave a première almost immediately and which then was broadcasted by Toscanini and came to be the "most talked about American composition in a decade." Harris' chamber music, like his orchestral works, is consistently outstanding for its elevated manner, "sublime for all its ruggedness."

Harris, who in 1938 was head of the composition department of the Westminster Choir School in Princeton, New Jersey and in 1940 is teaching and composing in New York, still looks and sounds his Western origin. "He is rather spare in build, and his voice has the barest suggestion of both lisp and twang. He has fair hair and eyes of bluish gray; his eyes can light up with humor or restrained sarcasm and he has the gift of listening." In his personality he has "a plain, driving force, undampable conviction, ruggedness," much of which is reflected in his music.

In the fall of 1940 *Singing Through the Ages: Melodic and Harmonic Songs* was published. It was edited by Harris and Jacob Evanson.

HART, BASIL HENRY LIDDELL—*See* Liddell Hart, B. H.

HART, LORENZ *See* Rodgers, R. and Hart, L.

HART, MOSS Oct 24, 1904- Playwright; librettist

Address: b. 1501 Broadway, New York City

In the fall of 1940 George Kaufman and Moss Hart presented Broadway with their seventh collaborated production, *George Washington Slept Here*, while their sixth, *The Man Who Came to Dinner*, was still playing to crowded houses.

Since Kaufman and Hart have built up the most smoothly integrated collaborating team in Broadway history, it is difficult to tell what particular gifts Moss Hart brings to their work. His feeling for satire combines readily with the more experienced Kaufman's sense of humor in situation and careful attention to the fine points of production. They satirized Hollywood (*Once in a Lifetime*, 1930) before either of them had ever been to the movie coast; they satirized New Deal politics (*I'd Rather be Right*, 1937), though neither had ever played the political game in Washington. But they were near-celebrities themselves when, as theatre-goers know, they satirized celebrity-worship in *The Man Who Came to Dinner* (1939), and their satirization of the woes of a New York family in a Bucks County, Pennsylvania farmhouse is close to their own experiences.

With critics and public agreed that *The Man Who Came to Dinner*, the story of a touring Great Man who breaks a hip and stays for weeks with a much enduring Midwest family, is one of the best and funniest of the Kaufman-Hart plays, Warner Brothers of Hollywood have negotiated with the playwrights for its screen production in 1941. *George Washington Slept Here*, however, was a disappointment to the critics (one called it: *George Kaufman Slipped Here*) who found that, despite tremendously amusing sequences, the story of the making over of a dilapidated Colonial farm house just wasn't enough for three acts.

Prototype of the bright-young-man who makes good on Broadway—from obscurity to riches in a decade—Moss Hart likes to say he was born on the wrong end of Fifth Avenue, New York, the son of Barnett and Lillian (Solomon) Hart. The place was 107th Street, the time October 24, 1904. The theatre began for him when he was seven years old and his Aunt Kate took him on a trip clear downtown to Manhattan to see a play called *Life* by Owen Davis, presented at the Manhattan Opera House. The boy at once knew that this world behind the footlights was the world he would live for. He made playwriting his objective while still in high school; he took up the study of the short story at Columbia University, but never got far with it. His parents were poor, so to help support them he went to work in cloaks and suits. His first contact with the theatrical world came when at 17 he became secretary to August Pitou, theatrical manager. His small salary was turned over to his family, but he did get passes to all the theatres. At 19 he wrote his first play, *The Hold Up Man*

Vandamm

MOSS HART

(or, *The Beloved Bandit*) and persuaded Pitou to produce it. The play actually ran for five weeks in Chicago, but Pitou lost so much money on it that he and his young secretary soon parted company.

Moss Hart next became a Little Theatre director. Then he got better paying jobs as entertainment director in large summer camps for adults. He found that one of the world's toughest jobs is keeping city folks sufficiently entertained when they are confronted with a few weeks of Nature. He stole most of the plays he produced for them on drama nights—and he played the lead in all of them. One season when it rained during 15 days the entertainment director had to devise a bit of palm reading, fortune telling, bridge tournaments and tap dancing on the side.

After one such harrowing summer Moss Hart announced to his family that he was going to write a play, that he must live away from New York in order to have peace and quiet to do it. Accordingly he and his family fled from The Bronx into the wilds of Brooklyn. There *Once in a Lifetime* was written. The young playwright hopefully took it to Jed Harris, who turned it down. It was Sam Harris who suggested that he might get George S. Kaufman to collaborate with him on its rewriting and production. Hart had long looked upon Kaufman, who was 15 years his senior, as a god, and could scarcely believe his good fortune when Kaufman liked the play and would work with him. But he now calls his first job working with Kaufman the "Days of Terror," since the daily schedule meant working from 10 a. m. "until exhausted" or starving, since Kaufman seldom ate anything while working. They might spend two hours shaping a sentence, or a whole day discussing an

HART, MOSS—Continued

exit. A Kaufman-Hart play is never completely written; it is gone over, cut, re-written time and time again before, during, and even after rehearsals.

Further opportunity came to Moss Hart, while he was still comparatively unknown, to collaborate with another brilliant theatrical personage: Irving Berlin. Hart was librettist for two successful reviews, Berlin writing the scores; *Face the Music* (1932) and *As Thousands Cheer* (1933). In 1935 he wrote, with Cole Porter, (see sketch this issue), *Jubilee*. This lightly satirized a social situation similar to one then developing at the Court of St. James; but in Hart's story the Royal Family is ordered to a gloomy castle as the result of a Communist threat perpetrated by a mischievous prince. The family escapes from the castle and goes on a bust of its own devising, incognito.

But since his initial success Hart's best work has been done in the plays that are Kaufman-Hart combines. *You Can't Take It With You* (1936) won the Pulitzer Award for drama that year. This, an outstanding motion picture success after its long run on Broadway, was a farce-comedy of the clowning Sycamore family: Grandfather Vanderhof who gave up business because he wanted to relax, his daughter Penelope who wrote plays because someone left a typewriter by mistake at the house, her husband who manufactured fireworks in the cellar. Only the youngest granddaughter is conventional enough to be an efficient secretary—and marry the boss' son. In 1937 came *I'd Rather Be Right*, the New Deal satire in which George M. Cohan as President Roosevelt helped roll up a tremendous box office score. *The Fabulous Invalid* (1938) was a cavalcade of the New York stage since 1900, showing the long struggle of a theatre and a producer-manager: everything is going to kill the theatre—but it always survives. *The American Way* (1939) was the type story of the immigrant, a German carpenter, who comes to this country to find freedom and work, raises a family, makes a fortune, loses a son in the War, is impoverished by the financial crash, and dies a martyr to freedom.

The Glamor Boy of New York first nights, whose meteoric rise has behind it some intensely hard work, is described as "a tall, pleasant looking man with lots of dark hair, a full face, eyebrows like inverted V's, and a rushing enthusiasm." He is unmarried, and fond mamas with marriageable daughters yearn over him. But sweet young things usually bore him; he prefers wise and witty and more experienced companions like Beatrice Lillie and Fanny Brice. He says that his home life is "a glamorous mixture of New York, Hollywood, insomnia, nervous indigestion and a childlike passion for the theatre." He likes dogs, has a dark room for amateur photography and always plenty of space for parties, since he has a phobia about eating alone.

His home in New York is a beautiful remodeled Victorian brownstone filled with Victorian furniture, much of which he picked up at auctions. In Bucks County, Pennsylvania he has a farmhouse in the center of a theatrical and art colony.

Moss Hart's idea of solid luxury is a gold monogram—several of them—on everything from belt buckles to bottle-stoppers. He is a spendthrift on haberdashery and gadgets; he spends not only on himself, but generously on his family and friends; lavish jewels, furs, silks. When he had his first success with *Once in a Lifetime* he established his family in an elegant hotel apartment refitted by the best interior decorators. He spent his royalties as fast as he got them, a procedure he still follows; fortunately there are usually more coming in.

In spite of the aura of success that surrounds Moss Hart, those who know him best believe that much more than a love of glitter is bred in his bones. His good friend but not-yet collaborator, Edna Ferber, writes of him: "Iron is stronger than gold, and he has plenty of that hardy metal in him. As his social sense wanes, he will write more and more out of his own emotional and intellectual findings. The theatre is an integral part of him. He sees people and events with an eye which is at once dramatic, technical and human—the craftsman's eye. There's not the slightest danger that he will one day be hopelessly snarled up in all those monograms, neckties, dressing-gowns and engraved dinner invitations."

Moss Hart has finished, on his own, a play tentatively called *Lady in the Dark*, in which Gertrude Lawrence (see sketch this issue) will star. *George Washington Slept Here*, a new Kaufman-Hart play, opened in New York in the fall of 1940.

HAWES, ELIZABETH Dec 16, 1903- Designer; writer

Address: b. c/o PM, 27 Sixth Ave, Brooklyn, New York; h. 217 E 48th St, New York City

Elizabeth Hawes has been referred to as "Fashion Is Spinach" Hawes, which indicates the popularity of her debunking book by that title. Whether or not she has indeed come

to the conclusion that "fashion is spinach" as far as she personally is concerned and has decided to forsake it for journalism, remains to be seen. Apparently she is engaged in both careers at present.

She closed her very exclusive dressmaking establishment in January 1940 with the announcement that she planned to open a "small laboratory" where she would make clothes and accessories for a very limited number of women with the hope eventually of applying the designs to mass production. Shortly after the announcement the shop was supplanted by Hawes Customers, Incorporated, run by Miss Hawes' former employees, and for which the former owner occasionally did some designing.

The announcement was almost coincidental with her acceptance of the post of editor of the "News for Living Department" of New York's new tabloid, *PM*, which made its appearance in May 1940. The "News for Living Department" took the place of the conventional woman's pages in newspapers, and, according to *PM* editors, was to help its readers eat better, dress better and have more fun for less money. It was, in effect, a new kind of woman's department, which gave a digest of advertisements, shopped for unadvertised bargains in clothes, listed 20 best buys in food each day, and searched for new trends in cosmetics, apartments, schools and entertainment. This department was discontinued in the fall of 1940, but Miss Hawes continues to write Sunday pieces for *PM*.

It was a far cry from Hawes, Incorporated, exclusive *couturière*, but yet entirely in keeping with the aims Elizabeth Hawes expressed in her best seller, *Fashion Is Spinach*, in 1938. For Elizabeth Hawes is definitely of the opinion that the American woman is not getting her money's worth in her clothes because she is the victim of that "deformed thief," fashion. And fashion, according to Miss Hawes, is something entirely different from style. Style, she says, is functional, while fashion is the whim of designers and manufacturers. A dress that is in good style may be worn for three years, she declares.

Giving women advice and information about clothes is certainly in Elizabeth Hawes' sphere. She began making clothes as a child in Ridgewood, New Jersey, where she was born the daughter of John and Henrietta (Houston) Hawes. She was sewing her own clothes by the time she was nine or ten years old, and at twelve she was making clothes for children of her mother's friends.

She wanted to go to art school, but somehow, after her graduation from the Ridgewood High School, found herself in Vassar, chiefly because her mother had been a student there and her older sister was attending the college. At the end of her sophomore year, however, she did attend an art school for a three months' summer term, the Parsons School of Fine and Applied Arts, in New York. The following

Mary Morris

ELIZABETH HAWES

summer, in 1924, still determined to become a designer and convinced that no art school could teach her, she went to work as an unpaid apprentice at Bergdorf Goodman, exclusive specialty shop, in New York.

For this privilege, obtained through a friend who bought her clothes at Bergdorf Goodman, she worked from 8:30 a. m. each morning, and it was 7:30 at night before she got to her suburban home. "I was so tired I cried every night when I got home," she writes in *Fashion Is Spinach*. "I learned how expensive clothes were made-to-order." But the experience apparently did not discourage her. During her senior year at Vassar she supplemented her meager allowance by designing clothes for a shop near the campus.

She was determined to go to work in Paris to learn the fashion business at first-hand. Soon after she was graduated in the summer of 1925 she set out for Paris with a Vassar classmate. There was no parental objection to overcome, and Elizabeth Hawes started off on her quest of a career armed with a letter to the Paris office of Bonwit Teller (New York exclusive specialty shop), and two fashion reporting jobs—one a \$10-a-month job for her local newspaper and the other a \$15-a-month job for a Wilkes-Barre, Pennsylvania department store.

From July 1925 to August 1928, when she returned to America permanently, Paris and the fashionable resorts of Europe were Elizabeth Hawes' stamping ground. Her first job was with a Paris copy house at the munificent salary of \$20 a month. The copy house was a bootleg establishment which copied the models of the famous French designers for its special customers. Miss Hawes assisted with this bootlegging and for a while found her work a pleasure,

HAWES, ELIZABETH—*Continued*

since she was learning to recognize the styles of the important French designers.

After three seasons she quit to make sketches for American buyers and manufacturers in Paris. This work consisted of accompanying buyers to the important fashion openings and sketching surreptitiously those dresses they wanted to copy, but did not wish to buy. She made some comparatively quick money in this way, and it left her free between buying seasons. Her next experience was as correspondent for an American fashion syndicate; she also was Paris correspondent for the *New Yorker* and for short periods a Paris stylist for Macy's and for the Lord & Taylor specialty shop in New York. She quit it all, however, to take a job with the French designer, Nicole Groult, for \$20 a month so that she could do designing.

But, after a season with Groult, the young *couturière* decided that French designing was not for her. She was out of sympathy with the life of the French leisure class. She wanted to design clothes for American women, to make clothes that suited the lives they led. "No use trying to design clothes in Paris for a group of people whose lives were nothing to me," she said.

She returned to America in September 1928 with no job, only with an idea that she wanted to design American fashions, a thing almost unheard of then, since the tradition of copying French models was still very strong. By chance she heard of Rosemary Harden, a debutante of the year before, who wanted to do something besides go to parties. Rosemary's father set the girls up in a dress business.

The firm of Hawes-Harden opened on East 56th Street on December 16, 1928, Elizabeth Hawes' twenty-fifth birthday. Launched with considerable publicity, the shop did \$60,000 worth of business the first year, but lost \$10,000, which Mr. Harden obligingly paid. Hawes-Harden was having more of a success making beautiful clothes than making money. In 1930, when Rosemary Harden was married, the Hardens gave Miss Hawes their share of the business for \$1.

Although Miss Hawes now had a business of her own, it was not easy going. The depression was just around the corner, and it looked rather dark for the shop for a time. But the ever-energetic Miss Hawes was full of ideas. Probably one of her most unusual stunts was the exhibition of her American fashions in Paris, July 4, 1931. It was the first time the world's style center had known invasion from overseas, and it won Miss Hawes considerable publicity.

Until this time, Miss Hawes' designing had been done exclusively for the woman who could afford to buy made-to-order clothes. But in 1933 she hired herself out

to a Seventh Avenue (the manufacturing row of New York) dress manufacturer to design ready-made clothes. Hawes' moderately priced designs were blazoned forth in advertisements and promotion pieces. Miss Hawes also designed gloves and bags for the retail market.

Color combinations that the retail trade thought startling and designs they declared very novel were merely duplications of things done in her made-to-order business several years before, Miss Hawes says. She made enough out of her first year's work with a dress manufacturer to pay for newer, larger quarters for her own business. Hawes, Incorporated, opened in its new quarters on East 67th Street in 1933. Soon afterward Miss Hawes left Seventh Avenue because she said she found Hawes' fashions being made in inferior materials and badly put together.

Elizabeth Hawes has dubbed herself an "American" *couturière*, and has built her success on that. She is, in fact, one of the pioneer American women's clothes designers of note. Her *Fashion Is Spinach* was thought by some to bear the faint tinge of press-agentry. A discussion of the ins and outs of fashion from the autobiographical standpoint, the book was called destructive by trade papers. Nevertheless it made the ranks of the best sellers. If it did press-agent Elizabeth Hawes, it was honest and entertaining.

Miss Hawes' *Men Can Take It*, published in 1939, was an indignant attack on the uncomfortable clothing men wear. The designer advocated functional clothing without stiff collars, heavy belts and stiffly buttoned coats, and predicted that colored slack suits would be the common business attire of the future. It was not her first attempt to do something about men's clothes. She had held a men's fashion show with clothes designed by her and previously had written articles on the subject.

The energetic Miss Hawes has tried her hand at fiction, also, and has had several short stories with a dress-designing background published. After *Fashion Is Spinach* was published she says she made more money from writing than from dress designing. Incidentally, writing, talking and bicycling are, she declares, her chief hobbies.

Miss Hawes has been married twice. Her first husband, whom she married December 12, 1930, was Ralph Jester. After a divorce, she was married to Joseph W. Losey, July 1937. They have one son, Gavrik, born in 1938.

HEATH, S. BURTON Dec 20, 1898—Journalist

Address: b. c/o New York World-Telegram, 125 Barclay St, New York City

"An anonymous postcard made a muckraker out of me," said S. Burton Heath of the New York *World-Telegram*, whose exposé of the illegal extra-judicial activities of former Judge Martin T. Manton of the United States Supreme Court of Appeals won for him the 1939 Pulitzer Award for best reportorial work.

Mr. Heath is a muckraker of the modern variety, and that means that when he gets through playing around with records and facts and figures something has to happen besides a series of articles in an evening newspaper. In this case Judge Manton resigned, was tried, convicted and sentenced to prison. Because of Heath's other muckraking activities, he tells us, "two judges have left the bench by resignation under fire; three of the largest insurance companies stand condemned in the public conscience; cheap equitable insurance is available to more than 12,000,000 in New York State; the taxpayers of New York were saved more than \$3,000,000 on a few foul, sewage-swept acres of unused ocean bottom."

Although Heath, the son of Horace Burton and Ida Victoria (Marine) Heath, was born on December 20, 1898 in Lynn, Massachusetts, he really hails from Vermont, where his parents still live. He attended the Bradford, Ver-

S. BURTON HEATH

mont High School and while a sophomore there, worked as hand compositor on the Bradford *Opinion*, the town's weekly newspaper. It is possible there wasn't much going on in Bradford that really required muckraking at the time. In 1917, a year after young Heath was graduated, he became editor-manager of the weekly Groton (Vermont) *Times*; in 1917 he enlisted in the Vermont National Guard, later was sent to France and returned to the *Times* with two citations for war-time service and two wound stripes. In 1919 he bought the newspaper. Shortly afterward he was forced to retire from the newspaper business because of poor health, but retirement was only temporary. Heath began to study at the University of Vermont and there he worked on the Burlington *Free Press*; when he was graduated in 1926 there was another newspaper job waiting for him with the New Haven Bureau of the Associated Press; in 1928 he came to the New York *Telegram*. He has been with the *Telegram* and the *World-Telegram* ever since, aside from a two-year interval (1930-32) during which he served as secretary of the St. Lawrence Power Development Commission.

It was not until 1933 that Heath began muckraking, though, and then his career was begun almost by accident. The anonymous postcard that Heath spoke of was one suggesting he investigate the judgments against one of the 48 justices in New York City's "poor man's court." He did, and the uncovering of the facts had such immediate and practical results that Heath used the same method to become the "unofficial scourge of Tammany Hall." His articles exposing Tammany's corruption provided considerable ammunition for the Fusion forces in driving Tammany from the City Hall that year, and until 1936 he

HEATH, S. BURTON—*Continued*

continued to specialize on municipal affairs. Later investigations included one on industrial insurance which was followed (April 1938) by the passage by the State Legislature of the Savings Bank Insurance Act, which allows savings banks to handle small insurance policies of the poorer citizens.

The first article on Judge Manton's activities appeared on January 27, 1939, but it was the result of patient research on Heath's part since the summer of 1938, with time out only to cover Dewey's (see sketch this issue) campaign for Governorship. "Research" to the modern muckraker means burrowing in ledgers, court files, tax reports. According to Heath it means having the "combined qualities of analytical accountant, mathematician, chess master, crossword-puzzler and jigsaw addict. It needs also a smattering, at least, of curbstome law." It was suspected that Judge Manton had been sitting on cases which involved persons from whom he had received financial benefits; simultaneously the New York County Grand Jury was investigating him. But it was up to Heath to provide the leads and work them up to prove that Manton was unfit to sit on the bench. His first article describing the control held over various corporations by Judge Manton brought about the Judge's resignation within three days. Shortly afterward Manton was indicted and on June 3, 1939 he was convicted, fined \$10,000 and sentenced to two years in prison.

The process of muckraking, modern style is, Heath says, "one of calm analysis of cold records; the collection and tabulation of facts and figures, their meticulous sifting and evaluation, and eventually their organization into a syllogism in which both premises are indisputable and the conclusion is inescapable." Those are big words, but they seem to have brought results.

In the fall of 1940 Burton Heath's book, *Yankee Reporter* tells how his kind of reporting is done. In it he tells of following clues through court records, statistics and personal interviews; in it he gives sidelights on various personalities he has met; in it he tells of his own life in Vermont, New Haven and New York. This, says Harry Hansen in the New York *World-Telegram* is a book "that was crying to be written."

Mr. Heath is a sharp-faced Vermonter, "mild and courteous," with a wife (he married Emily Dodge in 1923) and one daughter, Nancy, five years old. He is very fond of French fried potatoes and doesn't like fruit or vegetables. His first name unfortunately cannot be divulged for the sake of any record; he has been trying to keep it secret for 20 years.

HEDIN, SVEN ANDERS (hě-dēn' sfěn ān'dŭrs) Feb 19, 1865- Explorer; author
Address: c/o E. P. Dutton & Co, 300 Fourth Ave, New York City

For more than 50 years Sven Hedin, "the Marco Polo of our day," has been wandering through the unmapped regions of the world. "His yak-dung fires have burned in innumerable Himalayan passes; he has run the risk of death from cold, hunger, wolves, thieves; over and over again, from one remote and desolate spot he has gone through storm and flood, through Himalayan cold and the unspeakable dirt of Tibetan villages, to reach another equally remote and desolate spot merely for the satisfaction of drawing a new line on the map of the world." About 20 published volumes of which *The Wandering Lake* (April 1940) is the latest, tell the story of his adventures and discoveries.

Hedin has always been an explorer. In *My Life as an Explorer* (1935) he tells us: "At the early age of 12 my goal was fairly clear. My closest friends were Fenimore Cooper and Jules Verne, Livingstone and Stanley . . . particularly the long line of heroes and martyrs of Arctic exploration." When Nordenskjöld returned to Stockholm in 1878 (the city where Hedin was born in 1865), after a trip of incredible hardships through the Arctic, Sven Hedin was one of the crowd that cheered him. "All my life I shall remember that day," he says. "It decided my career."

Hedin then delved into everything about Arctic expeditions he could find. He read, he studied maps and during the northern winters he rolled in the snow and slept by open windows "to harden myself." But he never became an Arctic explorer. In 1885, while he was at the University of Stockholm, he was offered a job as a tutor in Baku on the Caspian. He went, "and for the rest of my life I was to be held by the enchanting power that emanates from the largest continent in the world."

From Baku, Sven Hedin went to Persia (1890) where he had the first of the many thrilling and amusing adventures that were to color his travels. Before he left Stockholm he had been asked by a professor at the university to bring back the crania of some Persian fire worshippers. He found three fine skulls. The customs official examined his luggage, and asked, "What's in that bag?" pointing to the one with the heads. "Human heads," Hedin replied. "Take a look." The official did, and sent Hedin through fast, perfectly certain that a foul triple murder had been committed.

In 1889 Hedin returned home. One of his professors called him to the attention of Baron von Richthofen, the famous Asiatic authority, and Hedin visited Richthofen in Berlin and studied Asiatic geography with

him. Then he returned to the East. *A Conquest of Tibet* (1934) tells some of his earlier adventures, his unsuccessful effort to reach Lhasa in disguise frustrated in a very gentle and polite fashion by Tibetan officials, his adventures and observations in a Tibetan monastery, his friendship with the Panchen Lama, his discovery of the sources of the Indus. Here and there in the book one sees mention of the Lop-nor, the mysterious wandering lake in Central China that flits through many of his books like a *Fata morgana* and finally forms the theme of his latest one.

From the turn of the century on, Sven Hedin continued to travel and explore Asia's deserts, Mongolia, India, Arabia, Tibet, Mesopotamia. The result of almost each expedition is a book, both scientific and exciting. *Overland to India* (1910); *Jerusalem* (1918); *Jehol, City of Emperors* (1932) are only a few of them. In *Across the Gobi Desert* (1931) we see Hedin as the executive, the head of a great Swedish and Chinese scientific expedition, directing its affairs from Peiping, the base in the Gobi Desert, the United States and back in the Gobi again. The affairs of that expedition, which employed a staff of 13 scientific specialists, run through his next book, too, *Riddles of the Gobi Desert* (1933). But here Hedin is no executive at a desk, recording contacts with lords and bureaucrats. He travels by auto, dugout and camel, on foot and by horse through the heart of the Gobi Desert.

In between his trips of exploration, Sven Hedin would return home. He would get the pictures he had taken into shape for publication and go over the drawings he had made. He always relied more on drawings, for as he said: "A landscape which I've painted I never forget." In Stockholm his father and his sister Alma would help him copy his manuscripts. But he never stayed with them long. Soon he would think of "the slow, measured step of camels and the sound of copper bells."

One summer evening in 1933 Sven Hedin was guest at the German Embassy in Peiping, where some officials of the then existing Chinese government were also present. One of these officials asked Hedin if he had any suggestion about how the Chinese government could retain control of Sinkiang, a Chinese dependency stretching from Mongolia to Tibet. Hedin said: "Yes. Motorize the Silk Road." The Chinese government didn't know what the Silk Road was. Hedin had to tell them it was the caravan route traveled by Marco Polo in the days when China exchanged her silk and spices for European goods. The Chinese government asked Hedin to make a map of the Silk Road so they could motorize it. Hedin knew there were about 5,000,000 maps already in existence, but he accepted. He had been over the route a dozen times, on camel, elephant, horse and coolie back,

SVEN HEDIN

but he liked the thought of going over it in a well-equipped Ford motor truck.

It wasn't so simple. China was disorganized during the years of 1933 and 1934. *The Flight of Big Horse* (1936) is the first of the three books which deal with this expedition. It is the story of the Hedin expedition as its adventures were intertwined with those of Ma Chung Yin, "Big Horse," a swash-buckling, 23-year-old general with the ambitions of a Tamerlane. Asiatic politics and gunplay and prison, victory and disaster make up a story of exciting Chinese adventure. *The Silk Road* (1938) continues the story of the perilous expedition that succeeded in laying out the famous road over which the present Chinese government is now consolidating China.

In the last book of the trilogy, *The Wandering Lake* (1940), Hedin covers a special province of that last expedition. This lake, Lop-nor, has been wandering in and out of Hedin's writings for the last 50 years. Now, at last, he examines it in detail, fixes its present geographical position and outlines and settles the arguments of the cartographers.

For his work in discovery Sven Hedin has received great homage from his countrymen and from other nations. He has been given a seat in the Swedish Academy, he has been knighted, he has received doctorates from Oxford and Cambridge, from the University of Berlin and from the University of Heidelberg. He has been awarded the Grand Gold Medal of the City of Paris and the Gold Medal of the Japanese Geographical Society.

Sven Hedin is 75 years old now, but this amazing and romantic figure is still going—"his energy and drive, his powers of production, his powers of observation, his flair for adventure undiminished for being now housed in a body that is no longer as sturdy and

HEDIN, SVEN—*Continued*

efficient as it once was." His latest book, published in November 1940, is on Chiang Kai-shek (see sketch this issue).

Hedin is in the news today not only as an explorer and author but as a diplomat. He has figured in politics from time to time before. Once he was diplomat from Sweden to the Shah of Persia, and before the First World War took an active part in "bringing about dissension between Sweden and Russia." To him has been attributed part of the responsibility for the "Peasants' March" to the Royal Palace in Stockholm, just before hostilities began, which resulted in "the triumph of those who sympathized with Prussia and her system of the government of the many by the privileged few."

Swedish Sven Hedin has always been on Germany's side. During the World War he strongly supported Germany and was the author of pamphlets urging Sweden to arm itself against the Allies. In 1937 he wrote *Germany and World Peace*, from Germany's point of view, and he has been called by the Berliner *Tageblatt* "a true friend of Germany." On his 75th birthday, on February 18, 1940, Hitler presented him with "the grand cross of the distinguished service of the German eagle."

Now that Germany is again at war, the explorer Sven Hedin is once again prominent in his less familiar rôle as statesman. On March 5, 1940 there was a report that in an interview with Hitler he had offered to mediate the Russian-Finnish War. According to *Time*, Sweden "picked him as her salesman." In April 1940 Hedin urged the American people not to side against Germany, not to take part in the War, not to supply the Allies with any materials.

In May 1940, when the War had advanced to Scandinavia, a good many people were curious about his position and feelings toward Germany. The New York Times book critic, before reviewing *The Wandering Lake*, told about the decoration Hitler gave Hedin only a few weeks before and asked: "I wonder if he has the ribbon in his button-hole now?"

HENDERSON, LEON May 26, 1895-Economist; member of the National Defense Commission

Address: b. Federal Reserve Bldg, Washington, D. C.; h. Millville, New Jersey

The career of Leon Henderson ever since he came to Washington in 1934 has aroused more controversy than that of any other member of the President's National Defense Commission. Henderson, who describes himself as a broker in economic ideas, and who looks like a Sunday-supplement caricature of a radical," is the terror and despair of those who oppose New Deal economic policies, for it is he who is supposed to be, and is, largely responsible for much of the economic activity that comes out of Washington.

It was Henderson who was one of the first and sternest evangelists of the consumer-purchasing power theory, today the New Deal's avowed economic policy. It was Henderson who shouted for relief expenditures. It was Henderson who was foremost in urging an attack on business

monopoly. It is Henderson who "has put his mark on the present Administration more firmly than anyone save Mr. Roosevelt." "A baffling mixture of personal humility and moral arrogance, his impact on Washington was not unlike that of the New England hurricane, except that the Henderson hurricane, after descending on Washington, has never passed."

Nevertheless, although every other appointment that Leon Henderson has received has stirred up hornets' nests, there has been surprisingly little uproar about his new job to watch over raw materials and price stabilization for the Defense Commission. Hugh Johnson, perhaps, sums this up best. "I brought Leon Henderson into this government from obscurity to an important post," he says. "I believe that he is too biased and pinkly partisan for his job in the SEC and with the monopoly committee but he will be, I think, ideal for this job."

There is no doubt that Henderson, who has already impressed business leaders with the need for holding prices down, is working as hard at this job as he has worked at everything he has ever done. He was born in Millville, New Jersey and went to school there. Then, "as the result of reading too many success stories," he decided that all he needed for riches was a college education. His father had just plunged all but 56 cents of his life-savings into the purchase of a farm, so Leon got a job long enough to earn enough money to take him to the University of Pennsylvania, from which he switched to Swarthmore College.

At Swarthmore Henderson had at least 14 sources of income. He was a newspaper reporter, referee, factory worker, salesman. He waited on table, worked on a farm, took care of children evenings and acted as secretary for Dr. Louis N. Robinson, who was later a member of President Hoover's Crime Commission. After two years of Swarthmore the War came along. Henderson served in the ordnance department starting as a private and finishing as a captain. He returned to college after the War and was graduated in 1920.

Then came a whirl at the Chautauqua business and a few years of teaching college—at the Wharton School of the University of Pennsylvania and at Carnegie Tech, where he got himself into characteristic hot water by taking his class to hear the Socialist Eugene V. Debs talk. In 1923 he began work in Pennsylvania, in charge of personnel and the classification of state employees. Then he organized the retirement system; later he became director of accounts and deputy secretary of the Commonwealth. With a new Administration Henderson's jobs in Pennsylvania—he held five simultaneously under Pinchot—were divided into \$28,000 worth of titles. His pay had been \$5,000 a year.

In 1925 Henderson married Myrlie Hamm (they have three children) and started to work for the Russell Sage Foun-

LEON HENDERSON

dation in New York City, where he stayed for eight years. Here he was director of the department of remedial loans and it was his job to run down loan sharks. Largely through the efforts of his department, laws against loan sharks were enacted or improved in some thirty states during the eight years he was there.

Henderson got his start in the government when he attended a consumers' conference in 1934, staged by the NRA. There he roused General Hugh Johnson's admiration by the epithets he hurled against Johnson's régime as head of the NRA. Johnson immediately appointed him as temporary assistant "to be purely critical," and within two months Henderson was made head of the NRA division of research and planning. As such he made reports on various industries, including one in which "every sore toe in the automobile industry was carefully trod upon."

Henderson was a member of the National Industry Recovery Board in 1935 when the Supreme Court knocked the blue eagle off its perch. He got a job then as economic advisor to the Senate committee on manufacturers but left it to become economic adviser to the Democratic National Campaign Committee at the request of President Roosevelt. His job as economist for the Democratic Committee was certainly the most peaceful position Henderson ever had. It was while he was turning out data for campaign use that he saw coming the slump that anti-New Dealers labeled the "Roosevelt Recession" a year later. "No blushing violet," he made as much noise as possible about it, and while other economists shilly-shallied over the need for "more facts," Henderson was proved right.

In 1936 Henderson showed his "phenomenal vigor and his facility for digesting great

gobs of statistics, transforming them into entrancing, apparently profound diagnoses of national ills." He wrote a treatise entitled *Boom or Bust* when he was a consulting economist of the WPA, a job which he kept until 1938, when he became executive secretary of the newly created Temporary National Economic Committee.

Before the TNEC investigation, for which he was considered largely responsible, Henderson said: "We are in a strategic point in our economy. If we go on as we are, we are in for stagnation and decline. We do not stop. We either go forward or back." He believed that the investigation had to find a way to increase the earning-consuming quotient of the nation's low-pay masses. Through Henderson's "swift and durable head" passed all the data presented to the committee—tables of statistics, price charts, graphs. As executive secretary and then as committee member he was, it has been said, the "guiding genius" of the committee, even though his appointment, according to Raymond Moley, "sent chills down the spine of the business community."

In May 1939 there was even more fuss about a Henderson appointment. He was appointed a member of the Securities and Exchange Commission to fill the vacancy left when William O. Douglas was appointed to the Supreme Court, and his appointment "aroused more criticism and resentment than the naming of any other member to that agency in the five years of its existence." Because he had little technical knowledge of finance, because of his opposition to "big business," because of his truculent temper, Wall Street tried to head off his appointment, couldn't and was more or less calmed by the appointment of Jerome Frank as the SEC's chairman. As member of the TNEC and as SEC member, Henderson has repeatedly affirmed and reaffirmed his hatred of monopoly and his sincere belief in competition. It is as deep, he says, "as a declaration of faith."

Raymond Moley calls Leon Henderson "the Falstaff of New Deal economists," and there seems some superficial justification for the epithet. Truculent, harried, Henderson whirls around Washington "in clothes almost sensationally unkempt." In summer when you call he may receive you with his 200 and more pounds clad only in shorts and then proceed to argue either classical or radical economies long and well, fishing thousands of statistics from the depths of his mind as he goes along.

Shortish, dark, with immense shoulders and chest, Henderson has a temper inconsistent with Falstaffian jollity. On one 10-day trip to New York he had fights with two taxicab drivers and one truck driver. Then he went to a football game and tossed a drunk over a parapet into the arms of three policemen, who tossed *him* in jail. Once at Swarthmore, in a huff at the coach who told him to retire from the basketball court, he took off his clothes and marched out naked, and once as an economics instructor, when a football hero he had flunked got nasty, Henderson threw him down the steps. Though he calls himself

"the best damned no-trump player in the United States," he has been known to put his fist through the card table when his bridge luck is against him. He can get just as truculent when he is championing the consumer, swinging statistics about to show the influence of rigid prices on the cost of living.

**HENDERSON, SIR NEVILLE MEY-
 RICK** June 10, 1882- Diplomat

Address: Lyncroft, Oxford, near Sevenoaks, Kent, England

The Second World War was declared on Sunday, September 3, 1939. On Monday morning, September 4, The Right Honorable Sir Neville Henderson left Berlin and shortly after 8 p. m. on Thursday, September 7 reached Victoria Station. "It had taken us three days and eight hours to get from Berlin to London," Sir Neville says in *Failure of a Mission*. "My mission to Berlin had terminated and the failure was complete."

Sir Neville Henderson began this mission in 1937. As British Ambassador to Germany he went there determined "to do my utmost to see the good side of the Nazi régime as well as the bad and to explain as objectively as I could its aspirations and viewpoint to His Majesty's Government," and determined "to labor for an honourable peace." He says: "I was, above all, convinced that the peace of Europe depended upon the realization of an understanding between Britain and Germany."

In a *Blue Book* published in England at the end of September 1939, in a *White Paper* given out at the end of October, and in his autobiographical *Failure of a Mission*, published in March and April 1940 in *Life Magazine* in condensed form, and in book form in April 1940, Sir Neville Henderson has told the story of his attempt, and his failure, to avert the calamity of European war. *Failure of a Mission* was selected as the May 1940 Book-of-the-Month Club choice.

In the documents which Sir Neville sent as his reports to Lord Halifax, British Foreign Secretary, he contrived to bring to the Stationery Office publications the

"quality of the best seller." The 75,000 first printing of the British *Blue Book* sold like hot cakes in London, for in it he had "turned in a world scoop, a still warm drop of the very blood of history," a terrifying picture of how war is born, some penetrating glimpses of Goering, Von Ribbentrop, Von Weizsäcker and, above all, a never-to-be-forgotten firsthand sketch of Hitler.

The *White Paper*, written as Sir Neville's final report to Lord Halifax (see sketch this issue) and released at the end of October 1939, is a 12,000-word intensive study of Hitler, the Nazis and the German nation. "Perceptive, witty and compassionate as a Jane Austen novel or a Lytton Strachey biography, it steers hard away from the old 1914 concept of the Germans as Huns or their ruler as the Beast of Berlin." Instead it describes them as understandable dupes and Hitler as a powerful but pitiable man.

Failure of a Mission is a story of world drama told within a few months of its happening by one of its principal actors. Looking back over the three years of his mission Sir Neville sees them as Greek tragedy moving inexorably toward disaster in spite of anything that can be done to avert it.

The year 1937 is, to him, the background of the drama. It was a time of preparation for Germany, of increasing military might and impatience to march on toward the glowing destiny of the Third Reich which Hitler had proclaimed. Throughout this section of the book are given descriptions of Sir Neville's meetings with Hitler, Goering, Hess, Von Ribbentrop, Himmler and the other Nazi leaders.

The years 1938 and 1939 are treated by Henderson as the tragedy proper, divided into four acts: Austria, Czechoslovakia, the occupation of Prague and Poland. Sir Neville was alert in those tragic days when Schuschnigg played out his desperate game in Austria. He waited tensely while the fate of Czechoslovakia trembled in the balance between May 21 and 28, 1938, and in September went to join Chamberlain on his visits to Berchtesgaden and Godesberg. Henderson was witness to Munich. There were the desperate months when he tried to save Poland until, after the last hopeless appeals and ultimatums, France and England were brought into the War.

H. V. Kaltenborn (see sketch this issue) says of *Failure of a Mission*: "This is the first source book on the Second World War. It will remain one of the most important." John Gunther states: "It is not an indiscreet book—no one of the type of Neville Henderson could ever be more than mildly indiscreet—but there are sidelights on the Nazi leaders of the utmost value. I read these pages with complete fascination. They are indispensable to the student of contemporary world tragedy." *Failure of a Mission* is both an important historical record and a very human story, the story of a man who failed disastrously but who tried with "every resource of heart and mind compatible with honor

HENDERSON, SIR NEVILE—*Continued*
to keep the lamps from going out all over Europe once again."

Sir Nevile Henderson, knighted in 1932, was appointed to his post as Ambassador to Germany after a long and varied career in the British diplomatic service. He was born on June 10, 1882, at Sedgwick Park, Horsham, Sussex, England. His father, Robert Henderson, who died in 1895, was for a long time a director of the Bank of England. His mother, Emma Hargreaves, was a sister of Reginald Hargreaves, who married the original of *Alice in Wonderland*, Alice Liddell. Sir Nevile's grandfather, also Robert Henderson, was a Scot who had gone South about 100 years before and had made a fortune in England.

Sir Nevile was educated at Eton, 1895 to 1900, and then went abroad to study languages before going into the diplomatic service. He entered the British Foreign Office in May 1905 and was sent to St. Petersburg as an attaché in December of that year. The 1905 Revolution came while he was in St. Petersburg and he watched the occupation of Bosnia and Herzegovina and the beginning of the Balkan crisis which led to the First World War. It was during this first appointment that he nearly brought his budding career to an end by all but strangling his chief, the British Ambassador, Sir Arthur Nicolson, whom he mistook for a burglar.

Sir Nevile was in Japan from 1909 to 1912 and marked the occupation of Korea and Japan's first advance into the mainland of Asia. He was in Rome in 1914 at the outbreak of War and in Serbia during her fight against Austria in 1914 and 1915. From 1915 through the peace conference he was in Paris. Four times, during the course of the War, he tried to resign from the Foreign Office to join the army, but was refused every time.

After the War, Henderson continued to be in the thick of things and went to Constantinople in 1921. Mustapha Kemal and Turkey were a main spot of interest in those years. When Sir Horace Rumbold left, Sir Nevile remained in charge as acting high commissioner in Constantinople from 1922 to 1924. In 1924 he returned to England, but was sent out on 24 hours' notice with the rank of Minister to reinforce Lord Allenby's staff in Cairo.

1928 and 1929 found Sir Nevile in Paris with the rank of Minister (second in command at the Embassy), and it was during this period that the Kellogg Pact was signed. At the end of 1929, Sir Nevile was sent to Belgrade, again as Minister, but this time in sole charge. This was his first absolutely independent diplomatic appointment, although he had been acting high commissioner at Constantinople and Cairo. In Belgrade diplomatic relations were complicated by the invariably bad relations between Italy and Yugoslavia, the internal

dispute with Croatia, the dictatorship of King Alexander and his murder at Marseille in 1934.

Sir Nevile's next post was in Argentina. He remained in Buenos Aires from November 1935 to March 1937 during which period the Anglo-Argentine Trade Agreement was concluded. In March 1937 he set out for Germany and his mission that failed.

Sir Nevile Henderson is unmarried. He is good at and likes golf, fishing and polo, but his favorite sport is hunting. His ability to shoot a stag through the heart with one bullet did much to win him Goering's favor, an important asset during those troubled years in Germany.

HENIE, SONJA (hě'ně) Apr 8, 1913-
Champion ice skater; motion picture actress
Address: b. Twentieth Century-Fox Film Corp, Beverly Hills, California

No other feminine sports figure in the world is the drawing card that Sonja Henie is. And no other feminine athlete to date has made as much money as Sonja Henie has made from her skating. It got her into the movies and together with her ice shows has netted her more than a million dollars—some say two million.

Sonja Henie has turned an athletic performance into an art. She performs the standard ice skating figure executions, but she puts beauty, sex appeal and theatre into them. Typical of how Sonja revolutionized amateur figure skating is her performance in Oslo, Norway in 1927 when she won her first world's figure championship for women. Six women skaters had appeared before her in the contest. All were quietly and modestly dressed, all cut their figures accurately and exhibited excellent technique. Polite applause greeted their efforts. Then the judges announced, "Fröken Sonja Henie," and a small figure in a dazzling white silk and ermine costume with very abbreviated skirt skated out, spread what there was of her skirt in a curtsy, and gave the judges a big smile. Sonja skated with her dimpled smile working full force; she dramatized every figure, like a ballet dancer, with a tilt of the head and a swing of the free leg. She brought something new and exciting to skating and she soon had a host of imitators.

Miss Henie won the world championship figure skating contests for 10 consecutive years, an unequalled record. She also won the seven European championship contests she entered and the Olympic championships in 1928, 1932 and 1936. And when

she terminated her amateur career in March 1936 it was only to begin a new and fabulously successful professional career.

Two great worries of Sonja Henie's life were first that she might kill or maim herself in her dangerous profession and second her friends' concern over her unmarried state. She corrected the latter on July 4, 1940 by marrying Daniel Reid Topping, New York sportsman, in Chicago, after a romance which had been making the headlines for several months, but which Sonja denied had any significance.

As for the danger in her skating, Sonja says that despite all precautions, she has taken falls which she believes would have killed a less experienced skater. To keep the ice clear of objects that might send her spinning upside down while she is traveling at 35 miles an hour, her troupe is forbidden to wear hairpins, and the electrical superstructure over the rink is scrupulously vacuumed. The shapely Henie legs are insured against accident for the largest sum Lloyds of London would underwrite, \$5,000 a week.

The "queen of the ice," as she had been called, first put on skates when she was eight years old. Her father, Wilhelm Henie, an Oslo fur merchant and once a champion amateur bicycle rider, got them for her for Christmas of that year, and her brother Leif gave her her first lesson. By the following year the chubby little blond Sonja had practiced so diligently that she won Oslo's junior competition. Five years later, when she was only 14, she won the Norwegian championship. Much of what happened in those years and later is told in her autobiography, *Wings on My Feet* (October 1940).

That year, 1924, was an Olympic year, and Sonja went to Chamonix to try out in the games. The little Norwegian champion placed third and was so disappointed she withdrew from competition and began practicing seven hours a day. Sonja could not brook serious rivals and with characteristic determination she set out not to have any. Because Norway had no indoor rinks and had good ice only for several months, Sonja followed the ice and Papa Henie financed lessons with teachers in Germany, England, Switzerland and Austria. To develop her sense of rhythm Sonja studied ballet under Madame Karsavina in London. There was nothing too hard or too trying for Sonja to do so that she might excel in her career. Her mother traveled with her and was her constant companion even after she turned professional.

In 1926 Miss Henie entered the world's championship matches at Stockholm and placed second. There followed another year of training, and in 1927 she came in first. In the ensuing 10 years her reign as amateur queen of the ice was undisputed. Kings, princes, queens, official dignitaries were her devoted fans. Norway's King Haakon (see sketch June issue) telegraphed her before each public performance. In Nor-

SONJA HENIE

way huge crowds met her at trains, docks. She was a national idol such as Norway had not worshiped since Ibsen.

But Sonja still had one ambition—to become a movie actress—and with the advice of an American friend and promoter she planned to go out of amateur athletics in a blaze of glory in the 1936 Olympics and then go to Hollywood. But despite a sensationally successful barnstorming tour through the United States, Sonja found no Hollywood producers knocking at her door. So far as Hollywood knew, Miss Henie was just another woman athlete. So Sonja gave a skating exhibition in Hollywood and showed them.

Twentieth Century-Fox offered her stardom, and in 1937 the "Pavlova of the Ice" made her debut in pictures. From the first, her pictures were a tremendous success. *One in a Million* played to packed houses; *Second Fiddle* was equally successful. The five-year contract for two pictures a year at an average of about \$125,000 a picture was proving a good investment. In the *Motion Picture Herald's* exhibitors' poll in 1939 Miss Henie was placed as Hollywood's third ranking box office attraction, following only Shirley Temple and Clark Gable. Critics were less enthusiastic concerning her acting ability. Her motion picture success also increased her drawing ability in her ice exhibitions. Henie ice revues sold tickets with a top of \$4.40, and the shows she put on, as extravagantly staged and costumed as any musical comedy, were often sellouts in advance. Her latest show is *It Happens on Ice*, which opened in October 1940. With sets by Norman Bel Geddes (see sketch this issue), humor by Joe Cook and ice skating by "young women who not only are beautiful but also have that special air of radiant health which for

HENIE, SONJA—*Continued*

some reason seems to attack all disciples of this difficult art," still, because Miss Henie is only a producer and not a performer, the attendance hasn't matched that of her other shows.

Miss Henie is shrewd in her business dealings, knows what she wants. Once a roly-poly, the little skater, five-feet-two, now weighs 110 pounds; takes two massages a day, one in the afternoon, the other before retiring; diets carefully; never smokes. Even on vacations, strenuous exercise is a daily routine for her; if not skating, then swimming, expert skiing or tennis (she once ranked second on Norway's list of most skillful women tennis players.)

After almost 20 years of skating Miss Henie is still at the apex of her career—a record few professional athletes can equal.

HENRY-HAYE, GASTON (hěnr'ê-hâ or ân'rê-î) 1889- French Ambassador to the United States

Address: b. 1601 V St, N W, Washington, D. C.

Gaston Henry-Haye arrived in the United States in September 1940 to take up his new duties as Ambassador from the Vichy government. He stepped out of the plane to be greeted by pickets bearing the legends, "Heil Haye"; "Haye, Made in Germany." "Gee whiz," said the Ambassador. Then he hastened to add: "I am pro-French. I have no brown shirt, just white ones," and he affirmed that any charges that he opposed French armaments and made friends with the Nazis are "unfounded and stupid."

Those who accuse the new Ambassador of pro-German sympathies point out his "curious association" with the German Ambassador to Vichy, Herr Abetz, alleged to be the underground pre-War organizer of the Fifth Column in France. They quote his desire for a new "dynamic" state; his urging of the Chamber of Deputies and the Senate to do business with Hitler and Mussolini and not offend them; his opposition to "frantic and hysterical" rearmament. In answer to them M. Henry-Haye reminds the American public that he opposed the evacuation of the Rhineland and voted for the construction of the Maginot Line. As he explains the situation: "I was one of the political men who favored some kind of *modus vivendi* between the French and German nations. I knew we were not prepared

for a war against Germany. Unfortunately, history has shown that I was right."

Robert Murphy, Chargé d'Affaires of the American Embassy in Vichy, strongly supports M. Henry-Haye. He is, he says, "a courageous man, a patriotic Frenchman and the best man for the position. . . . Any thought of him being Nazi or pro-German is the bunk." At least fourteen prominent American writers disagree with him, however, for on October 26 a joint statement was issued suggesting that we "beware of the men of Vichy who now spread the seeds of totalitarianism in America" and describing Henry-Haye and others as "pathetic wooden mannikins mouthing the words of the Nazi ventriloquists." Actually, the consensus of opinion seems to be that the new Ambassador is a Rightist who loves France and who presumably will serve the best interests of the Vichy régime.

It is going to need someone who is as "genial, astute and successful a politician" as Henry-Haye to do this. First of all there is the problem of our attitude toward the Pétain (see sketch this issue) régime, complicated by the relation of the United States toward the French colonial empire. One ticklish situation in this relationship has already arisen—the Pétain government is reported as intending to bolster the fortifications on Martinique Island, a plan which Roosevelt far from approves. Others will certainly arise and there may be cases in which our government's interests will be better served by recognizing the forces of "free Frenchmen" under De Gaulle (see sketch this issue).

There is a feeling in some quarters that the appointment of M. Henry-Haye, rumored to have been made through the intervention of our Ambassador to France, William C. Bullitt (see sketch this issue), removes the danger of President Roosevelt's withdrawing recognition from the Pétain government. Actually, however, in receiving the new Ambassador, the President made no reference to the Vichy government and said only that he was "pleased to hear that France in its travail bears still in its heart the ideals for which it took up arms." It should be remembered, too, that an acceptance of change in ambassadors of governments with which we have maintained diplomatic relations doesn't imply either recognition or non-recognition but merely a continuation of the *status quo*.

Another problem which M. Henry-Haye faces is that of the French credits now frozen in this country. Partly in answer to the fears of those who hesitate to release them, he told the members of the French Chamber of Commerce of the United States that he was surprised by the feeling in America that the Vichy government was a mere puppet of the Germans. "France is not dead," said M. Henry-Haye. "You will see very shortly that the spirit of all true Frenchmen still is alive."

It was the same sort of reply that he gave to those who picketed New York's swank Fefe's Monte Carlo, where he was a guest of the Friends of France, Incorporated. He looked at the signs of the members of the Committee to Defend America by Aiding the Allies ("Give all aid to Britain"; "Down with Henry-Haye, emissary of the Vichy government") and said: "If I understand their purpose they are picketing against food that should reach France through the blockade. If that is their purpose I feel sorry for them, but I want to assure them that no food sent from here to France will fall into German hands." One of M. Henry-Haye's main jobs, undoubtedly, is to get supplies of food and medicine to "my suffering country."

There is no question that the new Ambassador is well fitted for his complicated task—he knows America well and he is an eloquent writer and speaker, whether in French or in fluent English. This gray-haired, partly bald, ruddy-complexioned Frenchman was born at Chatou, a small town on the Seine near Paris. His family was not rich and when his father died he had to work. He decided to go to the United States and in 1906 arrived here to work as a bellboy in a large New York hotel and eventually to work with the American Worthing Pumps. Several times he crossed the continent, on foot, by car and train, by bicycle. Once he was arrested as a tramp, it is reported.

When the First World War broke out Henry-Haye returned to France to fight, and rose from a non-commissioned officer to captain. He saw heavy fighting in Champagne, on the Somme and at Verdun; was wounded; was cited five times for bravery and awarded the Légion d'Honneur and the Croix de Guerre. In 1917, when the United States entered the War, he was sent to America to instruct recruits and did a good job of it. He liked it, too. "My Sammies and I were the best pals in the world," he says. "I taught them soldiering and they taught me their *joie de vivre*, their great American optimism which has been a big help to me in life ever since."

After a year in the United States M. Henry-Haye returned to France but was back in this country in 1919 on a money-raising campaign for France and as the representative of coal consumers who were trying to buy coal. He put his son Pierre in school here and went all over the country, writing and lecturing, extolling France as the savior of democracy and pleading for money for her rehabilitation. His mission was considered a "brilliant success."

From 1921 to 1928 M. Henry-Haye was in business (industrial research) in Paris and at the same time active in war veterans' activities. Unknown in politics, he suddenly decided to run for Deputy from Versailles. He appeared from nowhere without any political tag, backing or connection with any party and announced: "I am a Repub-

GASTON HENRY-HAYE

lican Democrat but I am going to attack parliamentary customs and morals and the routine of bureaucracy which are the bane of my country." He was elected. In 1932 he was re-elected and in 1935 he was sent to the Senate, representing the department of Seine-et-Oise as an *Indépendant de Gauche*.

In the Senate M. Henry-Haye was a key figure in the Senatorial Commission on Foreign Affairs, known for his "purely pragmatic politics" and his gift for oratory; for his urging of a "dynamic" policy and his belief that direct negotiations with Hitler and Mussolini would avert war. In 1935 he was elected Mayor of the City of Versailles. Several times in his career M. Henry-Haye was offered ministerial portfolios. Each time he refused. "I prefer to be first in my village," he said, "rather than a cipher among the ephemeral and interchangeable excellencies who run our country so badly."

As Mayor of Versailles M. Henry-Haye did a good deal of city planning and also erected a monument in honor of French-American friendship and the A. E. F. When the Blitzkrieg struck he saved Versailles from being burned and pillaged—he had things so well in hand that "scarcely a teacup was cracked"—and later fed and provided for the 10,000 inhabitants who refused to abandon their homes.

During the Blitzkrieg and afterward M. Henry-Haye repeatedly told the world that in the hearts of Frenchmen was "a force which no power can crush." It was with this thought and the statement that "the ideal for the defense of which my countrymen courageously took up arms again only 20 years after the most bloody of victories, still remains alive in the heart of Frenchmen" that M. Henry-Haye presented his credentials from the Vichy government of

HILL, EDWIN C. Apr 23, 1884- Columnist; radio commentator

Address: b. 515 Madison Ave, New York City

Edwin Conger Hill (he uses only the initial of his middle name) had a long career as a star reporter before he became a columnist and a radio commentator. Even as far back as his public school days in his home town of Aurora, Indiana his ambition was to become a newspaperman. The son of Harvey Boone and Mary (Conger) Hill, he was born April 23, 1884. Upon his graduation from Indiana University in 1901 he began his newspaper career as a cub reporter on the old Indianapolis *Sentinel*. Later he moved on to the *Press* and the *Journal* of the same city and then on to Fort Wayne and Cincinnati.

He had already covered important assignments, such as the funeral of President Benjamin Harrison and an interview with James Whitcomb Riley, when he came to New York and a position on the New York *Sun* in 1904. He began by writing on space rates for the *Sun*, a precarious business at best. Just at that time the empty Proctor Theatre was slightly damaged by fire. Hill's story of the small fire and what might have happened won him his first recognition on the paper: it was such an excellent account that it was put on the front page. It was the first of a long series of poignant human-interest stories written by Hill, and within a few months the Hoosier boy was one of New York's crack reporters, covering the most important stories of the time.

Hill remained on the New York *Sun* until 1923. He met the great and the near great. He traveled with President Theodore Roosevelt; went to Europe, South America and Central America on assignments. He attended state and national conventions; he wrote about murders, about wrecks and inconsequential human-interest stories; he covered the sinking of the *Titanic*. He was, in a word, one of New York's star reporters.

Edwin C. Hill was one of the best-dressed newspapermen in New York. When he began interviewing important personages he decided that he would dress to impress visitors. He was one of the first to sport a cane in Park Row. Tall, courtly in manner, he made an impressive appearance.

By 1923 Hill felt he had exhausted the possibilities of newspaper work. He had a fling at the movies, working for Fox Film Corporation as newsreel director, scenario editor and supervisor in Hollywood.

But his movie career was comparatively short-lived. In 1927 he appeared at the *Sun* office. "A real newspaperman will never be content with any other job," he said, and went back to the old grind as a feature writer. Later he went to the King Features Syndicate, and his column, *The Human Side of the News*, was syndicated and appears in many newspapers throughout the country.

Hill has a deep, rich voice that was a "natural" for radio, bringing to it dramatic and graphic pictures of news stories. He made his first appearance in radio in 1931. In 1932 he had a contract to broadcast *The Human Side of the News* five times a week. The popularity of these broadcasts spread, and in addition he was called upon to conduct special radio programs to give his impressions of great news events. The

EDWIN C. HILL

HILL, EDWIN C.—*Continued*

Radio Editors of America in 1933 and 1934 elected him leading news commentator. Although news commentators since that time have increased and there is hardly a station that does not have several newscasts a day, Hill's program has remained steadily on the networks.

Hill divides his time between writing his syndicated column, broadcasting and other writing. He has published a novel, *The Iron Horse* (1925), based on the conquest of the West by the railroad builders; *The American Scene* (1933), which reviewed events of the year 1932; and *The Human Side of the News* (1934). Despite his activity he finds time for recreation. He likes horseback riding and golf and is an ardent fly fisherman.

He was married in 1922 to Miss Jane Gail of New York City.

HILLMAN, SIDNEY Mar 23, 1887—Labor leader; member of the National Defense Commission

Address: b. Federal Reserve Bldg, Room 2055, Washington, D. C.; h. 237 E 20th St, New York City

In May 1940 President Roosevelt appointed a National Defense Commission to energize American industry for mass production of the weapons our armed forces need. On the board, with Knudsen of General Motors (see sketch this issue) and Stettinius of United States Steel (see sketch this issue), is Sidney S. Hillman, president of the Amalgamated Clothing Workers of America, CIO.

Sidney Hillman has been placed in charge of non-military personnel for the new program. To the A F of L this has been a blow. Matthew Woll, vice-president of the A F of L, attacked the appointment sharply; to him Hillman of the clothing industry is not competent "to deal with employment problems affecting workers in the metal trades, aviation, steel, munitions and other industries vitally and directly concerned with national defense." To other A F of L

leaders it seems unfair that both the A F of L and the CIO haven't been given representation. Part of the CIO, too, isn't completely satisfied with the appointment because of differences of opinion between him and John L. Lewis which had been going on for some time before the November 1940 CIO convention, at which the friction seems to have been smoothed over, particularly by the election of Philip Murray (see sketch this issue) to the presidency of the CIO.

To much of the country at large, however, Sidney Hillman is a good man for the job, one of the main hopes for labor's teamwork in working for industrial preparedness. For almost 30 years he has been in the labor movement. For 25 years he has been president of the Amalgamated Clothing Workers, "one of the most potent and importantly pioneering unions in the country." For almost five years he has been a leader of the CIO. And in all these years he has urged labor to be "industry conscious." "We cannot ask from industry more than it can soundly afford to give," says Hillman. On the National Defense Commission Hillman has charted a plan for voluntary youth training in technical defense jobs; he has formed his Labor Advisory Committee to avoid labor disputes; and he has aroused a good deal of controversy over his statement that government contracts should be withheld from firms which violate the National Labor Relations Act. For these activities he has been assailed. When the training plan for youth was announced Representative Cox of Georgia exclaimed: "God alone can save this Republic if our youth are put under a man like Sidney Hillman." When his announcement on government contracts, supported by Attorney General Jackson (see sketch this issue) was announced, there was a tremendous furor over the possible disruption to national defense, as a result of which both he and Jackson backed down. This, in turn, resulted in criticism from labor, which has continued to protest that his division has not been reviewing defense contracts to see that they comply with labor rules. And there has also been a good deal of criticism of his continuing to receive his salary of \$12,500 a year from the Amalgamated Clothing Workers while working for the government. His answer to that was that, unlike Knudsen and Stettinius, he could not afford to forego his salary and live on \$1 a year.

Sidney Hillman was born in Zagare, Russia, the son of a small merchant. As a boy he studied for the rabbinate because almost all men in his family were rabbis. But he wasn't satisfied with this. He broke with his family over orthodoxy and at 15 went to a larger city, Kovno. Here he worked in a chemical laboratory for a living and at night studied the economists. What they said came to mean for him the demand for shorter hours of work. He paraded with the students for a 10-hour day. The police attacked the parade and threw scores into

jail, Hillman among them. For eight months he was in jail. After he got out he fled to England, where a prosperous uncle received him cordially. But he stayed there only seven months.

In 1907 he came to America—to Chicago. For two years he was a clerk and then went to Hart, Schaffner and Marx to learn the trade of a cutter of men's garments. For a while he worked without pay; then he made \$6 a week. Three years later he was still there making \$11 a week for 54 hours' work.

Conditions generally were terrible in the clothing industry. Children of 12 worked in the shops or at "home work." There was night work, speed up, low pay, long hours. In some places there were no toilets or drinking water so employees wouldn't have to take any time off from their work.

On September 22, 1910 five girls struck against Hart, Schaffner and Marx. They were joined by 6,000 other employees. Within three weeks 45,000 other men's garment workers in Chicago were on strike. For the first 10 weeks Hillman was a picket. Then he was chosen one of a committee to combat the influence of William Haywood, who was trying to lead the strikers into the IWW camp. Eventually Hillman was leading the strike. The Hart, Schaffner and Marx employees won theirs and got an agreement, the main point of which was the setting-up of an arbitration committee. The rest of the clothing employees, however, had to call off their strike.

Hillman's skill in the strike brought him a call in 1914 to do for the women's garment industry what the Hart, Schaffner and Marx agreement was doing for the men's clothing industry. He became chief clerk of the Cloakmakers' Union in New York and was doing fine when his own union called him back to lead a fight against the United Garment Workers to which it belonged. The members were dissatisfied with their "autocratic" leadership, with the failure of the leadership to recognize their problems. When dissenting delegates were barred from the national convention they held a convention of their own and asked the A F of L to recognize them rather than the other group. Hillman they nominated for president, warning him of the dangers to him in accepting this job in an "upstart" union. He gave up his job in New York and stayed. "When I came to America," he said, "I looked for a nine-dollar job and I was worth all of six. Well, the tailors made me. They can have me."

He led the revolt and in December 1914 the Amalgamated Clothing Workers of America was formed with Hillman as president. "From then on the careers of the Amalgamated and of Hillman have been practically inseparable." Born of rebellion against autocratic rule, the Amalgamated has stressed democracy in its constitution and actions. All these years it has followed Hillman, who believes in the democratic proc-

esses and who understands the problems of the rank and file. The members, so sure of his knowledge of their problems, have even been known to cheer his recommendation that they accept a 15 per cent wage cut.

Within time the clothing workers of New York, Chicago, Rochester, Cincinnati, Montreal, Toronto and many other large cities were completely unionized, though according to Benjamin Stolberg under "lower standards than any other needle-trades union," since Hillman's aim has usually been "to gain union recognition, to collect dues directly from the employers and make as little fuss as possible about union standards." In 1937 Hillman signed a contract with the manufacturers of the men's garment industry on a national basis. Ninety-five per cent of the industry was covered and \$30,000,000 in wages and increases was won for the workers.

Through the union's efforts production techniques which have increased output and saved overhead have been introduced. The manufacturers' needs have always been considered and the Amalgamated has gone so far as to lend money to firms which needed it. Before negotiations are even started a survey of the employer's business is made, and unless he can really afford raises they are not asked for.

Under Hillman's leadership the Amalgamated has established two banks, has inaugurated low-cost housing for its members, has given its members unemployment insurance. Under Hillman the Amalgamated originated the idea of an "impartial chairman" for disputes, which has been of great service to labor and industry generally. Under Hillman a union of a few thousand workers has grown to one of a quarter of a million.

Hillman has been an important figure in the labor movement as a whole, not only in his own union. The government recognized this even before his appointment to the National Defense Commission. In 1933 he was a member of the Labor Advisory Board of the NRA and used his position to bring about quickly the 36-hour week in the garment trades; in 1935 he was a member of the National Industrial Recovery Board. He has been a member of the National Advisory Board of the National Youth Administration, and in 1938 was a member of the Textile Committee of the Fair Labor Standards Board.

Hillman, too, was "Lewis' right-hand man in building up the CIO" though commentators are now prophesying a split between the forces led by the two men. In 1933 Hillman's union had finally joined the A F of L, but in 1935 it left to join the CIO. In the CIO, of which he was made first vice-president in 1937, Hillman has helped in the organization of steel, has arbitrated the factional struggle in the automobile industry and, most significant, has been in charge of the CIO's efforts to organize the textile field.

HILLMAN, SIDNEY—*Continued*

The textile field at the time he went into it was a mess: "it would take a Moses or a Mussolini to bring order out of its chaos." But within 10 months Hillman had increased the membership of the Textile Workers Organizing Committee from 30,000 to 450,000 workers and had signed contracts affecting half a million workers—all without violence or bad blood.

Although Hillman has worked to increase the strength and power of the CIO, still he is a firm believer in the necessity of A F of L-CIO unity in the labor movement today. He was a member of the committee that met in March 1939 to discuss peace, and he and his union have strongly advocated it. At the convention of May 1940 he went so far as to say that Lewis' position on peace was "a mistake" and that "labor and the nation stand to gain so much from a unified labor movement that no effort should be spared to achieve it."

There has, of course, been criticism of Sidney Hillman from both labor and capital. Labor has often assailed what it feels to be his collaborative tactics; capital has been aware of the fact that his is, on the whole, a socialist union and that he has a good deal of power in the American labor movement. Yet on the whole because he is a "conservative in the labor movement who stresses social responsibility," both employers and employees have consistently respected him. Even the caricaturists have not "gone to town" on him. That is probably, however, because there is little about him to caricature. "Except when on the platform his person and personality affect you like a quietly uttered understatement just before you recognize it as such. Then you notice the alert look in the brown eyes that make his glasses seem only an aid to an already keen vision." When on the platform his chin takes on a bulldog thrust, his voice rasps and rings, his consonants become hard and sharp and it is easy to see that his English, though correct, is acquired.

Sidney Hillman was married in 1916 to Bessie Abramowitz, one of the five girls who led the original Hart, Schaffner and Marx strike. She, too, is active in the Amalgamated Union. With their two children the Hillmans live in New York.

HILLYER, ROBERT SILLIMAN
(hil'yēr) June 3, 1895- Poet; professor of
English literature

Address: b. Harvard University, Cambridge,
Massachusetts; h. Venily, Pomfret, Connecticut

A new book of verse, *Pattern of a Day*, (August 1940) is the nineteenth published volume by Robert S. Hillyer, winner of the Pulitzer Prize for poetry in 1934 and professor of English at Harvard University since 1919. In 1937 Professor Hillyer succeeded Charles Townsend Copeland to the distinguished post of Boylston professor of rhetoric and oratory at the University.

A poet who writes with excellent technique in the sound tradition of English and American verse, Robert Hillyer was born June 3, 1895 in East Orange, New Jersey, son of James Rankin and Lillian Stanley (Smith) Hillyer. His preparatory education was at Kent School, Connecticut, and he took his B. A. degree at Harvard in 1917. From 1917 to 1919 he was an ambulance driver and lieutenant with the American Expeditionary Force. In 1919 he became an English instructor at Harvard, and from 1920 to 1921 studied in Copenhagen as a fellow of the American-Scandinavian Foundation. Following two years on the faculty of Trinity College in Connecticut he returned to Harvard as associate professor in 1928 and there continued his teaching of English literature. He was married in 1926 to Dorothy Hancock Tilton of Haverhill, Massachusetts. They have one son, Stanley Hancock Hillyer, and make their home in the country near Pomfret, Connecticut.

Robert Hillyer's first book, *Sonnets and Other Lyrics*, was published when he was 22. His next two collections of verse came out in 1920: *The Five Books of Youth* and *Alchemy: A Symphonic Poem*. The latter, based upon symphonic movements, revealed the skilled understanding of and love for music that has influenced much of his writing and underlies the subtlety of his rhythm and lyric tone. In 1923 he compiled an anthology called *The Coming Forth of Day* from the Egyptian *Book of the Dead*. His next book of poems, *The Hills Give Promise*, contained lyrics and sonnets on the emotions of romantic love. Two further collections preceded *The Seventh Hill* (1928), the volume which won for him his first real recognition. The poems were commended by Louis Untermeyer and other critics for their variety of subject

Johan Durup

ROBERT S. HILLYER

and thought and for the maturity and mastery of their technical composition. Mr. Hillyer received, however, wider notice in England because his work, though written in America, was not local in treatment but had a closer identity with the Georgian tradition. It was highly praised by English writers, including Arthur Machen and Middleton Murry.

A single excursion from poetry was Mr. Hillyer's novel, *Riverhead* (1932). Combining realism and symbolism, it told the story of a young man's canoe trip up the Connecticut River and back. Hillyer's *Collected Verse*, for which he was awarded a Pulitzer Prize, appeared in 1933. No other work of importance followed till 1937, when *A Letter to Robert Frost and Others* was published. These were for the most part tributes to personal friends that were at the same time criticisms of contemporary thought and letters. Of them Mr. Untermeyer said: "Superficially like Pope, the epistles are actually Horatian in spirit; underneath the clinched couplets a living philosophy declares itself."

Pattern of a Day, Robert Hillyer's most recent volume, contains several nature lyrics with a New England background, characteristic of the poet at his best, and a few satirical character sketches. It concludes with *In Time of Mistrust*, a Phi Beta Kappa poem read at the College of William and Mary and published separately in 1939.

Several critics of poetry admire Mr. Hillyer's technical accomplishments, but deplore the fact that he is in no way concerned with the temper and events of our time. Alfred Kreymborg has said of him: "One admires the self discipline of the poet, but cannot help hoping that a gust will shatter the lamp and drive the poet outdoors." Mr. Hillyer prefers not to come

outdoors. Of contemporary poets he most admires Robert Bridges, "incomparably the greatest poet of modern times." He says further: "Most of the poets who are petulant about the wasteland of these years have been happily sheltered from the confusions they deplore." In *Unregimented*, a poem in *Pattern of a Day*, he says that he abhors poets who espouse a cause, and thinks of himself as

"Freed of all obligation to enlist
On any side, triumphant Quietist."

HITZ, RALPH Mar 1, 1891—Jan 12, 1940
Hotel executive

Ralph Hitz, perhaps America's best-known hotel host, died after a heart attack in New York on January 12, 1940, at the age of 48. He was born in Vienna and came to the United States in 1906. From a three-dollar-a-week job scrubbing floors, washing dishes and peeling potatoes, he worked his way up to the presidency of the \$22,000,000 Hotel New Yorker and a chain of seven other hotels. His motto was, "Give 'em value and you get volume." He is credited with having introduced many novel ideas in hotel service which carried his hotels through the depression days.

HOARE, SIR SAMUEL JOHN GURNEY, 2ND BART (hōr) Feb 24, 1880-
British Ambassador to Spain

Address: 25 Cadogan Sq, London, S. W. 1, England

Sir Samuel Hoare, England's Ambassador to Spain, has one of the most delicate tasks in the British Empire. In view of Franco's obligations to Italy, now at war with England, his efforts to "promote friendly relations" between Spain and Great Britain will need consummate diplomatic finesse. When Sir Samuel arrived in Spain in May 1940 students immediately demonstrated against British possession of Gibraltar and since then Spain's cries for the fortress have been growing ever louder.

That Sir Samuel Hoare, who was given no place in Winston Churchill's (see sketch this issue) War coalition, should be given this important post is most probably due to his well-known reputation as an "appeaser," which would make him unsuitable for Cabinet rank in a fighting government, yet acceptable to Spain. It should be remembered, too, that Sir Samuel opposed the sanctions against Italy at the time of the Ethiopian War and fathered the Hoare-Laval plan for the partition of Ethiopia.

SIR SAMUEL HOARE

Samuel John Gurney Hoare comes of old Quaker banking stock. The Hoares are the oldest banking family in London; the Gurneys (one of whom was Samuel's great-grandmother) are an old banking family of Norwich. The baronetcy was created in 1899 and the first baronet married Katharine Louisa Hart Davis. Their son, Samuel, was educated at Harrow and at New College, Oxford, where he stood out both as a scholar and as an athlete. He took a "double first" in classics and a "first class" in history and represented his University in skating and tennis. He married Lady Maud Lygon, daughter of the Earl of Beauchamp.

In 1905 Hoare became assistant private secretary to the Honorable A. Lyttleton, the Colonial Secretary, and in the following year had an unsuccessful shot at Parliament by standing for Ipswich. He turned to municipal politics after his defeat and served on the London County Council, where his special interest was education and his special desire to see smaller classes and higher salaries for teachers.

In 1910 the Conservative Party accepted Hoare as candidate for Chelsea, a London constituency which includes a good many impecunious artists as well as a good many arrived ones and which has always been a safe Tory seat. Hoare won it easily enough and has represented it ever since. He attended to his duties at Westminster until the War when he joined the Norfolk Yeomanry as an officer. When winter came, however, he contracted rheumatic fever and was invalided out of the service.

While he was convalescing, Hoare decided to learn Russian and after six months' tutoring and study could speak and write it. The British Military Intelligence then sent him to Russia, where he remained until the beginning of the Kerensky régime. He was the first Englishman to hear of the death of Rasputin and certain persons even went so far as to suggest he was responsible for his murder! Because he knew Italian as well as Russian, Hoare then went to Italy.

After the War Hoare was appointed deputy high commissioner of the League of Nations for the care of Russian refugees. A year later, in 1922, Bonar Law made him Air Minister and he held that office, except for the brief spell of Labor rule in 1924, until 1929. When he became Air Minister he learned to fly, and at a time when the Air Ministry was something of a Cinderella, did much to forward its work.

When the second Labor government was routed in 1929, Hoare was one of those Conservatives who were actively engaged in the formation of the "National Government." Mr. MacDonald included him in his Cabinet as Secretary of State for India. It became Hoare's task to pilot the India Bill through the Commons—a huge and complicated measure that ran to 400 clauses, all of which Hoare had to know and defend against criticism. He was opposed line by line and clause by clause by one of the House's most formidable debaters, Win-

ston Churchill. It was a terrific fight and John Gunther estimates that Hoare answered 15,000 questions, made 600 speeches and read 25,000 pages of reports.

When Baldwin transferred Hoare to Foreign Affairs in 1935 Sir Samuel was utterly weary with the struggle. The Abyssinian War broke out in October of that year. Hoare, who had opposed sanctions, stopped off in Paris on his way to a holiday in Switzerland and had interviews with Laval (see sketch this issue). When their joint proposals were disclosed there was immediate and widespread indignation. Members of Parliament received scores of letters from their constituents protesting against any attempt to give Italy a large slice of Abyssinia. The London *Times* trained its heavy guns on the Foreign Secretary, and when he cut short his holiday and faced the House he found nothing but hostility. There was nothing to do but to resign.

The general feeling against Hoare was so strong that it was supposed that his political career was finished. Yet he was brought back to office again in June 1936 as first Lord of the Admiralty. In May 1937 Mr. Chamberlain made him Home Secretary and he gained a good deal of approval by bringing in a Criminal Justice Bill designed to lighten some of the more drastic penalties prescribed by law.

Sir Samuel had moved right up the ladder which leads to the Premiership, for the Home Secretaryship is the position next to the top. And yet, either because of the Hoare-Laval proposals and his general reputation of being an appeaser or because it was felt he could serve his country best in his present Ambassador's job, he found no place in Winston Churchill's coalition.

The English admire and respect Hoare for his intellectual standing, for his Oxford record, his linguistic ability, his wide literary culture, the mastery of detail evident in his management of the India Bill. But few like him, for he is a man of emotional half tones, "not one who mixes with the throng or feels at home in a crowd." In personality and in his speeches he is all cold precision and his thin voice and lack of fire have contributed toward making him "perhaps the duller speaker in the House of Commons."

In addition to his baronetcy, to which he succeeded in 1915, Sir Samuel is a Knight of the Order of the Star of India and of the Order of the British Empire and holds honorary doctorates from the Universities of Oxford, Cambridge and Reading. At the age of 60 he is president of the Lawn Tennis Association and is still a devotee of ice skating. Alfred Duff Cooper (see sketch this issue) tells of the time Hoare invited his friends to see an exhibition of his ice-skating skill. "Slim and dapper, perfectly dressed for the occasion, he whirled around like a ballet dancer before the eyes of his astonished colleagues, seeming anx-

ious to prove to them that there was no feat of balancing he could not perform."

HOELLERING, FRANZ (hül'ér-ing) July 9, 1896- Author

Address: Box 52, Stamford, Connecticut

The Defenders (1940) is a first novel by a distinguished Austrian journalist which John Chamberlain (see sketch this issue) calls "history in the three dimensions of space and the one dimension of time" and Edmund Wilson "a steadying contribution to the creative critical consciousness of our world." Nearly 500 pages long, the novel takes as its canvas nothing less than the entire society of Vienna—Vienna of February 1934, when democracy was being slowly strangled but could still stir a little. Without theorizing or propagandizing but "through the nerve ends of a score of vital protagonists," the author, Franz Hoellering, shows how it came about that the Vienna of the country-house aristocracy, of the university and coffeehouse intellectuals, of the Socialist workers and Social Democrat bureaucracy could become finally lost to the home-grown Fascists: the Italian-controlled Heimwehr who broke the ground for Hitler by their assault on the Socialist working classes. He does it in such a way that one has "the illusion of living in Vienna with letters of introduction."

It is a broad canvas; it was a complex and disunited society. There are the escapists who in the end failed to escape; the café

FRANZ HOELLERING

society of self-centered artists and writers; Baron Weisner, the cultivated and skeptical remnant of the last War who understands what is happening but still hopes to retire from his diplomatic post to "an honorable private life"; Franz Steiger, famous scientist and director of the Technological Institute, whose science knows no politics, who says: "Leave the present to those who have ruined it... There is never a time when all is lost." There are the Socialists, never sure of when to take a stand against the government: Councilor Birkmeier, grown complacent with years of Social Democratic rule; his son Joseph, a half-hysterical radical; Hippmann, weary party leader, preaching "passive tolerance" and "calmness and unity" in the face of attack. There are the Nazis and the incipient Nazis ("we must win the next war"). And there are, finally, the workers, the Left-wing conspirators of the Defense Corps who do at least meet force with force, too late, and who go down fighting.

Weaving the many threads together is the love story of Maria Steiger, 19-year-old daughter of Professor Steiger whom Baron Weisner plans to take with him into retirement but who instead chooses the real, challenging and dangerous world of Karl Merk.

This is history, but it does what history cannot do: "it lives, it moves." It is a book that belongs to its characters and its time, the author seeming to stand aside and with almost conscious self-restraint avoiding both heroics and the kind of mysticism common to novels of similar scope, only directing its intricate architecture. He speaks with no one voice, but Lewis Gannett interprets him as saying "that the men of honor must, in this primitively dangerous

age, also learn to live—and to act—dangerously."

Whether for all its integrity this is merely the novel of a particular situation is for the reader to decide. Clifton Fadiman finds that it is not "written on a level of universality," while Leane Zugsmith accuses every character of having "a French counterpart, even an American counterpart," and Lewis Gannett says: "It is Vienna; it is all Europe; it is frighteningly like America."

Of the author himself Gannett says: "He has had a romantic, a terrifying, and an inspiring life." Born in Baden bei Wien, Austria on July 9, 1896, the son of Georg and Maria Magdelana (Zahradnik) Hoellering, Hoellering grew up in a typically Viennese atmosphere in which politics, music and the theatre played leading rôles. His mother was a German from Czechoslovakia, his father a German from the Sudetenland who moved closer to Vienna, organized a musicians' union, became a candidate of the Deutschnationale Partei for a seat in the Austrian Parliament, later founded the Wiener Tonkünstler Orchestra and became general manager of the Friends of Music in Vienna. Franz played the violin from the time he was five; read intensively; published a volume of poetry in his teens. In those years a friend with a common interest in the theatre was Elisabeth Bergner.

Hoellering had attended public schools and the Realschule in Vienna; he was 18 and a student at the University of Vienna when War broke out. Volunteering, he served on the Russian, Italian, Serbian and Romanian fronts, won every possible medal. In 1916 a copy of the Kaiser's tricky peace offer fell into his hands. In sudden disgust he returned his medals and regimental insignia to his commanding officer, announced his opposition to the War. He was not court-martialed as he had expected, however, but sent to posts at the front where he should logically have been shot. Not caring much, he survived both bullets and brandy for breakfast; was shell-shocked in 1918, sent home, returned to the front; miraculously continued to survive.

When peace came unpeacefully in 1918 he plunged into the revolutionary student movement in Vienna, where he encountered Elisabeth Bergner again. But after taking his doctorate of law and economy at the University of Vienna in 1921 (he had been studying another officer's law books for a year while at the front), he found he had lost taste for both revolution and law. He turned to the theatre. By 1926 he found himself in Berlin writing the movie script of an Ibsen play, after having edited a theatre magazine, and directed German theatres in Brno and Teplitz-Schönau. Then he became a reporter, and it was as a reporter that he conceived the idea of founding a literary magazine about sports. The magazine, *Arena*, was a success principally "because none of us knew anything about sports, so we understood our readers," and his next ven-

ture, the A. I. Z., "sort of a working-class *Life*," attained a 350,000 circulation within a year.

That same year Hoellering went to Russia to see the tenth anniversary celebration of the Revolution. He came back to Germany to resign from his paper and take a non-political job as head of the dramatic department of the Ullstein group of publications. He published a novelette, *Fanny, the Story of a Maid*, a series of short stories, a study in criminology. But there was no escaping politics. While Hitler's star was in the ascendancy Hoellering became editor in chief of Ullstein's *B. Z. am Mittag*, a popular democratic newspaper, and made it militantly anti-Hitler. The public liked it; the owners were frightened; the Social Democrats attacked him for "overestimating" Hitler; and when, on December 12, 1931 he published Hitler's secret instructions to henchmen to form an aviation service, the sensation and scandal that it created caused Bruening's Cabinet to protest to the publishers. Hoellering refused to submit to "house censorship," was dropped from the staff. This compromise, which Von Ossietzky called "the most scandalous capitulation to National Socialism on record," did the publishers little good. Fourteen months later the House of Ullstein was taken over by the Nazis.

In 1932 Hoellering was in America working as a correspondent, but he returned to Germany at the beginning of 1933 with a book about the United States which was later torn up by the storm troopers. When Hitler became Chancellor, Hoellering was editor of the Leftist daily, *12 Uhr Blatt*, and the weekly *Montag Morgen*. On February 26 he wrote: "Unless something happens, the Chancellor cannot win the election." Something did happen—the Reichstag fire. There was a censor, but *all* of the contradictory reports of the fire sent out by the Nazis that night appeared the next day in Hoellering's paper under the sub-head "Official Reports of the Prussian Government News Service." The paper was suspended.

Hoellering fled, taking the train first to Dresden, then to Czechoslovakia, where he proceeded to found a German newspaper in Prague for anti-Nazis in exile. In 1934 he came to America and in 1937 married Marta Trojanova, a well-known Czech actress who is also the Czechoslovakian translator of Theodore Dreiser. The next year Hoellering came to *The Nation* as movie critic, a position which he still holds.

But he had watched democracy dying in Europe and had asked too many questions not to try to answer some of them. The result was *The Defenders*. It was set in Austria before the *Anschluss*, begun in New York, written in German on a typewriter lent by Hendrik van Loon, finished early in 1939, translated by Ludwig Lewisohn, published in the United States in August 1940.

Dr. Hoellering is particularly concerned with the problems of democratic authors whose books can no longer be published in Nazi-occupied territory, and he urges the establishment of a foundation for the publication of uncensored works in German, French, Czech, Polish, Dutch, etc. He does what he can to aid refugee authors both in the United States and abroad. Aside from that he divides his time between writing and tending his Stamford, Connecticut garden—both occupations which "involve a great deal of weeding." He is working now on a second novel whose scene will be laid in Europe and America from 1880 to the present.

Gannett, L. Franz Hoellering and His Novel "The Defenders" pam 1940

HOFFMAN, MALVINA June 15, 1887-
Sculptress

Address: 157 E 35th St, New York City

"HAVE PROPOSITION TO MAKE DO YOU CARE TO CONSIDER IT? RACIAL TYPES TO BE MODELED WHILE TRAVELING ROUND THE WORLD." As a result of this telegram from the Chicago Field Museum, sculptress Malvina Hoffman undertook a "head-hunting" expedition in 1930 which lasted five years and took her to the farthest corners of the earth. From 3,000 artists Malvina Cornell Hoffman (she does not use her middle name) was singled out to receive this, the largest sculptural commission ever given a woman, and possibly the largest ever completed by one sculptor anywhere. In the Hall of Man at the Field Museum are 101 life-size bronze statues, standing as an enduring monument to her perseverance, energy and creative genius.

"She has modeled the pygmies of Africa, enticing them from the jungles with cakes of chocolate and with beads; she has used cannibals for models; she has done an East Indian woman while her suspicious husband sat with a knife across his knees; her sitters have varied from lovely Balinese temple dancers to warriors and hunters."

The sculptress' childhood was spent on Forty-third Street in New York City, where she was born June 15, 1887, the daughter of Richard and Fidelia (Lamson) Hoffman. In those days Lillian Russell lived there, too, and the continuous stream of visitors to the actress' house provided the child with a "panorama of excitement."

Of her youth, Miss Hoffman says: "Born and brought up as I was in the lurid atmosphere of Broadway and Forty-third Street, I was nevertheless one of a household which conserved the traditional habits of Puritanical forefathers and conventional groups of numberless relatives."

Miss Hoffman studied painting for six years, but she turned to sculpture because she felt the need of three-dimensional form

G. Maillard Kesslère

MALVINA HOFFMAN

to make some adequate portrait of her father. Richard Hoffman was the English infant prodigy who, at the age of 15, had come to America to accompany Jenny Lind on her first concert tour under the management of P. T. Barnum. The marriage of Malvina's mother to the piano teacher was for many years regarded as a disgrace by the Lamson family.

Malvina's father was her idol. When she had completed the portrait of him the old man examined her work carefully. "My child," he said, "I'm afraid you're going to be an artist. It's a long hard road and you have to travel most of the time entirely alone. I am 78 years old and can leave you very little of this world's earthly goods, but if I can leave you my ideals, perhaps they will be worth more to you than anything else. Above all, you must *be* an artist; after that you may create art."

When she was only eight Malvina encountered "suicidal despair" for the first time and the experience made a profound impression on her youthful mind. As she watched a snow storm from her mother's bedroom window she saw a beautiful woman climb on to the window ledge opposite, discard her filmy gown and plunge 30 feet into a snow bank, narrowly missing the postman as she fell. The revelation of "naked young physical beauty" thrilled her unforgettably and probably awakened within her the first urge to translate her feelings into reality.

At the age of 16 Malvina modeled her first figure, a woman in the grip of despair, which expressed to her youthful mind all that she knew of grief. "It seemed to give me a certain sense of peace and satisfaction to feel that I had collected and concentrated my many conflicts and unshed tears into this concrete image," Miss Hoff-

man remembers. "Perhaps the artist does regain a sort of equilibrium from the transference of his emotions into his art."

After her father's death in 1910, Malvina and her mother sailed for Paris, armed with two marble busts, \$1,000 and a letter of introduction from Mrs. John Simpson of New York to Rodin, the famous French sculptor. After five attempts to see the artist, the 23-year-old girl finally gained entrance to his studio and succeeded in interesting him in the marble heads she had carved of her father and Samuel Bonarios Grimson, a friend of the family, whom she married on June 6, 1924.

On this first visit to Rodin's studio Miss Hoffman was locked in and left to explore every inch of the room while Rodin went out with some friends. When he returned he found her sketching small plaster hands, so completely absorbed that she had let the fire go out.

It was during these early days in Paris that Miss Hoffman became aware of the importance of understanding the craft as well as the art of sculpture. She became convinced that she must know her profession from the very beginning in order to attempt competition with men in the field. Accordingly she devoted hours to learning the technicalities of sculpture at the foundries where her work was reproduced.

International acclaim was first accorded Miss Hoffman in 1915 when she completed *Pavlova Gavotte* and *Bacchanale Russe*. These two pieces of sculpture were the only work she took with her to New York when, following a mental and physical collapse, her doctor ordered her to leave Paris and take an absolute rest.

During the next few years Miss Hoffman divided her time among three continents. In Yugoslavia she directed work in the child-feeding centers which Herbert Hoover had organized following the World War. In 1926 she yielded to her restlessness and left New York again to find "the island of the Lotus Eaters" off the coast of Africa. Her African experiences proved invaluable to her when the proposal came from the Field Museum three years later.

On most of these trips Sam Grimson accompanied his wife, taking moving pictures of her subjects. In the interval between Africa and the world tour, however, Miss Hoffman spent a winter in Rome studying alone and some time in Yugoslavia working under Ivan Meštrović (see sketch this issue), the famous sculptor whom she numbers among her most intimate friends.

The exciting years between 1930 and 1935 are described in her book, *Heads and Tales*, an autobiography, (1936) which she sat down and wrote while the "Hall of Man collection was becoming one of the most popular exhibitions in the world." From the standpoint of anthropology as well as that of art, this group of 101 statues is considered perfect. Miss Hoffman's attention to detail distinguishes all her work and she

has received the highest awards for it all over the world.

In 1939 Miss Hoffman wrote *Sculpture Inside and Out*, which is a combination of autobiography and technical information. Of this book it has been said: "With a generous inclusive enthusiasm and a broad, sympathetic attitude towards many radically different styles, Miss Hoffman writes on a wide variety of topics, all more or less related to sculpture, hoping that what she has said 'might be of use to serious students and of interest to the general public.'"

As a rule the sculptor prefers to let her work do her talking. "For better or for worse," she says, "it expresses my thoughts, my ideals, in brief, my way of meeting life and people who are so rich a part of life."

Her *International Dance Fountain* was considered one of the outstanding pieces of sculpture at the New York World's Fair. It consists of seven dancers of different nationalities modeled in high relief on a cylindrical form and was selected by the committee to remain as one of six pieces to decorate the Flushing Meadows Park after the close of the Fair.

Permanent exhibitions of Miss Hoffman's work are to be found in museums in many large cities throughout Europe and the United States. The most extensive collection is, of course, in Chicago, but many pieces are to be found in the Museum of Natural History and the Metropolitan Museum of Art in New York City and the Brooklyn Institute of Arts and Sciences.

While her own work "derives from the great tradition," she is never intolerant toward experiment or development from the classic mood. "Is it not exciting to be alive in an age of experiment and pioneering?" she writes. "We should all feel the urge to turn over the fresh earth and constantly plant new seeds of thought and action. Nothing is more deadly than the apathy of indifference or self-satisfaction."

In appearance, Miss Hoffman is tall, slim and gray-haired. She is a member of eight art societies and an honorary member of three others. In 1937 the degree of Doctor of Literature was conferred upon her by Mount Holyoke College, and that of Doctor of Fine Arts by the University of Rochester.

Her critics believe that Miss Hoffman is unconsciously describing herself when she says of the giants of art: "They seem to spring from the center of the earth, naked souls, living apart from the world's riches and distractions, and by some unexplained miracle living in close contact with elemental forces which endow them with super-energy and wisdom."

Who's Who in America

HOHENLOHE-WALDENBURG, STEFANIE RICHTER, PRINCESS (hö'ën-lō'ë-wäl'dën-bōōrg') 1896- European political figure

December 1940 Bulletin: The request of Princess Hohenlohe for a renewal of her temporary visitor's permit has been denied and unless she leaves the United States by December 21, 1940 deportation proceedings will be started, the United States Department of Justice announced. She was with Captain Fritz Weidemann, German Consul at San Francisco. The Princess' presence was regarded as "inimical" to this country's best interests because of her close association with Nazis.

Her long imposing name reduced to "Steffi" or "Toffi" by her friends, the Princess is also known to the tabloids as "the mystery woman of Europe" and has been described as "a very, very shrewd and a very, very dangerous woman." The mystery surrounding her is so fantastic that one candid reporter described her thus: "A stumpy, determined middle-aged woman . . . with mouse-brown hair" and another says she is "small, plump, with red gold hair, sleeked up-style."

Still surrounded by clouds of mystery after losing her bizarre law suit against Lord Rothermere (1939), Princess Steffi,

Acme

STEFANIE HOHENLOHE-WALDENBURG

HOHENLOHE-WALDENBURG, STEFANIE—*Continued*

her son and her mother, Baroness Szepessy, came to New York from London, December 22, 1939. The Princess is reputed to have been born into a middle-class Jewish family named Richter in Vienna in 1896. Her father was an attorney. To this, Steffi, one-time close friend of Adolf Hitler, impatiently said: "They say my father was in prison, that I am a Jewess named Richter and that I was arrested in France as a spy. I won't dignify those statements by confirming or denying them."

The sensational suit which she filed against the Nazi-admiring Lord Rothermere who controls the London *Daily Mail*, *Evening News* and *Sunday Dispatch* besides numerous provincial papers, was to force him to pay her \$20,000 yearly for the rest of her life. She affirmed that he paid her some \$185,000 (he says it was over \$250,000) for her services as "foreign political representative." She declared that Lord Rothermere in 1927 "had decided to work for the restoration of the Hohenzollern and Hapsburg dynasties. He wanted to be a modern Warwick-the-King-Maker and work on the European rather than the English field."

It is said that in 1931 she arranged a \$400,000,000 loan through the pro-German British publisher to Hitler. Her career as a leading "intrigante" started long after her marriage. On May 12, 1914 she married Prince Friedrich Franz Hohenlohe-Waldenburg-Schillingsfürst. The *Almanach de Gotha* listed the marriage as "not in conformity with the princely house of Hohenlohe." Six years later, after their son was born, they were divorced. In Germany she became a powerful personality in the intrigues of the country when she met Captain Fritz Weidemann, Hitler's aide-de-camp, now in 1940 German Consul in San Francisco. Through him she met Goebbels and it was decided that though she was a non-Aryan, she could be useful to the cause. She was given the title "Honorary Aryan" and was hostess during Viscount Runciman's mission to Prague, where, surrounded by Germans and Sudetens, she explained the Nazi viewpoint to Runciman. She is credited with arranging meetings which helped to bring about the Munich Pact.

During the trial in London it was brought out that when in 1933 she was reported in the French press as expelled from France because she was a Nazi spy, Lord Rothermere told her not to sue French papers, as he would defend her. Steffi's closeness to Hitler was brought out by a letter from German Consul General Weidemann, who wrote: "There is no doubt in my mind that he [Hitler] will grant to her any help he can in her fight to re-establish her personal honor and financial status."

The Princess says she has come to New York to write her memoirs, for which she is asking a very high price. Her agent is Curtis Brown. In her book she expects to recount her friendships with Hitler, Lord

Rothermere and Fritz Weidemann. She thinks it will take a year to write, for she has never written any books before. Asked how her writing was coming along she replied airily, "I expect to start in a few weeks." It is believed that she is here because she is no longer useful to Hitler after the publicity attending her trial, unwelcome in England and not allowed to enter Italy, which she tried. While here she is the subject of close scrutiny by both the New York Police Alien Squad and the Federal Bureau of Investigation.

Refusing to discuss international politics with reporters, she said: "If you like to write something about me you might say I am known for my loyalty to my friends, my love of music and my taste in dress. I have also won two beauty contests, one in England and another in Austria." Her taste in dress is attested by a reporter who wrote: "She wore a silver fox turban with a provocative pink rose perched on it, a silver fox finger-length coat, a black silk jersey (Alix model) and black kid Perugia sandals with sky-blue platform soles. Gorgeous diamond ear-clips were fastened on her small and pretty ears and a scintillating diamond clip lightened her dark dress."

HOOTON, EARNEST ALBERT Nov 20, 1887- Anthropologist

Address: b. Harvard University, Cambridge, Massachusetts; h. 13 Buckingham St, Cambridge, Massachusetts

Dr. Hooton, noted anthropologist, sends us the following sketch of himself:

"I was born on November 20, 1887, at Clemansville, Wisconsin, a tiny farming town about four miles from Oshkosh. My father, William Hooton, was at the time Methodist minister in that town, in which his uncle, also named William Hooton, was one of the most prosperous members of the farming community. My father was born in Rampton, Nottinghamshire, England, the son of a Methodist circuit rider. He emigrated to Toronto, Canada about 1878 and worked for a while in his half-brother's jewelry store. He then attended for some short while the theological school of McGill University, and, for one year, was a missionary on the Manitoulin Island in Lake Huron. In Toronto he met Margaret Newton, a young schoolteacher of Scottish descent. After their marriage they moved to

Wisconsin, where my father continued in the ministry for some 50 years.

"Father was a sentimentalist and a bookworm. His sermons were full of fine writing and stuffed with quotations from the poets. His knowledge of literature was vast. Otherwise he was a gentle, easygoing daydreamer, whom everyone liked. He was totally dominated by my mother except on occasion when his English obstinacy was aroused and he became quite unmanageable. Mother was a woman of great intellectual ability, a brilliant student, very practical and unswerving in her industry and devotion to her family and to her duties as a pastor's wife. She was by upbringing a Scotch Presbyterian and she loathed sentiment and verbosity. She was the most direct and forcible female speaker I have ever heard. She and my father were devoted to each other and she managed him in every activity except the writing and delivering of sermons. She also managed all of her children. I was brought up under a matriarchate and since I have married I have continued in another.

"I had two elder sisters, one quite gifted at the piano and the organ, the other sensitive, delicate and scholarly. Methodist ministers had to move every three or five years, so that we lived in many towns in eastern Wisconsin. Mother and father had two obsessions—religion and education. We possibly received too much of each. I started in the public kindergarten at the age of five and at the age of six put on spectacles for short-sightedness. This malady grew faster than I did and is still growing, although I am beginning to shrink. I think that I was objectionably precocious. Nearly every winter I contracted bronchitis or some respiratory ailment and was forced to stay out of school. Mother would then teach me at home and when I went back to school I would skip a grade. I was not small for my age, but I was always in classes with children two or three years older than I. I had to compensate for my physical inadequacy by the use of a sharp tongue and a certain facility in invective.

"Thus I entered the high school at Manitowoc at the age of 11—a pallid, spectacled child among bearded stalwarts of 18 or 19 years who chewed tobacco and spat the juice out of the windows. Of course some were younger and chewed gum. Wisconsin had a fine population of Germans, Scandinavians, Czechs, Poles, with a sprinkling of English, Scotch, Welsh and Old American stock. My friends were of all of these descents and some others. It was a splendid, small town life, geographically, temporally and socially, intermediate between that of Tom Sawyer and that of Penrod Schofield. Neither the sacred nor the profane was neglected. In the summer I cut lawns or worked in pea-canning factories; in the winter I was assistant janitor in the high school and head janitor in the church. I earned \$10 a month in the winter and was unbe-

Bachrach

EARNEST A. HOOTON

lievably rich. I bought a cornet and a gold-filled watch and also became an amateur photographer. Thus at a tender age I became a social nuisance.

"One sister was a year ahead of me in school and the other two years. We were all sent to Lawrence College, Appleton, Wisconsin, a small Methodist school [B. A. 1907]. We all specialized in Latin because my mother considered that subject to be the foundation and superstructure of a real education. I also specialized in college journalism, including amateur cartooning and scurrilous verse—both bad. In my senior year I went to Madison, Wisconsin to take the examinations for the Rhodes Scholarships. These examinations were in Greek, Latin and mathematics. After becoming eligible for a scholarship at Oxford I did not immediately present myself as a candidate, but spent three years at the University of Wisconsin doing graduate work in the classics [M. A. 1908 and Ph. D. 1911]. During this time I was supported by scholarships and teaching fellowships. The most terrifying experience I had was teaching freshman Latin prose to a class of 40 coeds. This resulted in my permanent intimidation as regards the weaker sex. Otherwise I learned something about Roman religion, archeology and the textual emendation of Greek and Latin manuscripts. I also discovered in the library a book called *Anthropology and the Classics* and decided that I would have a little flyer in anthropology when I went to Oxford.

"In 1910 I entered University College, Oxford as Rhodes Scholar from Wisconsin. I was the only American in the college. The master welcomed me by saying that they had had one American before and had not liked him. He hoped that they would like me better. I think he was disappointed.

I attended one session of Gilbert Murray's seminar on Sophocles which convinced me that I was not going to be a Greek scholar. So I went over to R. R. Marett, reader in social anthropology, at Exeter College. Anthropology was a hardly respectable subject; so Marett received me with enthusiasm and open arms. I found myself let in for all sorts of subjects, including anatomy and physical anthropology. I had always scorned the sciences with all of the superciliousness of the pure Classicist. Thus I entered upon the study of bones and cadavers with revulsion, but quickly acquired a possibly morbid fondness for these carnal relicts. In fact I found that I liked skeletons better than declensions and considered apes more interesting than philosophers. In my second year at Oxford I became demonstrator in physical anthropology—which was an euphemism for laboratory assistant. I took the diploma in anthropology (with distinction) and finished up my thesis for the Ph. D. in classics at the University of Wisconsin. In my last year I took a research degree at Oxford—the B. L. Meanwhile I spent some time in going about England pronouncing professional judgment upon bones dug up in excavations—such as the remains of a saint disinterred at Carnarvon, Wales and a group of skeletons brought to light in an early Anglo-Saxon cemetery at East Shefford, Berks. In the winter vacations I hung about Paris and other European capitals; in the summer I returned to the United States.

"On my way back to Oxford for my third year I became acquainted with a young lady from Chicago, Mary Beidler Camp, who, being graduated from Smith College, was going to Berlin for the ostensible purpose of studying at the university there. I spent my vacations that year pursuing this girl about Europe and ultimately succeeded in getting her to agree to marry me. This seems to have been the brightest thing I ever have done.

"At the end of my last year at Oxford [1913] I was fortunate enough to secure a position as instructor in anthropology at Harvard, the junior member of a three-man department. In the next summer vacation I returned to England to dig Bronze Age barrows in Wiltshire and was caught there when the War broke out, but got back in time for the opening of the university. At the end of the next academic year (1915) I married, and my wife and I set out for the Canary Islands, where I planned to dig caves in the interest of the newly founded Harvard African Studies. However, the Spanish government stopped my excavating, so that I spent most of the time in measuring skulls in the museum at Teneriffe. The results of these studies were eventually published in a large tome called *The Ancient Inhabitants of the Canary Islands* (1925). In the meantime there had been added to my duties as instructor in anthropology the post of curator of somatology in the Pea-

body Museum of Harvard University. This job involved the care of the numerous skulls and skeletons of the museum collection. It was a congenial task.

"In the summer of 1916 I attended the Second Business Men's Military Training Camp at Plattsburg, at the end of which I was honorably discharged as too blind for active duty. My subsequent efforts to get into the army were frustrated and I was obliged to remain at Harvard and teach during the War. After the Armistice I did some mapping of Africa for the Colonel House Peace Commission of experts, but I have no reason for suspecting that my maps were ever used. I spent the summer of 1919 at Camp Grant in Illinois, where I was in charge of measuring some 8,500 soldiers at demobilization. The summer of 1920 was spent in the excavating of Indian skeletons at the ruined pueblo of Pecos, New Mexico. The archeological project was being conducted for Philipps Academy, Andover, Massachusetts, under Dr. A. V. Kidder, and I had engaged to study the skeletal specimens which were to be deposited in the Peabody Museum of Harvard University. More than 1,000 skeletons were recovered—the largest collection from any site in the New World. My report, *The Indians of Pecos Pueblo*, was published by the Yale Press in 1931.

"The years between 1920 and 1925 were filled with hard work and the vicissitudes incidental to the acquisition and retention of three offspring. My wife and I went abroad one summer. I finished my studies of skeletal collections and began to promote research in race mixture in several parts of the world, the field work done mainly by young anthropologists sent out from Harvard.

"In 1926 I began an anthropological study of criminals in Massachusetts which was extended to cover 10 states and included the measurement and observation of some 17,000 criminals and check samples of civilians. It involved an enormous amount of reduction of statistical data and raising money for fieldworkers and clerical and statistical helpers. This is the biggest and toughest job I have ever undertaken or ever will. Publications up to the present include *Crime and the Man* (1939), a semi-popular (but actually very unpopular) preview, and *The American Criminal*, of which volume I is called *The Native White Criminal of Native Parentage* (1939)—a vast statistical and technical work. Two other volumes are projected. In this work the biological inferiority of criminals and the insane was demonstrated, to the satisfaction, at least, of the author. During the period 1918 to 1933 I also edited the *Harvard African Studies* of which some 10 large volumes were published. These years were active in Harvard anthropological expeditions to Africa, which I organized but

did not attend. These years were also most fruitful in studies of race mixture carried on by my students in various parts of the world. In 1929 I accompanied Professor A. M. Tozzer on a brief archeological reconnaissance in Panama.

"In 1930 I took up golf and wrote a non-technical book on human evolution called *Up From the Ape*, which was published the next year. I wrote the book, which I hoped would be popular, in order to gain a respite from ponderous scientific writing which no one read. I took up golf because I was bullied into it by my wife and my friends. *Up From the Ape* is still making a modest amount of money for me, but not enough to pay for my golf. I have played the latter game assiduously for the past decade, displaying an ineptitude which is nothing short of phenomenal. There can be no doubt that I am a golf moron. I have no other hobby, although I do read a great many detective stories and other volatile literature—literally as a soporific.

"In 1932 I organized the Harvard Anthropological Survey of Ireland which carried on field work in archeology, social anthropology and physical anthropology for more than five years. All of the actual work in Ireland was carried on by my junior colleagues. I am at present engaged upon the writing of the report on the physical survey of 10,000 adult Irish males.

"My present and future interest in applied physical anthropology has to do with the relation of the human constitution to pathology—mental and physical—and to social behavior. Such studies require the cooperative investigation of anthropologists, physicians, psychologists and sociologists. Most of my public speaking has been devoted during past years to an attempt to awaken in the educated and more or less intelligent public the realization that biological deterioration is at the bottom of our sociological and political troubles and that we must do something to check human degeneration. The medical profession must be aroused to play its proper and leading rôle in our biological redemption. I have pointed out its shortcomings in this duty. I have also attacked the social redemptionists who lay all of the evils of mankind to institutions and environment.

"My recent more or less popular books have dealt with these problems and have consisted mostly of public lectures on the various phases of the subject which I have given. These books are: *Apes, Men, and Morons* (1937); *Twilight of Man* (1939); and *Why Men Behave Like Apes, and Vice Versa* (1940).

"I regard my principal function as that of a university teacher and a trainer of professional workers in physical anthropology and I have taught unintermittently at Harvard for 27 years without any sabbatical or leave of absence. My pleasantest duty and

HOOTON, EARNEST—*Continued*

most prized privilege is lecturing to Harvard students."

 Who's Who in America

HOOVER, J. EDGAR Jan 1, 1895- Director, Federal Bureau of Investigation, United States Department of Justice since 1924

Address: b. United States Department of Justice Bldg, Washington, D. C.; h. 413 Seward Sq, S E, Washington, D. C.

In October 1940, J. Edgar Hoover, asked to issue a report on efforts to combat Fifth Columnists, reassured the American public:

"The nation is safer from spies and saboteurs than ever before. There has been a negligible amount of sabotage in the second World War in contrast to a similar period in the first World War.

"This situation exists largely because law enforcement throughout every municipality, county, state and the nation is far better prepared to deal with these matters than at any time in the past."

Although many times as many complaints have been pouring into the offices of the Federal Bureau of Investigation as during any year in the past, the FBI chief feels it is well equipped to cope with its tremendous responsibilities, and warns against vigilante hysteria.

Director of the Federal Bureau of Investigation since 1924, and connected with the Bureau since 1919, John Edgar Hoover has succeeded in acquiring in that time a great number of fervent admirers (including Walter Winchell, the late Courtney Ryley Cooper, Shirley Temple and thousands of G-man worshipping kids) and a great number of as fervent enemies. Like Martin Dies (see sketch this issue), he seems to be more a "national issue" than a man—at least in the spring of 1940, when criticism of his bureau was at its height.

He was born January 1, 1895 in "a pleasant frame house" in "an unpretentious section" of Washington, D. C., the son of Dickerson and Annie (Scheitlin) Hoover. He grew up in the Capital. At Central High School his nickname was "Speed," and although he weighed only 110 pounds and was the smallest boy in his cadet company, he became captain of the cadets by the time he was a senior. It is said that what he lacked in size he made up in loudness of voice when it came to drilling his company. Besides that, he sang in the choir at the Church of the Reformation, and from

all available evidence was something of a model boy. "Speed," said a friend of his much later, "chastised us with his morality." He was graduated in 1913, valedictorian of his class and a young man determined to go places.

He did. He worked as messenger in the Congressional Library and studied law evenings at George Washington University. By 1916 he had his Bachelor of Laws degree from George Washington, and the following year he received his Master of Laws, was admitted to the Bar, and for a short time was a practicing lawyer. He had some experience in war-time counter-espionage; then in 1919, after the War, he was appointed special assistant to Attorney General Palmer. As such he was director of the newly-created General Intelligence Division, known as the anti-radical" division.

In 1921 Hoover was appointed assistant director of the FBI, and three years later became its director. It is an office which he has since held under every Administration.

His anti-radical activities were not yet over. But it was not such activities, but his dramatic campaign against organized crime that first made "compact, wiry-haired" J. Edgar Hoover's name familiar to every schoolboy, moviegoer and reader of comic strips. When he became director of the Federal Bureau of Investigation it was a "sloppy, demoralized agency." From such a beginning, *Time* said in 1935, Hoover built "one of the finest, most efficient law enforcement agencies the world has ever known." He began to replace untrained men with members of the Bar or experienced accountants. New departments of training were instituted, new scientific methods of criminal detection studied and a central bureau for fingerprints set up. The appropriations asked of Congress for the Bureau were also continually increased, and the authority of the Bureau tremendously extended. In the first few years his agents were without authority even to carry arms or to make arrests. Armaments and automobiles were provided for them in 1934 (Hoover's men are now trained to use tear gas, machine guns and arms), and in that same year they also acquired the authority to investigate nearly all sorts of Federal violations, including "racketeering."

In the early '30s it was Hoover's blasts against "public enemies," the dramatic capture or death at the hands of G-men of such criminals as Baby Face Nelson, John Dillinger and Pretty Boy Floyd, the solution of a large number of kidnapping cases and the extensive publicity given to the part the FBI played in all these cases which served to spotlight his Bureau and its accomplishments, although a relatively small percentage of the cases handled by his Bureau are of this spectacular variety. Some thought Hoover carried self-advertising a little too far: his face appeared on everything from advertisements to comic strips, and he seemed to be an indefatigable speaker and writer of magazine articles. Hoover and

his supporters justified what publicity they did not disown, however. They said that the taxpayers were entitled to know exactly how their money was being spent, and that it is healthy for public morality when a G-man can be given more glamor than a gangster.

There was more serious criticism. It was claimed that many of the FBI gangster raids were not legal in all their aspects; agents of the Secret Service and of the Post Office Inspectors' Service made frequent complaints that "in scores of cases . . . their men have built up the evidence and located the criminal only to have the FBI step in for the kill and credit"; G-men were accused of needless shooting; it was said that Hoover's "headline-stalking" delayed the solution of many cases, and that there was little cooperation between Federal and local law enforcement agencies; Hoover's attacks on what he called "the abuses of the parole system" were called assaults on prison reform. What is more, the *New Republic* asserted that his "crime statistics and his claims for great returns for the millions he spends have been assailed by reputable criminologists as unreliable."

None of these charges were ever verified, however, and Hoover remained philosophic. He pointed to the Department of Justice's record of convictions—in one year, 94 per cent of all it brought to court—and to the great number of kidnappings solved. On the radio in his office was a framed sentiment entitled *The Penalty of Leadership* which no doubt reflected his own attitude: "In every field of human endeavor, he that is first must perpetually live in the white light of publicity. . . . When a man's work becomes a standard for the whole world, it also becomes a target for the shafts of the envious few." Congress appropriated with increasing generosity, in 1936 the Boys' Club of America presented him with their Distinguished Service Medal, and J. Edgar Hoover continued to make speeches. In 1939 five thousand addresses were made by the Director of the FBI and his agents.

With the outbreak of the European War in September 1939, J. Edgar Hoover again organized his General Intelligence Division and with 1919 enthusiasm started to compile an up-to-date index of those he considered engaged in subversive activities. He soon showed himself capable of action as well as definition. On January 14, 1940, about the time he was asking Congress for a 33 per cent increase in his annual appropriation (four times as much as a decade earlier), he released the story to the newspapers that 18 alleged members of the Christian Front had been arrested for a conspiracy to overthrow the government. Before any jury trial had taken place Hoover was pointing out to reporters that "it took only 23 men to overthrow Russia," was having "Rogue's Gallery" photographs of the men made and turned over to a weekly. But the fact that meanwhile the accused had spent weeks in jail, unindicted and unconvicted, caused Congressman Martin Kennedy to call this "an occurrence which we would very loudly

Paul Frehm

J. EDGAR HOOVER

protest if it were permitted in a foreign country."

Next sensational move of the FBI was early in the morning of February 6, 1940, when in Detroit 10 men and a woman were awakened from sleep, handcuffed, chained, stripped, searched and marched off to prison. It turned out that they had been indicted three days before under an 1818 statute for soliciting volunteers for the Spanish Loyalist Army. In prison they were admittedly held incommunicado and refused the right of consulting an attorney until 15 minutes before they were arraigned, and, according to a prompt letter of protest from Senator Norris, "subjected to third-degree methods from the time they were arrested until three o'clock in the afternoon."

Attorney General Jackson (see sketch this issue) quashed the Detroit indictments under pressure of public indignation, but Senator Norris, supported by Senator Wheeler (see sketch this issue), continued to demand an investigation of Hoover and his Department of Justice. When Jackson gave both a clean bill there followed a second protest, and Jackson finally ordered a departmental, though not an independent, investigation. Its report Norris also termed a "whitewash," nor was he appeased by the new Neutrality Division set up about the same time, since the White House said it would not curb Hoover's powers.

In the meantime a campaign of protest against the FBI on these and other counts had long been raging in the liberal (and part of the not-so-liberal) press. Hoover was its target. He was criticized for wintering in Florida; his habit of frequenting night clubs, often in the company of Walter Winchell, caused Vito Marcantonio to label him a "Stork Club detective"; and when Hoover himself revealed that his operators had been tapping

HOOVER, J. EDGAR—*Continued*

wires, a practice which had been made a felony in 1934, the storm had broken in all earnest. It was demanded of Jackson that he take action against Hoover other than his order barring wire-tapping by FBI agents in the future. Westbrook Pegler (see sketch this issue), who had previously called Hoover "a night-club fly-cop" and "a publicity hound pandering to gent's-room journalism," raised the ante, saying: "He would be a great attraction as a keyhole columnist and logroller, and he should be worth something at current rates, with 15 minutes of hysterics on the air composed of unimportant and unconfirmed innuendoes about people too big and too contemptuous to talk back." The FBI was frequently referred to as the "American Gestapo." Of Hoover's much-discussed card file *The Nation* suggested: "If it really is a list of persons dangerous to our form of government, it ought to include a card for 'Hoover, J. Edgar.'"

Hoover and his supporters, of course, were not remaining idle either. Headlines in the New York *Journal-American* and in other Hearst papers announced: "Reds 'smear' FBI." In speeches Hoover gave his opinion that criticism of his methods came directly or indirectly from un-American groups. Hugh S. Johnson (see sketch this issue) wrote: "This attack on such a man and his work is nothing less than obscene. . . . Sucker commentators and sucker politicians who have allowed themselves to be duped into support of this sabotage are unwittingly doing great harm. . . . If the reward for such victories over crime and corruption—such improvements in police methods everywhere—is a political smearing out from public life, then why should any cop be capable, be brave, efficient or honest?"

By November 1940 most of this tempest had died down, but Attorney General Jackson was taking up the cudgels in defending the efficiency of the FBI against attacks by Martin Dies.

The subject of this storm of controversy is a thick-set man in his 40's with "the constitution of a locomotive"—which is fortunate. His "hard, black eyes look down a nose that widens considerably as it turns south." He doesn't look like a man who would have a cheerful idea of human nature, and he hasn't; very recently he made a speech in which he estimated that "our army of criminals numbers into the millions." A bachelor, he is very careful of his reputation, and the only girl he has ever been photographed kissing is Shirley Temple, although he once received something like 500 proposals upon publication of an interview stating his requirements for his ideal girl. They ended: "She must remain upon the pedestal upon which I have placed her."

Hoover approves of sports because they "teach a man to take defeat and dig in all the harder." He is fond of the electric horse in the Department of Justice gym, plays tennis and jujitsu, and says he likes nothing better than a wrestling or boxing match or a

baseball game. His favorite dishes are green-turtle soup and hamburgers, his hobby collecting Chinese antiques at auctions (his study is filled with them), his favorite reading (according to one newspaper sketch) Edgar Guest and a few poems of Robert W. Service. If he doesn't find time for reading many books, that doesn't mean he doesn't enjoy words, though. Anything with five syllables is said to have particular appeal for him, and he is a man to whom fishing has become a "piscatorial diversion."

He is an unremitting foe of corruption in politics—"Old Man Politics" can be blamed for much of the crime in our national life today, he believes.

HORTHY DE NAGYBANYA, NICHOLAS (hó'ti) 1868- Regent of Hungary
Address: Budapest I, Királyi Vár, Hungary

There are few commentators on foreign, and especially Balkan, affairs who do not point out that Nicholas Horthy wears an admiral's uniform in a country that has no navy and is head of a kingdom which has no king. On the question of his attitude toward social and economic ideas they disagree, but they are unanimous in considering him, "loyal to his country and ever watchful of its needs."

Admiral Horthy has lasted longer than any other post-War ruler—"the most solid figure in the Continental flux," Anne O'Hare McCormick (see sketch this issue) calls him—and despite the movements and machinations of Europe's other rulers, it looks as though he will last a good while longer. During the past two years, however, Hungary has been an important pawn in Hitler's plans for Europe, because of its strategic position in the Danube Valley and because of its wheat and bauxite. So far Horthy has made out well. In 1938, just after the Munich settlement, his country was given Ruthenia, "a nibble of Czechoslovakia." In September 1940 a second Hitler award took half of Transylvania from Romania and gave it to Hungary, which had had it before the First World War. Awards like these cause their recipients to step warily, but Admiral Horthy, "the only head of a foreign country for whom Führer Hitler has deep respect," knows the advantages to Germany of having Hungary between it and Russia and believes firmly that this award is to the best advantage of his country. He may believe that it is also to Hungary's advantage to be part of the Berlin-Rome-Tokyo axis, which it joined in November 1940. Or he may know that it was definitely to Hungary's disadvantage not to join when asked.

Regent Horthy, who is 72 but looks less than 60, has been the dictator of Hungary for 20 years. Born in Kenderes, Hungary, the fourth son of Stephen de Horthy, a member of the House of Magnates, and of Paulette (de Halassy) Horthy, he is the descendant of a family of landed gentry which can trace its ancestry back to the thirteenth century. His father was a Protestant who took his five sons to the Protestant church in the village; his mother, a Catholic, took her daughters to Mass.

Young Nicholas attended the Reformist College at Debreczen for a while, but he had always been fascinated by the sea and ships and at a very early age entered the Imperial Naval Academy at Fiume with the necessary endorsement of the Emperor. In

NICHOLAS HORTHY DE NAGYBANYA

1886 he entered the Austro-Hungarian Navy and in 1900 was made a lieutenant. For many years he cruised around the world, at one time in a sailing frigate which provided the escort for an Austro-Hungarian scientific expedition into the South Seas. Tall, slender, with a long mustache and a collection of beautiful uniforms, he was a prominent and attractive figure and, in 1901, married Magdalene Purgly, the pick of all the eligible young ladies, "one of those beautiful Hungarian girls who seem to have stepped out of fairy tales." (They have two sons and one daughter.)

After having been stationed in various places, in 1908 Horthy was put in command of the *Taurus* at Constantinople, and proceeded, with his wife, to plunge into the whirl of diplomatic life there. When the Revolution of Young Turks occurred in 1908 his reports on it won him favorable attention. The next year Emperor Franz Josef made him his aide-de-camp, a job he was able to keep for a number of terms. Vital and even excitable, Horthy still knew when to hold his tongue and when to speak.

He rose rapidly in the Navy and just before the First World War was made a captain. When the War began Captain Horthy commanded the battleship *Hapsburg* for 10 months and then the cruiser *Novara*. In 1915 he was engaged in the attack of the Austro-Hungarian fleet on the Italian Adriatic coast and that same year sank the transports bound for the relief of Montenegro in the port of San Giovanni di Medua. When the Allies bottled up the Austro-Hungarian fleet in the Adriatic in 1917, it was Horthy who induced his superiors to undertake the Austrian Navy's only bold expedition of the War. As leader of the cruiser squadron he broke through the Allied blockade in the Straits

of Otranto. Overtaken by superior forces, wounded in the leg, he was still able to outmaneuver the enemy and returned to port safely. For this exploit he won a decoration, became a national hero overnight and was, the next year, promoted by Emperor Charles I to the position of rear admiral in command of the fleet, over the heads of older officers. In that same year he was made vice-admiral. But then the Austro-Hungarian monarchy collapsed and Admiral Horthy had to turn over its Navy to the newly formed South Slav government.

Emperor Charles I went into exile and Nicholas Horthy became "a national hero on half pension." Then came the Communist revolution under Béla Kun, and when the counter-revolutionists needed a man "with name, luck and love of adventure" to lead their forces, they chose Horthy to create Hungary's national army. He became Minister of War, the Communists were crushed and the White Terror set in. Concentration camps, the first in post-War Europe, were set up, the Jews were persecuted, thousands of people were killed. And, according to John Gunther, when the members of a British delegation investigating the atrocities complained to Horthy that the officers responsible had not been punished, he replied indignantly: "Why, they are my best men!"

After the Civil War strong authority was needed to build the country. On March 1, 1920 the National Assembly at Budapest elected Horthy Regent Governor of Hungary with the title of "Serene Excellency" and the privilege of keeping the position as long as he lived. Since then there have been one or two abortive *putschs* by ex-Emperor Charles, who mistakenly believed, when he came back in 1921, that Regent Horthy was just keeping the throne warm for him. But the job of Regent has been firmly Horthy's.

Since 1920 Admiral Horthy's power has been immense under Hungarian law. "He can dismiss premiers, as he has done repeatedly, and be sure that Parliament will always ratify his action." His veto is so strong that it is almost impossible for Parliament to override it. He issues decrees, appoints judges and other officials and determines the foreign policy of his country. Considered reactionary and even feudal in his social and economic ideas, he is, nevertheless, immensely popular among Hungary's people, to them "a loyal and courageous patriot."

"Straight as a sentry, his thick black hair hardly touched with gray," Admiral Horthy still holds a hunter's rifle firmly, his step is springy and "he wears his cap at a young officer's rakish angle." He has remained aflame with vitality. According to John Gunther: "At one moment, he may burst a collar discussing Hungarian revisionism; at the next, pick up a paper knife and go through the gestures of murder to illustrate a point; at the next,

mention with tears in his eyes how good a human being old Franz Josef was."

From the time he was made Regent, Horthy has lived in the royal palace on the Danube, but behind the imposing façade of marble corridors and miles of stairways, the Admiral works in a "small, rather shabby room." He and Madame Horthy, famous for the Winter Relief Fund she organized and supervises, spend as much time as they can in their pleasant country house at Kenderes, where Nicholas Horthy indulges his hobbies of painting and playing the piano.

HOSHINO, NAOKI (hō-shē'nō nā-ō'kē) 1888- Minister in the Cabinet of Prince Fumimaro Konoye

Address: General Affairs Board, Hsinking, Manchukuo

When Prince Fumimaro Konoye (see sketch this issue) formed his Cabinet, one of the first men he summoned was Naoki Hoshino, chief administrator of the Manchukuo State council and known abroad as "Manchukuo's dictator." In the Cabinet Hoshino is minister without portfolio and also president of the Cabinet's planning board, the government's most important administrative organ, where concrete measures for enforcing national policies are drafted.

Hoshino's previous career well qualifies him for his new job. It was he who originated Manchukuo's state-controlled economy, and, because Konoye's plans for Japan include the government's intensification of state-controlled industries, he picked him out. Since 1932 Hoshino has been in Manchukuo. He went there as a vice-minister in the finance department and in 1936 became chief administrator. It was Hoshino who announced Manchukuo's five-year development plan and who gave the Japanese financial world something to talk about again when, shortly after the outbreak of the Sino-Japanese hostilities in 1937, he succeeded in effecting Manchukuo's adoption of a revised expansion program with an increased appropriation.

Hoshino was born in Tokyo and was graduated from the Law College of Tokyo

Imperial University in 1917. He immediately went into Japan's finance ministry and became chief of the indirect taxation section and later chief of the state property section. But though his experience was received in the finance ministry, he is not of the orthodox, conservative career-man type. He isn't afraid of undertaking bold enterprises, as his plans for Manchukuo show.

When Hoshino arrived in Tokyo to become a member of Konoye's Cabinet he provided the newspaper reporters with good copy. He came by plane with only one suit, and that a soiled one. He also wore large, thick, shell-rimmed spectacles which accentuated his short stature of five feet two inches. His hair, thin but long, was disheveled. He startled the Japanese, too, when they found out that he had no home of his own in Tokyo and had to stay at a friend's place. He had gone to Manchukuo in 1932 with the intention of living there all his life and had given up all his Tokyo property and connections.

Hoshino, who is married and the father of two sons and one daughter, is said to be a man without a hobby. His only diversion is reading—mainly foreign books and periodicals. Unlike many men in Japanese public life he is easily approachable. Shortly after his appointment he amazed a reporter who was seeing him for the first time by greeting him like an old friend.

HOWARD, BART B. May 13, 1871-
Winner of 1939 Pulitzer Award for distinguished editorial writing

Address: b. St. Louis Post-Dispatch, St. Louis, Missouri

Bart Howard of the St. Louis *Post-Dispatch* is a man who is fond of saying: "There are three great documents that everybody needs to know: the Sermon on the Mount, the Magna Carta and the Bill of Rights. In them are distilled all the religion, all the politics, all the rules for good living that any man needs." For more than half a century he has also had the habit of memorizing an outstanding passage from his favorite authors each day, among them Homer, Cicero, Aeschylus, Seneca, Gibbon and Macaulay. And he has been a newspaper man for nearly 50 years. That may give some idea of the kind of editorials that won for him the 1939 Pulitzer Prize for distinguished editorial writing during the year, "the test of excellence being clearness of style, moral purpose, sound reasoning and power to influence public opinion in what the author conceives to be the right direction."

Bart Howard is a New Englander, born in North Brookfield, Massachusetts on May 13, 1871. He went to Phillips' Exeter Academy and thence to Williams College, where his talents as a second baseman outshone even his scholastic ability. He was so good that when he left college he went into professional baseball and in the depression of the mid-nineties was earning from \$175 to \$200 a month, a salary which enabled him to "afford the luxury of going to work as a cub reporter at \$6 a week" on the Schenectady (New York) *Gazette*.

After Howard was graduated from cub reporting there was a brief period in South America; then he went to Joplin, Missouri to become editor of both the *News-Herald* and the *Globe* and to discover Ann Picher, whom he married. (They have one daughter, Virginia.) While there he was "men-

tor" for at least a couple of younger newspaper men who since haven't done badly by the profession: Ben Reese, present managing editor of the *Post-Dispatch*, and Wesley Winans Stout, editor of the *Saturday Evening Post*.

Next Bart Howard went to Ohio as managing editor of the *Columbia Sun* until it suspended publication two years later. Then the St. Louis *Republic* took him on as feature writer, sports expert, conductor of the "Whatyamacallem" column of local fame. After that and after three years' experience as editorial writer with the *Daily Oklahoma* of Oklahoma City, he joined the St. Louis *Post-Dispatch* staff on May 6, 1919 (having worked for the paper briefly in 1910), and there he has been for the past 21 years.

Bart Howard's editorials are known not only for a respect for words that is unusual in the breezy journalism of today, but for the "deep and abiding convictions" that they evidence. He can be indignant—against Fascism, or corruption in business or government, or any flaunting of the human rights which he believes in so sincerely. He can be sonorous, too, much in the style of his favorite Macaulay. He can call Germany, epigrammatically, "a Colossus in growing pains," or he can use the "latest bit of slang fresh from Tin-Pan Alley." But there is a dignity and earnestness to all his writing that makes a Bart Howard editorial immediately recognizable.

He hasn't lost his fondness for baseball—or, for that matter, for anything else, whether it is flowers or good food, or simply the day's work. But he likes to recall the good old days in St. Louis (he calls it "the Golden Age") when his favorite beer was still being served by Tony Faust and when "the automobile had not yet banished the democracy of the street car."

HOWARD, ROY WILSON Jan 1, 1883-
Newspaper publisher

Address: b. 230 Park Ave, New York City

Roy Howard is a newspaper man who not only writes and publishes news but makes it. He made it when he got a "knock-out" interview with Lloyd George in 1916; when he gave out news of the false armistice in 1918; when he got a private interview with Emperor Hirohito of Japan in 1933; when he had an exclusive session with Stalin in 1936; and when President Roosevelt, in August 1940, pointed him out as the "one exception" who had refused to help in the defense program.

Roosevelt wanted Roy Howard to go to South America to sound out opinion among political leaders and publishers and report on Fifth Column activities. But Howard pointed out that he hadn't been in South America for any length of time for almost 20

years, knew no Spanish or Portuguese and was totally unfamiliar with Latin America. This, said he, was why he had refused, and "it would be erroneous to believe that my personal affairs played any part in my decision. No personal considerations have ever or ever will interfere with my rendering to you or anyone in your position, any public service for which I am qualified."

But though energetic Roy Howard states his willingness to render "public service" to Roosevelt, he and the Scripps-Howard newspapers under him, especially the New York *World-Telegram*, did their best to see that whatever service Roy Howard eventually gave would be given under Wendell Willkie (see sketch this issue). At the Republican Convention in June, Howard "buzzed around Philadelphia in a green sports coat, green striped flannels, green bow tie, green shirt, green pocket handkerchief" and then took Willkie away for a week end on the Howard yacht. Immediately his papers began "thunderously thumping" for the Republican nominee.

There was a time, however, when Roy Howard was enthusiastically for Roosevelt—"we have a leader," he rejoiced in 1933. A few years later the Scripps-Howard papers were delivering stinging attacks on the New Deal, partly in editorials, partly through their columnists, Raymond Clapper and Westbrook Pegler (see sketches this issue). Howard himself, in 1935, wrote Roosevelt: "There can be no recovery until the fears of the businessman have been allayed through the granting of a breathing spell to industry." His papers opposed spending, the tax program, the "dictatorial" Supreme Court reorganization plan, "politics in WPA," the Wagner Act. Nevertheless, even though 61 of 75 editorials written in a four-month period were anti-New Deal, as late as 1939 Roy Howard refused to admit that his papers had changed and rebuked the New York *Daily News* for suggesting he had turned sour on the New Deal program.

There are a good many commentators who feel that along with Roy Howard's swing away from the New Deal has come a general swing to the Right; that the Scripps-Howard newspapers, once liberal, have become more and more conservative. In foreign policy, in the autumn of 1940 Roy Howard was busy plugging the maintenance of good relations between the United States and Japan.

Roy Howard, now head of the Scripps-Howard chain which includes 24 newspapers; the United Press; the NEA, the world's largest newspaper feature syndicate; minor radio feature and photographic adjuncts; and millions of dollars worth of property, still "views himself as a thirty-eight-dollars-a-week reporter, in their daily, pitching hay with the rest of the hands." This is partly due to the fact that he is today actual working editor of the New York *World-Telegram*; mainly to the fact

ROY W. HOWARD

that Roy Howard started as a reporter and worked up from one.

His first job was in Indianapolis, where his family moved when he was quite young. Howard was born in the little town of Gano, Hamilton County, Ohio. His father, William A. Howard, was a brakeman on the railroad who earned about \$60 a month. Roy had to work. He got himself two newspaper routes in Indianapolis and, at the Manual Training High School earned his lunches by working behind the school cafeteria counter and his pocket money by acting as high school correspondent of the Indianapolis *News* at space rates. He was graduated in 1902.

When he got out of school the *News* offered him a full-time job at \$8 a week. He took it. It was shortly after that that his father died and Roy had to support his family on what he could make. His present-day "tightness" is supposed to be due to that hard period of his life—"even today, when his income runs to half-a-million a year, he is a string-saver, a waste-paper folder. He will walk around the block to dodge a hat-check tip" and for many years he was "notorious for paying smaller salaries than any newspaper owner in the country."

From the *News* Howard went to the Indianapolis *Star* as sports editor at \$20 a week. While there he went to Chicago to look for another job and was told by the editor who interviewed him not to come back until he "wouldn't look funny in long pants." He got another job, in St. Louis, on the *Post-Dispatch*, and from there went to the Cincinnati *Post* as news editor. The trouble with this last job was that Howard preferred to find and tell news, rather than edit it; so he went to New York in 1906 as correspondent for the Scripps-McRae League.

HOWARD, ROY WILSON—*Continued*

When Edward Wyllis Scripps, founder of the chain, first met Howard he is reported to have said: "That young man will never get indigestion from licking my boots." In the same year that he was hired Howard became New York manager of the new Scripps Publishers Press Association and the next year found him New York manager of the United Press when it took over the Publishers Press Association. Working 15 hours a day, Howard filed news, assigned reporters, organized bureaus, sold the service and set up a compact European news service. He also bought stock in the U. P., economizing to pay for it by living modestly with his mother, Elizabeth (Wilson) Howard, until he was married in 1909 in London to Margaret Rohe, pioneer newspaper correspondent and magazine writer. In 1912 Howard became president and general manager of the United Press. Under him it expanded from 21 bureaus serving 267 clients to 104 serving more than 1,350. There is no doubt that he was "in great measure responsible" for the U. P.'s success.

When the First World War broke out Howard went to Europe, "where he shuttled with tireless energy between trenches and foreign offices, running down news less energetic correspondents somehow missed." Because of his activities then and later a veteran newspaper man once described him as "three jumps ahead of the news—three jumps ahead of himself."

In 1921 E. W. Scripps told Howard he was going to be made a chairman of the board and business director of the Newspaper Enterprise Association and all the Scripps-McRae newspapers, as well as chairman of the board of the United Press Association, in partnership with Scripps' son Robert. Howard is supposed to have "put up a big kick." He didn't want to be a business manager; he wanted to be an editor. He took the job, however, and was able to get his chance in 1925, when he took over the editorial direction of all these enterprises in association with Robert Scripps. By this time the chain was no longer the Scripps-McRae newspapers: it was the Scripps-Howard chain.

In 1931 Howard engineered the merger of the New York *World* with the *Telegram* and proceeded to take a greater interest in that paper than in any other. In 1936 Howard resigned the chairmanship of the board of the Scripps-Howard enterprises "to associate himself more closely with Robert P. Scripps, the controlling stockholder, in purely editorial activities, especially those pertaining to national and international relationships." As he put it more informally, "I have never been one of those birds who could sit back and say, 'All right, boys, go

get them.' I have to say, 'All right, boys, let's go get 'em.'" After Robert Scripps, who had actually never taken much part in the work (he always wanted to be a poet) died in 1938, Howard, chairman of the executive committee, was in full editorial control.

Free from the cares of management, Howard continued traveling and reporting, "self-assured, light-heartedly truculent, uninhibited, peripatetic, striving to shrink the earth in the service of his solid mistress, the news, and her unstable sister, opinion." His five-foot-five slim figure continued to be seen all over the world, talking to crowned heads and head waiters—"gregarious, a first-rate story teller, an excellent mixer, he never forgets people worth while." And they seldom forget him, despite or maybe because of his "gift for spontaneous insult equaled by few men" and his "special Hoosier proficiency in the use of epithet and profanity," delivered in a "high, arid, twanging voice."

Howard is easy to remember, too, because of his taste in clothes. Whether he is game hunting or news hunting, he "favors checks. His shirts run through the spectrum and are often yellow, green or one of the gaudier shades of purple. He carries walking sticks, his folded pince-nez invariably swings across his waistcoat and to see him stride through a city room on one of his best days is to see an army with banners."

HOWE, QUINCY Aug 17, 1900- Author; editor; radio commentator

Address: b. Simon & Schuster, Inc, 1230 Sixth Ave, New York City; h. 108 E 82nd St, New York City

What Quincy Howe probably considers his most telling achievement in a distinguished career as author, editor and radio commentator is the fact that he once riled the imperturbable British. In fact, the British Lion has always been his *bête noire*, and his avocation has long been pulling the said royal beast's tail. This pastime attained results when his book, *England Expects Every American to Do His Duty*, provoked a storm of indignation in England in 1937.

Quincy Howe is a caustic-tongued, canny Yankee—by heritage as well as by inclination. He is the son of Boston's famed librarian and biographer, Mark Antony De Wolfe Howe, (who won the Pulitzer Prize of 1924 for *Barrett Wendell and His Letters*). On his father's side he descends from James Howe, who emigrated from England in 1637. Through his mother, Fanny Huntington Quincy, he descends from Josiah Quincy, the president of Harvard. Quincy Howe was born in Boston, and his wife, Mary L. Post, whom he married in 1932, also comes from Boston.

Young Howe attended St. George's School in Newport, Rhode Island and later went to Harvard. In 1918 he served in the United States marine unit of Harvard's Students' Army Training Corps. After he

was graduated, *magna cum laude*, in 1921 he spent a year abroad traveling in Europe and studying at Christ's College, Cambridge. His English critics explain his Anglophobia by hinting slyly that he did not enjoy his stay in Cambridge. Mr. Howe claims he did and that the British are a decaying race anyhow.

From 1922 to 1929 he worked with the Atlantic Monthly Company in Boston, where he was one of the editors of *Living Age*, a monthly devoted to translating and reprinting articles from the foreign press. In 1928 the magazine was sold to Archibald Watson of New York and after six months, during which he was assistant to the editor of the *Atlantic Monthly*, Mr. Howe followed it there as editor in chief. While editing *Living Age* he published a startling exposé of the arms traffic. This material formed the basis of the sensational article, *Arms and the Men*, which later appeared in *Fortune* and led to the Nye Senate investigation.

His first book, *World Diary: 1929-1934*, came out in the fall of 1934. A summary of his extensive knowledge of the foreign and domestic scene, it elicited a great deal of favorable comment. "Mr. Howe's volume . . . is one of the clearest and most consistent interpretations of events during the depression period that I have encountered anywhere. It is moreover an interpretation which no one can afford to ignore," wrote one critic.

A year later Quincy Howe became editor in chief of Simon & Schuster. Under him that firm has brought out three books "expressing respectively suspicion of the motives, amusement at the manners and rage at the methods of the massive muddling empire of George VI." The first was Howe's own *England Expects Every American to do His Duty* (1937); the others were Margaret Halsey's *With Malice Toward Some* (1938) and Robert Briffault's *Decline and Fall of the British Empire* (1938). He, too, was responsible for selecting that best seller of 1936, Dorothea Brande's *Wake Up and Live*.

But it was his own book, published in 1937, that produced a minor furore. His thesis was explicit in the title. Quincy Howe wrote a sardonic analysis of the ceaseless flood of British propaganda inundating the United States via such influential institutions as the English Speaking Union, the New York Times and Nicholas Murray Butler (see sketch this issue). He claimed that "ever since the unpleasantness of 1776 the American Dominion has been making the world safe for the British Empire." His forthright denunciation of the Anglophile policy of our State Department placed him in the ranks of eminent isolationists with a concretely outlined program of self-sufficiency.

The British reaction to his book was satisfying in the extreme. It provoked a debate on the floor of the House of Commons and a special meeting in London of the English Speaking Union, attended by Lady Astor, Lord Lothian (see sketches this issue)

QUINCY HOWE

and other eminent Englishmen. The British reviews ran the gamut from a Podsnap-like sneer to an outraged howl. There even came a reaction from H. G. Wells, who contributed a nasty little parable on "Dame Quincy Howe," who smugly watched other people's houses being burned until her own caught fire. Quincy Howe was matched at a press luncheon debate with Sir Wilmott Lewis, who accused him of seeing an Englishman under every bed. Howe replied to Sir Wilmott's rather superior speech by saying in effect that his honored opponent is the best illustration of how persuasive and dead wrong an Englishman can be at the same time.

Howe was one of the crop of commentators on world affairs that was brought forth by the Czechoslovakian crisis in 1938. He analyzed the news for the Mutual Broadcasting System. Since August 1939 he has been commenting three times a week on WQXR. Devoid of breathless sensationalism, his comments, delivered in a somewhat flat Bostonian monotone, have been amazingly canny and original. The impressive mixture of thorough knowledge and clarity in his broadcasts, plus an ingratiating homespun humorous quality, has made him a popular commentator.

In the spring of 1939 he wrote his third book, *Blood is Cheaper Than Water*, in which he described the attributes of what he called "the peace and war parties" of the United States and the state of mind of the average American who, "if he cannot entirely share the idealism of the peace party, finds the realism of the war party even less to his taste." No longer a total isolationist, Quincy Howe is himself the embodiment of the small group of people, who, unable to prevent the chaos into which the world is being plunged, nevertheless prefer to go

through it with their eyes wide open. That same year he also wrote an introduction to and edited David Low's *Cartoon History of Our Times* (see sketch this issue). In the fall of 1940 his latest book, *The News and How to Understand It, in Spite of the Newspapers, in Spite of the Magazines and in Spite of the Radio*, inspired by his own editing and radio experiences was published.

Quincy Howe is a slight, pleasant-spoken New Englander with a keen, expressive face. Vital and restless, he produces an impression of constant alertness, of always being on the go. Characterized by Clifton Fadiman (whom he succeeded at Simon & Schuster as editor in chief) as "one of the most brilliant editors working in New York today," he is without doubt also one of the busiest. Besides "editing other people's books," he keeps busy on his own. In 1940 and 1941 he will also be effectively occupied by a lecture tour throughout the country, speaking on subjects of topical interest. He has not much time for hobbies, smokes incessantly and will discourse fluently on any subject with a cigarette hanging precariously from the corner of his mouth. He likes to play tennis, sail and walk but gets time only for walking. He has two children—a son, Quincy Jr., and a daughter Mabel Davis. His sister, Helen Huntington Howe, is a well-known monologist.

HUGHES, LANGSTON Feb 1, 1902- Poet; novelist

Address: h. Hollow Hills Farm, Monterey, California

Of the young Negro writers in America, James Langston Hughes is credited with having best expressed, particularly in his poetry, the real consciousness and feeling

of his race. The Negro people themselves—dock hands, porters, domestic workers and factory workers, streetwalkers—are given voice in poems that employ primitive or folk forms and racial rhythms such as the “Blues” and the “Shout.” Mr. Hughes has further written of a typical Negro family in a novel; of the race problem in a play, *Mulatto*; and of the relations of white people and colored in various short stories. But the life of a talented Negro in social, literary and artistic circles during the last two decades is likewise a subject of special interest and significance; and that is the subject of Langston Hughes’ autobiography, *The Big Sea*, published in August 1940.

The Big Sea is a tolerant, candid, but unpretentious chronicle, richly underlaid with race experience, of a Negro boy’s growing up, of his adventures in travel and in literature. Since little beyond the most meager facts concerning the publication of his books has been written about Langston Hughes, *The Big Sea* is an authentically valuable biographical source as well as a vital human and social document. Early in his autobiography the author tells us that he is a “brown” Negro of mixed blood: on his father’s side both male great-grandparents were white; on his mother’s, French and Indian blood contributed to his heritage. His ancestors were intelligent, freedom-loving people; one of them was a follower of John Brown and was killed in the raid on Harpers Ferry. Young Langston was born in Joplin, Missouri on February 1, 1902, son of James Nathaniel and Carrie Mercer (Langston) Hughes. But he grew up mostly in Lawrence, Kansas. His father and mother were separated: his father was in Mexico, where his one ambition was to make big money and forget his race; his mother was forced to travel about in search of jobs. His grandmother brought him up. At her death he went to live with “Auntie” Reed, very kind, and very religious. At 13 he attended a revival at Auntie Reed’s church, hoping to “see Jesus” and get converted. All the children were soon saved but Langston, who felt so embarrassed at being the last one in his seat that he thought he’d better get up and say he was saved. But it was a bitter disappointment: he hadn’t seen Jesus.

The boy worked at odd jobs after school, and went to see all the road shows he could. Though he had never written a poem, when he was graduated from grammar school he was elected class poet; that, he says, is how he began to write poetry. His mother remarried when he entered high school and his family moved to Cleveland. There he went to Central High School and wrote poems for the school magazine. He read much of Carl Sandburg (see sketch this issue), whom he greatly admired, and began to write poems like his. “I wrote about love, about the steel mills where my stepfather worked, the slums where we lived, and the brown girls from the South.”

LANGSTON HUGHES

He was also on the track team and in his senior year edited the year book. His best friend was a Polish boy, but he had lots of Jewish friends, too. He worked during vacations; at night he read. The world of books became the real world to him. He began sending poems to magazines, but they all came back.

The summer of 1919 he spent in Mexico with his father, who associated with money-making whites and hated both poverty-stricken Negroes and peons. He intensely disliked his father and went back to Cleveland, but returned later on his father’s promise to give him a college education. At this time he wrote *The Negro Speaks of Rivers*, a poem which, published in the *Crisis*, first won him attention. He finally persuaded his father to let him go to Columbia University instead of to an engineering school, and went to New York City. But he didn’t like the bigness and loneliness of Columbia, couldn’t study, and quit at the end of the first year.

At 20 he moved to Harlem and began life on his own. Leaving the world of books to see the real world, his first big adventure came when he signed up on a ship going to Africa. He returned with a wealth of experience but with a pet monkey as his only material asset. Another sea-faring venture landed him at last in Paris, penniless but enchanted by all that Paris offered a romantic young man. He became assistant cook at the Grand Duc Café, where many famous Americans dined. After learning a good deal about Parisian night life he spent some time beachcombing in Italy and dipping into Spain before coming back to New York. Broke, he joined his mother in Washington, worked in a laundry, and because he was unhappy (he always wrote when unhappy, he says) composed a number of

HUGHES, LANGSTON—*Continued*

Negro blues and spirituals. While working as a bus boy in a hotel he met Vachel Lindsay, who was enthusiastic about his poems and made him known to the literary world of the '20s. With *The Weary Blues* he won first prize in a poetry contest held by *Opportunity* magazine.

Langston Hughes now found himself riding into fame on the new Negro vogue in New York—the vogue that saw the rise of Paul Robeson, Countee Cullen, Florence Mills, Josephine Baker, Roland Hayes—that took white people in droves to Harlem and the Cotton Club. Many white writers and philanthropists became interested in Negro culture: the “new Negro” was being created. Elegant banquets and parties, at which Negro artists were feted, were given by the intelligentsia. Chief among these party-givers was Carl Van Vechten, through whose influence Langston Hughes' first book of poems, *The Weary Blues*, was published in 1926, a book highly praised by critics for its force, passion, directness and sensitive perception. A second volume, *Fine Clothes to the Jew* (1927), was almost as well received by the white press, but generally condemned by Negro critics such as Benjamin Brawley, who missed its satire and felt that it was “holding up our imperfections to public gaze.”

Aware of the need of completing his education, Langston Hughes then became a student at Lincoln University in Pennsylvania, where he also began to write what he hoped would be a novel of typical Negro family life in Kansas. At this time he was receiving substantial financial aid from a wealthy New York patroness interested in his work. He felt deep gratitude and respect for his benefactress (whom he does not name). But when he wrote a satirical poem on the opening of the new Waldorf Hotel when thousands were hungry and homeless, she did not like it. Because of things she later said his violent anger resulted in a period of physical illness. About this time he realized that the “Negro renaissance” could not last and he determined to finish his novel and strike out on his own as a writer. *Not Without Laughter* (1930), narrating the life of the colored boy, Sandy, was commended as a good piece of work because it kept sanely to a middle course between the sentimental and the sensational in stories of Negro life. In 1931 this novel received the Harmon Prize of \$400 and a gold medal.

Langston Hughes' own story of his life in *The Big Sea* ends with the waning of the Negro vogue in 1930 and the publication of his novel. Because of his interest in the common folk from which he came and his sympathy for all persecuted peoples, he soon became active in workers' movements and his writing began to take on a new degree of social consciousness. This was to be noted in the poems in *Scottsboro Limited* (1932) and a collection of stories showing

the relations between white and colored told from the Negro viewpoint, *Ways of White Folks* (1934). *The Dream Keeper*, a number of poems for children, was published in 1932. In 1933 he was in Russia assisting in preparing a scenario on Negro life for a motion picture to be made in Moscow. He was selected by Dr. Charles Austin Beard in 1934 as one of America's 25 most interesting personages with a socially-conscious attitude. He was awarded a Guggenheim Fellowship in creative writing in 1935; and in that year his play, *Mulatto*, opened on Broadway. It was not well received; critics thought that Hughes, an excellent poet, should not be encouraged as a dramatist.

Meanwhile he continued his travels and observations, both in this country and abroad; and his sympathies for the Loyalist cause in Spain took him to that country during the Spanish Civil War in 1936 as Madrid correspondent for the Baltimore *Afro-American*. Since the publication of *The Big Sea* he has been living in Chicago and California and plans for the fall of 1940 a travel and lecture tour in the United States.

HULL, CORDELL Oct 2, 1871- Secretary of State

Address: b. Department of State, Washington, D. C.

“Cord wasn't set enough to be a school-teacher, wasn't rough enough to be a lumberman, wasn't sociable enough to be a doctor and couldn't holler loud enough to be a preacher. But Cord was a right thorough thinker.” That's what the father of the present United States Secretary of State said about him, and later others considered Cordell Hull “thorough thinker” enough to emerge as Democratic possibility for the Presidency of the United States in 1940.

It is true that Hull may not be the most popular man in the country in the spectacular sense of the word, but somebody once called him “the least unpopular,” and sometimes that's safer. In all Hull's years in a New Deal Cabinet he has managed to keep out of (and what's more, keep quiet about) domestic policies so completely that many conservatives consider him “a ‘sound’ man who happens to find himself in the Cabinet of a wild-man President,” yet lib-

erals can't point to very much in his record that's unprogressive. Two Republican former Secretaries of State, Stimson (see sketch this issue) and Charles Evans Hughes, were among his staunch supporters.

Hull himself has never asked any "monument in life except a deep nick in a tariff wall." It has taken him most of his life to make that nick, and if today we have "unconditional most-favored nation reciprocal trade agreements" with 22 nations, with which we have been doing 60 per cent of our foreign business, it is largely due to the persistence of this gaunt, white-haired, drawling Tennessean.

Cordell Hull wasn't born 'an internationalist. He was born and grew up in a community so backwoodsy that in 1937 there was one telephone in the whole countryside. The exact spot was on Star Point, in a log cabin among the haze-hung mountains of northern Tennessee, and the date October 2, 1871. His shrewd, tough, "ornery-dressin'" father, still remembered as "Uncle Billy" and celebrated as Pickett County's great man, was married to a girl with Cherokee blood in her veins: "tall, dark, sweet-eyed" Elizabeth Riley. Of their five sons Cord was the favorite: "always just like a grown man from the time he could walk," studious, quiet, but the most expert log-rafter and the best speaker and debater in the family. Billy Hull had become a timberman with \$1,000 earned from moonshining, and as a timberman he prospered. The Hull boys and the neighbors' children consequently went to a one-room school that Billy had built himself, and when Cord was 15 he went away to college, though not a very big one: Mont vale in Celina, Tennessee, where half the faculty was Joe McMillin, professor of surveying, geometry, anatomy and Greek. During the off months Cord worked in his father's lumber business, and besides, attended every political meeting he could. This was the part of the South where every Yankee was a "damyankee," an old-fashioned community where politicians still gathered at the country schoolhouse for their campaign oratory. Long before he was of voting age Cord was therefore not only an ardent Democrat but had even given a campaign speech (for Benton McMillin, Joe McMillin's brother, and a candidate for re-election to Congress), and had driven the Governor of the state around from town to town in a rented horse and buggy just in order to listen to the man's speeches over and over again. His family and neighbors didn't have to be particularly astute to predict a political career for him, even if they didn't know quite how far he would go.

In 1889 Cord attended the National Normal University at Lebanon, Ohio; the following year he spent 10 months at the Cumberland University Law School; and in 1891 he was admitted to the Tennessee Bar. The young lawyer wasn't yet 20. He prac-

Bachrach

CORDELL HULL

ticed law for a year or two in Celina (probably he didn't get a chance to practice much), and then got himself elected to the State Legislature. Already under the influence of Benton McMillin, fighter for free trade and author of an early income tax bill which had been defeated, Hull began to study taxation problems. When the Spanish-American War came, however, the youthful politician's more adventurous instincts suddenly asserted themselves and he left statistics to recruit a company of mountaineers and to join the Fourth Tennessee Regiment. Although the Fourth Tennessee arrived in Cuba too late to fight, Cordell Hull acquired more than local fame there for his poker-playing and a "command of language which was the envy of all the sergeants in Cuba."

In 1903 Hull was appointed judge of the Fifth Tennessee Circuit, with headquarters in Carthage, Tennessee, although his rivals had tried to keep him off the bench by picturing him as a "wild-eyed young poker-playing lawyer." Far from not taking his duties seriously, though, Hull turned out to be "so tough on the sinful that crime lost much of its allure and nearly all of its profits," and he once fined his own "pappy" five dollars for sitting in court with his hat on. This period of his life must have been a very happy one for some reason, for Hull would still rather be called "Jedge" than anything else. But he was a politician at heart, not contented for very long in a small-town courtroom, and in 1907, after a campaign in which he "wore out three horses, busted three wheels and two sets of springs on his buggy and stunned the mountaineers with tax talk," Hull went to Congress from the Fourth Tennessee District. He had been elected by the skin of his teeth and 17 votes.

HULL, CORDELL—*Continued*

In Congress Hull quickly became identified with his tariff and taxation program: low tariffs and the provision of revenues by direct taxation of wealth. He was something of a fanatic; it is said that he still prefers a "seven-page pamphlet on tariff statistics to a seven-course dinner." For 18 years he served on the Ways and Means Committee. In 1913 he authored the first Federal Income Tax Bill, in 1916 the Revised Act, and in the same year was author of the Federal and State Inheritance Tax Law. In the House he was leader of Wilson's economic program, and by 1919 he was calling for world economic conferences to level trade barriers "h'ar—thar—and ev'ry-whar." The Harding landslide put him temporarily out of the office the following year, but he was soon back in the House with his Jeffersonian free-trader's recipes for economic health and in 1931 he brought them to the Senate.

In 1933, five hours after Roosevelt's inauguration, it was Cordell Hull who was sworn in as his Secretary of State. Immediately there was speculation about the appointment, especially since Roosevelt's views didn't precisely agree with those of the 62-year-old Senator's, and since this unassuming gentleman from Tennessee "with one string to his bow" seemed a little drab in contrast to the youthful and aggressive brilliance of the Brain Trusters. In fact it was generally accepted that Roosevelt's was a purely political move, "part of the involved maneuvering to bind the dry, Bible-totin' Democratic fundamentalists of the South" to the New Dealers, and when powerful Raymond Moley was appointed Assistant Secretary of State people began to be a little sorry for "the Hon. Mr. Milquetoast at the State Department rookery who 'didn't know what it was all about'." Newspaper reporters nicknamed Cordell Hull who at first avoided his press conferences as much as possible "Old H'ar-Thar-and-Ev'ry-whar." When in June 1933 he headed the American delegation to the London Economic Conference, which ended in failure, a Britisher impressed with the ascendancy of Moley over Hull began to chant: "Moley, Moley, Moley, Lord God almighty."

It seemed that a lot of people were mistaken in their estimate of the tall Tennessean, however. He was quiet and he didn't have the manners of the conventional diplomat, but he knew his own mind and he knew how to make people like him. At the Pan-American Conference at Montevideo that same year his easy informality and genuine friendliness did more to wean the South American delegates away from their suspicion of the policies of the United States than any reassuring speeches on the part of his predecessors. Calling on them individually early in the morning (*too* early, maybe), the Secretary of State announced himself to the other delegates

simply as "Hull from the United States," chatted a while, and left with some pronouncement like: "Just give me a ring if you want to take anythin' up with me, and I'll be right ovah." It was at this conference that a Good Neighbor policy was really formulated, Hull supporting a pact which declared in part: "No state has the right to intervene in the internal or external affairs of another," and it was Hull who laid the groundwork for the abrogation of the Platt Amendment in Cuba.

What is more, it began to become evident that when someone tangled with Hull it was not Hull who got the worst of it. Moley was soon out of the State Department entirely; more and more Cordell Hull gained the President's ear and confidence. On June 12, 1934 the Trade Agreements Act was passed, designed specifically for the reconquest of Latin-American markets and for the re-establishment of United States predominance there, and providing that the President should have authority to raise or lower existing tariff rates by as much as 50 per cent for those nations willing to make reciprocal concessions. This was a great triumph for Hull's views on international trade.

The Secretary of State has been criticized for concentrating on trade treaties and leaving many important problems of foreign policy to others. Some say this is because "the real State Department is in the White House," and that "like a good first officer, Mr. Hull has obeyed orders." Others say that actually "his influence on American foreign policy in this critical period has been very real." In general it has been Wilsonian and internationalist, although the isolationist temper of the country has not made it possible for him to have given as much encouragement to the League of Nations as he might have wished, and although he shares the responsibility for the Spanish policy by his note to Senator Pittman opposing any action on the arms embargo. In 1940 his views follow President Roosevelt's very closely. He advocates the strongest possible national rearmament, a police force for the Western hemisphere, all aid short of war to the Allies. From July 1940 on, in the face of Japanese declarations for an Asiatic Monroe Doctrine, he reaffirmed the United States' Far Eastern policy of maintaining the *status quo* and condemned the Japanese moves in Indo-China. Cordell Hull played a prominent part in the Pan-American Conference in Havana in the summer of 1940, which he feels has made the Americas ready to meet unitedly any threat from abroad, and which resulted in the so-called Act of Havana, providing for a Pan-American trusteeship of any European possession in the Western hemisphere felt to be in danger of a change in its present status.

For a long time Hull's reciprocal trade agreements remained as important as ever

in his speeches, however, in spite of spectacular international and domestic events.

To the public Cordell Hull skillfully refuses to commit himself on any issues which can be avoided, and at press conferences his favorite cliché is a vague: "We are looking into all phases of the situation." His views on domestic issues are therefore practically unknown; he says "I 'tend to mah int'national affairs." But on the whole he is regarded as "in the New Deal but not of it." It is known that he is a sincere prohibitionist, it is reported that "what he said privately about the New Deal amiability toward sitdown strikes couldn't be printed on asbestos," and "toward the entire New Deal school of economics his thoughts reputedly parallel Mr. Garner's." For instance, he regards the NLRB as unfair to all sides—the employer, the worker and the public; the SEC, he believes, needs simplification and conservative administration.

Six feet one, with thick white hair and bright dark eyes, "as lean as a fence rail," Hull is said to possess the shy charm of one "who is uneasy in the world in which he moves." There is something broodingly Lincolnesque in his "look of frontier Weltschmerz"—he looks at you as if "he is ready to forgive and forget the shenanigans you have no intentions of pulling." Many people find the "finest expression of Mr. Hull's character" in his long, sensitive, almost poetic hands, which he uses freely. He speaks "two languages"—English and the Tennessee mountain lingo. His voice is high and rasping, his plates give him a slight lisp which interfere with his "r's," he is "inept at phrase-making and so devoid of literary sense that the men who compose his speeches sometimes nearly weep over the interpolations he chooses to make in them." Nevertheless even those who don't find him effective on the speaker's dais are impressed by his absolute sincerity and lack of affectation.

In 1917 he married Rose Frances Whitney of Staunton, Virginia. Mr. and Mrs. Hull are childless, and live in a seven-room hotel apartment in Washington. They live quietly and simply, without benefit of many social affairs except those which Mr. Hull's official position requires him to attend, and the Secretary's main recreations are reading or an occasional game of croquet. Almost the only indication that he isn't entirely self-effacing is the wall of his office, which is covered with framed news pictures telling the story of his official life.

Who's Who in America

Who's Who in the Nation's Capital

HULL, HELEN R. Author; teacher

Address: b. Columbia University, New York City; h. 878 West End Ave, New York City

During the first months she began writing fiction, Helen Rose Hull says she papered one whole wall of her house with rejection slips. But she kept right on writing, and gradually the "acceptance wall," distressingly bare for a long time, began filling up. She began her professional work with short stories that have appeared in most first-class American magazines, and in several English ones. Her first novel, *Quest*, was published in 1922, but it was 10 long years before she achieved recognition on a large scale. In 1932 *Heat Lightning* was the choice of the Book-of-the-Month Club, and it introduced her to thousands of new readers.

The 10 years between were punctuated by a number of happy literary events in her life. There was the Guggenheim Fellowship for creative writing which she received in 1931, and which gave her time for travel and study. And there were several new novels: *Labyrinth* (1923); *The Surry Family* (1925); *Islanders* (1927); and *The Asking Price* (1930).

Miss Hull combines a career of writing and teaching. Born in Albion, Michigan, of a teaching family, it was natural for her to gravitate toward teaching. She attended Michigan State College, spent one summer at the University of Michigan, and took her degree of Bachelor of Philosophy at the University of Chicago in 1912. From 1912 to 1915 she was instructor in English at Wellesley College. She has been teaching at Columbia University since 1916—as an instructor in the extension division until 1919; instructor in English from 1919 to 1923; an assistant professor until 1939, and an associate professor, giving courses in writing, since. In connection with her school work, she interviews hundreds of people, helping them with practical advice to find their ambitions and abilities. Cock Robin, a wire-haired terrier, who, according to his mistress, believes only in "art for art's sake," is her most appreciative au-

HELEN HULL

dience, a listener-in on all her courses and companion in all her adventures.

Miss Hull does most of her writing at her summer place, "Bayberry Farm," in the Blue Hill region of Maine. After a few years of renting the farmhouse, Miss Hull bought it and renovated it, for she likes the country with modern conveniences. "Bayberry Farm" is a sort of modern, rural Eden, judging from others' descriptions of it. The house stands in 15 acres of pasture and woodland, sloping down to the ocean. "There is a flower garden, a vegetable garden and an iris-bordered path leading to the door. At the foot of the lane is Blue Hill Bay, whose fine waters tempt motor boats or sailboats."

The minute college is out, Miss Hull is on her way to "Bayberry Farm." Here she dons slacks or a linen suit, and gives herself over to the simple life. There is a small building on the farm which Miss Hull calls the workhouse. When she is doing a book she conceals herself there mornings, with Cock Robin to guard the door. In the afternoons she gardens, walks, swims or sails. "She does not care for golf or politics, refuses to acknowledge the existence of bridge. She likes to cook, and could compete with any writing-chef in soufflé-making or birthday cake architecture. She shuns publicity and book reviews."

According to her own description of her writing methods, Miss Hull apparently follows the rewrite system. She says she can never make merely marginal corrections or erasures in her first draft. She reads her previous day's output, and always finds that the last page or two are inferior to the rest. She rewrites this portion.

She has the artist's absorption in and impatience to complete her work once the initial business of planning her story is

completed. "The necessary interruptions of sleeping, eating, being pleasant to friends, taking the dog for walks and attending to other tasks are brambles and fences and thick brush on what the book would prefer to be: one swift cross-country run." When the book is finished, she is free again—that is, until "that distant day when at the horizon [she] sees a cloud, no bigger than a man's hand, which means that the strange urge to write another book is rising."

Miss Hull's latest novel, *Through the House Door* (1940), is a character study of a woman suddenly thrown on her own resources when her husband becomes blind. Although one reviewer complained that it "smacks too much of the woman's magazine public, the critic of the *Boston Transcript* called it "her best book so far." This was preceded by *Frost Flower*, published in 1939, a study of everyday life in an American suburban family. Drama enters the story through the mother's past, threatening to break up the peaceful family life. The *New York Times* said of it: "This novel gives Miss Hull added stature as a creative artist. Her writing is delicate and sensitive, her characters distinct and real as individuals." Other reviewers received it warmly, although some were not as enthusiastic. Phyllis Bentley wrote in the *Saturday Review of Literature*: "This portrait of a modern housewife, 1939 vintage, though not perhaps very subtle, is accurate, detailed and entertaining. The rest of the characters are lightly, but adequately sketched."

In a vignette of Helen Hull and her work, Olga Owens wrote: "I believe that Helen Hull's unique quality is her ability to put into lucid words the elusive ideas that have always fallen just short of crystallization in one's own mind. We are spared the effort of articulating these deeply sensed thoughts, but we come upon them in her prose with a delighted familiarity. Her style is simple and direct. It is extremely difficult to believe that Miss Hull has not enjoyed several brands of husbands, and has not been the mother of assorted sons and daughters."

Miss Hull's *Experiment*, published January 1940, is a collection of four stories, all of which appeared previously in magazines. A reviewer says of it: "This is a collection of four short novels, or four long short stories, however the reader prefers to think of them. The title of the book has a twofold significance. It is the name of the last and best story in the group. It also undoubtedly refers in the author's mind to the experiment she is making in a length halfway between the short story and the novel. . . *Experiment* presents four readable, well-constructed tales."

Miss Hull's novels include, in addition to *Quest* (1922); *Labyrinth* (1923); *The Surry Family* (1925); *Islanders* (1927); *The Asking Price* (1930); *Heat Lightning* (1932); *Frost Flower* (1939); and *Through the House Door* (1940); the following: *Hardy Perennial*

(1933); *Morning Shows the Day* (1934); *Uncommon People* (1936); *Candle Indoors* (1936); *Snow in Summer* (1938), published with other writers' contributions under the title of *The Flying Yorkshireman*; and *Through the House Door* (1940).

HUTCHINS, ROBERT MAYNARD Jan 17, 1899- Educator; president of the University of Chicago

Address: b. University of Chicago, Chicago, Illinois; h. 1146 E 59th St, Chicago, Illinois

In 1929, when Robert Maynard Hutchins became the president of the University of Chicago at the age of 30, he was immediately dubbed the "Boy President," a sort of infant prodigy of the educational world. Today he is a veteran among college presidents—only eight universities out of thirty-three have kept their presidents as long as Chicago has kept Dr. Hutchins—but he is still considered the "most dangerous man in American education," watched by his fellow pedagogues with an admiration not unmixed with apprehension.

For the "terrible young man" is a breaker of shibboleths, an iconoclast, and, to boot, not afraid to express himself. He cares nothing for time-honored traditions of university life. The social contacts a boy can make in the University of Chicago may be negligible; the football team is terrible. But the president is not dismayed: he feels that the function of the university is not "social or athletic," that primarily students must "come to college to learn to think. . . To do that the old disciplines are needed—grammar, logic and mathematics—but don't let that scare you, for these are only the arts of reading, writing and reckoning." As a result, some of the letters Dr. Hutchins has been getting sound like the famous letter an indignant Princetonian wrote to Woodrow Wilson: "You are turning my dear old college into an educational institution." But in the meanwhile the University of Chicago is on the same level of achievement as Harvard and Yale—Hutchins himself claims that "compared with the University of Chicago, Yale is a boys' finishing school"—and the students attending it are doing some serious studying and thinking.

Tall, handsome Dr. Hutchins, who in appearance "compares favorably with a Greek god" and who has proved himself to be an accomplished administrator and a crack money raiser, has education in his blood and won't leave this field for any

ROBERT MAYNARD HUTCHINS

inducements. And there have been many of them: Hearst had offered him a job; President Roosevelt wanted him in the NRA; he was offered the presidency of the New York Stock Exchange and was mentioned as a possibility during the last three Supreme Court vacancies; and the Sinclair Lewises once nominated him for President of the United States. But Dr. Hutchins only wants to be able to teach and to get his educational reforms accepted.

He has been staying out of politics except for that one time in 1932 when he came out for President Roosevelt. Later he threatened to vote Socialist unless either of the two major parties better defined its issues. His latest public statement had to do with the draft. He did not favor exemption from the draft "for college and university students as such," claiming that it would result in young men regarding enrollment in a college as a method of avoiding conscription.

Hutchins comes from a family of educators. He is the son of William James and Anna Laura (Murch) Hutchins. His father, a Presbyterian minister, was the president of Berea College, Kentucky and was succeeded in that post by Robert's brother Francis, known for his activities in Yale-in-China. Robert was born in Brooklyn, New York on January 17, 1899. Later on the family moved to Oberlin, Ohio, where the father taught homiletics. In 1915 he went to Oberlin College and after two years transferred to Yale. He worked his way through Yale by organizing a cooperative tutoring bureau. In his college days he gained a considerable reputation as captain of the Yale debate club. In 1917 he went abroad with an ambulance corps and a year later was fighting with the Italian Army. He came back to Yale after the War and was graduated in 1921, celebrating his gradu-

HUTCHINS, ROBERT MAYNARD
 ation by marrying Maude Phelps McVeigh, a charming and gifted young sculptress.

Robert Hutchins spent the next year teaching English and history at a Lake Placid school. Then he came to Yale to study law and started teaching it as soon as he was graduated from the law school (1925). In two years he was the dean of the Yale Law School, which under him became one of the outstanding law schools of the country. In 1929 he became the president of the University of Chicago, probably the most dynamic and colorful personage in American education.

The first reform Dr. Hutchins inaugurated was his famed Chicago Plan, which was passed by the overawed faculty in 12 minutes. It achieved a great measure of liberalization by offering to treat students as adults desiring to learn rather than truant children who must be herded to classes. He eliminated required class attendance and the course credits system, substituting for them general examinations whenever the student was ready for them. This was an attempt to adapt the educational process to the student and to alter the previous student psychology. It was a good thing for the teacher as well as for the student, keeping the former mentally alert and preventing him from falling into a rut.

President Hutchins' other ideas did not meet with as prompt and enthusiastic a reception as the Chicago Plan. His curriculum, made up on the basis of his rather revolutionary ideas, was thrice rejected. And today he feels that even in his own university he is facing an unhappy spectacle of "wrong things being taught the right way." The bad aspects of the American educational system are vocationalism and specialism. "An American university," he states acidly, "will teach anything which will attract philanthropy or student fees." Hutchins is not concerned with making the student a "whole, well-rounded personality"—the Dewey concept of education. For him, higher education is primarily intellectual. He merely wishes to teach the student how to think so that he may himself discover the truth. To him that comes even before natural sciences. Education must cultivate certain permanent values, such as intellectual honesty, love of truth, ability to think clearly, moral qualities. This can be done by bringing the student's mind in contact with those of the greatest thinkers of mankind, rather than "putting them through little fake experiences." One of Hutchins' contributions was a course in which his students read and discussed the great classics—ancient and modern—from Homer to Freud, instead of predigested prepared pills in the form of textbooks. In 1939 Columbia University made a similar course compulsory for freshmen.

Dr. Hutchins is for the Jeffersonian principles of differentiation and selection, which

means that "a pupil should attend an institution suited to his needs." He would combine the last two years of high school and the first two years of college to create so-called junior colleges which would provide the students with general education. Many of them would need to go no further: their careers would be better furthered in technical and vocational schools. The rest would be sent on to the universities. In that way a B. A. degree would mean something more than a "sheepskin to clothe intellectual nakedness." He places more emphasis on the study of metaphysics and classics (he himself is on the board of St. John's College in Annapolis where the study of classics forms the heart of the curriculum) than on natural sciences—although he does not underestimate the latter. He has consistently opposed the waste and duplication of facilities in universities. Less advertisement and commercialism would be necessary if universities got together on expensive research projects, fostered the German idea of migration of students when convenient and pooled their resources together in other ways. His ideas were expressed in his book, *Higher Learning in America*, which came out in 1936 and was a veritable *Gone With the Wind* among books on education.

The ideas of President Hutchins, and the didactic way in which he states them, have brought a storm of controversy upon him. Many see something ominously medieval in his preference for Thomas Aquinas and Aristotle and insist that metaphysics is simply a technical word for superstition. Many critics, the most violent being Dean Clark of the Yale Law School, have taken issue with his absolutism and suggested that his ideas spring from the same philosophy that forms the basis of Fascism. President Hutchins is not dismayed by these attacks. In the first place he can take care of his opponents singlehanded, being a brilliant polemicist; in the second place, even his enemies cannot deny his record as a liberal from the time he defended Sacco and Vanzetti. Even Clark has said that his defense of freedom of thought and expression are "noble additions to our priceless heritage of human liberty."

Under him the faculty has known the true meaning of "university freedom." In 1935 when Hearst and the financial community of Chicago charged the university with "sedition," raising a "red scare," Hutchins replied stirringly: "Socrates was accused of corrupting the youth. Some people would like to visit upon the educators of America the fate which Socrates suffered. . . Athens missed Socrates when he was gone. . . Those who have made these charges are either ignorant, malicious, deluded or misinformed." In 1933, as regional chairman of the first National Labor Board, he decided in favor of a striking bus drivers' union and was dubbed a Communist. His reputation for integrity was advanced when he resigned from the board of the New York Exchange, where he was serving as a "rep-

representative of the public interest," because the Exchange refused to investigate the "ethics of Whitney's confidants in Wall Street."

Yet in spite of his complete integrity and independence, often caustically expressed—he once told a fractious donor of \$25,000 that "donors of less than \$50,000 are not allowed to open their heads"—Hutchins is a crack money-raiser and has brought into the Chicago University coffers contributions trailing only slightly behind those to Yale and Harvard. His is the rare capacity of getting the money without toadying, and from the most unexpected quarters: such was a contribution of \$550,000 from Walgreen, who had started the "sedition" investigation in 1935. Things like that keep the trustees from firing him, in spite of their wallings about his "Rooseveltian finance." His was practically the only university that did not cut the professors' salaries during the lean years, although administrative salaries were cut. He does not believe in economizing on education.

Dr. Hutchins has the physique of a Yale oarsman in spite of a marked disinclination for exercise: he ascribes his excellent health to the fact that whenever the impulse to exercise comes over him he lies down until it passes over. He is not on too familiar terms with either the students or the faculty. Mortimer J. Adler (see sketch this issue), whom he brought to Chicago from Columbia to teach his "great books" course, is a good friend of his and he numbers Felix Frankfurter, William Douglas of the United States Treasury and Alexander Woollcott among his friends. But he is rarely seen on the campus and never fraternizes with anyone on it: for one thing he is too busy to entertain the faculty; besides, he refuses to capitalize on his well-known charm. His manner toward the students is that of friendly disdain. He intimidates them in the classroom by his didactic coldness and by pouncing on them whenever they say something vague or mediocre. Nevertheless they worship him from a distance and much of the talk in the halls centers on Hutchins' latest activities.

Although gifted with all characteristics that a demagogue would welcome, he scorns to bring them into play. Thornton Wilder says that his epitaph should be, "Here lies a University President who has never used the word 'Ideal.'" He prefers to appeal to intellect rather than to emotions. He is witty and a brilliant conversationalist. His chief fear is to come to a board meeting and find all the trustees agreeing with him—that would mean that he is getting old and settling down. He hates the publicity which is brought upon him by his position and reputation. When his daughter was born (he has two, Frances Ratcliffe and Joanna Blessing) he remarked acidly to the reporters who cornered him: "Gentlemen, believe it or not, this is not a publicity stunt."

HUTCHINSON, RAY CORYTON Jan 23, 1907- Author

Address: c/o Farrar & Rinehart, Inc, 232 Madison Ave, New York City

"This," R. C. Hutchinson said a year ago, "is a day for journalists. The novelists can't keep up with the stream; the breadth and depth and fullness and lovely proportions of the art—as the masters have revealed it—cannot show themselves in this uproar." And yet, out of this uproar Mr. Hutchinson, now on active military service with the British Army, has managed to produce a novel which "will be long remembered by anyone who reads it, a novel certain to add substantially to his already secure reputation," a novel which William Lyon Phelps calls the best he has read this year.

The Fire and the Wood was written at a time when it has become "increasingly hard to concentrate for several hours a day on the fortunes of two people." But it is in Mr. Hutchinson's concentration on the two main characters of his book, against a background of Nazi Germany, that its power and moving quality lie. The story is that of Dr. Josef Zeppichmann, a young bacteriologist fanatically interested in discovering a cure for tuberculosis. Unable to find facilities for his research at the hospital where he works, he fits up a laboratory in his rooming house and begins to treat Minna, the housemaid there, for the disease. His formula is one he has so far tried out only on rats. The treatments go on; Zeppichmann (he is a Jew) loses his job; and Minna becomes, instead of a human guinea pig, someone he loves.

Zeppichmann is interned in a concentration camp and Minna in a sanitarium. Half cured, she procures Zeppichmann's escape and the two of them flee on a canal boat across the border into safety. According to most reviewers, it is in this last half of the book that Mr. Hutchinson falls down; its first part is real, its characterization meaningful.

S. J. Woolf

RAY CORYTON HUTCHINSON

What faults belong to the whole are faults of "unevenness," of "too much invention."

These are the faults which have been pointed out in all of Mr. Hutchinson's novels since 1932; yet the virtues of *The Fire and the Wood* are persistent enough throughout all his work to inspire some reviewers to calling him "a great novelist"; and even the more cautious ones do not hesitate to prophesy that he will be "one of the most interesting of England's post-Second World War novelists."

R. C. Hutchinson's first published novel was *Thou Hast a Devil* (1930). He himself says: "I have read many first novels, but not, on my oath, anything quite so excruciatingly naïve as this one. I then wrote what I thought was a pot-boiler. So far from boiling the pot it was (rightly) refused by nearly every publisher in London. My third book, *The Answering Glory* (1932), was better, I think."

The notable quality of *The Answering Glory* is its "ability to depict character," one reviewer wrote when it came out. It is the story of Miss Thompson, a missionary in Africa who is carried unwillingly back to England. There she dies, but the inspiration of her example sends another woman out to take her place. It is a warm and moving story "with plenty of stamina in it," but its material, somehow, "has not been thoroughly melted down."

Two years later, in 1934, appeared *The Unforgotten Prisoner*, a story of the Germany of post-War disintegration which, when published in England, was a Book Society choice and caused "tremendous furore." "Uneven", "too long," in plan "too haphazard," it was yet felt to be "an indictment of war as poignant as any tale of horror at the front." Its successor was

One Light Burning (1935), a tale of a don who ran away from women until he was past 40 and then began to run after one whom he had taken to idealizing with a kind of old-fashioned sentimentality. Some said it had "a silly plot," and some found it confusing; others felt that it was an "extraordinarily compelling story with deep spiritual overtones."

This novel was followed by *Shining Scabbard* (1936), in which Mr. Hutchinson presents Colonel Séverin, whose main aim in life is to have the stain of a court-martial removed from his name; the Eurasian wife of his son Pierre and their two children. It is in the relationship to one another of the Séverin family that the essential interest of the book lies, a relationship, some critics feel, "that will leave no reader unmoved."

Testament, a novel of the Russian Revolution, was published in 1938, won the London *Sunday Times*' gold medal for fiction and was translated into five languages. Phyllis Bentley called it "undoubtedly the outstanding English novel of 1938," and its author was called "the most mature and the most accomplished of the English novelists." And yet there were those who felt about *Testament*, as about Mr. Hutchinson's other books, that he "invents too copiously and writes too easily," that he is "a man of many words."

"I wrote stories as far back as I can remember," Mr. Hutchinson says. He was born in Middlesex, the son of Harry Hutchinson, and was brought up in what he calls "an exceedingly comfortable home in a London suburb." At 13 he went to boarding school (Monkton Combe), where he wrote his first novel, a "thriller" of 20,000 words, and where he was miserable with homesickness. From there young Hutchinson went to Oriel College, Oxford, "where I wasted my time." While there he joined the cavalry section of the O. T. C., but found that his "temperament was incompatible with that of the horse." He gave this up and went into the air squadron, where he learned how to take up an airplane and bring it down without smashing it.

A great deal of Mr. Hutchinson's last year at school was spent "nervously shadowing" an undergraduate. This, he says, "was the one sensible thing I did at Oxford and we became betrothed almost immediately after I had sat for my final 'schools.'" They (the girl's name was Margaret Jones) were married in 1929 and now have four ("rather pleasant, I think") children—girl-boy-girl-boy.

After college Mr. Hutchinson went into the firm of J. and J. Colman, Limited, manufacturers of mustard and "a lot of other things." First he was in the foreign dissection department and then in the advertising department, where he was chief assistant to the manager for almost six years. "But I never found the business of selling things such an outsize thrill as some people do,"

he says, and in 1935 he quit to give his full time to writing.

By this time he had already had five books published after a more or less unsuccessful attempt at writing short stories, and a little acting at Norwich. These had all been written in the evenings after a full day's work: *Shining Scabbard* was the first book to which he was able to devote all his time.

When he sends a manuscript in to his printers Mr. Hutchinson invariably accompanies it with a letter that reads something like this: "I have at last finished the book. Here it is. Someday I hope I shall write a really good one." There are Englishmen, and Americans, too, who believe that R. C. Hutchinson has already written "a really good one," and that what will come eventually from his pen is "a really great one."

INGERSOLL, RALPH MCALLISTER (in'gēr-sól) Dec 8, 1900- Editor; publisher
Address: b. 27 Sixth Ave, Brooklyn, New York; h. Shadow Rock Farm, Lakeville, Connecticut

Ralph McAllister Ingersoll became front page news when he brought to life a new kind of metropolitan newspaper—*PM*, which made its debut in New York City June 18, 1940 without a line of advertising, a neat 32-page edition, smaller and squarer than the regular tabloids. It solved the question of revenue by charging five cents for a paper. To keep its readers informed of bargains, sales and announcements of new merchandise it presented a digest of retail advertising as news. The paper was a departure from the conventional newspaper in other respects also; it was a new kind of tabloid in its treatment and writing of news and in its technical make-up.

If *PM* is a success Ingersoll will make a permanent name for himself in the journalistic hall of fame. Since 1895 only three big dailies have been born in Manhattan, and all of them were tabloids financed by rich men who could afford to spend millions on them. One, Bernarr MacFadden's *Evening Graphic*, died in infancy. The other two, Joseph Medill Patterson's *Daily News* and William Randolph Hearst's

RALPH McALLISTER INGERSOLL

Daily Mirror, survive and prosper. Ingersoll had no such private resources as Hearst's or Patterson's upon which to draw. He started out backed by \$1,500,000, invested by a group of stockholders in lots of about \$100,000.

Ingersoll is a comparatively young man to be the father of a new kind of journalistic effort. Thirty-nine years old when *PM* was born, he already had had a long career as an editor. He had been managing editor of the *New Yorker*, managing editor of *Fortune*, vice-president and general manager of Time, Incorporated, and publisher of *Time*.

Born in New Haven, Connecticut, December 8, 1900, son of an important consulting engineer, Colin Macrae Ingersoll, and Theresa (McAllister) Ingersoll, he was graduated from Yale University's Sheffield Scientific School in 1921 to follow in his father's footsteps as an engineer. He continued his education at Columbia University the following year, then got a job as a mining engineer with a California gold mine, working underground as a miner. After several months he got another job with a copper mining company in Bisbee, Arizona, and went underground again to work as a miner. In 1923 he became a division engineer for a mining company in Mexico.

The end of the year brought a complete change of work for the young mining engineer. He had written a book, *In and Under Mexico* (1924), and largely on the strength of that had obtained a job as a reporter on the *New York American*. He stayed with the *American* until the end of 1924, and then did free-lance writing in New York and abroad. This led to reporting for the *New Yorker*. In 1925 when he was 25 years old he became managing editor

of the *New Yorker*, and remained in that position for five years.

His next move was to the associate editorship of *Fortune*, published by Henry R. Luce, a fellow alumnus of Yale and the Hotchkiss School. Thence he moved to the managing editorship of *Fortune*, serving in that capacity from 1930 to 1935, when he became vice-president and general manager of Time, Incorporated. This involved publishing of the Time enterprises—*Time*, *Fortune*, *Life* and the *Architectural Forum*, and the sponsoring of the radio and cinema productions of *March of Time*. In 1937 Ingersoll was appointed publisher of *Time*, remaining in that position until he resigned to begin *PM*, the new paper.

Tall, bald, shambling, Ingersoll was regarded as one of the possible heirs to the mantle of Henry R. Luce while he was on *Time*. He had a reputation on *Time* for being the magazine's No. 1 hypochondriac, and his desk was littered with pills and unguents. He wrote copious memoranda about filing systems and other trivia. His salary in 1938 was reported as \$30,000, income from stock, \$40,000.

Ingersoll is something of a socialite. *Who's Who in America* lists Ralph Ingersoll as a member of the Yale, Union, Racquet, Tennis and Cloud Clubs. He was married in 1926 to Miss Elizabeth Carden of New York.

Back in 1933 Ingersoll got an idea that he wanted to start a radically different newspaper. He was then publisher of *Time*. But the project was entirely Ingersoll's and *Time* had no desire to go into the newspaper business. Rumor that Henry Luce's money was tied up in the new project was denied. So Ingersoll went ahead on his own. He figured that without advertising, a paper selling for five cents would break even with a daily circulation of about 200,000, and that a newspaper such as he planned could get that many subscribers without disturbing the circulations of other New York newspapers. To succeed as a commercial venture, it has been estimated, such a paper would need a steady circulation of about 300,000.

Editor Ingersoll set up a small office under the name of Publications Research, Incorporated to figure costs and make plans. In the meantime he was busy turning out dummies and planning the editorial policy and content of the proposed paper with a staff of well-known writers, laboring without pay. By April 1939 things had progressed to the point where Ingersoll was ready to resign his job with *Time*—with six months' pay.

Then began the problem of raising money for the project. Ingersoll went about delivering forceful sales talks and writing dynamic prospectuses. By August 1939 he had found three "angels" to back him. But just then Hitler marched into Poland, the stock market soared upward, and two of the backers decided their money was better invested in the stock market. One, Mrs. Marion Rosenwald Stern, daughter of the founder of Sears, Roebuck & Company, remained.

Ingersoll started finding new backers, this time trying the idea of selling stock in lots of about \$100,000. It took four months of wining, dining, talking and persuading before he finally raised the \$1,500,000.

The list of stockholders of *PM* read like Dun and Bradstreet's top rating. It included Marshall Field III, John Hay (Jock) Whitney, Lawyer Garrard Bigelow Winston, Lessing Julius Rosenwald, M. Lincoln Schuster, George Huntington Hartford II, Philip Knight Wrigley, Producer Dwight Deere Wiman and Columnist Dorothy Thompson (see sketch this issue).

The paper was financed on terms of non-intervention by stockholders, however. The legal guarantee of management control is a five year employment contract between the 20 directors representing the preferred stock, and Ralph Ingersoll. The contract is accompanied by \$500,000 worth of insurance on Ingersoll's life as investment protection, and gives Ingersoll "complete, absolute and exclusive power to formulate the editorial, advertising, circulation, production and promotion policies."

At the end of three months, marked with many changes and considerable experimentation, it became apparent that *PM* had run through the \$1,500,000 cash which its original 18 stockholders had put up to found it. Most of the money had gone into the tremendous build-up which preceded the launching of its first issue and into the equipment. But Ingersoll had chosen his backers well. In October 1940 one of them, Marshall Field III, one of the richest men in the United States, became the paper's sole angel, forming a new corporation, and paying back the original stockholders 20 cents on the dollar. He also added \$500,000 more to the depleted coffers of *PM*. The editorial policies will remain unchanged, Ingersoll retaining full control as publisher. Ingersoll himself has been writing editorials, some of which, particularly an attack on Lindbergh and an appraisal of the conscription bill, had aroused considerable comment and praise. The only changes envisaged would be enlargement of the paper with a view to greater news coverage. Ingersoll reportedly was not discouraged by the reorganization, confident that the circulation was going up. As a matter of fact, he took time off to go to London "in search of a scoop," according to some sources, and returned to write a series of feature stories.

In a prospectus sent out to subscribers, Ingersoll, prior to the publication of *PM*, said the editorial purpose of the newspaper would be to tell as much of the truth as it could find out. More specifically he wrote: "We are against people who push other people around, just for the fun of pushing, whether they flourish in this country or abroad. We are against fraud and deceit and greed and cruelty and we will seek to expose their practitioners. We are for people who are kindly and courageous and honest. We respect intelligence,

sound accomplishment, open-mindedness, religious tolerance. We do not believe all mankind's problems are now being solved successfully by any existing social order, certainly not our own, and we propose to crusade for those who seek constructively to improve the way men live together. We are Americans and we prefer democracy to any other principle of government."

Technically *PM* has a number of innovations. Each story is complete on its page. There are no "continued on page-." It uses both photographs and artists' drawings to illustrate news stories. Its various departments—foreign, national, New York, labor, business, opinion, the press, theatre, movies, radio, living, food and advertising digest—and the page number on which they appear on the issue are listed on the front page. In addition, the radio news programs of each day are listed on the front page. Thus one column of the front page is given over to a table of contents and the day's news by radio, and the remaining three columns to a news story or picture. The tabloid technique of telling a story in pictures is employed often, but is not a rule. Some others use no picture illustrations at all. The statement that *PM* imitates no other newspaper is apparently true.

The paper is now housed in a three-story brick and stucco factory in downtown Brooklyn, which will gradually be transformed into modern, permanent editorial offices. The name *PM* was an accident. A typographer had slapped *Newspaper* across the masthead of a dummy copy and Ingersoll thought the name *Newspaper* good enough for temporary purposes. Prospectuses and correspondence referred to the prospective daily as simply *Newspaper*. Then a gossip columnist, mistaking a gag credited to playwright Lillian Hellman as the truth, called the paper *PM* in his column. So many outsiders began using the name that Ingersoll decided to leave it at that. The name inspired a popular song called *6 PM*, which so pleased Ingersoll that he has been paying a supplementary royalty to its authors.

IRONSIDE, SIR EDMUND May 6, 1880-
Former chief of the British Imperial General Staff; now commander in chief of the home forces

Sir William Edmund Ironside stands six feet four and weighs 258 pounds, which is why his troops nicknamed him "Tiny." When "Tiny" Ironside, "attired in yellow corduroy trousers and sport coat, took over his duties as chief of staff at the War Office in September 1939, his massive frame, his brindle bulldogs, his long cigars, his battery of pipes and his very name furnished British journalism with copy and color. Great Britain had found not only the man to direct her troops but also a rugged symbol of her war efforts."

Sir Edmund has always been a soldier. He was born on May 6, 1880, the son of Surgeon Major William Ironside, a Scot in the British Army (Royal Horse Artillery) Medical Service at Ironside, Aberdeenshire, Scotland. In 1899 young Edmund started his military career with the Royal Artillery and started what has come to be the Ironside legend. His name is mentioned in dispatches of the Boer War in which he is "supposed to have seized a Boer in his arms and crushed him to death." Later, as a wagon driver, he joined German troops in a campaign against rebellious natives in German South Africa, his duties those of a spy. After a couple of narrow "squeaks," he completed his job, and "disappeared into the routine existence of a British army officer."

Then came the World War. Ironside was the first British officer to land in France, and he proceeded to get himself promoted from gunner captain to brigadier general in 1916, after winning a Distinguished Service Order. A major general at 38, he was given one of the hardest assignments possible. He was sent as commander in chief of the Allied forces to the North Russian port of Archangel in 1918 to forestall a German thrust to the Arctic. The Germans didn't advance, and Ironside found himself opposed by Bolshevik propaganda instead of the Kaiser's soldiers. The morale of the varied Allied forces was far from high, and Ironside, haranguing in many languages, "performed prodigies in maintaining discipline and inspiring his listless troops with a spirit of cohesion." His superiors summed him up after Archangel. They called him "that rare combination, a good staff officer and theoretical soldier who has been successful as a practical combat officer." For his Arctic services Ironside received a knighthood in 1919.

Ironside's next post was also one of lost hopes. He took over the command of the Ismid force at Constantinople and dealt with Turks, Greeks, Bolsheviks and the intrigues on the Golden Horn. Again he accomplished a feat of extrication, maneuvering against the Turkish troops of Kemal Pasha. It was at this time that he wryly told a friend, "I seem to have become a specialist in retreats."

He appeared as retreat specialist again in 1920 in North Persia, where another Allied scheme for crushing the Bolsheviks hadn't worked out. He supervised the withdrawal of the North Persian force from the Caucasus region of Russia and later from Mesopotamia. An airplane accident in

SIR EDMUND IRONSIDE

which both his thighs were broken closed Sir Edmund's Near Eastern chapter.

In 1922 he took over the command of the Staff College at Camberley, four years later was commander of troops in India, and three years after that, in 1929, was appointed to the lieutenancy of the Tower of London. "This honor, conferred usually upon decorative gentlemen in their dotage, seemed to mark the end of his military career."

However, in 1936, a full general at 56, he advanced to the command of the Middle Eastern forces, one of the key posts of Britain's Imperial defenses. Then he returned to assume command of England's eastern area, and when in 1938 he took over the governor generalship of Gibraltar it certainly did not mean demotion. At Gibraltar, Ironside overhauled defenses and added a new item to the Ironside legend. "There was a catchy image in the association of two names, of man and rock: Ironside and Gibraltar."

When Hore-Belisha in the War Ministry started housecleaning Britain's military set-up, Sir Edmund was chosen over 50 officers of senior rank as inspector general of the Overseas forces. When War was declared in September 1939, he was made chief of the Imperial General Staff, the highest military job in England. On May 26 he relinquished that office to become commander in chief of the home forces and was succeeded by Sir John Greer Dill.

A few weeks after the declaration of War, Ironside became a familiar figure to the English public, impressed by his physique, intrigued by reports of his success as a linguist and his brilliant conversation. The spotlight was turned on his family, too. In 1915 he had taken a week's leave between two offensives to marry Mariot Isobel Chayne. They have one daughter and one son. When their fifteen-year-old son, Edmund Jr., visited French headquarters upon General Gamelin's (see sketch this issue) invitation, there was a good deal of anger in the House of Commons at the idea of such a privilege having been extended to a minor and a civilian. Young Edmund, upon his return from his visit to the army, assured reporters that he still wished to join the navy.

"Ironside spends his rare moments of leisure at a small cottage in Hingham, Norfolk. Here the General's horses are kept. In years gone by, Ironside has greatly enjoyed riding to hounds. While he never has excelled at sports, he loves fox hunting and fine jumping horses. In the hunting field the massive General on a still more massive hunter cuts an impressive figure. But his disrespectful fellow huntsmen were wont to cry, 'Here comes the tank,' when Sir Edmund hove into view."

JACKSON, CHEVALIER Nov 4, 1865-
Physician; surgeon

Address: Temple University Hospital, Philadelphia, Pennsylvania

The House of Delegates of the American Medical Association voted to Dr. Chevalier Jackson the Distinguished Service Award of the A. M. A. "for achievement in the art and science of medicine" in June 1940.

CHEVALIER JACKSON

Dr. Jackson is famous for his work in the development of methods for seeing into the esophagus, larynx and stomach and for his skill in removing foreign bodies from the throat and lungs. Nails, safety pins, hair pins, buttons, jackstones, coins and even false teeth have all been successfully retrieved by him. There was a time when 98 per cent of those who inspired foreign bodies died, but Dr. Jackson's successful use of the bronchoscope has now made it possible to remove safety pins or false teeth through the mouth without the slightest risk or harm to the patient.

Dr. Jackson is known, too, for his campaign to have poisons, especially lye, labeled as poisons. For years he tried to interest people and the government in the need for this; for years he lobbied in Congress and finally, in 1927, saw his aim fulfilled.

The life of Chevalier Jackson, told in his autobiography (1938) has been a hard yet singularly happy one—a life simple in its devotion to medicine. He was born in Pittsburgh on November 4, 1865, but his family, shortly after his birth, moved to Greentree Township in Pennsylvania. As a boy, he says, "I had no intimate friends and few companions," and his school life at the Greentree Township Public School was an unhappy one. Undersized and frail, inter-

ested in his studies, he felt keenly the difference between the miners' sons there and himself, and the miners' sons felt it, too. "Jeering, taunting and physical abuse" were a regular feature of recess periods.

When "Chev" was still in his teens, his family suffered sharp financial reverses. They opened a summer hotel which never was much of a success, and "Chev" worked there summers. He always knew he wanted to be a doctor, even though he was fully aware of the hardships it would mean, and finally he entered the Western University of Pennsylvania, now the University of Pittsburgh, to take his pre-medical course. He commuted from home, earning whatever he could by painting china and glass.

In 1884 Jackson entered Jefferson Medical College in Philadelphia with exactly 63 cents a day to meet all his expenses, outside of tuition, for the year. He cooked his own meals, lived in a dollar-a-week room, spent his summers selling medical textbooks and fishing for cod. In 1886, after two years of privation and hard work, he was graduated.

Jackson knew he was interested particularly in the throat, even though doctors were, at that time, discouraged from specializing, and he scraped up enough money to go to Europe and study laryngology. Most of the money came from an old guest at his parents' hotel who told Jackson to get the best information so that he could treat his chronic laryngeal ailment. The time abroad was profitably spent, and when he returned Jackson opened an office in Pittsburgh, specializing in diseases of the throat.

Most of his time was spent with the poor, and Jackson was poor himself. He invented the esophagoscope and then became interested in bronchoscopy. But his constitution, always frail, went back on him—"most of my life," he says, "has been a battle against impaired health." In 1911 he was stricken with tuberculosis. He kept working, resting 12 hours out of every 24. In 1913 he had a very bad attack and was forced to go to bed. Somehow he enjoyed that attack. His wife, Alice White, whom he had married in 1899, took good care of him, and he was able to write the book he long had wanted to write—*Peroral Endoscopy and Laryngeal Surgery* (1914). The book was well received and has come to be regarded as marking a new era, that of direct inspection. All his other books—*Bronchoscopy*, *Esophagoscopy and Gastroscopy* (1934); *Foreign Body in Air and Food Passages* (1934); *Diseases of the Air and Food Passages of Foreign-Body Origin* (1936); and *The Nose, Throat and Ear and Their Diseases* (1929) which he edited and to which he contributed—have been welcomed by doctors everywhere.

By the time of publication of his first book, Dr. Jackson was famous. He was on the staff of 14 Pittsburgh hospitals, he was a medical professor at Western Pennsylvania Medical College and he had built up an international reputation. But he still was poor—"I could never mentally interpret achievement in terms of dollars."

In 1916 Dr. Jackson pulled up his stakes and moved to Philadelphia to establish a bronchoscopic clinic. Here he suffered another attack of tuberculosis, but recovered shortly and soon found himself in more comfortable circumstances than he had ever enjoyed—mostly because he hired a financial secretary to take care of all his money matters. In Philadelphia medals began to come thick and fast, and he was simultaneously on the faculties of all five medical colleges of Philadelphia, a most unheard-of thing.

Dr. Jackson is now considered the dean of laryngologists. His method of removing foreign bodies from the lungs by the insertion of tubes through the mouth and his techniques of laryngeal surgery have been universally adopted. Though an old man now, Dr. Jackson still devotes all his time to his work, still enthusiastic and agile.

His renowned clinic on the second floor of Temple University Hospital annually handles about 5,000 cases, and "a Ford-plant assembly line works no more smoothly." Dr. Jackson operates on Mondays and Thursdays, with his son and co-author, Dr. Chevalier L. Jackson, and two staff men assisting. There is always a fifth present—a fortunate doctor who has won the privilege of working with the master for a three months' period.

Now, as during all his life, he has very little social life, not because of an unsociable nature, he says "but simply that I felt I could not spare the time from the completion of a life's work." He eats sparingly, avoids meats and never drinks or smokes. He says he has always been grateful for "the clear eye and steady hand that only total abstinence from alcohol and tobacco could give."

Dr. Jackson is and always has been a reserved man, happy to be alone with his work and the painting he does for diversion. One of his colleagues once said: "Dr. Jackson is generous to a fault, eager to help anybody out of difficulty at almost any sacrifice. We have long been working together. He has done many kind things for me during the past 10 years, yet I feel I do not know him any better now than the day I first met him."

Dr. Jackson has devoted himself to his work with almost the devotion of an anchorite. And the dominating passions of his life have been his faith in human nature, his "love of truth, of little children, animals, nature and his great desire to relieve human suffering."

JACKSON, ROBERT HOUGHWOUT
 (how'üt) Feb 13, 1892- Attorney General
 of the United States

Address: b. Department of Justice, Washington, D. C.; h. Lakewood Rd., Jamestown, N. J.

The appointment of Robert H. Jackson, January 4, 1940, as Attorney General of the United States, was no surprise to anyone who had followed his notable career. Most people recognized his position as "favorite son" of President Franklin D. Roosevelt, who thinks Jackson will some day be a great liberal President of the United States.

The son of William Eldred and Angelina (Houghwout) Jackson, Robert was born on the family farm at Spring Creek, Pennsylvania, February 13, 1892. When he was a boy, his father, a horse breeder, moved the family to Jamestown, New York, because Western New York was better suited to horses. A precocious youngster, by the time "Bob" reached his middle teens he had absorbed the learning of the Jamestown and Frewsburg, New York high schools and was sent off to Albany to study law at the Albany Law School. He never went to college, but he spent many summers studying at the home seat of learning, Chautauqua Institute, and received from it their B. A. degree.

When he was 21 "Bob" Jackson was admitted to the New York Bar and hung out his lawyer's shingle in Jamestown, the largest town of the district, where he still maintains his residence. On April 24, 1916 he married Irene Gerhardt of Albany. They have two children—William Eldred (born in 1919) and Mary Margaret (born in 1921).

Jackson never received a law degree—with the exception of an honorary LL. D. awarded him in 1938 by National University. After he left Albany Law School he obtained practical law experience through a practice of tremendous range. Every type of case came his way in those early years, and labor unions and large corporations alike were his clients.

As his practice grew, Jackson became increasingly identified with the business life of Jamestown. "Repeatedly," writes Marquis W. Childs in *Forum*, "he found himself on the side of the local enterprise, the native industry, that was fighting for independence, resisting the encroachments of monopoly control. For years he fought the battles of the Jamestown Telephone Corporation, which is still an independent company." After the crash of 1929, he directed the consolidation of the three banks in Jamestown, and was made a director of the new Bank of Jamestown. Jackson has served as vice-president and general counsel of the Jamestown Street Railway Company

ROBERT H. JACKSON

and of the Jamestown, Westfield and Northwestern Railroad, as well as of the Jamestown corporation counsel.

Jackson has never been elected to public office. He first entered the government in 1934 as general counsel of the Bureau of Internal Revenue. There he earned a reputation as "the most zealous tax collector Uncle Sam ever had." After exploring the infinite ramifications of the Mellon empire, he brought a tax claim totaling, with penalties and interest, more than three million dollars. The hearing before the Board of Tax Appeals ran for eight weeks in Pittsburgh and in Washington. The tax liability was finally reduced to about \$750,000, but in a dissenting opinion the minority paid high tribute to the case Jackson had built up. Before this decision was handed down Jackson had been sent to the Securities and Exchange Commission to take charge of the government's Electric Bond & Share case to test the holding-company law of 1935.

Jackson's appointment, in 1936, as Assistant Attorney General in charge of the anti-trust division was a natural result of his recent excursions into the ways of Big Business. He hates entrenched wealth as much as he despises political corruption. Before he went to the Department of Justice he had definite ideas about antitrust procedure. As soon as he was in charge of the division he began to put those ideas into effect, basing his policy on the interest of the public in the prosecution of monopoly. He started the drive against monopoly in 1937 with the suit against Mellon's Aluminum Company of America. He later instituted the cases against the big oil companies and against the motor finance firms. It was largely on his suggestion that a formal, extensive investigation of monopoly was started.

In 1937, partly to build him up for the Presidency, for which the Governorship of New York is the best stepping stone, and partly because he had become a political force to be reckoned with, some of Jackson's friends persuaded him to run for Governor of New York. Jackson, to be sure, remained skeptical of the move, as well he might, for neither Postmaster General James A. Farley, who dominated the Democratic Party machinery in his State, nor other political bosses would support Jackson.

So Jackson went back to Washington. Appointed Solicitor General of the United States (chief of the government's legal staff) in 1938, he has argued more Supreme Court cases involving constitutional law than Daniel Webster. During the term ending in June 1939 he argued 24 cases, of which he lost only three. Despite contrary economic views, even the older members of the Supreme Court pay high tribute to Jackson's ability, and Chief Justice Hughes has called him "the ablest Solicitor General." A few weeks before his forty-eighth birthday, Jackson was appointed Attorney General.

Jackson has subscribed to the ideals and objectives of the New Deal since long before the New Deal was heard of. He has fought for them unspectacularly but brilliantly. He has sacrificed nothing for position but has consistently promoted the cause of men who were particularly suited for certain key positions, or whose appointments would best further the purposes of the New Deal. One Washington columnist has written of him: "Many contemporary Washington figures seem to have been eroded by the passage of time. But Jackson's stature has not been impaired."

Marquis W. Childs has written of Robert Jackson: "He will stay in Washington as long as he feels he is useful. At 48 he has an incurable belief in the processes of democracy. Those who have watched him in Washington believe that ... his star inevitably will rise in the future."

Since his appointment Robert Jackson has been the busiest—and some say the most harassed—man in Washington. In June 1940 the whole alien problem was dumped in his lap when the Bureau of Immigration and Naturalization was transferred to his department. He proposed and took charge of alien registration and had to fight the alien discrimination tendency that followed. He had to carry on the investigation of Fifth Column activities, while at the same time trying to counteract the vicious effects of the Fifth Column scare and defend the Bill of Rights. He instigated anti-trust action against oil companies and faced the Supreme Court on the regulation of the bituminous industry. He recently clarified the Hatch "clean politics" Act, rapping both parties on the fingers.

Two of his rulings created considerable stir: The first was his opinion of September 4, 1940 when he upheld President

Roosevelt's action in sending over-age destroyers to Great Britain. In October he created an uproar by holding that companies judged by the National Labor Relations Board to be guilty of unfair labor practices should be barred from further government contracts. "The findings of the NLRB," he wrote in answer to a question from Sidney Hillman (see sketch this issue) "are binding and conclusive upon other agencies of the executive branch of the government unless and until these findings are reversed by a court of competent jurisdiction." Since this ruling affected important firms like Ford and Bethlehem, it was greeted with objections from many quarters. Cries of rage subsided, however, when he explained that this opinion had no bearing on the awarding of defense contracts which need not be withheld because of labor policies of contractors. This was resented by many labor leaders as a backing down on the part of the Administration.

In 1940 Jackson's new book, *The Struggle for Judicial Supremacy*, was published.

The Attorney General is moderate in all things but his capacity for work. He does not smoke and seldom takes a drink. "There is about him a quality of buoyant health and well-being." A thoroughly unaffected person, he likes simplicity. He is probably the only Cabinet member who drives his own car. As Solicitor General he was given a suite of two rooms: a huge and imposing room and a small one meant to be a study. Jackson chose to work in the study and put his secretary in the spacious office.

An outdoor man, Jackson is fond of sports—especially of fishing, shooting and horseback riding. He is a good softball pitcher and a fine campfire cook. He and his gay and charming wife are accomplished figure skaters, and enjoy dancing together as well. Jackson's chief hobby is raising horses, which was his father's business. All the Jacksons look forward to summer vacations on their farm in Jamestown, and to long hours of riding, roughing it and camping. Jackson keeps a small power boat, the "Alibi," on Lake Chautauqua. "The best thing about it," he says, "is that it has no telephone."

JAMES, ARTHUR HORACE July 14, 1883- Governor of Pennsylvania
Address: Harrisburg, Pennsylvania

One of the "dark horse" candidates for the Republican Presidential nomination in 1940 was Governor Arthur H. James of Pennsylvania, who in 1938, following the administration of New Deal Governor Earle, restored to Pennsylvania the long reign of conservative Republican control. His campaign theme was economy. He pledged himself to operate the commonwealth upon a principle of thrift and husbandry. "We are going to take relief out

Bachrach

ARTHUR JAMES

of politics," he said. "We are going to humanize relief."

A coal mine boss' son who became a corporation lawyer, stocky, redheaded Arthur James was born in the heart of the anthracite region in Plymouth, Pennsylvania, July 14, 1883. He was the eldest son of James D. and Rachel (Edwards) James, Welsh immigrants. Governor James likes to recall that he was not born to riches and luxury, but went down into the mines during his boyhood. This was during summer school vacations. He started as breaker boy (slate picker) but rapidly rose as a nipper, brakeman and bratticeman. Once he drove mules ahead of loaded coal cars through the colliery gangways. At night after doing his homework he read slowly and distinctly from two *Bibles*, Welsh and English, to his father, who was studying shorthand. To this early practice he attributes his public speaking ability.

Ambitious to become a lawyer, Arthur James entered the Dickinson School of Law at Carlisle, Pennsylvania, youngest member of his class. He was active in sports and a member of the basketball team. In 1904 he received his LL. B. He was admitted to the Bar of Cumberland County, and later opened his own office in Plymouth. His first years were lean, but he steadily established himself until he was able to open another office in Wilkes-Barre. In 1912 he married a young school teacher, Ada Morris. Twins were born to them in 1915, the girl, Dorothy, surviving. A second son, born four years later, died in 1939. The death of Mrs. James occurred in 1935.

Arthur James entered politics in 1919 when elected district attorney of Luzerne County. During the War he administered the selective service laws and became known as a good law enforcer. He became the State's

Lieutenant-Governor in 1926: as presiding officer of the Senate he was characterized by "a grasp of intricate legislative complexities." In 1932 he was elected judge of the Pennsylvania Supreme Court, thus keeping intact his record of never having been defeated for office.

In 1937, with a Democratic Administration in control, James decided he would lead staunch Republicans to victory. He conducted a big campaign, trekking all over the state and making as many as 25 speeches a day. He assured the people he was a poor boy up from the mines, a man who shared their lot. "Thirty years ago when I left that coal mine in Plymouth I left my heart with the people in it." He was elected by a strong majority.

To keep his economy pledges, Governor James first repealed outright or amended the enactments of "fat cat" Earle's administration, abandoning most of Earle's projects. His opponents complain that he repealed the labor and workmen's compensation laws, authorized sheriff sale of tax-delinquent property, gave industry the right to work women till midnight, postponed state subsidies to schools and health institutions, and that he further financed the deficit by cutting the relief appropriations in half at a time when there was a simultaneous cut in WPA rolls. The amendment of the state's "little Wagner Act" provisions to protect employers as well as employees kept several industrial concerns in the state, however, and the outbreak of the War in 1939 resulted also in increased production in the steel plants. These "new" industries were to give those on relief jobs—the "Give-a-job" plan.

Accordingly a series of advertisements under the signature of James appeared in the *Saturday Evening Post* and *Nation's Business* saying: "Production is up, employment rising, industry expanding . . . figures show stimulation of employment by industry to the extent of 400,000 new jobs." His political adherents claimed that he had also saved the State millions of dollars by abolishing 2,000 useless and unnecessary government positions and that he had put relief on a business basis. Nevertheless writers in the *New Republic* and other papers who toured the state found a large number of "ghost" mining and steel towns, others with almost all families on relief, a four-day strike in May 1940 of 4,500 miners near Pittsburgh in protest against indiscriminate firing of miners.

Governor James is fond of all sports, particularly duck-hunting, fishing, rowing, swimming. He is frequently heard singing as he takes his morning walk. He is a member of the Board of Trustees of the Methodist Church, first president of the Plymouth Kiwanis Club and a member of Plymouth Fire Company Number One. He has been given numerous honorary degrees. His love of hiking is as typically a part of him as reading the *Bible*, for from

both practices he obtains comfort and inspiration. His favorite Biblical quotation is found in Psalms: "I will lift up mine eyes unto the hills, whence cometh my help."

JOHNSON, HAROLD OGDEN See
Olsen, J. S.

JOHNSON, HUGH SAMUEL Aug 5,
1882- Newspaper columnist
Address: b. 1626 K St, N W, Washington,
D. C.; h. Okmulgee, Oklahoma

Hugh Johnson Says is a column that reaches a large part of the American public every day. What Hugh Johnson says is usually sulphurous, bumptious, opinionated—seldom pulling any punches. "Hell hath no fury like General Johnson's scorn." For a long time Johnson has been one of the most outspoken Democratic critics of the New Deal and even claimed credit for having unwittingly launched the Willkie boom by his statement that if Willkie (see sketch this issue) were nominated he would make a powerful candidate and, if elected, a great President. The Presidential campaign found him warning us that Roosevelt's reelection would mean "the last of democracy as we have known it" and offering to eat his own column if Gallup's (see sketch this issue) poll had predicted the results correctly. Although General Johnson favors a strong national defense and was an ardent advocate of conscription, he believes the President is leading the United States into war, and this idea makes him use his most original adjectives and nouns. Among other things, President Roosevelt is "the real appeaser." And, Johnson asks, "what are we doing and risking in Asia?"

Former cavalry officer, writer of boys' books, businessman, NRA and WPA administrator, the General is one of the most colorful characters in public life and one of newspaperdom's greatest masters of invective. He was born August 5, 1882 in Fort Scott, Kansas, the son of Samuel and Elizabeth (Mead) Johnson. There he "ate, slept, and learned to spell to the discordant accompaniment of bugle calls, whinnying cavalry horses, and bawling top sergeants." The children in the neighborhood remember him at the age of four for his cry: "Everybody in the world is a rink-stink but Hughie Johnson and he's all right!" At 15, after his family moved to the Oklahoma Territory, he tried to run away to join the Rough Riders, was caught on the station platform by his father, dissuaded only by the promise of West Point. Upon finishing Oklahoma Northwestern Teachers College in 1901 he got the promised appointment and was graduated from the military academy two years later, the youngest in his class, with a reputation as "one of the most talented hazers" who ever attended the school and a memory of two years' membership in the Salt Creek Club, whose motto was: "Never bone today what you can bugle tomorrow." He was commissioned a second lieutenant of cavalry and the following year married Helen Kilbourne. (They now have one son, Captain Kilbourne Johnson.)

There followed years of routine military service in Texas, San Francisco and the Philippines, during which he acquired the nickname "Tuffy," published *Williams of West Point* (1908) and *Williams on Service* (1910), "two boys' books chockfull of chivalry, courage and last-minute touchdowns," wrote numerous short stories and ended by being sent by the army to the University of Cali-

JOHNSON, HUGH SAMUEL—*Continued*
 fornica. There he finished in two years a three-year course which gave him both B. A. (1915) and Doctor of Jurisprudence (1916) degrees. After California he was a member of the Pershing Punitive Expedition which dashed over the Mexican border after Villa, but in October 1916 was transferred to the office of the judge advocate in Washington.

Johnson tells with pride in his book, *The Blue Eagle from Egg to Earth* (1935), how, months before the United States declared war on Germany, he originated the majority of the provisions of the Selective Service Act; how, illegally and without authority, he had 30,000,000 registration forms printed before the act was passed; how he wrote Wilson's proclamation ("It is in no sense a conscription of the unwilling; it is rather a selection from a nation which has volunteered in mass"); how he "sold" conscription to the American people.

His talents next brought him to the War Industries Board as representative of the Army general staff, where he helped a group of men headed by Bernard Baruch regiment industry, and then to the head of the Purchase, Storage and Traffic Division of the general staff, in effect for the last four months of the War. By 1918 he had acquired the title of brigadier general, commanding the 15th Infantry Brigade, but wasn't allowed to go to France.

When Johnson resigned from the service in February 1919 he could have had his pick of several hundred good jobs in private industry. He chose to become general counsel (later vice-president) of the Moline Plow Company, in association with George N. Peek. The farm slump soon forced liquidation, and although in 1925 the business was reorganized with a new company, by 1927 Johnson had become associated with Bernard Baruch as industrial and economic adviser. Since Baruch had achieved the unofficial position of adviser to United States' Presidents, Roosevelt's frequent consultations with both Baruch and Johnson soon after his nomination came about naturally. And it was natural enough, too, that Johnson should receive the position of administrator for Roosevelt's newborn NRA on June 16, 1933, with the job of selling industry the idea of "fair-trade-practice codes reminiscent of those of war-time."

"When Johnson first struck Washington he gave the most exciting press conferences within the memory of the oldest inhabitant," according to the late Heywood Broun. Looking rather like Captain Flagg in *What Price Glory*, "gruff and tough," his pet phrases "you guys", "cut out that guff", "bunk", "hokey", "chiselers," tireless, rabid in his devotion to his job, the fiery general dramatized the New Deal as no one else could. He turned out to be a better evangelist than administrator, however—or that seems to be the consensus of opinion.

Business winced at his tirades and constant threats to "crack down"; labor complained more and more that his eloquence in defense of its rights stacked up with few of his actions; economists attacked his theories; others found him inconsistent, unable to stick to a decision. Although Roosevelt's faith in him never wavered, in 1934 Johnson resigned, still friendly to the Administration and the New Deal.

In March 1935 came his courageous blast against Father Coughlin (see sketch this issue) and the late Huey Long while speaking at a dinner given him by *Redbook*, which was publishing his autobiography. United features promptly signed him up to do his present "fighting" daily column. Shortly afterward he accepted the position of Works Progress Administrator, although in his column he had called the new relief program "a new, if more ambitious kind of leaf-raking" which looked like "\$4,000,000 worth of boondoggling" to him. "Anyone who congratulates me on this job is crazy!" he announced when he took it; and he held it only until October 1935. The summer of the next year found him working as labor counsel for RCA during a strike in which, liberals claim, the RCA management employed "every union-busting dodge in the book." In 1937 Bromo Quinine ("for colds and simple headaches") signed him up for four broadcasts a week.

For some time Johnson's column had been enthusiastic neither about President Roosevelt's advisers nor various features of the New Deal which followed his beloved NRA; he had never been a "yes-man"; but he did not definitely turn against Roosevelt himself until the spring of 1937 brought demands for the enlargement of the Supreme Court. Then his editorial warnings of the Administration's threats to democracy grew more alarming daily, while he was already painting equally alarming pictures of a Fascist invasion of the American continent and plumping for the heaviest possible national rearmament. In 1940 he was violent against the third term "draft."

Johnson isn't quite the brusque "Man of Action" that he sometimes pretends. He is an Anglican Catholic. At his Cedarhurst, Long Island home he likes nothing better than tending his roses and his collection of rare plants, raising wire-haired terriers, reading political science and economics. He has read almost everything and can produce an "unexpected, apt quotation from the Scripture" for any occasion. (Recently he brought clerical wrath down on his head by using Holy Writ for a pro-conscription broadside.) He is something of a hero-worshipper: Ludendorff, Newton D. Baker and Bernard Baruch are among the idols to whom he remains faithful; and Roosevelt used to be in the same gallery.

His charm is almost as famous as his energy; few even of Johnson's political enemies find it possible to dislike him personally. His wisecracks are "rapid and sizzling." He has a "childlike trick of abruptly holding little muttered conversa-

tions with himself" which is utterly disarming. And the effect of his smile, a "combination of shyness and hard-boiledness," is "as surprising as though an army tank suddenly paused, reached out a lily-fingered hand and handed you a posy."

 Who's Who in the Nation's Capital

JOHNSON, NELSON TRUSLER Apr 3, 1887- United States Ambassador to China
 Address: c/o Department of State, Washington, D. C.

During the first two months of 1940 the State Department of Washington felt anxiety concerning the life of our Ambassador to China, because of announcement by Japanese Army spokesmen that the Chinese were planning his assassination as a means of embarrassing the Japanese in their international relations. But in March 1940 Ambassador Johnson was back in Chungking after his three-months' tour of Japanese-occupied cities, well and unharmed.

A career diplomat, Nelson Trusler Johnson was born in Washington, D. C. in 1887 and studied at the Sidwell's Friends School and at George Washington University. Languages were his best subjects at college, and he disclosed other linguistic abilities by mixing with the Southwestern Indians and learning their dialects. When a professor suggested a language appointment in the foreign service, Johnson took the examination, passed it easily and

Thomas D. McAvoy

NELSON TRUSLER JOHNSON

was sent to China. There for the past 30 years he has represented the United States in various capacities, except for short intervals in Washington.

During his early years in China he was shifted around so much that he developed a restlessness which still clings to him. In 1923 he was appointed chief of the Far Eastern Division of the State Department in Washington, in 1927 he was made Assistant Secretary of State, and two years later Minister to China. In 1935 he became Ambassador, with a salary increase from \$10,000 to \$17,000 per year. In China, a country to which he quickly became devoted, Johnson easily became adept at reading and speaking Chinese and has been of great service in making friends for the United States. He is a typical American who is able to translate his homey, honest viewpoint to the Chinese, who have great faith in him. His attitude has always been a cautious one in regard to Japanese aggression in China. In general he has followed the course advised by the State Department—"self-denial and restraint"; no provoking of Japan in regard to our interests in China; "sitting tight on the *status quo*." Johnson has been through hair-raising times in China—civil war, the Manchuria invasion, the Shanghai battles of 1932—and has found comfort in his favorite books, which he carries in his pockets—the *Analects of Confucius* in one and *Alice in Wonderland* in the other.

At 43, and regarded as a life-long bachelor, he married a school teacher from Cody, Wyoming, who was in Peking on a round-the-world tour. They have two children, Nelson Beck and Betty Jane. His wife and children stay in Peking while he transacts business at Chungking, where he may at any time be awakened in the middle of the

JOHNSON, NELSON—*Continued*

night by an air raid alarm and be forced to seek shelter in a dugout until the danger is over.

Described as "a regular Old King Cole," Johnson is "plump as a pillow. He has thinning pale-gold hair, with lashes and brows to match, a face all shades of pink, from salmon to sunset, big enough nose, strong chin, mouth with a chronic smile. In ricksha, cutaway, or gas mask he looks more like a tire salesman than an Ambassador."

 Who's Who in America

JOHNSON, OSA Mar 14, 1894- Author; explorer

Address: J. B. Lippincott Company, 250 Park Ave, New York City

Unsettled world conditions cannot stop Osa Johnson, widow of Martin Elmer Johnson, from returning to the jungles of East Africa, to the little compound which she calls home. She could never bear staying here in civilization for long, she says. "There is tropical fever, yes. But in the jungles there are no diseases comparable in number and deadliness with those of civilization. There are savage animals. I have been stalked by man-eating tigers. I have walked head on into ambushed lions. But always I was superior. I was the intelligent and stronger one, armed with a weapon. . . The dangers of the jungle are trivial compared with the dangers of civilization. Nature made the one, man the other. I have implicit trust in Nature's goodness."

For 27 years she had worked at her husband's side in Africa, Borneo, Australia and the South Sea Islands. Resting under an equatorial sun, drenched by tropical rain or freezing in the bitter cold of high mountains by water holes, they waited with camera or notebook until nearly all the wild beasts came to be captured with the lens.

Chanute, Kansas was the birthplace of Osa Helen Leighty, daughter of William Sherman and Ruby Isabel Leighty. At the age of seven Osa asked her father for 10 cents, an unprecedented amount for a brakeman father to give a child of seven—a sum that would buy a pound of steak or a gallon of gasoline. It was to have six pictures of her three-year-old brother taken by an itinerant student photographer. The photographer, Martin Johnson, on his first adventure and 11 years her senior, was the man she married when she was 16. In the meantime he had worked in his father's jewelry store in In-

OSA JOHNSON

dependence, Kansas; with only \$4.25, traveled to Europe on a bet; and accompanied Jack London on the voyage of the "Snark."

Discouraging months of haphazard troop-ing, with Martin lecturing and showing the cannibal pictures taken on the "Snark's" trip, accompanied by Osa singing and dancing, marked the early days of their marriage. Finally they got an Orpheum booking which enabled them to save enough to plan an expedition to the South Seas. They were captured by Malekula cannibals and released by the intervention of a British gun boat. Several years later (1914), they returned to the same island, and with movies of their previous visit made friends with the islanders—completed a camera record to establish the existence of cannibalism among savage tribes. This was the first of 15 motion picture features, some produced under their own name, Martin Johnson Pictures, Incorporated.

They returned home periodically to show the records of their trips and lecture about their adventures, but never stayed for long. In 1917 they went to explore North Borneo around the upper reaches of the Kinabatangan River, to photograph wild animal life and the savage Murat and Tengarrah tribes.

In 1921 they made their first expedition to Africa and were so enchanted with the abundance of wild life that they have made repeated return trips, producing their historic feature films, *Simba*, *Congorilla* and *Baboonia*. They discovered Lake Paradise, a crater lake on the Northern frontier, and there spent four years filming the vanishing wild life for the American Museum of Natural History, New York.

In 1932 the couple adopted airplanes and in two Sikorsky amphibians, "The Spirit of Africa" (painted to resemble a giraffe) and "Osa's Ark" (so named because Mrs. John-

son was always rescuing wounded animals), flew 60,000 miles over all parts of the African continent.

Following an airplane crash which claimed the life of her husband in California in 1937, Osa Johnson dedicated her life to carrying on their scientific and film work, and returned in that year to Africa to make the largest motion picture expedition ever undertaken, resulting in the motion picture *Stanley and Livingstone*.

She collaborated with her husband in writing *Cannibal Land* (1922); *Camera Trails in Africa* (1924); *Lion* (1929); *Congorilla* (1931); and *Over African Jungles* (1935). Independently she has written a number of children's books—*Jungle Babies* (1930); *Jungle Pete* (1932); and *Osa Johnson's Jungle Friends* (1939)—and many stories for children which have been published in magazines. *I Married Adventure* is the Book-of-the-Month Club selection for June 1940, and a motion picture of the same title has been released. Both deal with the 27 years' adventure Osa and Martin Johnson faced in dangerous jungles in all corners of the world.

Mrs. Johnson is listed in *American Women* as an explorer, motion picture producer, author and lecturer. As a lecturer of five-feet-two, weighing 112 pounds, she is "chicly dressed, with a pert little hat perched over one eye, has lovely eyes and tiny feet, and the African sun doesn't seem to have damaged her complexion."

She has also achieved note as a designer of animal toys, animals resembling as nearly as possible those she has had as jungle pets. These toys are sponsored by the National Wild Life Federation, as a means of interesting young children in wild life conservation.

Fond of clothes, she has been acclaimed as one of the 12 best-dressed women in America, and says: "I'm a woman in the jungle. At the end of the day I get into royal blue satin tuxedo pajamas which have zippers on the sides and buttons of lipstick red." She and Irene Castle were the first in this country to have permanent waves. She was described by one interviewer as "having the face and form of a movie star, the heart of a home-loving woman, and the courage of a lion."

Johnson, O. H. *I Married Adventure*
1940

JOLIOT-CURIE, IRENE Sept 12, 1897- (zhōl-yō' kŭ-rē ē-rēn') Scientist; winner with her husband, Frederic Joliot, of the Nobel Prize in chemistry, 1935; also Barnard Gold

Medal for Meritorious Service to Science, 1940

One cannot tell the story of Irène Joliot-Curie without telling of her parents, for she is the daughter of Pierre and Marie Curie, famous discoverers of radium. She was born while they were searching for radium, and practically grew up in the laboratory. She was only a little girl when her parents won the Nobel Prize of 1903 jointly for their work in discovering radium. Her father was killed in an accident in 1906, and Marie Curie continued the scientific work alone, winning in 1911 the second family Nobel Prize, this time for isolating radium.

Irène Curie became her mother's assistant, working with her at the Radium Institute of the University of Paris. There she met Frederic Joliot, eager young scientist and one of her mother's assistants. Marie Curie lived to see her daughter Irène marry young Joliot in 1926, lived to see her begin the same kind of scientific partnership which she and Pierre Curie had enjoyed. Her old age was gladdened by being able to watch the two young people develop into fine, able scientists.

Marie Curie did not live to see her daughter and son-in-law duplicate the honor she and Pierre had, the joint winning of a Nobel Prize. The Nobel Prize in chemistry awarded jointly to Frederic and Irène Joliot-Curie in 1935 was the third in the Curie family. The Joliot-Curie's won it for discovering that radioactivity can be produced artificially, a pioneer work of the atom smashers. The cash award amounted to about \$41,000.

The Joliot-Curie pair were honored again in 1940 when they won the Barnard Gold Medal for Meritorious Service to Science. The prize, established by the will of Dr.

IRENE JOLIOT-CURIE

JOLIOT-CURIE, IRENE—*Continued*

Frederick A. P. Barnard, former president of Columbia University, is awarded every five years for outstanding discoveries "in physical or astronomical science, or such novel application of science to purposes beneficial to the human race." They have also been co-recipients of the Henri Wilde Prize and the Marquet Prize of the Académie des Sciences.

In many respects Irène Joliot-Curie is like her famous mother. The elder of the two Curie children, she not only inherited her mother's love of science, but her mother's lack of interest in clothes or the usual feminine vanities and fripperies.

Eve Curie (see sketch this issue), the younger sister, who took to music and writing and had no interest in science, never failed to be amazed at Irène's personality. Writing a sketch of the famous Irène in a Parisian weekly, she tells how even as a child her elder sister's conduct seemed to her entirely incomprehensible. "It used to dismay me," she says, "to see Irène Curie get a box of bonbons, put it away in her small yellow pine cupboard, always in such meticulous order, take it out once to eat a single bonbon, and finally forget all about the existence of this treasure, which I should have devoured in a few hours. I have seen her accumulate in her savings bank, franc by franc, sums which seemed enormous to me but which she never spent—simply because she never wanted anything."

Eve Curie tells of her sister's punctuality, her perfect record in doing homework, neatly and well. "This young person, so unsociable, so slow-moving and hard to approach, lacked the dash of the brilliant pupils," Eve says of Irène. "She had something better; knowledge once acquired was fixed firmly in her well-ordered mind. The examination periods for the bachelor's and master's degrees, which had made even our mother in her time feverish and nervous, were for Irène Curie just like any other days. She went quietly to the Sorbonne, came back certain of being accepted, and then waited without much emotion for the results, of which she was sure in advance."

Thus Irène Joliot-Curie acquired her B. A. and M. A. degrees, and quietly, with no hesitation, began her life's work of scientific research. In 1921 she published her first essay on physics. Fourteen years later when she was 38 she received the Nobel Chemistry Prize with her husband.

During the First World War Irène Curie served as a nurse, and her unruffled calm and constant good humor proved a boon to wounded soldiers, just as it did later to the laboratory students whose experiments she supervised at the Radium Institute in Paris. "I have never succeeded in making Irène angry," Eve Curie writes, "nor have I ever heard her say anything nasty, and to my knowledge she has never told a lie in her life." But on the other hand Madame Joliot-Curie will not do anything that bores her, such as seeing importunate people, taking

interest in clothing or showing interest at public receptions.

She likes sports, and even when she has been working hardest has found time to ski, to canoe, swim and climb mountains. She hates city life, and has a house both in suburban Paris and in Brittany so that she can work all year round in a healthy atmosphere and lead a simple family life.

When she and her husband were married they agreed that the family name should be Joliot-Curie, and thus the name Curie has been perpetuated in their 12-year-old daughter and 7-year-old son. The name is also perpetuated in the "curie," the unit by which radioactivity of elements is measured. Madame Joliot-Curie signs her scientific papers Irène Curie, however.

Marriage made Irène Joliot-Curie more human, more tractable, Eve Curie says in an article translated from the French in *Living Age*. "I have seen her adapting herself little by little to family life, transforming herself into a housewife, growing deeply attached to the two children she has brought into the world. The impassive physicist now gets excited about social questions, even about political doctrines."

But tall, slim, bushy-haired, grave Madame Joliot-Curie has not allowed public questions or anything else to interfere with her scientific research. She was undersecretary for scientific research in the Blum Cabinet from June to September 1936, but resigned to continue her 10 or 12-hour day in the laboratory. Even the Nazi occupation of France could not keep her long from working: although the Germans requisitioned her equipment after the fall of France, in November 1940 they put it once more at her disposal. Nor has her pretty, fashionable sister, Eve, succeeded in making her more style-conscious. "All my efforts to get her to take care of her fine hair and to make up her face, with its firm and beautiful features, like a primitive portrait, have been in vain," writes Eve.

Madame Curie is a scientist first, a woman afterward. And she is carrying on from where her mother left off.

JOLSON, AL May 26, 1886- Comedian; singer

Address: c/o The Lambs, 130 W 44th St, New York City

The Jolson legend started on another chapter when the famous blackface comedian and mammy singer came back to Broadway after a year's absence in a sprightly comedy

called *Hold On to Your Hats*. The 1940 Jolson is streamlined. He has discarded the burnt cork and has, by some miraculous means, cured himself of his trick of falling to his knees whenever his songs touch on the sacred subject of his "mma-a-a-mmy,"—a time-honored practice that, he himself claims, has "given him that knee-sprung look." The critics greeted him with cries of joy. Besides being tops in entertainment, the production has turned out to be a nostalgia-fest. At the première Jolson sang *April Showers*, *Swanee*, *Sonny-Boy*, *Mammy*, of course—all the old favorites that had wrung the hearts of audiences many years ago and caused strong men to "totter out to send a night letter to their mothers."

"Jolson is a great, great man," wrote one critic. "He is one of the greatest dominators in the theatre. Every once in a while he leaves the stage to change his suit and snatch a drag at a gasper, but to his fans those brief absences are what might be called 'stage waits.'" All of the critics paid tribute to his inexhaustible ebullience: "His voice is a good 80 per cent of what it was 20 years ago, his vitality apparently 90 per cent... At the première he made many men over 40 cry as he sang [the old favorites from his stage career]. It was a nostalgic success and Mr. Jolson was very happy." Another critic says: "No doubt Jolson really does represent a phenomenon of cultural history. He has a style which he to some extent invented and which proved to be exactly what a large public wanted—a style which combined a persistent form of sentiment with a new sort of frenzied rhythm. Nor does he seem to have lost his knack, for when he lets himself go there is no great difference between the Jolson of today and the Jolson of the remote '20s."

The Jolson legend began with its hero fleeing his father's home for the doubtful and vagrant life of a minstrel. His father was a respectable Rabbi. The Yoelsons (Al Jolson's original name was Asa Yoelson and he had come from Russia with his parents when he was about seven years old) lived in Washington, D. C., and young Jolson's earliest ambition was to be a cantor. That ambition faded early in life, to be succeeded by a burning desire to be an actor. The boy began to run away from home, singing in cafés and saloons, following circuses. He tried at the age of 15 to join a Spanish American War regiment. From all of these ventures he was sent home or to one of his many relatives, penniless, often sick, but never discouraged. Once his father, in despair, sent him to a house of refuge.

His first appearance in the legitimate theatre was in 1899 in Israel Zangwill's *Children of the Ghetto*, in which he played in a mob scene. After that he traveled around with vaudeville and minstrel shows and passed through a long apprenticeship as an "end man" with Lew Dockstader's Min-

AL JOLSON

strels. He discovered "mammy," and America discovered him in 1909 in San Francisco, when he had to pinch-hit for one of the stars and sang his first mammy-song in blackface. After the last anguished invocation had shaken the rafters Jolson was a made man. Growing constantly more popular, he finally was engaged to play in the productions of the Winter Garden Theatre. His first show—a great success—was *La Belle Paree*, in 1911.

In the 14 years Jolson spent on the stage before Hollywood called him he was featured in a whole series of productions loosely known as Winter Garden Shows, in which he mostly appeared as "Gus," a stock character played in blackface. The productions were: *Vera Violetta* (1911); *The Whirl of Society* (1912); *Honeymoon Express* (1913); *Dancing Around* (1914); *Robinson Crusoe Jr.* (1916); *Sinbad* (1918-20)—all of them lavish Shubert extravaganzas. In 1921 he played in *Bombo* in a theatre that was named after him and in 1925 appeared triumphantly in *Big Boy*.

The impact of the Jolson personality on the American audience was terrific. Dynamic, vital, witty, he created a style of his own and precipitated a flock of imitators. His style of singing was emotional and tear-jerking—he depended on smashing abandon to put a song across, used such tricks as falling on his knees, talking off the second verse of a song. He has been called the greatest master of hokum in show business. Gilbert Seldes wrote of him: "No one else . . . so holds an audience in the hollow of the hand. . . I have heard Jolson in a second-rate show before an audience, listless or hostile, sing [an] outdated and forgotten song and . . . saw also the tremendous leap in vitality and happiness which took possession of the audience as he sang it."

JOLSON, AL—*Continued*

In 1927 Jolson started on his movie career by making *The Jazz Singer*, the first talking picture, for Warner Brothers. Based on his own story, it was a smashing success. He followed up with others, most of them glorifying his personality—a mush-mouthed mammy-singer with a voice and heart of gold. At about that time, too, he discovered the possibilities of father love and wrung people's hearts with his *Sonny-Boy*, which he made popular in *The Singing Fool*. He came back to Broadway in 1931 in a somewhat more sophisticated rôle in *Wonderbar*. That was his swan song. He left the theatre for the movies and the radio. Among the pictures that he made were: *Say It With Songs* (1929); *Big Boy* (1930); *Hallelujah I'm a Bum* (1933); *Wonderbar* (1935); *Go Into Your Dance* (1935); *The Singing Kid* (1936) and *The Rose of Washington Square* (1939). His influence in the motion picture industry as producer of *The Jazz Singer* remained considerable. He had a lot to say about the stories and plays bought by Warner Brothers. As new and more streamlined stars dawned on the horizon his popularity fell off and his pictures grew few and far between. He concentrated on the radio. He began his radio programs in 1932, varying his singing routine with "serious stuff." Later he shifted to weekly broadcasts from Hollywood over WABC of the Columbia Network, with Parkyakakus and Martha Raye. His style was usually running monologue interspersed with songs.

Throughout his career in the theatre as well as in the films he managed to keep America interested in him as one of its most fascinating personalities, even dabbling in its political destiny as he campaigned songfully for Harding, Coolidge and Roosevelt. A confirmed and joyous extrovert, he has made headlines with his domestic affairs. He was married three times: to Henrietta Keller in 1906, in 1922 to Alma Osborne, known on the stage as Ethel Delmar, and to Ruby Keeler in 1928. The nation was constantly posted as to his marital bliss or vicissitudes, suffered when his marriages broke up, watched breathlessly his courting. In 1935 he and Ruby Keeler (an ex-Follies girl and a well-known motion picture star in her own right) adopted a son, to whom Jolson has made many affectionate references on the radio. In 1939 he and Miss Keeler were divorced. That however, did not prevent her from staying temporarily in the Chicago production of *Hold On to Your Hats*.

In 1933 the country rocked when he knocked Walter Winchell out at a prize fight. Jolson's fistic victory over the gray-haired columnist who had been his friend was perhaps as much due to the not too serious lessons in boxing given to him by his friends Dempsey and Max Baer as to his opponent's being out of condition. The ensuing publicity caused him to remark

philosophically that: "You have to sock a columnist before you're really famous." Winchell's favorable comment about *Hold On to Your Hats* probably terminated the enmity.

Jolson's most characteristic trait is his inexhaustible vitality. He is a brown, lean man with a rolling eye and an irresistibly droll smile. He is an unashamed sentimentalist: used to have a youngster near the microphone when singing *Sonny-Boy*, and has been known to shed tears at a particularly enthusiastic reception. He likes to confide in his audience: to tell them how much money he sank in the show, what a wonderful girl Ruby is, something about his baby boy back in California. He is an inveterate gambler. He has been known to lose a fortune on a horse and is one of Broadway's heaviest stock plungers: likes the feel of ticker tape on his fingers. The only card game he is fond of is hearts.

Although he has never studied voice, for a time he nurtured operatic ambitions and he is interested in song writing. He has long wanted to direct a motion picture. He likes to sail, fish and play golf, has a farm in San Fernando Valley, California, where he raises walnuts and oranges, and in 1935 was elected the Mayor of Encino, a small town near his farm. His life has been full and exciting in all its aspects—theatrical as well as domestic. It can be best summed up by something else that Gilbert Seldes had written about him: "Whatever he does he does at the highest possible pressure."

JONES, E. STANLEY, REV. Jan 3, 1884-Missionary

Address: Clifton Springs Sanatorium, Clifton Springs, New York

Destined to become one of the greatest Christian missionaries, Dr. Eli Stanley Jones (he uses only the initial of his first name) was, at the age of 17, an untamed youth with little knowledge of or interest in religion. He and a group of boys went to church one day to hear an English minister because they had heard he pronounced English queerly. Young Jones was deeply moved by the sermon and joined the church. Other matters took up his time, however, and it was two years before he

heard another sermon that made him think seriously of religion.

Through the Rev. Bateman, young Jones was induced to study at Asbury College, Wilmore, Kentucky, from which he was graduated in 1906. It was while he was still in college that he felt the call to go abroad as a missionary. There was some conflict within him, for his mother was opposed to his going, and others believed that he should do evangelistic work at home. Nevertheless, in 1907, at the age of 23, he went to India as a missionary of the Methodist Episcopal Church.

The work was heavy for an inexperienced missionary. During the next eight years he was pastor of the English Church at Lucknow, superintendent of the Lucknow District, and principal of the Sitapur Boarding School. His work at this time was largely with the low castes. But as Dr. Jones writes in his book, *The Christ of the Indian Road* (1925), he "was strangely drawn to work among the educated high castes, the intelligentsia."

After work, Dr. Jones often played tennis at an Indian clubhouse with the high-caste Hindus and Mohammedans. One evening a Hindu official asked him why he had gone only to the low-caste Hindus to tell of Christ. Dr. Jones answered that he didn't think the higher castes were interested. The official answered: "It is a mistake. We want you, if you will come in the right way."

Thus began Dr. Jones' work among the high castes, the educated and student groups in India. That he has found the "right way" is evident from the esteem in which the Indians hold him. They call him "Rishi" (a saint). Yet Dr. Jones had not started his work without misgivings and questioning of his own abilities. In an interview he once told of the tense, nervous struggle of those early days in India, of the public debates he held, arguing the superiority of Christianity with Buddhists, Moslems, Hindus.

Dr. Jones asked Gandhi what should be done to naturalize Christianity in India. Gandhi, Dr. Jones declared, told him that the Christian missionaries should live more like Jesus Christ, that they should practice their Christian religion without adulterating it or toning it down and that they should study the non-Christian faiths more sympathetically in order that they might have a more sympathetic approach to the people.

These points, Dr. Jones declared, he decided to put into practice because they went to the heart of things. He did put them into practice. In 1926 he spent several months in the school of the Indian Christian poet, Dr. Rabindranath Tagore, studying India's culture and religion. Dr. Tagore and Mahatma Gandhi are among his intimate personal friends, as was the late Charles F. Andrews, missionary and biographer of Gandhi. Dr. Jones also counts among his friends scores of other Indian leaders.

While Dr. Jones is officially a missionary of the Methodist Church, serving among the

REV. E. STANLEY JONES

high castes, his fame as a preacher, lecturer and author has spread far beyond India. He has been heard by hundreds of thousands of persons in Japan, Korea, Burma, China, the Philippines and Malaya. South Americans, a few years ago, thronged a series of meetings which he held in their principal cities, and his following in the United States and Canada is probably unequalled by any other living religious leader.

A few years ago, when he conducted the annual Lenten services of the Greater New York Federation of Churches, his addresses were broadcast across America by a chain of radio stations. In the autumn of 1938 he toured America as chief speaker in a University Christian Mission of the Federal Council of Churches, and brought his dynamic, intensely personal messages to young people in a dozen universities.

The department of evangelism of the Federal Council of Churches gave more Americans an opportunity to hear him in the summer of 1940 at two Christian Ashrams (Indian for retreats) held at Westminster Lodge, Saugatuck, Michigan and at Blue Ridge, North Carolina. Dr. Jones spoke at both retreats daily.

Dr. Jones' books, too, have enjoyed a tremendous popularity. His first, and one of his most popular and best known, *The Christ of the Indian Road*, he wrote in a month between speaking engagements when he was on furlough in America in 1925. He pounded it out in haste, for he was anxious to get back to his work in India. He was writing the book at the urging of a church executive who wanted a record of Dr. Jones' missionary impressions. He left the manuscript and thought no more of it until a printed copy reached him in the interior late in the year.

JONES, E. STANLEY, REV.—Continued

By that time the book was fast becoming a best seller. An honestly written, straightforward account of his evangelistic experiences in India, it is a story of a religion in practice, of Christian precepts freed from prejudice and self-interest. It so impressed certain political leaders in England that they asked their party's members in Parliament to read it as a help towards understanding India.

The Christ of the Indian Road sold 600,000 copies, an unusually high number for a religious book. It was translated into 12 foreign languages, several Indian vernaculars and into Braille. It made Dr. Jones an international figure.

On the heels of the success of the book came Dr. Jones' election as a bishop of the Methodist Episcopal Church in 1928, an office from which he resigned at once (24 hours after his election) because he wished to continue his work in India. Twice later he refused to be elected a bishop, preferring to devote his entire time to his missionary work.

The Christ of the Indian Road was followed by eight other books, written at intervals of about every two years. All have had wide audiences and have been translated into many languages. Dr. Jones has also been a prolific contributor to religious publications.

Dr. Jones has decried the rivalry between various denominations and the petty quarrels over ritual. He believes that all divisive labels of Christianity should be dropped and that the denominations should become members of a Church of Christ in America.

Dr. Jones was born in Clarksville, Maryland, January 3, 1884 and was educated at the City College of Baltimore and at Asbury College. He received his M. A. degree in 1912 from Asbury College, his D. D. from Duke University and S. T. D. from Syracuse University. He was married in 1911 to Mabel Lossing. They have one daughter, Eunice, born in 1914.

JONES, JACK See Jones J. J.

JONES, JESSE HOLMAN Apr 5, 1874-
United States Secretary of Commerce; Federal Loan Administrator

Address: b. Department of Commerce, Washington, D. C.; Federal Loan Agency Bldg, 811 Vermont Ave, N W, Washington, D. C.; h. Shoreham Hotel, Washington, D. C.

December 1940 Bulletin: In the fall of 1940, Jesse Jones, acting in his capacity of Federal Loan Administrator, has signed an agreement to lend Brazil \$20,000,000 to set up her own steel industry and has been negotiating the question of further loans to China in exchange for essential defense products needed by the United States.

From October issue:

There were no dissenting voices when President Roosevelt announced his choice for Secretary of Commerce to succeed Harry Hopkins. His selection of Jesse Holman Jones meant, everyone felt, that he had offered that office "to a man who by training and experience is fit to hold it." A successful businessman and for the past eight years a successful government administrator, Mr. Jones is considered by both Republicans and Democrats, by New Dealers and anti-New Dealers "a splendid demonstration that government in business can be competent."

His job since July 1939 has been that of Federal Loan Administrator, in charge not only of the Reconstruction Finance Corporation and its affiliates which he formerly headed, but of the Federal Housing Administration, Electric Home and Farm Authority, Export-Import Bank of Washington, the Home Owners' Loan Corporation and the Federal Home Loan Bank system. President Roosevelt asked Congress to permit Jesse Jones to continue as Federal Loan Administrator while he is Secretary of Commerce, and most commentators agree that with the two offices he will be better able to coordinate the work of the Federal agencies in the Western Hemisphere.

Jesse Jones, who has loaned millions of the government's dollars to thousands of its citizens, knows personally "what it feels like for a businessman to lay a million dollars on the line." He has been a successful businessman since his teens. His father, William Hasque Jones (his mother was Anne Holman), was a tobacco planter in Robertson County, Tennessee, where Jesse was born, and Jesse worked for and with him almost from the time he was old enough to go out into the fields alone. His schooling was intermittent but his practical experience was large. There was the time when he wanted a horse, but got a small pig instead. Jesse didn't complain. He fed that pig until it was big enough to swap for a calf and he brought that calf up until he was able to get a horse in trade for it. He raised tobacco for himself on a plot near the house where "the turkeys and the chickens would pick off the worms for me" and made money on it.

When Jesse was 20 his father died, and Jesse went to Dallas, Texas, where an uncle had a lumber business. Within a year he was manager of the company in Dallas and by 1898 he was general manager of its main office in Houston. It was in Dallas that Jesse Jones began seriously to borrow money, make a profit on it, invest his profit and make more. He started by borrowing \$500 from the local bank. "I didn't have any use for it," said Jones, "but I knew I'd need money some day soon, if I was ever to get a start." He put the money away in a drawer and later paid it back. He did the same with larger sums, always repaying them promptly. Then he found he needed \$10,000 to buy up some timberland and was able to get it. Within five years he had disposed of this land for a profit of fifty thousand dollars.

In Houston Jesse Jones branched out from the lumber business, and he is considered mainly responsible for the city's growth after the panic of 1907. He built skyscrapers, office buildings, stores, a hotel, a theatre, and then spread out to Fort Worth and Dallas. He organized and became chairman of the Texas Trust Company and was active in most of the banking and real estate operations of Houston.

During the First World War Jones spent 18 months in France as director general of the department of military relief of the American Red Cross and took charge of the building of canteens and recreation halls in all the American Army camps. In 1919 he was sent back to Europe to help organize the League of Red Cross Societies of the World.

When the War was over Jesse Jones was married to Mary Gibbs of Mexia, Texas, and went back to his old jobs of putting up buildings and organizing banks. The field of his operations this time was New York City, where he put up one apartment house on Park Avenue and one on Fifth Avenue, built an apartment hotel, a theatre

JESSE JONES

and a professional building. Then he went back to Houston, bought the *Houston Chronicle* and started to become active in politics. From 1924 to 1928 he was director of finance for the Democratic National Committee, and in 1928 chairman of the advisory finance committee. In that year he was personally responsible for getting the Democratic convention to Houston.

It was a Republican, however, who first brought him to Washington. In 1932, when the Reconstruction Finance Corporation was organized, President Hoover asked Garner, then Democratic leader in the House, for a list of Democrats from which he could select a director. Garner handed in one name, that of Jesse H. Jones. In 1933, when Roosevelt was President, Jones became chairman of the RFC, which was given more scope and power. The RFC became "easily the public's favorite New Deal Agency and he perhaps Washington's favorite administrator."

The RFC with its 32 branches lends money to all sorts and sizes of borrowers. Chairman Jones' main questions to prospective borrowers when the cases came to his office were: "Will the loan add to employment?" "Have you exhausted all private loan sources?" "Is too much money being spent on high executive salaries and dividends?" And, "Will the loan be repaid?" Jones always believed that "the greatest disservice you can do a man is to lend him money he can't repay." His job, he said, was not to give away money but to *lend* it—"on the best terms possible both to the government and the borrower." And in the years that Jesse Jones headed the RFC it not only helped thousands of people but made money as well, since it was able to get money from the Treasury at one per cent less than it charged borrowers.

JONES, JESSE—*Continued*

In July 1939 Jesse Jones resigned as chairman and member of the board of directors of the Reconstruction Finance Corporation to become Federal Loan Administrator and in August 1940 he was offered the Cabinet post of Secretary of Commerce. During these years he has remained on excellent terms with Republicans and Democrats, considered by many a "Democrat rather than a starry-eyed New Dealer." During these years his large, six-foot-two frame, his blue eyes, white hair and dimpled cheeks have become familiar to all of Washington. And his reputation for being a hard and successful worker has grown. At 6:30 each morning he gets up and starts reading office papers before breakfast. Twelve and fourteen hours later he is often still working, and working well. President Roosevelt once said "Jesse Jones was the only man in Washington who could say yes or no intelligently 24 hours a day."

JONES, JOE Apr 7, 1909- Artist

Address: c/o A. C. A. Gallery, 52 W 8th St, New York City

Joe Jones, the former member of the St. Louis House Painters' Union whose first Manhattan exhibit in 1935 brought him immediate fame as one of the most gifted among American painters of social protest, in November 1940 had his fifth New York one-man show at the A. C. A. Gallery. *Cue* announced: "The champion of the underdog finds things not a whit better than when he first joined the strikers."
